* This is just what the late Mr. Meredith Townsend says in his interesting work, "Asia and Europe." "The white man invented the steam engine, but no religion which has endured. . . . The truth is the European is essentially secular, that is, intent on securing objects he can see; and the Asiatic essentially religious, that is, intent on obedience to powers which he cannot see but can imagine."—(WRITER OF THE SUMMARY).

† The term "Oriental" is made use of throughout Mr. Koyanagi's essay; but it only includes Chinese and Japanese thought, which of course differs in some very important particulars from Indian thought.—(WRITER OF SUMMARY.)

consider other discrepancies in the two systems, we find that Oriental thought begins with intuition and ends in fatalism; while Occidental thought is founded on experience, is distinctly utilitarian and holds liberty in high regard. Self-denial, renunciation, asceticism, are far more highly esteemed in the East than in the West, where from ancient times Hedonism has found a very large number of admirers. Activity, energy, motive, excitement of all kinds, these are the watchwords of modern Western thought as reflected in the writings of moralists and philosophers, and they form a striking contrast to the habitual calm and listlessness of the Eastern world. Coming to the structure of society, in the East society is centred in the family; in the West in the individual. The position occupied by woman, the relations of various members of the family to each other and the authority possessed by parents, elder brothers and the like are altogether different in the East and the West.

But the tendency to-day is all in favour of a blending of Eastern and Western thought, of making one the complement of the other; and among the different countries of the world Japan is happily situated for the accomplishment of this task and the process of harmonization is actually going on in our midst. A few instances of this I now proceed to give (1) *Law and public sentiment*. In Europe morality is founded on law, with us it rests on what we call *unryō*, humanity. While Occidentals esteem law above everything, with us etiquette, usage, custom rule the day. But in statecraft and in the regulation of society it becomes necessary that law and usage should work together. They have always done so more or less. In the West usage and etiquette are found embodied in law; in the East law is found to be embodied in what we know as *rei*. There is no real opposition between the two as sources of authority. In our Civil Code, in the sections dealing with the family and with inheritance our traditional notions are blended with occidental ideas on the rights of the individual. As civilisation advances religion changes into morality, morality into law. But in practical life the three forces work together with the same end in view and it is neither possible nor desirable to separate them. (2) *Economy and Morality*. The fundamental principle of Western economy is thorough freedom of action, unrestrained competition. This involves the survival of the fittest, which means that the weak go to the wall. Realizing that there is something harsh, pitiless and inexorable about this process, numbers of persons have devised remedies for alleviating the hardships of the struggle for existence among human beings, that is to say, morality has come to the aid of mere economy in the regulation of human affairs. In this matter we are favourably situated, as our traditional notions on the claims of human beings to kind treatment are such that anything like unfeeling oppression of the lower orders is most repulsive to us, and in the struggle between capital and labour our sympathies naturally go towards the sons of toil. . . . There is no doubt that during the past three decades we have assimilated a good deal of Western thought, but it is in the twentieth century that the permanent type of our new civilisation will be determined.

Mr. Yamane Masatsugu, a member of the Diet, who has for a long time taken great interest in physical education, is quoted by the *Dokuritu Hyōron* (No. 6) as saying that the physique of army recruits is not so good as it was some years ago. The following is a list of the average weights of able-bodied men liable for military service, prepared for the Osaka Exhibition:

Year.	Weights. Kwan Momme.
1883.....	15.670
1884.....	15.380
1886.....	15.520
1887.....	15.630
1888.....	15.600
1889.....	15.510
1890.....	15.600
1891.....	15.380
1892.....	15.220
1893.....	15.180
1895.....	15.500
1896.....	15.410

1897.....	14.880
1898.....	14.810
1899.....	14.780

It has to be borne in mind that in 1897, according to the new army regulations, recruiting covered a wider area and that this affected the weights of average able-bodied men (壯丁, *sōtei*) to a certain extent.

The *Dokuritu Hyōron* has an article entitled "The Sons of Reaction," which gives full expression to the notion that the present is a thoroughly degenerate age compared with the one that preceded it. It is the fashion in this country among a certain class of writers to praise the past and denounce the present. We find the same thing in the West. We are told that manners have degenerated. Daughters and sons are not what they were. The old virtues have gone out of fashion, and so on, and so on. But to most people this species of pessimism is distasteful and savours of exaggeration. In the course of our reading year after year we come across scores of age-denouncing articles such as the one that lies before us now, and we have grown weary of reproducing them except in the barest outline. According to the *Dokuritu Hyōron*, in the political world, Itō and Okuma are morally inferior, though intellectually sharper, than Saigō Takamori and Kido. Learning has advanced, but morality has grown lax. The modern official is lacking in seriousness of mind. He is a merely elevated student, with all the flippancy that characterizes this class. The modern school-teacher has all the confidence and all the ignorance of youth. Only a few months separate his graduation from his appointment as teacher. Rapid changes of the sort through which the nation has passed destroy character. Men adapt themselves to this and that new fashion until all stable traits are lost. Such were the English in the time of Charles II. and such were the French in Napoleon's day. We are so busy in seeking to appropriate the various elements of Occidental civilisation that we have no time for self-culture, and the like.

* * *

In the *Tōkyō Kyōkujihō* a police inspector, Mr. Matsui Shigeru, states that the police force of Tōkyō is insufficiently manned. The city having a population of 1,840,000, a force of 3,000 men is small enough, but the actual number of constables in service often falls short of the full complement by 300 men. Even to-day the force is 91 men short. Many are the shifts to which those on guard are driven when their numbers are short. Into these we cannot go here. Mr. Matsui complains of the want of consideration of the public generally. He seems to be of opinion that the police in Japan are rather hardly used. Certainly the pay is very poor, but he says nothing about this.

* * *

In the *Kyōiku Kohō* appears the report of a long lecture entitled, "Marked phenomena in the history of Education in the Meiji era and Modern Abuses," by Mr. Ishikawa Yasujiro. Much that is penned on the degeneracy of the times is founded on misapprehension, says Mr. Ishikawa. The fact is that the modern moral standard is in many respects much higher than that of the Tokugawa era. Bribery is denounced now, but in former times it was most common and passed under the name of *yakutoku*, the perquisites of office. Concubinage is now universally condemned, but 40 years ago nobody was surprised at a man's keeping 4 or 5 concubines. The complaints of to-day are mostly signs of progress. During the past 30 years change has followed change with great rapidity, showing that there has been a deep-seated desire for progress. But in education the policy of the Mombushō has been much affected by the constant changes in the Ministry. Between the 4th and 32nd years of Meiji there were 24 changes. The longest tenure of office has not exceeded two or three years and the shortest was only about 9 days. There have been 3-month ministers and 5-month ministers. The policy first adopted by the Department of Education was founded on information supplied to Prince Iwakura by Mori Arinori bearing on the American system of education. As a result

of this in 1874 Professor Morse was summoned from America. The policy of the Department in those days was conservative. Before he became Minister of Education Mori Arinori was in favour of the most radical changes in the educational system of the country, but as a result of conferences with Marquis Itō, who at this time had been thoroughly Germanized, Mori modified his policy very considerably. "Conservative and gradually progressive" are terms that best describe the permanent policy of the Department. But most of the Ministers were more conservative than progressive. Admiral Enomoto made Confucianism the basis of his policy. Viscount Yoshikawa gave out that his watchwords were the traditional "loyalty and patriotism" (*chūkun, aikoku*). This was the keynote of the famous Imperial Rescript on education. The late Viscount Inoue Ki declared that his policy was to develop business education. He was followed by Marquis Saionji who avowed that cosmopolitanism was his guide in determining educational questions. He advocated the extension of female education and the paying of more attention to foreign languages. His policy was described as international and was charged with being unpatriotic. His successor, Mr. Ozaki Yukio, was a Minister of a new type. He came into power with the determination to inaugurate radical changes. But the nation did not support him and his tenure of office was short. It is said that when Mr. Ozaki was made Minister he was asked by the Emperor what policy in education he purposed adopting, and that he adroitly replied that he proposed to make the principles enunciated in the Imperial Rescript the basis of his policy. Now, the Imperial Rescript has ever since its issue received a very different interpretation from the general public to that put on it by Mombushō officials, and Mr. Ozaki intended to give effect in actual practice to the more liberal method of interpretation had he been given *carte blanche* to act as he pleased. But this he did not receive. The fact is that the conservative air which every successive Minister of Education breathes is of so powerful a nature that he soon succumbs to it, whatever may have been his notions before coming into power, and it is true to say that the advance which has been made in education has been largely owing to outside pressure and agitation rather than to initiatory policy on the part of the Department. It is non-official educationists that deserve most of the credit of the progress which has been made. They have been the champions of liberty, free inquiry and radical changes. There are four names worthy of special mention in this connection. (1) Mr. Fukuzawa Yukichi. He was an advocate of the adoption of the material civilisation of the West, especially that of American type. (2) Mr. Nakae Tokusuke gave expression to French ideas on liberty and popular government. His writings had great influence on the minds of educationists and others. He has been called the Rousseau of Japan. (3) Next comes Mr. Nakamura Keiu, who by his writings and his school in Koishikawa introduced to the notice of his fellow-countrymen English methods of teaching and English popular ideas. (4) Dr. Katō Hiroyuki represented German thought in the educational world and in official as well as non-official circles made his influence felt. The above four men may be said to have had no equals as leaders of Japanese thought. But no account of the educational influences of the present era would be complete without a record of the earnest labours of Dr. Nijima in connection with the Dōshisha, of Dr. Verbeck in connection with several Government schools, of Dr. Brown of Yokohama, who turned out such men as Oshikawa Masayoshi, Uemura Masahisa, and Shimada Saburō; of Captain James, of Kumamoto, under whom Messrs. Yokoi Tokio, Tokutomi Ichiirō Kozaki Hiromichi, and Ukita Kazutami and other noted men studied; of Mr. Clark of Sapporo at whose feet sat Mr. Uchimura Kanzō, Dr. Satō Shōzō, and others. So that, to sum up, the intellectual condition of Japan to-day is largely the result of the labours of 4 Japanese, 4 foreigners and the Educational Department officials. The chief defects of the present school system can be stated in a very few words. (1)

The school-buildings erected are in many cases too grand to suit the pockets of taxpayers. Simpler and cheaper structures would answer all practical purposes better. (2) Too many subjects are taught in Government schools, resulting in superficiality in most branches of knowledge. (3) The preparation of text-books by the State is undesirable, as it interferes with the free competition which is essential to the production of the best books. There are other ways of putting a stop to corruption. (4) Examinations and graduation are made too much of. Study is made too subservient to these. (5) Our education is too much over-ridden with rules. It is mechanical and stereotyped and depends more on fixed methods than men. There can be no true education without a large amount of personal influence. Schools which in the past have scored successes or are now prospering may be counted on the fingers, and they were all the creation of individuals. The High Commercial School owed its great prestige for many years to Mr. Yano Jirō's labours; the Industrial School was largely the product of Mr. Tejima Seichi's brains. The same may be said of the School of Fine Art, which Mr. Okakura Kakuzō established, of Mr. Konishi Shimpachi's Blind and Deaf Asylum, of Mr. Izawa Shiji's connection with the High Normal School. But the unfortunate thing is, that with the exception of Messrs. Tejima and Konishi the men whose influence proved so powerful have forsaken the work they inaugurated with so much success and have been succeeded by mere stop-gaps or temporary office-holders. Education throughout the country smacks too much of the nature of a trade and men teach more as a means of making a living than because they are conscious of possessing special qualifications for the task.

* * *

The following statistics are taken from tables furnished to the *Taiyō* by Mr. S. Ito.

* * *

The August number of the *Taiyō* contains a long and learned essay by Dr. Tsubouchi Yūzō on Suicide, which we can only reproduce in an extremely condensed form. (1) *Suicide in modern times may be said to be a product of civilisation.*—The result of education and keen competition. Human consciousness has been so developed that trouble makes more impression on the mind than it used to do. (2) *The different kinds of suicide.*—(a) Physiological suicide, suicide that comes from inherited tendencies, from morbidity of some kind. There is no remedy for such cases. (b) Circumstantial suicide where the person who destroys himself has some special reason for doing so. These cases are of two kinds. In some instances self-destruction is resorted to with a view of benefiting others; in other cases a desire to escape from an unbearably unpleasant situation is the sole motive of suicide. Suicides that have an object in view may be divided into egoistic and altruistic suicides. In most cases of this kind there are ways of preventing the self-destruction contemplated. (3) *Unqualified, universal condemnation of suicide is not an attitude that can be logically defended.* (4) *Those who approve of suicide under certain circumstances base their approval on a variety of considerations.*—(a) They may think that the person who destroys himself has no real control over his actions, that he cannot overcome his inclination towards self-destruction.* (b) Opinion on the suicide is greatly affected by the character and life of the suicide himself, by his selfishness or unselfishness of disposition. (c) The view taken of his act depends much on the nobleness or ignobleness of the object he has in view, and by the presence or absence of ostentation or self-advertisement of any kind. (5) *Allowable suicide.*—This is either the result of weakness of will, or of great distress, being of the negative type, a succumbing to external conditions; or on the other hand it has some great moral purpose in view, is of a positive nature, involving great self-denial. This kind was most common among us in old days, as is shown by many of the sayings that have come down to us, a few specimens of which we now give: *Shi (士) wa onore no shiru mono no tame ni shi su.* (The samurai dies for the sake of those who know their own hearts). *Kiwaru to natte matten karan yori wa tama to narite kudaken.* (Rather than remain whole as a tile it is better to be broken in pieces as a gem). Many were the instances in which our old warriors considered that it was only by death that they could show their loyalty and sincerity, and there have been not a few cases where self-destruction was prompted by the noblest and most unselfish feelings, where by the death of one person life has been made much easier for others, where the avoiding of troublesome complications of sundry kinds has led brave men and women to take their lives,

* This no doubt is what is meant by the somewhat silly verdict so often given at Coroners' Inquests, "temporary insanity," which implies an untruth, since sane people frequently commit suicide.—(WRITER OF SUMMARY).

parents have died by their own hands in order to make life easier for their children, wives have shown their devotion to their husbands' interests by destroying themselves. Suicide in this country as well as in many others has met with the approval of very high moral codes. Human life according to these codes is never to be preserved at the expense of rectitude. *Inochi wa gi no tame ni karonsu.* (When the doing of what is right is concerned, life must be lightly esteemed) *Mi wo michi no tame ni kenru.* (One must sacrifice oneself on the altar of duty). Such sayings as these embody the inmost convictions of many virtuous men in all times. When life is taken with the express object of promoting good, the motive has always been considered to justify self-destruction. (6) *Unallowable suicide.*—Where suicide is the result of inability to endure shame, reproach or trouble, it is unallowable from a moral standpoint. There is a saying, *Haji wo shinobi, hazukashime wo shinobi, kore dami.* (To bear shame, and to bear causing shame, this is to be a man). A great many of the suicides of feudal times were the result of mistaken notions as to the proper course to be followed by those who committed them. The circumstances in which the men committed these acts, though regarded by them as desperate, were not actually so. The terms in which they describe the situations in which they were placed, such expressions as *senkata nashi, zehi ni oyobasu, zettai, setsumei,shintai kore kiwamaru*, were very frequently gross exaggerations of the real state of affairs. Such suicides as have lately been taking place at the Kegon waterfall proceed from partial knowledge combined with a certain amount of the romantic. Such deaths possess a good deal of attraction for dreamy, semi-educated youths who have not learnt the real value of life. They are all cases of illusion and self-deception. They proceed from mistaken notions as to what we have a right to expect in our human life. To destroy oneself because life does not yield what we wish it to yield, because certain ardent longings remain unsatisfied is childish. Those may be called by some "sacrifices on the altar of truth," but they are nothing of the kind. What do they teach? Nothing except the morbid state of the minds of the suicides. Pessimism such as is taught by many Western leaders of thought undoubtedly prepares certain minds for following desperate courses. But no one is benefited one iota by suicides of this kind. It is maintained by some that in certain cases the act of self-destruction is not open to the application of ordinary ethical tests; that the actors are placed by an extraordinary combination of circumstances on a different footing morally from all other men and that the ordinary rules of action do not apply to them. Among such some would include those who destroy themselves on account of their views on religion, philosophy and human life. But there are no human actions to which the principles of morality are inapplicable. Whatever the circumstances may be, self-destruction must be judged of by those fundamental ethical principles which are universally applicable. Much sympathy has been expressed for the youths who have been destroying themselves of late. Pity one cannot but feel, but at the same time care should be taken not to defend or to excuse weak delusions of this kind. Words of praise are altogether out of place. Such acts constitute an abuse and as such they are to be regarded. The last number of the *Taiyō* contains an instructive article on Marquis Saionji entitled "The New President of the Seiyūkai." After dwelling on the dangers to which the Seiyūkai is exposed and expressing a doubt as to the possibility of its being able to survive the disintegration which has set in, the writer goes on to consider what is likely to be the result of Marquis Saionji's presidency. Marquis Saionji, says the *Taiyō*, has never been considered to be a very earnest politician. Like Lord Rosebery he has seemed to play with politics, and to be averse to associating himself with the holders of definite opinions. In considering the present situation it has to be remembered that though Marquis Ito has formally severed his connection with the Seiyūkai, his interest in the success of the Association has not abated in the least. Though circumstances over

which he had no control made it necessary for him to resign the Presidency, his spirit is still with the Association (*Sono seishin wa natsu todomatte Seiyukai ni ari. Kō (候) wa izentaru Seiyukai no shugo-shin taru nari*). Considering Marquis Saionji's past connection with Marquis Itō, his nomination to the Presidency of the Seiyukai was a foregone conclusion, but it is only right to point out that it was a case of the Seiyukai's seeking the Marquis rather than of the Marquis seeking the Association. Though his name did appear among those who favoured the organization of the party, he has since its establishment done little to promote its interests. Even when under the Itō ministerial leadership he held the portfolios of Education and Foreign Affairs, he failed to make use of the opportunity for pushing the interests of the Association. He did not at that time figure as an active politician in any way. Though for 10 years past he has had a coterie of admirers, he has not displayed the slightest tendency towards taking the leadership of the men who regard him as their head; nor can we see in him any of the qualities that go to make a successful political leader. Though undoubtedly a man of most enlightened views, he has not enough zeal nor sufficient ambition to enter the political arena and fence with the many opponents of those views. He does not seem to have sufficient faith in his own political principles to take the necessary measures for putting them into practice. Politics will never absorb him. His tastes are multifarious. To give himself almost exclusively to one thing is not in him. Variety is the spice of his life. People compare him to Lord Rosebery, and there are certainly many points of resemblance in the two statesmen. They are both noblemen holding democratic views very strongly. They are both highly educated and highly polished men, whose observations have extended over a very wide area, and whose tastes agree on a variety of subjects. But their attitude to politics is different. Lord Rosebery is a man who possesses considerable histrionic imagination and he takes delight in posing on the stage of politics in attitudes that are as fascinating as they are varied; whereas Marquis Saionji is content to act the part of the cold critic or the disinterested spectator. He shows no inclination whatever to figure on the stage himself.*

Though Marquis Itō figured for a long time as the President of the Seiyukai, he never thoroughly controlled it. And what he failed to do it is not to be supposed that Marquis Saionji will accomplish. For leading a political party energy is needed more than intelligence; courage more than enlightenment; the power to excite rather than ability to teach. The Marquis has given no evidence that he possesses the necessary qualifications for the leadership of a party. What is known of him all points the other way. And as to his having confidence in himself, of this he has given no signs. Just as Campbell-Bannerman makes a better leader than Rosebery, despite the latter's philosophic insight and intellectual acumen; so a man with a narrower outlook, less refined and not so highly educated, provided that he possessed the necessary strength of will and the power to impress others, would make a better leader than Marquis Saionji. We shall continue this character sketch in our next Summary.

CORRESPONDENCE.

COMPLAINT AGAINST THE POST OFFICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Failing all other means of reparation, I appeal to the foreign press of Japan to protest against the manner in which the Japanese Post Office is treating my correspondence. I am a Russian newspaper correspondent now residing in Japan, and have necessarily to use the Japanese Post Office for the transmission of my letters. What is the result? A registered letter posted here on July 16 was not delivered in Port Arthur until it had first been opened and then resealed. Another letter

* It is questionable whether this remark is not as true of Lord Rosebery as of Marquis Saionji. It seems to be very doubtful whether he will ever lead a party or follow the leadership of anybody else.

posted on July 2nd took till July 26 before it was delivered; another posted on July 9 was delivered in Port Arthur on July 22nd. So much for letters going from Japan. My Russian newspapers are all detained at the Post Office here for many days. One arrived in Yokohama from Port Arthur on July 25 but it was not delivered to me until August 12. I ought to receive every Monday morning a bundle of papers from Port Arthur, but it is never till the close of the week that they reach me, though from the post marks on the wrappers I find they do reach Yokohama on Mondays. So far my protests at the Post Office have proved of no avail. Every one from the head official downward is ready to say "Go men nasai; and there the matter stops so far as they are concerned. Thanking you for printing my protest I remain, yours, etc.

H. B. MASHKEVITCH,
East. Correspondent of Russian Newspapers.

Yokohama, August 17.

THE GENERAL HOSPITAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to the remarks, made at yesterday's meeting, in connection with publishing the names of a proposed Committee for the General Hospital, I have only to say that a member of the Advisory Committee brought me a list of names which, he assured me, were the selection of the Ladies' Committee (and, I presumed, the Advisory Committee jointly), and requested me to publish the list in the papers. This list I submitted to another member of the Advisory Committee, at whose suggestion some changes were made.

I apologise to the Ladies Committee for having, unknowingly, misrepresented them, and remain, Sir, yours faithfully.

W. K. WILSON.

Yokohama, August 18th 1903.

HUMOUR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Humour, even though it be unintentional, should never be allowed to pass by unnoticed, and therefore it seems to me that on these lines, the letter of "complaint against the Post Office" in your issue of to-day, signed by a Mr. Mashkevitch, deserves some attention.

I speak of the humour of the thing, because it must surely strike the meanest intellect how absurd and out of place a complaint of this nature is, coming from a Russian!

Are not Russians past masters in the art of seizing correspondence and newspapers?

Who does not know that any letter from certain European countries, is invariably opened before it can reach its owner, and that too in times of quiet and peace?

Who is it that has taught the Japanese to do this if it is not the Russians themselves?

We all sympathise very much with Mr. Maskevitch in his capacity of "Correspondent of Russian Newspapers" but I for my part would recall to his recollection the recent fate of the St. Petersburg correspondent of the *Times*, who for merely expressing an honest opinion in his own newspaper, the greatest in the world, relative to the disgraceful massacres in Kishineff, was ruthlessly expelled from Russia at a moment's notice without any explanation being offered for this high-handed act.

I expressly recall this event to Mr. Maskevitch in case the Japanese Authorities should see fit to treat him in a similar manner. If they did and I see no reason why they should not, it would serve Mr. Maskevitch quite right. Diamond cut diamond!

Seeing that it is the practice of the Russian Authorities to do what Mr. Maskevitch complains of, every day and even to mutilate, obliterate and to otherwise disfigure foreign newspapers, how can he grumble at the treatment of the Japanese P.O. officials; for were he a foreigner in his own country under the conditions at present ruling between Japan and Russia, he would indeed have good cause to congratulate himself if he ever got his letters and newspapers at all!!

I am, Sir, yours faithfully,

"BRITISHER."

Yokohama, 18th August, 1903.

THE JAPANESE POST OFFICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to Mr. H. B. Maskevitch's letter in your issue of to-day, it appears that the same is to be taken as a public protest against the Japanese Post Office, accusing the officials of intercepting his correspondence.

If true, this is only practically "Tit for Tat," for it is known that the Russian Government open and

confiscate indiscriminately any letters or newspapers they may see fit.

I am sure Mr. Maskevitch as a "Correspondent of Russian Newspapers" ought to be fully aware of this and I consider his appeal to the public quite uncalled for.

Furthermore the Russian Government have little consideration for Correspondents of Newspapers. If undesirable they usually give these gentlemen a few hours in which to get out of the country.

I have never heard of anyone being able to get the slightest redress after such treatment, and I doubt if Russian newspapers would dare to publish a letter similar to Mr. Maskevitch's.

I enclose my card, and remain, Sir, yours truly,
"ONE WHOSE NEWSPAPERS HAVE BEEN
CONFISCATED BY THE RUSSIAN
GOVERNMENT."

Yokohama, August 18th 1903.

THE BARBAROUS OFFICIAL MURDER AT PEKING.

(FROM THE "N.-C. DAILY NEWS.")

Peking, August 3.

A tragedy has just been enacted in Peking which for sheer cold-blooded barbarity must be almost unsurpassed in the annals of criminal justice. Your readers are aware no doubt that a Mr. Shên Chin who has been for some time a reporter here for some of the Japanese papers, was arrested on a charge of complicity in the abortive plot at Hankow of some three years ago and has been done to death; but the manner of his death—carried out by direct order of the Empress Dowager—is such an outrage on all feelings of humanity that it seems desirable at the present moment that the truth should be known. The writer has been at some pains to get at the facts, and the following is, to the best of his information, correct.

THE VICTIM'S ANTECEDENTS.

The unfortunate Shên was a scholar and gentleman, and mixed freely with the better classes of Peking, among whom he had numerous friends. It seems possible enough that he was mixed up with the Hankow affair of 1900, in which a dozen or so of his countrymen lost their heads; he having indeed, it is said, been a Secretary in the Viceroy's yamen at Wuchang. He escaped, however, to Japan, it is supposed, and having made there some friends he returned to Peking about a year ago as a newspaper reporter, and there is no suggestion that since his return he has in any way interfered in politics. The worst that can be said against him is that he was very pro-Japanese and consequently anti-Russian, and his telegrams to the Japanese papers were not always well-founded. He himself ascribes, as will be seen later on, his calamity to the fact of his having stated in a Japanese paper that China had consented to two of the clauses in the Russian demands which he calls the secret Treaty, but in this he was mistaken apparently, though it is not impossible there was Russian influence at work.

THE TRIAL.

Unhappily for him, however, some petty officials had got hold of the secret of his identity and carried the information direct to the Palace. Thereupon a secret Decree was issued for his arrest and consignment to the Board of Punishments. We pass over the irregularity of his arrest, as also of his treatment in prison up to his trial and condemnation, as these are common incidents of political offences in China. The trial took place on the 29th of last month before a special Commission nominated by the Empress Dowager, and consisted, not in calling evidence or even stating by whom or of what he was accused, but, Chinese-like, of simple interrogation of the prisoner, with the instruments of torture ready to quicken memory. The unhappy man seems to have made up his mind to his fate from the first as he confessed, so it is said, freely, and no torture had to be applied. The usual course of Chinese justice in such a case is that the Judges composing the Court give no verdict and pass no sentence, but simply report to the Throne. So far there was nothing unusual—nothing that is not passing every day in China. His friends fully expected that a Decree would appear next day for his execution; though some faint hopes were entertained, that as the ordinary law prescribes that no execution shall take place during the great heat, the execution might be postponed till the autumn and thus give some faint chance of a reprieve.

THE DEATH OF SLAVES.

Now comes the horrible part of the story, but it must be told. The Judges having done their part by reporting adversely, it may be presumed, to the prisoner, it was then for the Throne, that is the Empress Dowager, to prescribe the punishment. The Decree was issued, not that the man should be executed, not even that he should die by the "ling-chih," but that

he should be beaten to death in prison. Strange it is that creatures can be found to carry out such a sentence, but there seems no lack of them in the Board of Punishments, for no sooner was the Decree received than they proceeded to carry it out. The gruesome work began at 4 o'clock, and for two mortal hours they rained blows with blunt bamboos on the limbs and back of the wretched prisoner until the flesh was hanging in shreds and tatters, and still the man would not die. In his agony he implored them in mercy to put an end to it by strangulation, and finally something of the kind had to be resorted to. The shades of evening were falling before the mangled body had ceased to quiver.

Such is the latest phase of Chinese civilisation as exemplified by the amiable and well-meaning lady who now rules the destinies of the Empire. It is beyond all doubt that the Decree came straight from her hand, for it is such a monstrous perversion of even Chinese justice, that only she whose word is law would have dared to do it. There is no such punishment prescribed in the Codes, even for high treason. It is only for the eunuchs and slaves of the Palace—unfortunates who have no rights—that the punishment of beating to death is reserved.

The pity of it is there should be found instruments willing to carry out such brutal orders. If the warden of the prison had replied that he was there to carry out the law, not to commit judicial murder, though it might have cost him his head, there would have been a ray of hope for China. It might have marked a new era, the dawn of a fight for civil freedom.

A SWAN SONG.

I have obtained a copy of verses written by the prisoner shortly before his death and when under the impression that he would suffer the usual penalty on the public execution ground. Though not of great literary merit they have a pathetic interest, and I venture a rough translation:—

Loaded with clanking chains I am taken from prison,
By the Shunichi Gate I shall lay down my life.
There on the execution ground my old friends* have
shed their blood,

Five loyal and six learned, all Hukuang men of
fame.

Japan and Russia are struggling for possession of
Manchuria,
Henceforth the cradle of the race is lost to China.
Partition comes apace. I cannot bear to think of it,
You Rulers of the country, have you never seen the
plans of division?

Let all the public papers over the wide world,
Because of my buried wrongs, publish the story of
my death.

For making public two harmless clauses in a secret
treaty
Chingkuan and Chunglang have worked me this
woe.

The thirty-one years of my life now past,
Though I have conquered some name, are now of
no value.

Hence come prosperity or disaster, I shall heed it not.
My spirit will find happiness chanting in Heaven.

ENGLAND'S SHIPPING STILL ON INCREASE.

(SPECIAL CORRESPONDENCE "NEW YORK
COMMERCIAL.")

Liverpool, July 13.

All subjects connected with the trade of the country are now so much under discussion that the "Annual Statement of the Navigation and Shipping of the United Kingdom" has been eagerly scanned here. The "Statement" is a formidable one, comprising some 340 foolscap pages of statistics, served up, if not exactly raw yet without any sauce of official comment. The subject dealt with is the ocean carrying trade of the United Kingdom—a trade which embraces not only the export and import business of the country proper, but also the transshipment transactions and the coastal traffic between the various ports of Great Britain.

The figures given, voluminous as they are, apply only to the number, tonnage and nationality of the vessels engaged in this trade, and do not directly indicate either its volume or its value. Even with these limitations, they are to some extent misleading, because they include as "British" the number of American-owned vessels—notably those acquired by the Morgan combine last year, which are not, since they are controlled from abroad, properly a part of our mercantile marine. This consideration applies, however, almost exclusively to American-owned vessels, ships acquired by Germany and other countries being for the most part quickly transferred under the flags of the purchasers, since no advantage

* Meaning Kang Yu-wei's party at the time of the coup d'état in 1898.

† Moukdeu.

is to be obtained from continuing them on the British register, while in some cases this would entail a positive disadvantage. Making allowances for these defects in the statistics, the conclusions to be derived therefrom are still favorable to the vitality of our carrying trade and to the continuance of our maritime supremacy.

TONNAGE OF SHIPPING

A glance at the following figures, showing the total net shipping tonnage of our foreign trade both inward and outward for the past three years, will suffice to demonstrate that in this period, at least, there has been no retrogression.

Description.	1900 Net tons.	1901 Net tons.	1902 Net tons.
British vessels.....	62,710,836	62,789,841	64,902,907
Foreign vessels.....	35,812,857	34,561,172	34,969,812

Total 98,523,693 97,351,013 99,872,719

We have here not alone a considerable increase in the total tonnage to the credit of last year, but also a continuous progression for the last three years in the proportion of British vessels engaged in this trade. As compared with 1900 the last year shows an increase of 2,192,000 tons in the British shipping handling our foreign trade and a decrease of 843,000 tons in the foreign shipping, the British percentage having risen from a little over 63 to nearly 65 per cent. No doubt if last year's American transfers were allowed for, the improvement would be less marked; but the margin is still considerably more than sufficient to cover the Morgan acquisitions, and, apart from these, it is clear that foreign competition has made no progress in recent years, so far as the carrying of this country's ocean traffic is concerned.

Of only secondary interest to the general apportionment of the carrying trade between British and foreign bottoms is the relative distribution of business between the various great ports of the United Kingdom. The reorganization of the port of London, which is now only a question of time, has attracted particular attention to the statistics connected with the Thames, and it must be confessed that, so far, these figures exhibit a steady and continuous development.

LONDON STILL LEADS.

If the subjoined table, showing the record of the five leading ports for three years, be examined it will be seen that London is still a long way ahead of any other seaport in the country, and that the increase in its tonnage is greater than that of any of its rivals, with the single exception of Liverpool:—

	1900. Net tons.	1901. Net tons.	1902. Net tons.
British ports.			
London	16,700,000	17,275,000	15,564,108
Cardiff	12,769,000	12,737,000	12,556,664
Liverpool	11,660,000	12,636,000	13,157,714
Southampton ...	3,009,000	3,063,000	3,224,521
Glasgow	3,682,000	3,826,000	4,144,217

Relatively, however to the volume of its shipping, the advance made by London is less than that not only of Liverpool, but also of Southampton and Glasgow. Cardiff is the only port of the five which displays a retrograde movement over the three years, but Cardiff, being so largely dependent upon the coal trade, is in a somewhat exceptional position.

Taking other leading ports as well as those mentioned above into consideration, there was a general improvement in tonnage last year as compared with 1901, but several still record a decrease as against the figures for 1900, more especially the English northern coal ports and Belfast and Dublin. A side issue involved in the great tariff controversy is the probable effect of differential duties on our valuable transshipment trade. So far as colonial produce is concerned it would, of course, not be affected, since there would be no duties imposed thereon, and this section constitutes a considerable proportion of the entire business, but whether a rebate on re-exports would suffice to prevent a check to the transshipment business as regards foreign goods marketed here and subjected to duty remains to be ascertained.

We know, however, that, duty or no duty, the direct trade of certain great continental ports, such as Hamburg, Bremen and Antwerp, is steadily growing and that there is an increasing tendency to save, so far as possible, any intermediate handling of goods.

TONNAGE INCREASES.

The tonnage of vessels on the British register continues to advance, the total for 1902 being 11,567,000 tons, or an increase of 446,000 tons, as against 1901, which itself was about a quarter of a million tons above the previous year's figures. The colonial tonnage, however, which is included in the above total, showed scarcely any increase last year. As regards the manning of the mercantile marine, it unfortunately cannot be said that any progress was made in the elimination of the foreign element. Out of a total of 253,000 persons engaged in this employment in 1902, nearly 70,000 were foreigners.

The increase in the British seamen employed was under 2,000, and even that addition brings the total

only to the figure of 1900. On the other hand, the number of foreigners so engaged increased by upward of 2,000, and of Iascars by nearly that amount, while both totals exhibit substantial increases as against 1900. In respect of construction, the year was a good one, the quantity built being 800,000 tons, which is considerably above the totals of the two previous periods. Taken all round, with the single exception of the continuous influx of foreigners into the employment, the shipping record as depicted in the present Blue Book is satisfactory enough. Whether construction has not to some extent outrun the demand for freight room is doubtful; but, apart from that, which is a point somewhat outside the scope of these statistics, it is eminently encouraging to know that the position of British shipping in the most important section of the carrying trade is being so well maintained.

A HOT WEATHER ASPIRATION.

(HOLMAN F. DAY in *Boston Journal*.)

"Tis good to be an Emperor and sit upon a throne.
—An autocratic Emperor, and run the thing alone.
"Tis fine to be an autocrat or a bashibazouk,
Or with ducats in profusion one could even be a duke.
A job as King or Kaiser, with serfs to stand in wait,
Or steady work as almost any kind of potentate,
Has certainly attractions for a humble, toiling bard
Who has to twang the lyre pretty steadily and hard.
But I look at the thermometer and really I declare
I'd rather, for a time at least, become a polar bear.

The Tsar of all the Russias, living mostly underground,
Or somewhere in cold-storage, where he cannot well be found,

Undoubtedly is able to go through a heated spell
And still enjoy religion and its comforts pretty well.
But the Kaiser and Kaiserin and the King of Italy
Have to tog themselves for functions to elaborate degree.

And the man who's never tried it doesn't know how awful warm
Is a padded, belted, corseted and gewgawed uniform.
And here is dear King Ed'ard, trussed in padding to the chin,
To show the proper courtesy to Loubet, visitin'.

Oh, no! To be a ruler in the good old summer time
Must certainly incite the meekest mortal unto crime.
If genial Metamorphosis should grant my earnest prayer,
Until the autumn solstice I would be a polar bear.

How lovely for to sit aloft upon an ice-berg peak,
Not here within this city block with every pore aleak.

How fine to have for breakfast a frozen hunk of whale
And then go out a-sliding down a glacier on your tail!

For polar bears, they tell us, do frequent lark and play
Without the risk of sunstroke in the Northland far away.

Oh, think of having snowdrifts to sleep on every night,
And think of being able to escape the ice-man fight!
Oh, think of being able to save your hard-earned chink

Nor buy at every corner a long, cool, summer drink.
To be a Pierpont Morgan wouldn't be so very tough,
There's a lot of consolation in having cash enough;
But even Pierpont Morgan, though he holds all else,

you bet,
Comes down with goods a-plenty when the call's
"Deliver Sweat!"

And he hasn't any license to kill and barbecue
The dripping man who queries, "Is it hot enough for you?"

I certainly to be a Pierpont Morgan would not care.
If I had my private iceberg and could be a polar bear.

I've dreamed of kings and palaces, of emperors and
sich.

And pondered on the pleasures of the eminent and
rich.

But I sop my throbbing forehead even while I twang
the lute

And wriggle in discomfort in my clammy, clinging
suit.

I wouldn't be an emperor—I wouldn't be a king.
I wouldn't be a sultan, no, sir, not for anything!

I'd rather be a-sharpening my toenails on the Pole!
With a good, big, feathery snowdrift handy by in
which to roll.

And while perspiring humans round me sweat and
sop and swear,

I dream how very nice 't would seem to be a polar
bear.

TELEGRAMS.

(REUTERS' SPECIAL SERVICE.)

A SERIOUS REVOLUTION.

London, August 14.

Latest advices from the Balkans show that a most serious revolution is spreading eastward. A big fight has taken place near Monastir.

Lord Lansdowne, in the House of Lords, said the Government was anxiously watching the situation.

London, Aug. 15.

Turkey pays 400,000 francs indemnity to Noskowsky's family.

The Turks have captured Krushevo. Fighting continues outside the town.

Noskowsky's murderer has been executed.

Parliament has been prorogued. The King's Speech said that the situation in the European provinces of Turkey continues to be a subject of general anxiety. "My Government,"—said the King—"and the Governments of other Powers have used their best efforts to restrict the area of the disturbance."

London, Aug. 16.

A quantity of ammunition intended for Macedonia has been confiscated at the Belgrade Custom House. It was packed in cases marked "hardware" and "nails."

Russia's Black Sea fleet at Sebastopol has been ordered to Turkish waters.

Noskowsky's widow has declined the indemnity offered by Turkey, and has returned her husband's Turkish decorations.

Russia, with a view to the pacification of Macedonia, has demanded the punishment of all officials guilty of excesses, and the re-employment of foreign officers in the gendarmerie and the police.

London, August 17.

The Bulgarian Government in a Memorandum to the Powers accuses the Turks of exasperating and terrorizing the Christian population by burning, pillaging, violating, arresting and banishing innocents; by closing schools and churches. It lays the responsibility on the Turkish Government which has not fulfilled its undertakings.

Nothing is known at Constantinople about the dispatch of the Russian fleet to Turkish waters, but it is considered improbable.

A mail train has been dynamited on the Uskub-Salonika line.

London, August 18.

The news that the Russian squadron in the Black Sea had sailed for Turkish waters was originally doubted, but it is now stated that four battleships, four destroyers, and six torpedo-boats, with transports, have sailed.

The Porte has called out 52 fresh battalions in consequence of the extension of the insurrectionary movement.

London, August 19.

Two divisions of Bulgarian reserves were called out yesterday. It is believed that the object is to strengthen the forces on the frontier.

The Turks appear to be unable to cope with the insurrection which is fast gaining ground everywhere. Small sanguinary encounters are reported to be taking place daily between the troops and the rebels in various districts.

A telegram from Sophia says that 1,000 rebels repulsed three battalions of troops after six hours' fighting, near Monastir. The troops had 216 casualties, the insurgents' loss is unknown.

The entire Christian population at Krushevo has been massacred.

London, August 20.

Russia has presented some supplementary demands of a political nature to the Porte.

The movement of the Russian Black Sea squadron is now producing alarm in Constantinople, where it is believed to portend further demands. The squadron is now anchored at Iniada Bay, 80 miles to the north-west of the Bosphorus.

The Albanians have broken out seriously between Monastir and Uskub. The situation at Salonika is critical. A reign of terror prevails at Uskub.

CHINESE AFFAIRS.

London, Aug. 14.

Lord Lansdowne referred to the latest horrible execution by the Peking Government and said the latter was morally bound to see that the pledges under which the Shanghai reformers pleaded guilty shall be carried out.

VICEROY OF THE FAR EAST.

The Tsar has issued a ukase in which he appoints Admiral Alexieff Viceroy of the Far East, with supreme power, and responsible only to a special Council at St. Petersburg. The Viceroyalty comprises the Amur and Kwantung territories.

ILLNESS OF LORD SALISBURY.

Lord Salisbury is unwell, being considerably exhausted.

INDIA AND THE CAPE GARRISON.

Lord George Hamilton, Secretary of State for India, announces that India disagreed with the scheme for the part payment of the troops in South Africa, and that the War Office does not therefore intend to incur the expenditure in South Africa which it would otherwise have done.

The British newspapers generally are pleased at the abandonment of Mr. Brodrick's South African proposal.

BRITISH-CHINA TREATY.

London, August 15.

The ratifications of the British treaty with China have been exchanged. Portions of the treaty come into immediate operation.

THE HUMBERT ESTATE.

London, August 16.

The Official Liquidator of the Humbert property has testified that he estimates the deficiency to be £468,000.

LORD SALISBURY.

Lord Salisbury's condition is very grave.

THE PANAMA CANAL.

London, August 18.

The Colombian senate has rejected the Panama Canal treaty with the United States.

FATAL ALPINE ACCIDENT.

London, August 19.

A party of seven tourists have been killed while ascending the Aguille Grise, close to Mont Blanc.

THE ALPINE ACCIDENT.

London, August 20.

The tourists who fell into the crevasse on the Aguille Grise are injured not killed.

THE "AMERICA" CUP.

The *Reliance* and *Shamrock* were measured on the 18th inst. The *Reliance* allows the challenger 105 seconds.

(RECEIVED AT THE LEGATION OF FRANCE.)

STORM AT MARTINIQUE.

Saigon, August 13.

There has been a tempest at Martinique, causing great damage. Eight people were killed.

THE HUMBERT CASE.

Saigon, August 14.

The Humbert case continues in Paris without incident. The statements of the witnesses convey no new information.

THE ANGLO-FRENCH ENTENTE.

Saigon, August 17.

The King of England in his Speech prologuing Parliament, alluded to the visit of President Loubet and affirmed the mutual cordiality of the relations between England and France.

THE BALKAN TROUBLES.

Saigon, August 18.

The assassin of the Russian Consul at Monastir has been executed.

The Bulgarian insurrectionary movement continues in Macedonia.

(RECEIVED IN TOKYO.)

RUSSIAN TIMBER-FELLERS.

A party of Russians who were engaged felling timber at Musan on the upper waters of the Tumen have been recalled from Russia and have all left the district. This order was given on the 20th June.

There are now no Russians in that quarter or in the Yenkechin district.

(FROM THE "JIJI SHIMPO.")
BALKAN AFFAIRS.

London, August 12.

The revolt has extended over two districts, Uskub (or Skopje) and Adrianople, and consequently the condition of affairs in the Balkans is critical. Further the insurgents have occupied Krushevo, Krichava and Monastir. At Dengery (?), 60 metres length of an iron bridge on the railway has been broken. Communication between Constantinople, Monastir, and Salonika are suspended. Albanians have attacked the Bulgarian villagers in the Gibra (?Divra) district.

London, August 13.

The western part of Macedonia has been occupied by the insurgents. Severe fighting has occurred at Monastir.

London, August 14.

The fighting in the Balkans still continues. It is certain that Satewitzoff (?) leader of the movement, is himself commanding the insurgents.

The Porte has proposed to pay £16,000 to the family of the Russian Consul who was murdered. Russia has demanded the execution of the culprit.

London, Aug. 16.

The man who murdered the Russian Consul has been punished. Two gendarmes who were found to be accessories have been sentenced to long terms of imprisonment.

The family of the late Russian Consul have refused to accept the money offered by the Porte. Further the family have returned the Turkish decoration which the late Consul possessed.

The Russian squadron at Sabastopol has been despatched to Constantinople for the purposes of re-enforcement (?). As the grounds of this re-enforcement, the Porte was requested to employ foreign military officers to command the Macedonian gendarmes.

The Turkish regulars have reoccupied Krushevo. The fighting on the frontier, however, still continues. The Governor of Monastir has been banished to Tripoli.

London, August 17.

The Russian squadron which has been ordered to Turkish waters consists of four warships and ten torpedo-boats.

German papers says that this demonstration on the part of Russia will direct present affairs into a dangerous condition.

The Porte has purchased Krupp field guns for thirty-two *dailai* battalions (? batteries).

THE RAILWAY CALAMITY.

London, August 12.

According to official information, eighty-four persons were killed by the accident on the Paris underground railway. King Edward has despatched a telegram expressing his sympathy.

JAPANESE BONDS.

Five per cent. Japanese Loan Bonds have advanced five shillings.

RUSSIA AND MANCHURIA.

London, August 13.

According to a despatch from St. Petersburg, a Decree has, under signature and seal of the Czar,

been promulgated to the effect that the Amur territory and Manchuria shall be placed in the condition of a Viceroyalty, and that the Viceroy shall have, independent of Cabinet ministers, supreme authority and command over the Pacific Squadron and the troops in the Amur territory and in Manchuria. Admiral Alexieff has been appointed to the new post and invested with powers to negotiate diplomatic matters with neighbouring countries.

CYCLONE IN JAMAICA.

A cyclone has visited Jamaica with the result that numerous ships and buildings have been destroyed; the damage is estimated at two million pounds sterling.

THE BRITISH PRESS ON MANCHURIA.

London, August 14.

The *Times* comments severely upon the fact that Russia, not only is not evacuating Manchuria but has established a special official with supreme control over the territory. The *Standard* insists that inasmuch as Russia is acting arbitrarily and tyrannically with reference to the Chinese dominions, Japan and Great Britain must take similar steps. (?)

BRITISH NAVAL MANOEUVRES.

London, August 16.

On the conclusion of the British naval manoeuvres, a hundred warships assembled at Lagos Bay. The chief officers of the squadrons had audience of the King of Portugal.

KOREAN INDEPENDENCE THREATENED.

London, Aug. 17.

The *Times* publishes a telegram which Dr. Morrison has despatched from the Seoul railway station, in which he states that Korea is now in a serious condition, its independence being gravely threatened.

NEW STEAMSHIP LINE TO RUSSIA.

The *Norvost* of St. Petersburg, states that a Japanese Shipping Company intends to open shortly a line to Odessa.

(FROM THE "ASAHI SHINBUN.")

BALKAN AFFAIRS.

London, Aug. 17.

Macedonian conditions are still unquiet.

The people at Sophia who are giving assistance to the Macedonians have urgently requested the Bulgarian Government for mediation.

Zontieff(?), the Chief of the Macedonian Committee, who had been captured, has escaped to Bulgaria.

Arms and ammunition are continually being carried into Macedonia.

The supposition in Bulgaria that the Russian attitude at Constantinople has brought about the present troubles is a dangerous misunderstanding. Russia has given a strong warning to the Bulgarian Government with reference to the necessity of putting down the revolutionary elements.

FROM THE "DEUTSCHE JAPAN-POST.")

THE BALKANS.

Berlin, August 13.

All Macedonia is in open insurrection. The Powers leave the quelling of the revolt to Turkey. The Reform movement is stopped.

The strained relations between Russia and Turkey, caused by the murder of the Consul at Monastir, have ceased.

Berlin, August 17.

The Russian official journal, the *Government Express*, reports that the Ambassadors at Constantinople have been informed that a part of the Black Sea fleet is proceeding to Turkish waters. The Balkan situation looks very threatening.

THE SITUATION IN SERBIA.

Berlin, August 13.

A Ministerial crisis has developed in Serbia. As showing the insecurity of the situation King Peter now receives the murderers of the late King.

DEATH OF A PROMINENT GERMAN.

A former President of the German Reichstag, Freiherr von Levetzow, is dead.

PRINCESS RUPPRECHT OF BAVARIA.

Berlin, August 20.

Princess Rupprecht of Bavaria, who is suffering from typhitis, has undergone an operation with good results.

THE BALKANS.

The revolution continues in Macedonia, and fights with the Turkish troops are frequent. These events have no influence on politics or the money market.

(FROM THE "N.C. DAILY NEWS.")

FATAL BOILER ACCIDENT ON BRITISH CRUISER.

London, August 8.

There has been a boiler accident on the 1st-class cruiser *Drake* at Funchal, Madeira, while she was

engaged in the manoeuvres. One man was killed and six wounded, two of them dangerously.

FATAL RAILWAY ACCIDENT IN THE STATES.

Two sections of a circus train ran into each other at Durand, Michigan. Nineteen people were killed and thirty injured.

[Durand, north-west of Detroit, is a junction at which six railways meet.—Ed.]

SOMALILAND.

Three members of the Boer contingent in Somaliland have been granted the Distinguished Conduct Medal.

Captains W. G. Walker, 4th Goorkhas, and G. M. Rolland, 1st Bombay Infantry, have been granted the Victoria Cross for their assistance to Captain Gough in the action in Somaliland on the 22nd of April last.

MACEDONIA.

London, August 10.

A report is current at Salonika that ten thousand Bulgarians are operating at Monastir against the Turks, and ten thousand at Kastoria.

The Bulgarian Government says it is taken by surprise by the recrudescence of fighting in Macedonia, and is determined to maintain its neutrality, and considers the movement merely local; but the Turks say the movement has become general.

Later.

Hilmi Pasha, Inspector General for Reforms, reports that a large force of insurgents have massacred the whole of the inhabitants of several villages in the Clisura district of Monastir. They have also attacked other villages, taking many prisoners and burning some alive.

The Vail of Monastir has been recalled. Hilmi Pasha replaces him provisionally.

Turkey has assured Russia that the murderer shall have the severest punishment; a court-martial has been summoned at Monastir to try him.

Further fighting has taken place near Sorovich. Twenty-four battalions of Turkish troops have been ordered from Anatolia.

The Prime Minister (Mr. Balfour), in the House of Commons, regretted his inability to say anything reassuring concerning the situation in Macedonia. It was the duty, he said, of Europe to support Austria and Russia so long as they were striving without regard to their own ambitions to ameliorate the condition of the population.

London, August 11.

The Macedonian Committee have sent to the representatives of the Powers at Sofia a circular declaring that unless a Christian Governor, independent of the Porte, is appointed the struggle will continue to the end.

UNREST IN RUSSIA.

London, August 11.

In the rioting at Kieff on Wednesday, Thursday, and Friday, sixty persons were killed and one hundred severely wounded.

SOMALILAND.

London, August 11.

An advance in Somaliland with Burao as a base is expected in September.

[Burao is almost the central point of British Somaliland midway between Berbera to the N. W. and Bohotle to the S. E.—Ed.]

THE SORROW OF THE SULTAN.

London, August 12.

The Sultan has sent his oldest son to the Russian Embassy with a message renewing the expression of his regret for the murder of Mr. Roskovsky.

POACHING ON LAKE ERIE.

London, August 13.

The American fishing boat *Silver Spray* was found on the Canadian side of Lake Erie, and struck by twenty shots while escaping from the Canadian revenue cutter. She was badly shattered but there were no fatalities.

THE DEAR SUGAR CONVENTION.

The importation of Danish, Russian, and Argentine sugar into Great Britain is prohibited from the 1st of September.

THE OBJECTIONABLE ALIEN.

The report of the Alien Immigration Commission recommends the establishment of an Immigration Department which will provide for the exclusion of undesirable or destitute aliens, and the registration of immigrants, making all who become undesirable or destitute within two years after landing liable to expulsion and repatriation at the cost of the shipowners who brought them.

THE "SUPAO" CASE.

London, Aug. 14.

Lord Lansdowne referred in the House of Lords to the horrible execution of Shen Tê-kwei at Peking. The Government, he said, are morally bound to see that the pledges under which the Shanghai Reformers pleaded guilty, are carried out.

THE VICEROY OF INDIA.

Lord George Hamilton stated in the House of

Commons that it had been arranged that Lord Curzon should remain in India until May 1904. Should he be able to continue the duties of Viceroy beyond that, the Government would extend his tenure of the office for a period not exceeding two years.

It is likely that before entering on this fresh term his Lordship may require a holiday in England.

(FROM THE "STRAITS TIMES.")

MURDER AT PAHANG.

Kuala Lipis, August 3.

Mons. Juppeaux, the French miner who was attacked by gang robbers, is dead.

[In chronicling the attack upon the late Mr. Juppeaux, the *Puang Gazette* says that gang robberies have been very frequent of late in the Kampar district and that the mortal wounding of a European should certainly serve to turn the attention of the authorities to the matter. Our contemporary says that Mr. Juppeaux was an Assistant Engineer under the Societe des Etains de Kinta, and was probably prospecting in the neighbourhood of Tembeling, where the attack took place.]

ROYALTIES IN IRELAND.

The royal yacht *Victoria and Albert*, with King Edward and Queen Alexandra aboard, which left Buncrana, on the north coast, of Ireland on July 28th arrived at Killala bay, on the west coast, the following day. Their Majesties were accompanied by the Earl of Dudley, Lord Lieutenant of Ireland. Despite the inclement weather, they landed on the Mayo side of the bay, and afterward proceeded in a motor car through the picturesque scenery of that portion of Ireland, inspecting many of the labourers' cottages on the way. At night the war ships in the bay were illuminated and bonfires were burning on the surrounding hills.

Queen Alexandra has given the Earl of Dudley £2,500 for distribution among the poorest people of Dublin and other parts of Ireland.

King Edward and Queen Alexandra continued, by motor, their inspection on July 30th of some of the wildest and most picturesque regions of Ireland. The start was made at 9 o'clock from the little town of Leenane, on the shore of Killary bay, where the Mayor, the local rector, the parish priests and a deputation representing 20,000 inhabitants of the wild Connemara mountains presented an address.

The King, in replying, said he had already inspected some of the cottage industries, and he wished to assure the inhabitants that he was greatly pleased with the spirit of industrial activity and the warm, hearty welcome of the people, which he and the Queen both would long remember. The hearty tone of his Majesty's speech was received with every evidence of appreciation.

The royal party drove off in motors through the beautiful lake and mountain country, everywhere greeted loyally by the inhabitants, many of whom journeyed leagues across the mountains to catch a sight of them. The motor journey ended at Recces, where the party had luncheon. The town was decorated and the hotel was surrounded by a guard of honor of "Connemara Cavalry," peasants from the surrounding country astride saddleless mountain ponies and wearing "Jerry" hats decorated with tri-colour ribbons and green rosettes.

Their Majesties took a train for Galway and arrived there late in the afternoon. They met with an enthusiastic reception. The King was presented with addresses by the District Council and other bodies, which he replied briefly. Their Majesties then boarded the royal yacht, which was lying in Galway bay.

The following day they were to take a train from Kenmare, near which place they will be the guests of Lord Lansdowne, Secretary of State for Foreign Affairs, at his country seat, "Dirreen," County Kerry.

"RELiance" TO DEFEND THE CUP.

A Newport (R.I.), telegram of July 27th said: After to-day's race between the *Reliance*, *Constitution* and *Columbia*, in which the former boat again demonstrated her superiority over the other two, the challenge committee of the New York Yacht Club selected the *Reliance* as the defender of the *America's* cup. It was also decided to discontinue the trial races. Messrs. Morgan of the *Columbia* and Belmont of the *Constitution* were perfectly satisfied with the choice of the committee. They are both of the opinion that the *Reliance* is the fastest of the trio.

From the showing of the three boats this season *Reliance* is fairly entitled to be the defending vessel. In any case, she has crossed the finish line ahead, and has lost but few events on time allowance. It is probable that the defender will proceed to Bristol for a thorough overhauling.

The three yachts raced over a leeward and windward course to-day. There was a puffy northwester of fifteen miles' strength blowing when the starting signal was given at 11.30. The *Reliance* was first to cross the line. The *Constitution* crossed soon after and the *Columbia* followed a couple of seconds behind the handicap gun at 11.32.

The *Constitution* ran by the *Reliance* shortly after the start, and at 11.40, when the *Columbia* was almost on even terms with her, the *Reliance* set her spinnaker flying on the starboard side. The new boat felt the effect immediately, and slowly regained the stretch of water that separated her from the *Constitution*. A mile from the turn the *Reliance* got by the *Constitution* and turned the mark just ahead of her. Meantime the *Columbia* had fallen away in the rear.

The yachts turned the outer mark as follow:—

Reliance, 1.10.06.
Columbia, 1.10.31.
Constitution, 1.14.38.

Hauling sheets around the mark, the *Reliance* began heaving out to the weather of the *Constitution*. They went about on the port tack about 2.10, and after that the new boat drew ahead and to windward steadily. The *Columbia* sailed a fast race to windward, and, by a fortunate slant of wind close under the Newport shore, hauled up so much on the *Constitution* that the latter barely beat her across the finish line. Summary:—

Boat.	Start.	Finish.	Elapsed.
<i>Reliance</i>	11.30.06	3.04.09	3-33.41
<i>Columbia</i>	11.32.00	3.10.11	3-38.11
<i>Constitution</i>	11.30.37	3.09.16	3-38.39

PASSENGERS.

ARRIVED.

Per British steamer *Gadic*, from Hongkong via ports:—Mr. H. F. Edmiston, Mr. E. H. Hunter, Mr. H. Llewellyn, Mr. Agar Wynn, Mrs. Wynn, Capt. F. C. Everett, Mr. C. R. Tozer, Rt. Rev. S. C. Partridge, Miss Christensen, and Miss H. Christensen, in cabin. For Honolulu:—Mr. Lee Chan Yau, in cabin. For San Francisco:—Dr. J. E. Stubbs, Mrs. Stubbs, and Dr. R. Pick, in cabin.

Per Japanese steamer *Kobe Maru*, from Shanghai via ports:—Admiral S. Ito, Capt. Kamizumi, Mr. P. Clarke, Miss Talbot, Miss Turner, Mr. C. C. Bojesen, Miss Clayton, Mr. W. Cowan, Mr. E. Brandel, Mrs. C. Davis, Miss Scruton, Miss J. Walker, Mr. C. Wenger, Mr. Kushibiki, Dr. H. Ten Kate, Mr. Penney, Mr. Yamakawa, Mr. A. K. Morris, Capt. J. T. Harrison, in cabin; 13 Japanese, and 4 Chinese, in second class; 52, in steerage.

Per German steamer *Kiautschou*, from Hamburg via ports:—Mr. and Mrs. R. Schwanke, Mr. and Mrs. R. H. Campbell, Mrs. Schellbass, Mrs. A. Becker, Mrs. and Miss G. Harling, Postmaster W. Puche, Mr. and Mrs. G. Daniels, Mrs. H. S. Helmer, Mr. F. D. Browne, Mr. C. E. H. Meeths, Mr. Hubner, Mr. Kunz, Mr. O. Yukins, Mr. E. A. Evers, Mr. G. Erich, Mr. J. D. McKay, Mr. E. C. Millor, Mrs. W. G. Ham, Mr. C. F. Benrath, Miss Scheppelmann, Mr. Frinscher, Mr. H. Willner and Mrs. Josef Vernoni in cabin.

Per Japanese steamer *Nippon Maru*, from San Francisco via Honolulu:—Mr. J. Shinobu, Mrs. S. C. Partridge, Mr. C. Aoki, Dr. H. Salmon and wife, Mr. S. C. Evans, Jr., Mrs. S. C. Evans and son, and Mrs. L. A. Seaton, in cabin. For Shanghai:—Miss L. N. Jones, Miss Frances West, Mrs. C. J. King, and Miss M. Prentiss, in cabin. For Hongkong:—Mr. B. E. Lear, Mr. C. A. McDonough, Mrs. C. H. Smith, Mrs. J. Lesser, Mrs. P. C. H. Parker, Mr. J. H. Burwell, Mrs. J. S. Van Buren and maid, Mrs. L. E. Ross, Master Wm. Kincaid, Master Percy Kincaid, Master Geo. Kincaid, Miss Bessie Kincaid, Miss M. L. Hughes, Miss May Duncan, Mrs. Fred. O'Brien, Mr. S. P. Walker, Miss F. McGee, Mrs. C. H. Patterson, Mr. C. H. Pearson, Mr. J. W. Cheesborough, Rev. W. N. Wong, Mrs. W. N. Fong and infant, Mr. C. C. Brunner, Mr. T. H. S. Stewart, Mr. H. L. Stevens and wife, Miss K. A. Egan, Miss C. W. Park, and Mr. Fremont Morse, in cabin.

Per Japanese steamer *Kumano Maru*, from Australia via ports:—Prince S. Ichijo, Princesses T. Ichijo, Miss T. Shijo, Miss Ninde, Miss Ninde, Mr. W. C. Norris, Mr. and Mrs. Chas. Fairbairn, Mr. T. F. Lincoln, Miss Robinson, Mr. Pearce, Mr. Deveson, Mr. and Mrs. Newman, Mr. and Mrs. Tose Silvestre

and daughter, Miss Godard, Mrs. D. Nicheant, Mr. Grant, Dr. W. Macleod, Mr. Y. Funawatar, Mr. Sydney F. Pate, Mr. J. H. Pope, Miss Smith, Mrs. Honey Field, Mr. W. C. Keim, Mr. P. R. Scott, Mr. H. Smith, Mr. G. Carpentier, Mrs. S. Kaneko, Mr. A. H. Dare, Miss Benyusuf, and Mr. N. Fujishima, in cabin; Mr. A. Perez, Mr. Antoni Constantino, Miss Kobbe, Mr. P. Labayan, Mr. T. Furuya, Mr. Do Sung, Mr. G. Awaji, Mr. M. Awaji, and Mr. Kewalan Lhemchand, in second class; 22 Japanese, 1 Filipino, and 1 Chinese, in steerage.

DEPARTED.

Per British steamer *Empress of China*, from Vancouver, B.C.—Mrs. Biddlecombe, Miss Biddlecombe, Lieut. H. Bowie, U.S.A., Mr. H. J. Bradley, Miss Chomondeley, Mr. Geo. Clark, Mrs. Geo. Clark, Mr. C. N. Crosse, Mr. Martin Eagan, Major E. C. Eicke, Madame von Fischer, Judge W. W. Foster, Mr. C. S. Fowler, Mrs. C. S. Fowler, Major G. A. Gardenhire, Mr. H. K. Hemans, Mr. J. L. Hess, Baron H. Iwasaki, Sub-Lieut. C. E. Kennedy-Purvis, R.N., Mrs. F. J. Koester, Lieut. L. B. Kramer, Miss H. Lewis, Com. B. Miller, R.N., Mr. S. Mogi, Mrs. S. Mogi, Mr. C. S. Moody, Mr. R. Morris, Mrs. R. Morris, Mr. H. Oishi, Sub-Lieut. J. F. C. Patterson, R.N., Miss Russell, Master A. Russell, Mr. D. C. Rutherford, Hon. Robt. Shewan, Mr. Hy. Southall, Mrs. Hy. Southall, Miss K. B. Stayner, Gen. S. S. Sumner, U.S.A., and servant, Mrs. S. S. Sumner, Sub-Lieut. H. B. Taylor, R.N., Major E. T. Tudor, R.E., Mrs. E. T. Tudor, Miss Underwood, and Mr. K. Yoshitomi, in cabin.

Per British steamer *Gaelic*, for San Francisco via Honolulu.—Mrs. C. W. Case Deering, Mr. J. Katsuyoshi, Mr. O. Le Grand, Mr. Victor Marsh, Dr. R. Pick, Dr. J. E. Stubbs, Mrs. J. E. Stubbs, Mr. W. G. Walker, Mrs. W. G. Walker and Mr. Lee Chang Yau in cabin.

Per Japanese steamer *Nippon Maru*, for Hongkong via ports.—Miss Alden, Mr. G. G. Brunner, Mr. J. H. Burwell, Mr. J. W. Cheesborough, Mr. G. W. Colton, Miss May Duncan, Miss K. A. Egan, Rev. W. H. Fong, Mrs. W. H. Fong and infant, Mr. R. L. Gray, Mrs. P. H. Helmer and native servant, Mr. E. H. J. Hogg, Miss M. L. Hughes, Mrs. D. Jackson, Miss L. N. Jones, Miss Bessie Kincaid, Master Geo. Kincaid, Mr. Percy Kincaid, Mr. Wm. Kincaid, Mrs. C. J. King, Mr. B. E. Lear, Mrs. J. Lesser, Mr. A. Madalla, Mr. W. Madler, Mr. C. A. McDonough, Miss F. McGee, Mr. Fremont Morse, Mrs. E. O'Brien, Miss C. W. Park, Mrs. B. C. H. Parker, Mrs. G. H. Patterson, Mr. C. H. Pearson, Miss M. Prentiss, Mr. H. R. Riehm, Mrs. L. E. Ross, Mr. C. Shiba, Mrs. C. H. Smith, Mr. F. Stichopoff, Mr. H. L. Stevens, Mrs. H. L. Stevens, Mr. T. H. Stewart, Dr. P. Sys, Mrs. J. C. Van Buren and maid, Mr. S. P. Walker, Dr. B. F. Weir, Mrs. B. F. Weir, and Miss Frances West, in cabin.

Per Japanese steamer *Yamaguchi Maru*, for Shanghai via ports.—Mr. and Mrs. Clegg, Mr. T. Shidachi, Mr. F. J. Morse, Mr. G. Arakawa, and Mr. C. J. Bojesen, in cabin; Mr. G. T. Cho, Mr. S. Mizushima, Mr. T. Kagekuni, Mr. and Mrs. M. Nakada, Mr. Y. Shigemori, Mr. K. S. Woo, Mr. K. C. Koh, Mr. K. K. Baw, and Mr. John Westwood, in second class; 41, in steerage.

REPORTS.

The Boston Tow Boat Co.'s steamer *Lyra* reports:—Left Seattle July 26th. Experienced to Lat. 51° 24' N. Long. 139° 42' W., moderate various winds, head sea. From there to Lat. 51° 40' N. Long. 167° 03' W., strong westerly winds and heavy head sea, rain and thick fog. Then to the 180° meridian encountered moderate gale from the S.W. and heavy head sea, miserable fog and rainy weather. To Lat. 45° 47' N. Long. 161° 50' E., S.S.E. winds and heavy cross sea, thick weather. Thence to port N.W. and W. winds, head sea and cloudy, later part fine clear weather.

LATEST COMMERCIAL.

IMPORTS.

The market is still inactive but the favourable weather gives promise of an abnormally large rice crop and a revival of demand for Cotton generally. There is practically nothing doing in shirtings. With a continuance of the dry weather clearances will probably be brisk next month.

COTTON PIECE GOODS.

White Shirting—{ 40 yds. 36 in. } ... 0.09 to 0.1
 { 50 yds. 36 in. } ... 0.09 to 0.1

RAW COTTONS.

American Middling ... 31
 Indian Broach ... Nominal. 26
 Chinese ... 23

METALS.

A better feeling in this market, and a fair volume of business has been passing.

Round and square ½ inch and upward ... 4.00 to 4.30
 Iron Plates, assorted ... 4.30 to 4.50
 Sheet Iron ... 4.50 to 6.80

Galvanised iron sheets ... 10.10 to 11.10
 Wire Nails, assorted ... 5.30 to 5.90
 Tin Plates, per box ... 6.50 to 7.40

Pig Iron, No. 3 ... 2.00 to 2.50
 Hoop Iron (¾ to 1½ inch) ... 5.00 to 5.50

KEROSENE.

The market is strong.

American ... \$2.96
 Russian ... 2.80
 Langkat ... 2.60

SUGAR.

The market continues steady for Hongkong Refined and a small business has been done at advancing rates.

Brown Takao ... 5.90 to 6.25
 Brown Manila ... 5.80 to 6.80
 Brown Daitong ... 4.90 to 6.20

Brown Canton ... 5.50 to 7.50
 White Java and Penang ... 7.00 to 8.10
 White Refined ... 8.40 to 11.30

INDIGO.

The market is improving.

Java, Medium to best ... 270.00 to 320.00
 Calcutta, Medium to best ... 180.00 to 290.00
 Madras (Kupah), Medium to best ... 135.00 to 165.00

Madras (Dry Leaf), Medium to best ... 100.00 to 140.00

EXPORTS.

RAW SILK.

Buying has continued on a large scale and prices for some kinds have been again advanced, but the news from consuming markets still remains unsatisfactory, prices there being below ours. This does not seem to matter to workers in this market. Japanese holders are specially strong and insist on full prices for everything they sell.

Filatures—Extra Best, Coarse ... 1,090 to 1,100
 Filatures—Extra, Fine ... 1,070 to 1,075
 Filatures—Extra, Coarse ... 1,000 to 1,110

Filatures—No. 1, Fine ... 1,010 to 1,030
 Filatures—No. 1, Coarse ... 1,080 to 1,090
 Filatures—No. 1½, Fine ... 1,000 to 1,010

Filatures—No. 1½, Coarse ... 1,040 to 1,050
 Filatures—No. 2, Fine ... 1,040 to 1,050

QUOTATIONS.

Filatures—No. 2, Coarse ... 1,030 to 1,035
 Common—Coarse ... 1,010 to 1,015
 Re-reels—Extra ... 990 to 1,000
 Re-reels—No. 1 ... 960 to 970
 Re-reels—No. 1½ ... 940 to 950

Re-reels—No. 2 ... 1,020 to 1,030
 Re-reels—No. 3 ... 990 to 1,000
 Kakedas—Extra ... 970 to 980
 Kakedas—No. 1 ... 940 to 945
 Kakedas—No. 2 ... 910 to 915

WASTE SILK.

There are now fairly large supplies of all kinds in the market but holders are very strong, and do not care to sell unless they get "top notch" on every occasion. Some business is doing each day, but the buying is far from general at these high prices.

Noshi—Filatures, Best ... 190 to 200
 Noshi—Filatures, Good ... 170 to 180
 Noshi—Oshiu, Best ... 200 to 205
 Noshi—Oshiu, Good ... 190 to 195

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 29TH, 1903.

DEATH.

At Nagasaki, on the 18th inst., HUGO WORBS, after a lingering illness, aged 37 years.

MARRIAGE.

On the 24th of June, 1903, at Lyon (France), Monsieur REGIS LACROIX to Mademoiselle CHARLOTTE RICHARD.

SUMMARY OF NEWS.

A CASE of cholera was reported in Tokyo on Aug. 23rd.

MESSRS. HARLAND and Wolff have launched the 10,000-tonner *Macedonia* for the P. & O. Co.

OWING to the heavy rains, traffic on the southern branch lines of the O-u railway was suspended on August 20th.

GAS exploded on August 24th at the Fujita Coal Mine, Fukuoka Prefecture. One person sustained injury.

HATSU (54) wife a farmer named C. Sakamoto living at the village of Kusahana, near Tokyo, was killed by lightning on the evening of August

19th while a thunderstorm prevailed over the district.

On the night of Aug. 19th, a hail storm raged in the Sosa district, Chiba prefecture, with the result that the crops were damaged.

THE amalgamation of the 43rd Bank and the Shogyo Bank, Wakayama, was decided on by the shareholders of both at a meeting on Aug. 20th.

THE Nishinari Railway Company, Osaka, held a general meeting on Aug. 25th, when it was decided to issue debentures to the amount of yen 35,000.

THE Nara Prefectural Assembly intends to spend yen 330,000 in repairing damage sustained by bridges, river banks, etc., by the inundations last month.

EARLY on the morning of Aug. 26th, three convicts escaped from Yokosuka jail, having broken through a water-closet. One was re-arrested the same day.

A TELEGRAM under date of Aug. 22nd from Shimonoseki says rinderpest prevails in the district of Kikyū, and it is feared that the epidemic is spreading.

HAIL prevailed on Aug. 19th and 20th at Urawa and the surrounding districts in Saitama prefecture, and some damage seems to have been caused to the crops.

FOUR cars of a train on the Sobu Railway were blown off the rails by a strong gale on the night of Aug. 19th, while running between Matsuo and Yoshida. No person was injured.

TOKYO papers state that as the result of the proposed administrative reforms, two out of the six prefectural offices in Kyushu will be abolished and two in Shikoku will be closed.

THE Korean refugee Pak Yong-ho arrived at Oiso on August 24th and paid a visit to another refugee, Liu, at the Kakuhon-ro, after which he left for Kobe by the evening train.

MR. H. E. POLLOCK, K. C., was elected to the Legislative Council, Hongkong, on the 12th, as representative of the Chamber of Commerce, by 63 votes against 54 given for Mr. E. A. Hewett.

THE construction of the Inyo railway between Mikuriya and Yatsushashi being completed, a trial run takes place to-day (August 25th). It will be opened to the public on the 27th or 28th.

ILL-FEELING between the Japanese and Filipinos in Shanghai is running very high just now, and the police fear, says the *N.-C. Daily News*, that they will come to blows, or rather knives, in Hongkew shortly.

BARON KOMURA, Minister for Foreign Affairs, despatched on August 24th a telegram, expressive of the profound sympathy of the Japanese Government with the British Government on the death of Lord Salisbury.

THE Tientsin Customs are imposing 2 per cent. duty in addition to the original duty (of 5 per cent.) to raise money needed for the conservation works on the Pei-ho river. They may raise the additional duty to 3 per cent.

G. YAMAZAKI, ex-headman of the village of Nagara, Chiba Prefecture who embezzled yen 800 belonging to the office in 1902 while he was in office and then absconded, was arrested on August 20th in Tokyo.

As successor to the late Marquis C. de Nembrini Gonzaga, a Swiss gentleman who is now at

Haiphong, will be appointed interpreter at the Kanagawa Kencho. He is expected to arrive at Yokohama in the beginning of October.

At the artillery barracks in the compound of the 11th Division, Marugame, a quantity of ammunition exploded on Aug. 26th while soldiers were working with it. Nine were killed on the spot. The cause has not yet been ascertained.

It is stated by the *Yorokku* that thirteen cases of dysentery appeared on Aug. 26th, in the dormitory of the Osaka Cotton Spinning Company. The building, in which over two hundred workmen are living, was isolated by the police authorities.

THE *Asahi* states that the Teikoku and Kaigai emigrant companies have been asked by the Manila Government to provide 500 Japanese workmen each. The companies recently applied to the authorities for passports to the number specified.

A POSTMAN named K. Tsuda (38), of the Shitaya Post Office, Tokyo, was arrested on Aug. 20th on a charge of having stolen money orders and cheques enclosed in letters. It is alleged that the man broke open many letters and then burned them.

AUGUST 31st being the birthday of the Crown Prince he will receive congratulations from princes of the blood, the peerage, and high officials at the villa of Viscount Mishima, at Shiobara, where his Highness is now staying. On Sept. 1st or 2nd he will proceed to Nikko.

A MAN armed with a large knife entered, early in the morning of August 23rd, the dwelling of a merchant named S. Asano, Kogane-cho, Yokohama, and inflicted severe injury on the occupant. The intruder escaped with a small amount of money.

OWING to serious fluctuation in price, the rice exchange at Fukuoka was closed temporarily on Aug. 26th. The Kyoto Exchange gave notice on the same day that it would suspend business till the 29th. The Osaka exchange closed also temporarily on the evening of the 26th.

A TELEGRAM from Awomori states that dysentery prevails at Sannohe where distress from famine existed. Over twenty cases appeared on Aug. 26th at the village of Tako. It is feared that the epidemic will spread. A primary school was closed in consequence of the appearance of the disease.

ACCORDING to a telegram from Formosa heavy storms have occurred since the 18th throughout the island. In the southern parts, inundations took place causing severe damage to fields and buildings. Telegraphic communication between Tainan, Takao, etc. was suspended.

A PASSENGER named Y. Araki (22) of the steamer *Miike Maru* attempted to commit suicide by jumping into the sea on the morning of Aug. 20th as the ship was passing the light-ship from Kobe. Two of the light-ship's crew immediately rescued him and removed him to a boat of the Quarantine station for medical treatment.

TELEGRAPHIC news was received at the Shimonoseki Marine Office on Aug. 23rd, that the Osaka Shosen Kaisha's steamer *Taioku Maru*, which was bound from Kobe to Ujina, collided at 9.40 p.m. on Aug. 20th, with a sailing vessel (60.89 gross tons) off Mutsujima, Bitchu province. The latter immediately sank. The sailing ship was on its way to Kobe from Imari with 81 tons of coal. The *Asahi* states that it is owned in the village of Shinchī, Chiba district, Aichi Prefecture.

KOREA.

Monday, August 24.

There are somewhat conflicting accounts about the Yong Am-pho land-lease, but the gist of the matter appears to be that the agreement was declared void in consequence of the clause which provides that foreigners violating the law within the limits of the new settlement should be handed over to the Russian Authorities. M. Pavlov, however, is said to have substituted a new form of lease, from which the objectionable clause is expunged, but by way of compensation a much larger area of land is leased. The Korean Foreign Office is represented as having shown reluctance to accept this change, as the grant of land would thus assume formidable dimensions, but it is alleged that secret instructions have been received from the Household Department to sign the compact without further amendment. The *Fiji's* correspondent says that in answer to Mr. Hayashi's protest the Foreign Office denied that the formation of a Russian settlement was contemplated, and suggested that the Japanese Minister gave himself needless concern. How far the details wired from Seoul are correct we do not know, but it seems tolerably certain that the matter is being reconsidered and that the lease is not yet an accomplished fact.

The *Nichi Nichi Shinbun* writes in a large-minded strain about this matter. It seems to regard the whole matter as quite trivial. Russia, says our contemporary, is wrong alike in her choice of methods and in her choice of time. Not infrequently she errs in that manner, and the result is that she not only fails of achievement but even mars, on occasion, successes already obtained. For a long time she tried persistently to secure a port in southern Korea. Masampho, Ching-hai Bay and other places were the scene of her efforts. But she failed in every case and now, *faute de mieux*, she has transferred her energy to the north. The truth is that she exceeds as much in action and intrigue as Japan exceeds in indifference. Nevertheless what the past should teach Japan is that times and methods are all important, and that she need not be apprehensive in the face of enterprises which err against both. Neither need she trouble herself seriously about petty matters like the Yong Am-pho lease. There are many great undertakings that invite her attention in Korea; undertakings which do not involve any dispute with foreign Powers or clash with any foreign interests.

It strikes us on reading the *Nichi Nichi's* article that an unfriendly critic might interpret it as recommending a continuance of the very policy to which it attributes some of Japan's failures. Nonchalance and indifference are recognised by our contemporary as faults of this empire's foreign policy, and in the same breath Japan is virtually recommended to place her trust in the guardianship of some providence of propitiation, some directing force which condemns to unsuccess any error against times and convenience. Our own reading of history is that there is another power which works with much more unfailing certainty; namely, the power of imperial expansion. Here and there at scattered points in her immense area of effort Russia may occasionally have been checked or even defeated. But on the whole she has swept onward and is sweeping onward irresistibly, and if the foundations of the huge edifice of empire erected by her could be laid bare, they would be found to be precisely such apparently petty essays as this Yalu-Valley business.

On the 22nd instant the Directors of the Seoul-Fusan Railway announced the issue of four million *yen* worth of debentures. We take it that the announcement is purely a formality, for the public is allowed only 3 days to send in applications, namely from the 22nd to the 25th. The fact is, we presume, that arrangements have already been made for the taking up of these debentures by Japanese banks. Still the details are not without interest. The dimensions of the debentures are a thousand *yen*, five thousand *yen*, and ten thousand *yen*, and they are not registered, being thus purchasable by foreigners as well as Japanese. The rate of interest is 6 per cent., payable semi-annually at the close of June and December. The selling price is 97 per 100 *yen* of face value, and the debentures are to be paid off by October, 1905. Applications must be made by the 25th of this month and the amount must be paid up by the 29th. We may add that the capital of the Company is 25,000,000 *yen*, and that 4,356,840 *yen* has been paid up.

Tuesday, August 25.

Rumours begin to be conflicting about the Yong Am-pho affair. On the 23rd instant a statement was published in Tokyo to the effect that the Russian Representative proposed a different form of agreement and that it had been accepted by Korea and duly signed on the 21st instant. This intelligence was sent by the *Kokumin's* correspondent, who supplemented it by saying that the new agreement consisted of seven articles not differing in any material respect from those of which an epitome had previously been wired. Now, however, the *Asahi* has a cablegram saying that M. Pavlov has abandoned his idea of concluding any formal agreement, and that he will be content to rely on the timber-felling concession of 1896, according to the terms of which he claims that the concessionaires have the right of settling temporarily at any place convenient to the prosecution of their enterprise, nothing being necessary by way of supplement to the concession except that the exact position of the settlement and its extent should be settled in consultation with the Korean Government.

The *Asahi Shinbun* interprets this change of method to mean, not that the Russian Representative is disposed to abate anything of his pretensions, but that his idea is to retain a free hand for aggressions on a wider scale.

In the meanwhile the Korean Government seems disposed to placate the conflicting interests by opening Wiju with one hand and granting Russia's demands with the other. It is justly pointed out by the *Asahi* that these two acts can not be weighed in the same scales. The opening of Wiju is a step intended to benefit all nations equally, or, at any rate, in proportion as they are prepared to take advantage of it. Russia shares the benefit on the same footing with all the rest; on a specially wide footing, indeed, since her recent proceedings show that she has a particular desire to obtain access to the Yalu Valley. But the Yong Am-pho concession being a marked discrimination in Russia's favour, such a concession can not be counter-balanced for an instant by the opening of Wiju, and the *Asahi* insists that the difference should be pressed insistently on Korea's attention.

Wednesday, August 26.

Accounts from Seoul indicate that there is hesitation about signing the Yong Am-pho lease. At present the indications are

that a commission will be sent to the place to prepare a report before any final step is taken. Meanwhile Japan and England have been pressing for the opening of Wiju, to which application they have added a demand for a good place of anchorage near the mouth of the river. It happens that Yong Am-pho is the only place answering to such a description, and consequently a settlement is likely to be established there. Apart from the land which is the subject of the Russian lease—now said to be two hundred thousand square metres, not *tsubo*, which means less than one-fourth of the original estimate—there is an area of a million square metres excellently suited for settlement purposes. On such lines, therefore, the complication appears not unlikely to be settled.

But the accounts agree that Japan is strongly urging Korea to refuse a special lease of land to Russian subjects, and is threatening to prefer, in the alternative, a demand which Korea will find inconvenient. Doubtless in this matter the Japanese Government is influenced by an objection to the mode of Russian action. If Russia wanted a settlement at Yong Am-pho the usual and legitimate route was open to her, and had she trodden it, there is no reason to suppose that she would have encountered any pragmatical opposition on Japan's part. But if her lease be now granted, the Korean authorities will be giving *post-facto* approval to an act which amounted virtually to a seizure of territory, and it is obvious that one such precedent thus established would be fatal to the security of the situation. It appears to us that Russia has made an unquestionable mistake in this matter. Whether she allowed circumstances to over-rule her, or whether, as many Japanese seem to suppose, she set out with the idea of establishing a counter-irritant in the Yalu Valley and then, like all able generals, converted her feat into a true attack so soon as opportunity offered, we do not know. But surely she should have understood that whatever licence of aggression may be possible in Manchuria, Korea must be kept out of the arena. However, it is now said that there are indications of a placable mood on M. Pavlov's side, which is what might have been expected, for most certainly Russia has no idea of drawing the sword of a flagrant aggressor.

There is to be another essay to open a line of steamers from Chemulpo to Wiju. This time, however, the venture will be in the hands of the Nippon Yusen Kaisha, so that nothing like hasty abandonment is likely to occur. It can scarcely be expected that the service will pay from the outset, but it is one of those enterprises more or less essential to the development and conservation of Japan's interests in Korea, and the Directors of the big steam-ship company show a spirit of tactful patriotism when they deliberately face the pecuniary sacrifice that must be made at first. The recently unsuccessful effort to open a line to Wiju was made by Mr. Hori, and it could scarcely have been expected that an individual would persevere in such an undertaking. On the other hand, the establishment of a line by the Nippon Yusen Kaisha presupposes the opening of Wiju, which may now be regarded, perhaps, as an accomplished fact. It is stated that the service will commence from September 1st, and that the maiden trip will be made by the steamer *Wakauoura Maru*.

Thursday, August 27.

It is alleged (*Nichi Nichi's* correspondent) that the new convention, drafted by the

Russian Minister with regard to Yong Am-pho, provides that at the termination of the period of the lease, the land shall not be alienated to any other Power. But the Korean Foreign Office insists that no such provision shall be inserted, and that Russia shall simply pledge herself to restore the land unconditionally at the end of 20 years.

If it be true that Russia asks for such a stipulation, she plainly displays the political character of the concession, which thus becomes effectually removed from the sphere of a mere timber-felling enterprise.

The *Jiji Shimpō's* correspondent says that Mr. Hayashi, the Japanese Representative, has intimated to the Korean Foreign Office that as he has matters of grave international importance to submit for the Emperor's consideration, he desires an audience as soon as possible.

The duties of a foreign representative in Seoul are not easy to perform. He has to deal with the Sovereign's ministers and with the Sovereign himself, and sometimes the parts of this dual system take refuge behind each other, sometimes they are in overt disagreement.

The semi-annual meeting of the Seoul-Fusan Railway Company was held on the 25th instant, Baron Shibusawa in the chair. The number of shareholders represented directly or by proxy aggregated 14,424, and the number of shares 220,942. Baron Shibusawa announced that the arrangements for the transfer of the Seoul-Chemulpo Railway had not yet been entirely concluded, there being some points to which the Government took exception. He assured the meeting, however, that this was a matter of time only. The Company might congratulate itself on the terms of the purchase, for since these had been arranged, the traffic receipts of the line had shown marked improvement. Alluding to the project of a foreign loan guaranteed by the Government, the Baron said that the Diet had been prevented from approaching the question last session, but he had little doubt that it would receive favourable consideration next session. Meanwhile the Company had issued debentures independently of any Government guarantee, and the transaction had matured successfully. The Baron's remarks were confined to these subjects.

We may add here that the principal shareholders of the Company now are as follow: The Imperial Estates Bureau (Japanese) 3,000 shares; the Imperial Estates Bureau (Korean) 2,000; Baron Iwasaki (Hisaya) 1,000; Mr. Okura Kihachiro, 1,000; Baron Mitsui (Takayasu) 1,000; Baron Shibusawa, 1,000; Mr. Owada (Soshichi) 1,000; the Korean Crown Prince 1,000; and Prince Yong 500.

The interest of this list is that it shows the Japanese Imperial Family to be interested to the extent of 3,000 shares and the Korean Imperial Family to the extent of 3,500. In fact the enterprise is essentially Japanese-Korean.

In the *Jiji Shimpō's* Seoul correspondence we read that Li Yong-ik, having recovered from the illness which kept him for several weeks in hospital, where he became the target of a bomb, has resumed his active agitation for the establishment of a central bank. The probability is that his project will soon become an accomplished fact, and that Chhim Sang-hun, former Minister of Finance, will be appointed president of the bank, Li himself becoming vice-president.

Friday, Aug. 28.

It is stated by the *Jiji Shimpō's* Seoul correspondent that the draft proposals put forward by the Russian Representative with regard to Yong Am-pho are:—

- 1.—That both sides shall send commissioners to Yong Am-pho to survey the ground and erect landmarks preparatory to the granting of a lease.
- 2.—That the term of the lease shall be twenty years from the date of the timber-felling concession, within which time Korea shall pledge herself not to sell the land to any foreigners, or, if she does wish to sell it, that she will give Russia the refusal.
- 3.—That if in connexion with the extension of their operations the Russians find the Settlement too small, they shall be entitled to ask for an extension.

With reference to this Mr. Hayashi, the Japanese Representative in Seoul, is said to have informed the Korean Government that if these proposals were accepted Japan should consider that her commercial treaty with Korea was violated, that the relations between the two empires were impaired, that their amity was disturbed, and should further conclude that the whole of Korea was opened *de facto* to foreign trade and travel, adopting whatever measures might seem advisable in the sequel of that conclusion. It was for the purpose of emphasizing this strong protest that Mr. Hayashi sought an audience with the Emperor on the 25th instant.

The *Nichi Nichi Shimbun* publishes virtually the same news, but represents Mr. Hayashi's language as somewhat less explicit, inasmuch as he does not base his declaration on the acceptance of M. Pavlov's proposals by Korea but on the contingency of Korea granting conditions not properly included within the limits of the timber-felling concession.

In the *Kokumin's* correspondence it is stated that M. Pavlov visited the Korean Foreign Minister on the 25th instant and pressed for the signature of the convention. He obtained a promise that it should be signed on the 26th, and the correspondent states that in view of the attitude of the Court the promise would in all probability be carried out. The new agreement does not contain the original clause relating to jurisdiction, but it contains instead two new clauses, the first stipulating that should the Russian concessionaries find it convenient, they may lease the land to other nationals within the term of 20 years, and the second providing that if necessity arises the area of the settlement shall be extended. M. Pavlov, according to this correspondent, is said to have insisted that Russia's claims in the matter of this timber-felling enterprise, fell far short of the privileges already acquired by Japanese subjects in the line of mining and railway-building. The correspondent further states that the despatch of Mr. Cho to Yong Am-pho is merely for the purpose of inspecting and reporting on the position and area of the new settlement, and has nothing to do with fixing its limits.

It will be observed that there is some conflict between the various accounts. Two facts, however, emerge clearly enough. One is that the lease has not yet been officially signed—or, at least, had not been signed up to the 25th instant—; the other that Japan has protested in very strong terms against its signature. Evidently the view taken by the Japanese Government is that if arbitrary acquisitions of Korean territory by aliens are to be regarded as legitimately acquired interests and to receive *post-facto* approval from the Korean Government, then a situation exists inconsistent with any theory of Korea being a closed country, and Japan will proceed in accordance with this radical

change in the situation. That, indeed, is incontrovertible. If anybody that is so disposed may purchase or lease territory from Korean subjects in any part of Korea, and if such transaction is to be subsequently recognised as binding by Korean officialdom, then of course Korea is open. Any alien can go where he pleases and settle where his convenience indicates. Korea will be somewhat shocked, we suspect, to find herself suddenly confronted with the practical conclusion of her illogical and suicidal procedure, but all lovers of peace would frankly welcome any incident that deprived Korea of her present potentialities to do mischief.

BRAIN WEIGHT.

At a recent meeting of the Anthropological Society of Washington, U.S., Dr. Spitzka read an interesting paper on the cerebral characteristics of distinguished men, with special reference to the late Major J. W. Powell. Dr. Spitzka tabulated the weights of 97 brains of men eminent in art, science, and the professions. As compared with the series of ordinary brains collected by Bischoff and Marchand, they were, on the whole, decidedly heavier. A further analysis showed that men of the higher intellectual occupations, for example, the mathematical sciences, involving the most complex mechanisms of the mind, men of original research, and strong characters like Ben Butler or Daniel Webster, possess the heaviest brains. The increase of brain weight by growth is related to increase of cranial capacity, along with development of brachycephaly, or broad-headedness. As for the surface of the brain, that of an intellectual man is likely to exhibit a greater complexity in the convolutions. The differences, too, in the extent of some areas of the surface, for instance, the associative areas, is plain and measurable. Particularly important in this respect is the "insula" (Island of Reil), probably the purest association centre in the brain. It usually shows a superior development in men whose powers of speech are of a high order. Major Powell's brain weighed 1,488 grams, or above the average of the 97 brains of eminent men. It was chiefly distinguished for a redundancy in the "subparietal" association area on the right side, and is perhaps related to his keen observation and power of generalising his observations.

A physician of Prague, Dr. Matiegka, who has spent a long time in the preparation of a work on the weight of the brain in relation to different extrinsic and intrinsic conditions, gives many interesting facts in reference to this subject, in a book which is based on the records of the anatomical college of Prague. The heaviest brain which Dr. Matiegka observed was that of a young man of twenty-two years, the brain weighing 1820 grams. The brain of the heaviest woman, on the other hand, reached 1500 grams. An interesting table is that which gives the average weight of the brain with reference to the character of work pursued, this table being the result of 235 brain weights:

	NUMBER OF CASES.	AVERAGE WEIGHT GRAMS.
Day labourer	14	1410.0
Manual workman	34	1433.0
Porters, guards, etc.	14	1435.7
Mechanics	123	1449.6
Musicians, business men, etc...	28	1468.5
Physicians and persons whose work indicated university training	22	1500.0

CHINA.

Saturday, August 22.

The *Nichi Nichi's* Peking correspondent says that China has unquestionably weakened. Originally her statesmen resolved to take a strong line. They would make no concessions to Russia, and if the Governor-General of Manchuria conceded anything beyond the legitimate range of his authority, he should be repudiated and punished. But the subsequent course of events showed China that she could not rely on any foreign Power's assistance in carrying out this strong policy, and she has therefore decided to conciliate Russia by recognising the validity of any vested interests acquired by her in Manchuria. The Tokyo journal's correspondent thinks it beyond question that a secret understanding exists in that sense between the statesmen of Peking and St. Petersburg. After Russia has evacuated Manchuria, Mukden and Ta-tung-kou will be opened.

The *Kokumin Shimbun* takes a very emphatic view of the office conferred on Admiral Alexieff. No inference, it declares, can be drawn from the appointment except that Russia has resolved to occupy Manchuria permanently, and that she has assured herself of China's complaisance, or at any rate, of her impotence to resist. Is Russia determined, asks our contemporary, to persist in openly pursuing this policy of aggression and arbitrariness in the face of the whole world. If so, the responsibility of disturbing the peace of the East will rest upon her shoulders.

We can not take this view of Admiral Alexieff's appointment. Even supposing that Russia carries out her promise and evacuates Manchuria, there will remain to her the Liaotung Peninsula and the control of the districts in the immediate proximity of her railways. Surely it is not unnatural or extravagant that she should appoint a high official to discharge the difficult functions of government within these limits. Complications of various kinds will inevitably declare themselves in connexion with such a situation; a situation inconceivable in any other part of the world. For imagine a railway built by foreigners through a part of the Russian Empire, for example; imagine that the duty of policing and protecting the line devolved on its foreign owners, and imagine that its terminus was a strong strategical place in the Russian empire leased for a term of years to the foreigners, fortified by them and used as their naval basis. Is it conceivable that such conditions should be reconciled with any working theory of Russian sovereignty, or that their maintenance could fail to be marked by perpetual difficulties and complications? The fact is that Russia, quite apart from the question of evacuation, has obtained in Manchuria a position of potential mastery, and it is not for the purpose of consolidating or affirming that position that she has appointed Admiral Alexieff, but for the purpose of directing its development with a minimum of friction.

Monday, August 24.

The *Jiji Shimpō's* Peking correspondent says that M. Lessar is trying to persuade the Chinese Government that Japan has already concluded a secret convention with Russia, which will necessarily preclude the former from further interference in Manchurian affairs. Therefore, M. Lessar argues, it would be natural and prudent for China also to conclude an agreement with Russia irrespective of Japan.

If a tithe of the stories that reach us from

Peking be credible, the Chinese Foreign Office must be the most busy of all foreign offices in the world.

Tuesday, August 25.

A rumour is published that the Chinese statesmen, in their extremity, are debating the expediency of sending a special envoy to Russia for the purpose of explaining their country's difficulties and soliciting generous treatment in the matter of Manchuria—an appeal *ad misericordiam* in fact. The envoy would not bear that official character. He would be some great personage, despatched under pretence of ordinary travel.

Wednesday, August 26.

It is reported that the German line of telegraph in Shantung has been broken by Chinese rioters. Germany is the last Power in the world to adopt temporizing measures in such emergencies. Probably she will make this incident an excuse for the military guardianship of the railways she is constructing in Shantung. "And what for no?" as Meg Dorts used to say. The Kaiser has reasons, very good reasons from a German point of view, for establishing some *pieds-à-terre* for his subjects in distant lands, and if the Chinese play his game for him, that is their look-out.

Thursday, August 27.

Salaries are quite a secondary consideration in China. What is valuable is the opportunity attaching to a salaried position. Perhaps that consideration has something to do with a sweeping measure just reported as having taken place in Chili, namely, the docking of all official stipends by 50 per cent. in order to provide funds for restoring the city's gates which were destroyed in the Boxer rising. Still it is no small matter to have one's regular income suddenly cut down by half, and we may well suppose that the victims of this *corvée* are muttering curses against the foreign devils whose artillery wrought the havoc now involving such sacrifices.

From Shanghai comes to the *Jiji* a telegram saying that on the 18th instant, a German missionary, the Rev. A. Meyer, was attacked by a mob at Pehkiang in Kwangtung. He received several severe wounds and was robbed of all his clothing and money. His boatman and his wife's maid-servant were also roughly handled. The German Consul at Canton immediately proceeded to the place to make inquiries. It does not appear that Mr. Meyer is fatally injured.

Friday, Aug. 28.

France and Russia seem to have advocated a renewal of the embargo on the import of arms and material of war into the empire of China. The other Powers, however, have taken a different view, and the veto ceased to be effective from the 26th of this month. Russia's attitude in this matter was more or less enforced by circumstances. If she admitted that the embargo might be removed, she would have been constructively admitting that tranquillity has been completely restored in China, and that the continued presence of her own troops in Manchuria is unnecessary.

A telegram dated 4.41 p.m. on Aug. 26th from Shanghai was received by the *Jiji* stating that a Norwegian steamer, the *Skald*, carrying coal from Moji has been wrecked off Amherst Island, 65 miles distant from Shanghai.

THE CHINESE IN FORMOSA.

It is reported from Formosa that much trouble and inconvenience has been caused by the Government's re-inforcement of the regulations issued some years ago, which require that every person of Chinese nationality desiring to reside and pursue his calling in the island, must either take steps to be enrolled as a Japanese subject, or must obtain from the Japanese authorities on the mainland a passport for travel and residence. It should not be a great hardship to embrace one or other of these alternatives, but apparently Chinese of the lower orders either retain sufficient patriotism to prefer their own nationality or labour under some mistaken prejudices about Japanese rule, and, on the other hand, few of them are in a position to put up the sum of 7½ *yen* required to obtain a passport. Hence when the regulation was promulgated numerous evasions of its provisions took place, especially at Kelung, where hundreds of Chinese managed to escape official scrutiny, and to earn a livelihood by plying the trades of boatman, baggage-carrier, labourer, and so forth, having recourse to brigandage when legitimate business grew slack. It would seem that this element of the population has been found dangerous and troublesome, for we read in the *Hochi Shimbun* that the Authorities at Kelung lately carried out an investigation which resulted in the deporting of some 400 men to Amoy and Foochow. The scene on the occasion of their departure is said to have been well nigh shocking, all varieties of emotion being displayed from the fiercest anger to plaintive weeping. No doubt a great many harmless hard-working people suffered. One can not but pity those to whom such a description applies, nor is it possible to avoid thinking that ignorance rather than any deliberate intention of evading the law was responsible in numerous cases. The account says that this sudden reduction of the coolie population of Kelung has caused some inconvenience to the residents.

POLITICAL NOTES.

Another of the Seven Professors—Seven Solons, or Seven Sillies, the Japanese public seems uncertain which epithet to adopt—is publishing a long essay advocating an appeal to the sword for the purpose of keeping North China open to Japanese immigration and Japanese commerce. On the other hand Mr. Nakada, formerly Chief of the Political Bureau in the Foreign Office, and now engaged in the Tokyo Office of the Ashiwo Mine, speaks through the columns of the *Nippon* in favour of a peaceful solution. He contends that even if Japan obtained the victory in her first struggle with Russia, the problem would be far from solution and new complications of all kinds would have to be faced. These views are supplemented by those of an officer on the staff of the Fifth Division, who declares that the commissariat difficulties attending a campaign in Manchuria would be enormous. He speaks from experience, having served in the war of 1894-5, and his conviction is that Harbin would be the farthest point to which a Japanese army could reach, so cripplingly cumbrous would be its train of supplies. In truth that is a matter too often lost sight of by civilian essayists. It was possible for Tso to make his campaign in Kashgaria long enough to permit the planting and harvesting of crops to feed his

troops, but with Russia for opponent that kind of Fabian fighting would be farcical. The general public has never learned fully how immense were the difficulties experienced by the Japanese in their remarkable marches from end to end of Korea and then from east to west of Manchuria, to say nothing of their Liaotung and Mukden movements. The only thing to be said is that Russia's difficulties would be still greater. The question is, however, whether the difference would not be more than compensated by the discrepancy between the reserve resources of the two empires.

Lord Cranbourne, speaking recently in the House of Commons, said that while England was perfectly willing to come to an understanding with Russia, the difficulty was that no clear idea could be obtained as to what Russia wanted. Considering her form of government she ought to be perfectly informed about her own desires and intentions, but practical experience showed that the very opposite was the truth. The fact seems to be that those who direct Russia's career are divided into a peace party headed by the Tsar and an aggressively expansive party headed by the man at the front. The St. Petersburg party would not be in the least embarrassed, we suspect, to formulate a programme of agreement with England and Japan, but the problem of bringing the other party into line is not so easily solved. That appears to be the explanation of the delay in the negotiations now understood to be in progress between Japan and Russia. The latter is said to have twice asked for time to reflect, in view of the serious character of the questions involved. Hence an impression begins to prevail in Japan that St. Petersburg is paltering with the matter, while, on the other hand, it is justly remarked that the progress of events at the scene of action is not suspended pending the deliberations in the Russian capital, but that, on the contrary, every week sees some new addition to the list of "accomplished facts" or "acquired interests." However, the general sentiment is that a pacific exit will be found from all the complications since diplomacy has taken charge of the situation.

Friday, Aug. 28.

It is rumoured that the Cabinet has now come to a unanimous agreement about the financial question, and that the draft Budget for next year has been approved. The economies effected total 16 million yen, but as to their exact nature no clear intimation is published.

That important point having been disposed of, the Emperor will probably be advised, says the *Jimmin*, to allot the vacant or temporarily held portfolios, in the following manner, namely, that of Agriculture and Commerce to Mr. Oura Kanetake, now Chief of Police, and that of Communications to Mr. Komatsubara Eitaro, but as for the Department of Education, its fate being in the balance no allotment of its portfolio is probable.

We observe that the *Jiji Shimpō* raises its powerful voice in favour of abolishing the Department of Education. We need scarcely say that the *Jiji* does not found its argument on the question of finance. That is altogether a secondary consideration. The point made is that the Department has arrogated to itself the duty of directing the morals of the nation, and that its method of direction has frequently been most injurious to healthy mental development. Our readers need scarcely be reminded that this is an old ground of complaint with the

Jiji Shimpō, and that the leading journal's protests against the conservative and sometimes bigoted policy of the Department were as loud in the days of the great Fukuzawa's direction as they are now in the time of his able successor. Neither need we remind any one familiar with the events of the past twenty-five years in Japan that the *Mombushō* was once loudly charged with promoting a revival of Confucianism, and that the tenets which some of its officials had an opportunity of widely inculcating, were supposed to nourish an evil spirit of national exclusiveness. Nobody imagines that the record remains unbroken in that respect, but it is evidently the *Jiji Shimpō's* conviction that the Department represents a piece of official machinery endowed with mischievous potentialities, and not in a position to atone for the evil it might do on occasion by the good it does habitually. This is a large question, not to be treated in an off-hand manner.

THE ALLEGED RUSSIAN SPIES.

Mr. Kanematsu, who had the pleasure of being called "a Russian lap-dog," challenged Mr. Yamane, the employer of the term, to fight a duel, which would have been a silly kind of exit unless the challenger could have been sure of shooting his opponent. Duels were occasionally regarded as methods of reconciliation in old times; witness the cartel sent by Peveril of the Peak to Major Bridgenorth by the hand of Sir Jasper Cranbourne. Very likely Messrs. Kanematsu and Yamane would have become fast friends after an encounter in the ring, but Mr. Yamane, not being able to substantiate his charges, has withdrawn them. He has not, however, succeeded in allaying the uneasiness that his original declaration caused. Quite a little commotion has been created, which suggests that the Japanese have not absolute faith in the universality of their patriotism. There are, however, black sheep in every flock, and, for the rest, if Russia employs spies at this juncture, that is what most countries would do in her place. The Japanese also know something of the trade, though we have never heard of their employing foreigners for such a purpose.

This incident has had the effect of directing a larger share of public attention to the *Tai-ro Dosui-kai*. It held a meeting, which was very numerously attended, on the 20th instant. Various speeches were delivered. Mr. Takahashi vehemently attacked the idea of an exchange between Korea and Manchuria, and Mr. Shiba Shiro, after arguing that there could be no efficient defence without capacity for attack, expressed astonishment that the Japanese Government did not show a more resolute attitude in the Manchurian complication. The nation was unanimous, its armaments were complete and it possessed a powerful ally. Mr. Kusume Gen, one of the seceders from the *Seiyu-kai*, attacked Marquis Ito who had been in office at the time of the Liaotung surrender and whose spirit seemed to have been entirely broken by that incident. Mr. Oi Kentaro made a speech the burthen of which was that the time had come for appeal to the *ultima ratio*. There were various other speeches, but the points chiefly remarkable were the size of the meeting and the unanimity of sentiment apparently pervading it.

LORD SALISBURY IN THE JAPANESE PRESS.

Tokyo journals, with few exceptions, publish pictures of the late Lord Salisbury and accompany them with brief biographies or eulogistic articles. The likenesses are excellent. As for the articles, those of the *Jiji Shimpō*, the *Nichi Nichi Shimbun*, and the *Kokumin* are the most noteworthy. The *Jiji*, after strongly lauding the career of the late Marquis in the field of foreign politics, recalls the fact that it was he who put aside the objections of the multitude of lesser statesmen, and departing from England's traditional policy of isolation, formed an alliance with Japan, thus completing this country's introduction to the comity of European nations. Japan now mourns for him as for a true friend who understood her and trusted her. The *Kokumin Shimbun* considers that the peace amid which Lord Salisbury passed to his long rest is a conclusive proof of the political foresight that distinguished his career. Among the many statesmen of the 19th century, not one other has such a record of continuous success culminating in a death amid secure and satisfactory conditions. Bismarck, though a more renowned statesman than Salisbury, felt the autumn wind blow chill on his face in the closing years of his life, but the British Peer goes to his grave amid the undiminished acclaims of his countrymen and of the world, and Japan mourns for him as sincerely as Englishmen do. The *Nichi Nichi* observes that Lord Salisbury's mantle descends upon his own kindred and that he bequeathes his work to a number of most able men. All, without regard to party, will mourn for him with reverent regret, in which Japan joins most sincerely.

SHIMBASHI-SHINAGAWA ELECTRIC RAILWAY.

This line was opened on August 22nd. Cars were run over it by way of trial on the night of the 19th instant, but for some unexplained reason the opening to traffic was deferred until the 22nd. Some special dispensation seems to have been obtained from the Municipality in the matter of road-bed. Apparently not even a stone foundation has been put down. The electric-tram rails were laid between those of the electric cars on the old bed, so far as we can judge, and the consequence is that for some months past, the road-way, owing to the presence of three sets of rails and to the gross carelessness of the company as to repairing the adjacent spaces, has been almost impassable. Certainly the Japanese public is the most long-suffering in the world.

The Tokyo Street Railway also has completed the first section, distance of 1 mile 30 chains, from Yuraku-cho to Kanda Bashi, and permission to open traffic is now awaited. The line appears to be finely laid so far as foundation and surface flagging are concerned, but it would seem that a rather soft stone has been used for the foundations.

Meanwhile the dispute between the amalgamation and anti-amalgamation parties of the Street Railway Company continues. The attempt to depose Mr. Amenomiya from the position of President has proved a new bone of contention. He and his friends refuse to recognise the deposition and declare that he still holds the post. It is difficult to see what will be the exit from this trouble. Presumably all the books and

archives of the company are in Mr. Ameno-miya's possession and the charters are in his name.

The result of the first day's working (22nd instant) of the Shimbashi-Shinagawa section of the Tokyo Densha Company's lines was that 663 *yen* worth of tickets were sold, which is said to be some 300 *yen* in excess of the amount usually collected when horse power was used instead of electricity. A part of this signal development must be attributed, of course, to the novelty of the thing, but there can be no doubt that the citizens of Tokyo will show themselves liberal patrons of electric railways. The Densha Company, despite the fact that it has been gathering in huge profits for many years, is resorting to an essentially penny-wise-pound-foolish policy in the manner of laying its line. It has obtained permission to work with a temporary road-bed for five years, which means that it will work with the road bed of the old horse trams. It is easy to foresee what will be the end of that.

The Densha Company has been so unfortunate as to have a collision within the first three days of its operation. It opened traffic on the Shimbashi-Shinagawa section of its electric lines last Saturday, and on Tuesday two of the cars came into collision as they were rounding a corner. No one was hurt, but the man-saving net of the colliding car suffered injury, and the whole service had to be suspended for a time. The cars follow each other at intervals of two minutes, so that 17 or 18 were compelled to await the restoration of the broken net.

A REMARKABLE SWIMMING FEAT.

Under the auspices of Mr. Fukuzawa, proprietor of the *Jiji Shimpō*, a remarkable swimming feat recently took place at Hayama. The chief performers were pupils of the *Keio Gijuku*, but with them were some outsiders, including Master John Brinkley. The project was to swim from Hayama to Enoshima, a distance of about 8 miles in a direct line. But in order to avoid any extreme change of temperature such as would be experienced in deep water, it was decided to make the journey by coasting, which involved a long detour and increased the total distance to some 11 miles. Twenty-one started, including two professors of natation, Messrs. Mizoguchi and Sato, but the professors entered the boats almost immediately. They were divided into parties of four, the best swimmers being instructed to assist the weaker members, and the whole being accompanied by 4 boats. The first stage, 3½ miles, between Hayama and Kotsubo, was performed without mishap. But in the next stage, from Kotsubo to Inamura, the force of the current swept the swimmers out of their course, and after covering another mile four of the youths had to desist. All the rest reached Inamura at 11.44, having covered 7½ miles. By this time the wind was blowing very strong and being dead ahead the difficulty and labour of swimming were immensely enhanced. Nevertheless the remaining 15 lads held on their way, though the boats accompanying them were in danger of being upset. By the time of reaching Yuki-ai, about another mile, 8 more fell out and only 7 continued swimming. These held out as far as Yamazaki, whence the flags at the point of arrival in Enoshima and the people assembled to receive the swimmers could be discerned

at a distance of about half a mile. But the violence of the wind and waves now proved too much for two of the party—including young Brinkley—and they entered the boats, having covered about 10½ miles. The remaining 5 accompanied by the two professors reached Yebisuya at 3.50 p.m., having performed the distance in 7 hours 40 min. It was certainly a very remarkable swim. Mr. Fukuzawa presented silver medals to the successful competitors.

ADMIRAL ALEXIEFF.

As to M. Alexieff's new appointment—to which, we observe, Japanese newspapers now give the term *kyokuto sotoku*, or Governor-General of the Far East—the Chinese Government is said to have asked M. Lessar what powers are included in the commission. The Russian Representative—we quote from the *Jiji's* Peking correspondence—replied that as there had not yet been made any appointment of an official to oversee Russia's railways in Eastern China after the evacuation of Manchuria, such office had now been conferred on M. Alexieff.

It would appear from the same telegram that Russia has not made to China any official announcement of M. Alexieff's appointment, and that China has consequently declared her resolve not to recognise M. Alexieff's commission pending such announcement. These matters are so much beyond the guidance of precedent that it is difficult to form any hard and fast opinion about them, but certainly to unsophisticated minds it would present itself in the light of a matter of ordinary courtesy that when a foreign official is appointed to discharge duties of which an important part lies within Chinese territory, some formal intimation of the fact should be made to Peking. Russia, however, probably takes the not unreasonable view that so long as she remains in military occupation of Manchuria she is at liberty to make her own arrangements without consulting or notifying any one. On the morrow of evacuation, whenever that dawn of the Greek Kalends arrives, she will doubtless put herself straight in all matters of etiquette.

The *Kokumin Shimbun* gives a somewhat different account. It says that the Chinese Government has instructed its St. Petersburg Representative to the effect that M. Alexieff's nomination to the post of Governor-General of the Far East seems to imply that Manchuria is no longer regarded by Russia as Chinese territory. The Representative is directed to pay special attention to this point, and to ascertain what Russia's real views are.

NOTES ON CURRENT EVENTS.

On the afternoon of the 19th instant fire broke out on board the steamer *Saikio Maru* as she was passing Mutsurejima en route for Kelung from Shimonosaki. The vessel having a quantity of gunpower on board, much alarm was caused among the passengers by the outbreak of the flames. They were quickly taken off by the Osaka Shosen Kaisha's steamer *Kasuga Maru*, after which the *Saikio* steamed at full speed to Odo and landed the powder. The fire was ultimately extinguished with the aid of the shore authorities, but unfortunately three seamen were suffocated in extricating the mails, a part of which were damaged. It is said that the conflagration was caused by the shipping of

400 tons of inflammable cargo at Kobe without proper notice from the shippers.

Discussing the question of administrative reform, the *Yomiuri Shimbun* makes a striking calculation. It says that during the twelve years of the Diet's existence, there have been promulgated 500 laws, 3,500 Ordinances and over 2,000 Departmental Orders. In other words, a period of 4,380 days has seen the issue of some 6,000 legal enactments, or much more than one daily. One result of this extraordinary body of laws is that any business which a Japanese subject attempts to put through has to be examined in connexion with enactment after enactment, and when it has been brought into accord with the regulations of one Department, it is then found to be in conflict with those of another. We imagine that there is much justice in what the *Yomiuri* says. Japan is almost "snowed under" with regulations, laws and ordinances. It is almost inevitable that she should suffer from some such malady, seeing that she is putting her hand to so many new things which have hitherto been entirely beyond the purview of legal enactments, but now that she has done her best to meet each fresh situation as it arose, the time has perhaps come when she can proceed to simplify and synthesise her regulations.

We have received from Mr. Yukawa Kankichi, Chief of the Tokyo Tsushin Kanrikyoku (Tokyo Communication Superintendence Bureau), saying that every effort is being made to improve the means of communication in Tokyo, Saitama, Chiba and Yamanashi Prefectures which fall under the jurisdiction of the Bureau. With that object a telephone, No. 300 (Honkyoku), has been installed in Mr. Yukawa's office and the public are requested to communicate direct with him should there be any cause of complaint with regard to posts, telegraphs or telephones. Persons who are not in a position to telephone can forward their complaints by letter, observing that the envelope need not be stamped if it bears on the outside a statement that the letter is on business connected with any of the services here mentioned. Of course communications are not received on Sunday or after noon on Saturday. Otherwise any time within office hours may be chosen.

A brief account is published of a lecture on finance delivered by Count Inouye in Yokohama on the 22nd instant. The Count affirmed that since 1896 the nation at large had been affected by the Government's expansive policy after the war with China. Out of the Indemnity large sums had been devoted to the Army and Navy Departments, and this had excited the ambition of other Departments to get their share of the big development, so that there resulted a competition for appropriations and a consequent disturbance of the central Government's unity. That the communes had felt the infection might be seen by examining the records which showed that, within the past few years, the outlays on account of sanitation had been multiplied by eight, those on account of education by five, and those on account of public works by four. Retrenchment had come to be an absolute necessity, but they erred greatly who imagined that the country could revert to a total expenditure of 80 or 100 million *yen* and that the taxes might be materially diminished. There was an inevitable growth of outlays corresponding with national development. To that they

must reconcile themselves. All that could now be reasonably compassed was to bring the expenditures completely within the limits of the State's income, with a margin such as would obviate the need of recourse to heroic measures of finance in the event of any international crisis.

The *Hochi Shimbun* publishes a story too amusing to be overlooked. It is to the effect that the Russian inhabitants of the Kuriles have resolved to assist Japan in the event of war between her and Russia. This mood is attributed to the fact that they are all exiles, transported direct from Russia or at second hand from Siberia, who lead a miserable existence in a wretched climate, barely procuring means of subsistence by fishing. They could not be in a sorer plight, and they have lost all hope of seeing Russia again. Therefore they think that their condition might be bettered by passing under Japan's rule. Thus far the story is not incredible. But it has another chapter, namely, that the leading inhabitants of the islands recently held a meeting and openly decided to espouse Japan's cause in case of war. Truly a probable incident!

Apparently from a news agency comes the intelligence that Japan has approached Russia direct with proposals pointing to the re-establishment of Chinese sovereignty in Manchuria and the opening of the region to foreign trade. There is also a vague reference to some special measure with regard to Korea. Russia is said to have intimated the necessity of considering these proposals deliberately and carefully as grave issues are involved. The framers of the rumour add that Japan has signified her acquiescence in the recognition of exceptional Russian rights with regard to railways. This is all quite sufficiently vague to be an echo of irresponsible hearsay.

A long-distance swimmer, correcting popular errors, states, according to *Health*, that accidents to swimmers are seldom due to cramp, but to apoplexy resulting from sudden cooling. The sinking three times is a curious error, as some persons swallow water and strangle on first immersion, sinking but once, while others may sink and rise fifty times. A man who has saved sixty-five lives has found that the drowning person cannot be stunned by a blow in the face, but that he can be handled by pressing the thumbs under his ears and ducking his head until manageable, this being done from behind.

A Russian cruiser, the *Manchu Maru*, has seized a number of Japanese fishing vessels at a place called "Kesh-kawa" or "Chikka" in Kamchatka. Some accounts say that four Russian ships made the capture; some put the number at one only. As to the Japanese vessels also there is discrepancy, and whether 9 or 14 were seized we can not tell. At all events their crews are said to have aggregated 272 men. They were all taken to Vladivostok where 26 were placed in confinement, 150 were sent back to Japan, and the remainder were to be sent by the next opportunity. We have only the account given by the Japanese themselves and of course there is another side to the story. They say that they had obtained passports and complied with all the prescribed preliminaries before leaving Vladivostok for "Chikka." Their object was to purchase salted salmon, and they were working in cooperation with Russian subjects. But the Russian authorities decided that their pro-

cedure was unlawful. The captured vessels belonged to people in Hokkaido.

With reference to Reuter's telegram to the effect that Japan and Canada are negotiating a commercial treaty, the *Hochi Nichi Shimbun* learns, on reference to the authorities, that although at one time Canada showed a disposition to come into the revised treaty arrangements, she desisted from negotiating, and for some unexplained reason remained thereafter silent. No *pour-parlers* are taking place at present.

On the 25th instant the ceremony of unveiling a statue of the late Count Kuroda took place at Sapporo, the principal part in the celebration being performed by Mr. Nagayama, Chief of the Hokkaido Administration, and Lieut. General Baron Oseko, who commands the troops. It is scarcely necessary to remind our readers that Count Kuroda was head of the Kaitaku-shi (Colonial Bureau) throughout its whole career, and that he contributed more than any other Japanese to the development of Hokkaido.

Japanese newspapers state that Dr. Okuyama, and Dr. Endo, collaborators with Professor Kitasato, have discovered a serum by the injection of which asthma can be cured. German investigators had already discovered the asthma bacillus, and had declared that a serum to destroy it ought to be obtainable. But to Japanese bacteriologists belongs the honour of having found the serum. Should this information be correct, humanity will have been relieved of one of its most distressing afflictions.

The case of the anti-amalgamation party versus the pro-amalgamation party of the Tokyo Street Railway Company has at length been submitted to the Tokyo Local Court. Hitherto the legal procedure has been confined to an application for an injunction to restrain the amalgamationists from giving effect to the resolution adopted by a general meeting which had already been declared closed. How the application fared we can not discover. Apparently the delays contrived by the anti-amalgamationists have had their desired effect, and the court's decision is still pending. The suit itself, the suit now formally instituted, is an action for the purpose of obtaining a judicial declaration that the meeting which decided in favour of amalgamation was illegally constituted and that its decision is not binding. Unless some compromise can be effected, this weary business threatens to be almost interminable.

It really seems as if Ireland were at last putting her pitiful sorrows behind and setting forth upon an era of prosperous tranquillity. The King's visit in particular has been viewed in the light of an augury of better days to come, and we find the philosophic *Outlook* writing that a general belief prevails that a new Ireland has begun, an Ireland which the King will be able to visit as often as he may wish. And if the high hopes conceived of the effect of the Land Bill are even partially realised, then the King will not find it possible to visit Ireland as often as the Irish people will wish to greet him. For the Irish as a race are passionately attached to authority, and possess a capacity for loyalty not equalled in quality by any nation whatsoever. The void left by the extinction of the old chiefs has, from causes written deep in a sad history, never been filled. Yet it is possible to fill it, and it would indeed be a happy circumstance if the

visit of the King were found to coincide with the fortunate issue of the land legislation so as to mark a new era of social contentment and political loyalty. To Mr. Wyndham, in whose veins runs the blood of the grand old Geraldines, is due a full and generous tribute of admiration for the statesmanship which enabled him to bring about the pleasing state of affairs that at present exists. "Not a little of his success is due to personal qualities which are characteristically Irish. The humour and wit mingling happily with steadfastness of purpose, the generosity of temper that knows when to yield and how to yield handsomely, the humane contempt for mere partisan principles, are all traits of race not conspicuously prominent in the long line of past Irish Secretaries. King Edward too, has, in homely phrase, a way with him, and it is the very way to reach the Irish heart if fair opportunity be found." These high hopes, if the news of the King's triumphal progress which came to us via New York is only approximately correct, seem in a fair way of being realized.

Siberia must (says the *International Handels Kurier* of Warsaw) cover its requirements of iron to a vast extent by importation, in spite of its own wealth of mineral treasure of every kind, as it possesses only two iron-works on a small scale. These are the Petrow Works, which supply the Nerezhinsk Gold Mines exclusively, and the Abakau Works in the Minusinsk district, which produce only 200,000 roubles worth annually. In view of this the Ural Iron Factories control the entire West Siberian market, while the east of the country draws its supplies of German and American iron goods overwhelmingly via Vladivostok. Machinery comes mainly from Germany. Siberia buys annually in the aggregate iron to the tune of about two million poods. A syndicate has now been formed in order to set the Nikolajew Rolling Works at Irkutsk, which had been involved in the Mamontow bankruptcy, upon its legs again, with a view to rendering an annual production of two million poods possible. The cost of production is said not to exceed that of the Ural; the ore contains 60 per cent. of pure iron, and the transport to Irkutsk is rendered possible by the navigable Angara. The establishment possesses about 49,000 desiatines of forest. The establishment of a similar undertaking on a large scale is projected for Western Siberia, with the support of the American millionaire, Mr. Astor. It is proposed to work the rich coal district of Kolczuga with the iron deposits of Telbes. This territory can easily be rendered accessible by a branch railway from the station Polomoszhja, which is situate near the railway bridge which crosses the Ob.

SHOOTING AT TSURUMI.

A special match was shot off at Tsurumi on Sunday in the presence of a fair number of spectators. A very keen match resulted, the shooting lasting the whole day, owing to the number of ties. The following were the results for single and double, each bird counting two points:—

	Points.	Handicap.
1st Prize Special Gold Medal, S. Yano.....	40	(4)
2nd " Silver Cup, K. Ijuin	40	(2)
3rd " Gold Medal, S. Okamoto.....	40	(4)
4th " Gold Medal, T. Okudaira.....	39	(2)
5th " Lacquered Ware, M. Negishi	39	(2)
6th " " S. Watanabe.....	38	Scratch
7th " " J. B. Gibbs	38	(2)
8th " " H. Osaka	37	(4)

JAPAN AND KOREA.

THERE are symptoms that Japan is losing patience with Korea and will probably feel compelled to adopt strong measures towards that most helpless and hopeless empire. The *Kokumin Shimbun* employs an apt simile when it says that Korea resembles a straw house to which people with lighted candles are admitted. At any moment a conflagration may break out involving the residences of the neighbours, and thus it becomes imperative that the latter should either insist on the reconstruction of the house or take steps to prevent the ingress of dangerous inmates. Looking back to the year 1881, when Seoul first became an arena of intrigues affecting the relations of foreign Powers, we fail to see that Korea has in any sense changed for the better. Not merely does she still remain incompetent, absolutely incompetent, to protect herself, but also her statesmen continue to subserve their country's interests to their own personal ambitions, and continue to regard foreign interference as a legitimate weapon for the furtherance of these interests. The same sequence of events has had to be recorded year after year: struggles between petty cabals or rival families to grasp political authority; total indifference to the development of the country's resources; equally flagrant carelessness about her means of self-protection, and perpetually recurring pecuniary complications which might easily be avoided and which often lead to collateral issues of a nationally dangerous character. As a buffer State Korea is probably the worst qualified empire that ever stood in that capacity, and as anything but a buffer State its imperial *raison d'être* is invisible. It has been plain for many years to every ordinarily close observer of events that the interposition of such a country between Japan and Russia must ultimately prove a source rather than an averter of trouble. Japan has been, on the whole, very patient. She may claim that credit, we think. She has adopted and adhered to the rule of avoiding undue or arbitrary interference in Korea's domestic affairs, and she has been content quietly to develop material interests, strengthening her title to a voice in the country's destiny. But to-day she finds herself face to face with conditions which will probably constrain her to adopt a different attitude. She is confronted by the fact that the Korean Government has no idea of asserting its sovereign rights to repel aggression, and is prepared to sanction any violations of these rights which is attended by a sufficient display of force. As to the strategical value of a Russian Port-Arthur at Yong Am-pho, there may be difference of opinion, but there can not be the remotest question that Russia's method of acquiring lease of land at Yong Am-pho was wholly defiant of Korea's sovereignty, and that in giving her *post-facto* assent to the aggression Korea opened a chapter of contingencies such as Japan can not view

without the greatest uneasiness. We have often expressed astonishment that Russia should deliberately subject Japan's patience to severe tests in Korea. Manchuria is a different matter. It is true that few nations in the history of the world have ever been flouted so egregiously as Japan has been flouted in the matter of Manchuria. But that is a story we do not care to emphasise. Japan is sufficiently level-headed to exclude sentiment from international questions. But with the Korean problem her very integrity as an empire is bound up, and Russia knows it. Why then does Russia supplement her exceedingly aggravating course in Manchuria by flagrantly aggressive measures in Korea? She can not be indifferent to Japan's mood. She can not be deliberately bent upon creating complications perilous to the peace of the East. We desire to take the fairest and least prejudiced view of her doings, but it is difficult, exceedingly difficult, to reconcile them with any theory of pacific circumspection. At any rate the time seems to have come when Japan must abandon her attitude of long-suffering patience. There is no occasion to consider what degree of latitude her protocols with Russia permit. The situation has been forced by Russia and upon her shoulder rests the responsibility of disturbing the *status quo*. We are not advocating anything in the nature of belligerent measures. On the contrary, our conviction is that the best way to avert war is to forestall issues which would necessitate resource to the sword. Japan must consolidate her position in Korea so unequivocally that any attempt on the part of another Power to disturb it would be at the obvious peril of that Power. Whether the Japanese Government takes that view we do not know, but we are firmly persuaded that no other view is consistent with the country's best interests. The field is still open, but that it will long remain open recent events forbid us to think.

THE HISTORIC HOUSE OF CECIL.

IT was an ancestor of the late Marquis of SALISBURY, the famous Lord Treasurer of JAMES I., in a letter to Sir JOHN HARRINGTON, who declared towards the close of his busy and successful life:—

Good Knight, rest content and give heed to one who hath Sorrowed in the bright lustre of a Court, and gone heavily on even the best seeming fair ground. 'Tis a great task to prove one's honesty and yet not mar one's fortune. I wish I waited now in your presence-chamber with Ease at my foot and Rest in my bed. I am pushed from the shore of Comfort, and know not where the winds and the waves of a Court will bear one. I know it bringeth little comfort on earth, and he is, I reckon, no wise man that looketh this way to Heaven.

History is always repeating itself. The private life of the great statesman who wrote that letter was almost as closely sealed from the public view as was the private life of his descendant whose death the British empire mourns to-day. It will be by his public acts alone that posterity will be able to judge of the character of ROBERT ARTHUR

TALBOT GASCOIGNE CECIL, third Marquis of SALISBURY, for apart from them he was, so far as the outside world was concerned, a learned recluse, hating the clamour of the mob and despising its ill-tuned plaudits. But this much is certain: he was in every sense of the term a worthy descendant of an historic house, and though occupying a prominent place in the world's esteem was "one who had sorrowed" and "gone heavily."

The CECILS first came under royal notice in the reign of HENRY VIII., when DAVID CECIL, a Lincolnshire squire, rose to the dignity of High Sheriff of Northamptonshire. His son RICHARD was present at the Field of the Cloth of Gold as a page, and profiting by the spoilage of the monasteries grew rich and left behind him estates in several counties. WILLIAM, the son of this RICHARD, became the famous Lord BURLEIGH. Born in 1520, he entered St. John's College, Cambridge, at the age of fifteen. St. John's was then the most famous and aristocratic seat of learning in England, and at the time CECIL was there it numbered among its Fellows ROGER ASCHAM and JOHN CHEKE, the profoundest Greek scholar of his generation. Young CECIL struck up a very close friendship with the great Grecian, whose father had been only a University beadle, and whose widowed mother supported her young family by keeping a wine-shop in the town. Despite his birth and breeding, CECIL very humanly fell in love with the poor widow's daughter MARY, much to his father's disgust. He was packed off to a lawyer's office in Gray's Inn, but two months after he brought the fair Mistress CHEKE from Cambridge and married her. She died, however, within three years, leaving an only son, THOMAS CECIL, who was to become Earl of Exeter, and to whom the simple wine-seller in Cambridge bequeathed her new bed, bolster, and hangings. CECIL did not long remain disconsolate, for in the following year, 1545, he married MILDRED, the eldest daughter of Sir ANTHONY COOK, the great lawyer, whose four daughters were notorious—to-day the proper epithet is famous—for their classical erudition. The second daughter will be remembered as the mother of Lord BACON. It is from his second wife that the descendants of CECIL inherit much of their ability, for the EXETERs, who are descended from CECIL's first wife, have not figured conspicuously in the page of history.

Every Briton who has taken the trouble to read his country's history, knows the wonderful part played by CECIL for fifty long years, and how the influence of the family was paramount during almost the whole of the century ending in 1612, which marked the death of Lord BURLEIGH's second son, who had been created Earl of SALISBURY. In fact, during the reigns of five successive sovereigns, HENRY VIII., EDWARD VI., MARY, ELIZABETH, and JAMES I., the CECILs—to use the phrase which is traditionally applied to the GORDONS

—had "the guidin' o't." In 1550, little more than three years after his introduction to political life, BURLEIGH was created one of the Secretaries of State, and from this time until his death in 1589, his influence ranked only after that of the Sovereign. To ELIZABETH, whose accession he had practically brought about, he became absolutely indispensable, and she constantly recognised his services, notably in 1571, when she created him Baron of BURLEIGH.

"For Burleigh she forgot her usual parsimony, both of wealth and of dignity. For Burleigh, she relaxed that severe etiquette to which she was unreasonably attached. Every other person to whom she addressed her speech, or on whom the glance of her eagle-eye fell, instantly sank on his knees. For Burleigh alone a chair was set in her presence, and there the old Minister, by birth only a plain Lincolnshire esquire, took his ease, while the haughty heirs of the Fitz Alans and the De Veers humbled themselves to the dust around him."

So wrote MACAULAY, who loved not the man. BURLEIGH's second son became JAMES I.'s Lord Treasurer, and though not so brilliant a genius as his father must be accounted a far-seeing statesman. It was in his day that Hatfield came into the possession of the CECILS, JAMES I. exchanging this royal demesne for Theobalds, another Hertfordshire palace. What a lordly treasure-house Hatfield is has been described by many pens. In Madame WADDINGTON's chatty letters, just published in London, we read of a visit she paid to Hatfield during the time her husband was French Ambassador to the Court of St. James. She says:—

"This morning Lady Salisbury showed me the house (Hatfield),—most interesting, full of treasures and memories, a great library with all sorts of letters from the time of Elizabeth, and in the drawing-room a vitrine filled with relics of the 'Virgin Queen.' It was curious to see her gloves, shoes, hat. I think Lady Salisbury was somewhat surprised at my interest in these last things, but I told her she must make allowances for the American, who was not accustomed to old family traditions and souvenirs of that kind. When I think of our Revolution, then it seems ages ago to me. We enjoyed our visit extremely, they are all so nice and simple. We got back to London this morning, and of course, dined out somewhere. I was amused by one of the ladies saying to me after dinner, 'Did you really enjoy your visit to Hatfield? Aren't they all dreadfully clever?' I don't think I should have applied the adverb, but clever they certainly are. Lord Salisbury has such a fine thoughtful face."

But to resume. The Lord Treasurer's son took no part in public life, but the 4th Earl was ordered in 1689 by the House of Commons to be impeached for high treason for becoming a Roman Catholic, though the prosecution was not proceeded with. A few years later he was sent to the Tower, being accused of having signed a manifesto purporting to be that of a Jacobite association, which vowed vengeance on the Prince of ORANGE. The document turned out, however, to be a forgery. MACAULAY writes of him: "He was foolish to a proverb. His figure was so bloated by sensual indulgence as to be almost incapable of moving, and this sluggish body was the abode of an equally sluggish mind. He was represented in popular lampoons as a man made to be duped and a man who had hitherto been made the prey of gamblers, and who might as well be the prey of friars." The fifth Earl carried St. EDWARD's staff at the coronation of GEORGE I., but did nothing

else of importance, beyond making a wealthy marriage and bringing another title into the family. The next Earl became the first Marquis of SALISBURY. This was in 1789. His wife, who was a daughter of the first Marquis of DOWNSHIRE, was overtaken by a tragic fate in 1835, thirteen years after the death of her husband, perishing in the fire which destroyed the west wing of Hatfield House. Her eldest son, the second Marquis, after representing Weymouth in the House of Commons during his father's lifetime, supported Lord LIVERPOOL on reaching the Gilded Chamber. He emerged into greater publicity when, in 1852, he joined Lord DERBY's Government as Lord Privy Seal, and when DERBY took office again six years later, the Marquis became Lord President of the Council. Lord ROBERT CECIL, whose death is recorded to-day, was his second son and but for his elder brother's untimely death, might possibly have remained in the obscurity which enshrouds many second sons in England. But fate willed otherwise and the man whose chief hobby was experimental chemistry and whose next greatest delight was to be found at the writing desk, was driven from the laboratory and the study to become the foremost Foreign Secretary of Queen VICTORIA's reign and three times her Prime Minister. Born in the historic house of Hatfield in 1830, he was educated at Eton and Christ Church, and began his Parliamentary career in 1853 as member for Stamford, representing the borough until his succession to the marquise fifteen years later. Who does not remember TENNYSON's "Lord of Burleigh" in connection with this ancient town, though the story deals with the elder line of CECILS and not with the Hatfield family.

Lord SALISBURY's first important post was that of Secretary for India, to which he was appointed in 1866. Previous to this he had made a tour through the Australian colonies, visiting some of the newly-discovered gold fields, particularly Bendigo, and on his return to England he took up journalism to provide the wherewithal to support his wife and young family. He was a member of the staff of the *Saturday Review* in its most brilliant and truculent days and the habit of sarcastic repartee fostered in those early years of struggle remained with him to the last. Many are the caustic sayings attributed to the late peer, thrown up carelessly in the course of debate and no doubt as bitterly regretted later when the time for reflection arrived; for it was one of his characteristics to "think aloud upon his feet" and not prepare his speeches beforehand. Thus many an unlucky phrase that flashed through his mind as he developed his argument was blurted out, recorded in cold print, to be brought up against him later, that would probably never have been uttered had he restricted himself to the methods of BRIGHT or GLADSTONE. We need not here enter more fully upon his career nor enumerate the many positions he

filled as a country gentleman, a peer of the realm, and as a politician: they form part of recent history.

The motives which led Lord SALISBURY to lay down the burden of office directly after the close of the Boer War and on the very eve of the KING's coronation will not be known in our generation. But his withdrawal from the arena while yet his "eye was not dim, nor his natural force abated,"—though he was then in his seventy-second year—evoked a remarkable outburst from papers representing all shades of political opinion, not only in his own country and in his mother tongue, but in France, Germany, Italy, Austria and Japan—all paying willing tribute to his preeminent qualities as a statesman as well as to his charms as a courtly English gentleman, one "of the olden time."

THE INSURANCE QUESTION.

IN his remarks covering an interesting account of an interview between representatives of the leading life insurance companies of the United States now doing business in Japan and Mr. WADA, Director of the Bureau of Commerce and Industry, Mr. BASIL H. BETTS makes the important point that there is comparatively little discrimination in the States of America against foreign life insurance companies. The discriminations in the case of fire and marine companies is much more marked. With reference to that we append at the close of this article some epitomes of the practice in a few of the States. Of course our own remarks were not limited to any one class of insurance, but it is necessary to notice that Mr. BETTS' reference is to life companies only. Some of his readers have already failed to observe this distinction.

What seems to us specially noticeable in the answers given by Mr. WADA to Mr. BETTS and Mr. HAMILTON is that a radical difference is clearly indicated between the Japanese official method of calculating the sum which the insurance companies will have to put up under the new order and the companies' method of calculation. We have from the first expressed our conviction that some such difference must necessarily exist. Although—a fact which is somewhat incomprehensible—Mr. WADA did not appear to be in a position to explain the official method clearly, there is room to hope that when a clear explanation is forthcoming, the proposed system will lose most of its objectionable features, for, as we understand the matter, what the companies complain of is not the necessity of lodging security to the extent of one or two hundred thousand yen, but the necessity of investing many millions in securities not of their own choosing, to say nothing of other deterrent features. It has always to be remembered, and we trust the Japanese Authorities will remember, that foreigners are peculiarly circumstanced with regard to investments in Japan. Not only is the ownership of real estate forbidden to them, but also many of the most advantageous

securities are beyond their reach. This disability ought certainly to be taken into account by the framers of such an order as that now under discussion. At the same time, the attention of the Japanese at large may thus be directed to the disadvantages they bring upon themselves by this restrictive policy. Undoubtedly if the privileges of owning real estate and exercising the same latitude of choice as Japanese subjects in acquiring securities were granted to foreigners, the agents of great insurance companies would soon be tempted to direct to this country capital now invested at comparatively low rates of interest in America and Europe. Mr. BETTS has explained convincingly and succinctly that none of the money collected by foreign insurance agents in Japan ultimately leaves this country. But it does go abroad temporarily for investment, and that is an interlude which it is very much in the interest of Japan to prevent by placing all her best securities within the reach of foreigners. Besides, these big insurance companies are the greatest capitalists, the greatest financial institutions, in the world. No country can afford to antagonise them, especially a country like Japan where there is urgent need of capital. It is therefore to be hoped, and indeed we confidently expect, that some *via media* will be found.

The following references explain the attitude of some of the States of America:—

Connecticut.—Every stock, fire and marine insurance company must possess a cash capital of \$150,000, actually paid in and securely invested, if organized in this or any other of the United States. *Every fire or marine insurance corporation foreign to the United States must possess a cash capital of \$200,000 paid up and shall have said amount on deposit with the Treasurer of this or the proper office of some other State, in securities authorized by law for savings banks.*

There is here an emphatic discrimination with regard to foreign companies, but only fire and marine companies.

Massachusetts.—Every life company must possess available cash funds to the amount of \$100,000, and have policies in force to at least 1,000 persons, aggregating not less than one million dollars. Assets must be of net cash value equal to liabilities including legal reserve. *Every foreign life company must deposit or keep in the hands of trustees in exclusive trust for policy-holders in the United States the net value of all its policies in the United States, and not less than \$200,000.*

Here is emphatic discrimination in the case of life companies.

Minnesota.—Every fire company doing business in this State must possess a paid up capital of \$100,000. *Every company foreign to the United States must deposit with the proper official of some one of the States for the security of all its policy-holders in the United States security to an amount equal to the capital required of like companies under the laws of the State.*

Here again is discrimination, for whereas the home company (fire) is only required to have a paid up capital of \$100,000, the foreign company must deposit that amount with the proper official.

Missouri.—Every joint stock fire and marine company shall possess a paid-up capital stock of at least \$200,000. *Every foreign company (other than life or accident companies) shall have on deposit not less than \$200,000.*

Here again the foreign companies (fire) are required to deposit whereas the home companies need only have paid up capital.

New York.—Every fire or marine company must possess a paid-up capital of \$200,000. No deposit

is required. Every life company must possess at least \$100,000 invested in the stocks or bonds of the United States, the State of New York, or of the State where the Company is located, or in loans &c. Such securities must be deposited with the Auditor, controller or chief financial officer of the State where said Company is incorporated. *Every foreign fire and marine company must have within the United States, deposited with insurance departments or held in trust and invested in securities of the same general character as those which companies of the State are permitted to hold not less than \$500,000, and not less than \$200,000 if a life or casualty company.*

Here the discrimination is one of amount in the case of all companies, and one of manner of holding in the case of fire and marine companies.

Tennessee.—Life companies must satisfy the Insurance Commissioner that they have on deposit with the Treasurer of this State or with the proper officer of some other State, securities to the cash value of \$100,000. *Companies foreign to the United States must deposit with the Treasurer of the State or with the financial officer of some other State of the United States or with trustees who are citizens of the United States, &c., a sum of not less than \$200,000 in securities approved by the Insurance Commissioner.*

Here the difference is one of amount only.

A writer in the *Fiji Slimpo* makes the point that if a foreign insurance company doing business in Japan conceived at any moment the idea of withdrawing its office from this country, the Japanese subjects holding policies in it would be virtually powerless. They would have no security for the fulfillment of their contracts, since they could scarcely be expected to carry their cases to Europe or America. Then the only way to make these offices certainly accessible is to insist that they shall have deposits in Japan.

The same writer notes that this deposit question may be associated indirectly with that of foreign capital, inasmuch as the money collected by a foreign agency in this country must, in the absence of any deposit, be transferred to Europe or America for investment, temporarily at all events. He does not notice, however, that the greater part of it necessarily returns to Japan in the long run, and that in some cases the sums accruing to the insured exceed the total sums paid by them in premia. We are of the opinion, however, that legislation for the security of Japanese subjects insuring in foreign offices ought to be quite independent of measures dictated by the empire's fiscal policy.

The *Fiji's* informant takes also some pains to show that the deposit demanded by the Government is not excessive. But he confines his argument to the sum of 100,000 yen, failing to notice that if that amount alone were in question there would be no manner of complaint on the part of the insurance offices, unless they were so unwise as to insist upon an unwarrantable rendering of the treaties. The treaty argument is unhappily weak, and the sooner it ceases to hold a leading place in the discussion the better for the cause of the insurance offices.

DEATHS OF NAGASAKI RESIDENTS.

We regret to learn of the death at Nagasaki on Tuesday afternoon of Mr. H. Worbs, who was well-known to many foreign residents at this port. Mr. Worbs, who was a British subject, was born in London, and came to Japan in 1888 or 1889, being engaged by the firm of Messrs. Sale & Co., of Yokohama. Mr. Worbs later proceeded to Vladivostok, receiving an appointment there with Messrs. Kunst & Albers as English correspondent. A few years later he returned to Kobe to represent the firm here, but conducted the business under his own firm name. About four years ago he left for Nagasaki to take charge of the newly-established branch of Messrs. Kunst & Albers at that port, but in December 1901 his health was such that he proceeded to Europe to consult a specialist, the firm granting him twelve months' leave for this purpose. After obtaining the best medical advice, Mr. Worbs was informed that his case was a most critical one, and in March of the following year he returned to Nagasaki, where he has since resided. For more than twelve months he has been practically confined to his bed, suffering from tuberculosis of the kidneys, and, as already stated, he passed away on Tuesday afternoon. Mr. Worbs was about thirty-six years of age and unmarried. He was of a very cheerful disposition, and during his residence here made a number of friends, by whom he will be long remembered.—*Kobe Chronicle*.

News was received in Kobe on Aug. 21st of the death at Nagasaki of Mr. F. G. Stone, Manager of the China and Japan Trading Co. at the southern port. The deceased gentleman, says the *Kobe Herald*, has been a resident of Nagasaki for very many years and the sad intelligence will be a shock to many both here and in Yokohama, who had not the slightest suspicion that there was any cause for anxiety regarding Mr. Stone's health. No particulars are to hand, the mere announcement of his death having been telegraphed up. Mr. Stone has been in the service of the C. & J. Company for over a quarter of a century.

BASEBALL.

The match on Saturday between the "Bachelors" and "Stars" was probably the most drawn out and uninteresting game this year, the intervals between the bits of good play to interest the big crowd of spectators being exceedingly marked. The "Bachelors" started batting and managed to get in two runs before they were shut out. They had the better of the play almost all through the game, the score at the end of the sixth inning being 10 to 6 in favour of the "Bachelors." It was during this inning that an unfortunate accident occurred to E. W. Kilby. He had reached second base on an excellent slide and tried third in the same manner, the umpire giving "safe." On rising he found he had dislocated his wrist badly. Play was suspended for awhile, Kilby retiring from the game, and his wrist being attended to by Dr. Garion. On play being resumed several positions were changed, Mr. Mann, of Shanghai, an excellent player, cheerfully taking first, and Dr. Post substituting in the field, while McChesney, the "Star" Captain, twirled the ball most creditably. Of course the side were handicapped by the loss of Kilby, though the game from the 7th was a little faster, the "Stars" even equalizing the score in the 8th. The "Bachelors" finally won, the score being 15 to 11. Mr. Stone umpired and Mr. Cox scored. Time of game: 2½ hours. A large number of ladies were present who partook of tea served in the Pavilion after the game. The weather was perfect; the temperature being delightfully cool after the baking heat of the past week.

KARUIZAWA.

Oh! bard of Lake Chuzenji,
Could you see our plain by moonlight,
With the white light on the mountains
And the blue light on the pines!
Could you see the rocks of Miogi
Rise through sea-like mist from Togi,
You would give her fairer mention
In your clever rhyming lines.

Could you see our purple mountain
Send her incense up to heaven,
As though conscious of a power
Greater than all powers below:
Could you hear with silent wonder
Her inward throbbing thunder,
You would feel that God was mighty;
And, in feeling, learn to know.

Not much water here, I grant you,
Though we have our streams that sparkle
More than dewdrops in the moonlight,
More than rain drops in the sun;
And we have an ancient river
That sings strenuous songs for ever,
When the golden joys of summer
Have all perished, one by one.

I have watched the fallen water
Fight the water ever falling—
Like men's late born thoughts that ever
Fight the new thoughts in the brain:
I have watched the ceaseless motion
Which bears each drop to ocean;
And have felt that what has been
Will never be again.

But I love our mountains better,
For they seem to reach to heaven
And kiss the stars, while darkness
Wraps all the world in rest;
While the swift-wing'd mist flits gently
O'er their breasts, an angel sentry,
Who would guard a world they know not,
But they still must love the best.

Could we ever live surrounded
By the beauties of this valley,
With its nightingales and wild flowers,
And its pure and balmy air;
We would grow up, man and woman,
Far more Christ-like and more human,
Seeing God in all earth's beauty,
Seeking beauty everywhere.

Karuizawa, August 15th.

AN OMISSION RECTIFIED.

Oh, Bard of Karuizawa,
Have you not forgotten something
Which should surely count a little,
Writing of that favoured place?
Of tennis you've not spoken,
Nor given any token
Of records, bravely broken,
Of error and of ace.

I know you saw the tournay—
I watched you, as you watched it
From beneath that charming covering,
With smile and glance demure:
And we all felt most inspired,
With enthusiasm fired
To play till we were tired;
Of that I'm very sure.

And yet I think you must have
Felt a thrill throughout your being,
As each morning dawned (save Sunday),
Bringing out that brave array
Of swains each other facing,
And lobbing, smashing, placing,
Others' tennis balls a-chasing
During all the great tournay.

But perhaps you were not thinking
Of such mundane commonplaces,
As with much of sweet simplicity

You watched with smile so rare;
You took no thought of faces
Of errors and of aces,
As each went through his paces
On the tennis ground up there.

Fair Bard of Karuizawa!
What do you think Asama,
Hanare and the Togi thought
About the tennis play?
Perhaps they all together
Felt that, even in such weather,
It was rather doubtful whether
They could ever play that way.

K. AND S.

MOSQUITOES.

(AFTER WALT WHITMAN).

Buzz!
Like the far off sound of a Jew's harp played by
an eloquent boy resting upon his basket.
Whizz!
Like a cork hissing out of the sloping shoulders
of the soda-water bottle that the barmaid has
handled too hastily.

Ping!
Like a bullet.
Then the bite.

But, O camarado, kindle not up your wrath at
this marvelous musical mystical work of crea-
tion;
Behold, is not man one with nature?—the bullock
his brother, the saurian his sister, the great auk
his great aunt in the country, the cicada his
little crippled sister down at Brighton;

And the mosquito, truly regarded, what is he?
Surely, a blood relation; insistent as a poor one.
O camarado
Lend me, I pray thee, a pocket flask of sal-
volatile:
This time it is on my nose.—*The Globe*.

A MOUNTAIN PRINCESS.

She was a husky Rocky Mountain girl,
A dream of crude, uncultivated grace,
Her hair of auburn hung in many a curl
Around her face.

Her dress of faded Mormon cloth was old
Her feet were bare and of a yellow brown—
They lay like two retorts of native gold
Beneath her gown.

"So fair a flower should not be here," I cried,
"To waste its fragrance on the desert air."
Her smile was heavenly as she replied:
"That's good, I swear!"

"Do you not pine for gay scenes, sweet maid?
For swell adorners and for raiment fine?"
She wiped her nose upon her sleeve and said:
"Not one durn pine!"

"And is the path a happy one you tread,
In these weird wilds upon your unshod feet?"
She flipped a junebug from her ear and said:
"It can't be beat!"

"Do you not in your dreamings long to see
The gilded scenes in fashion's paradise?"
She smiled in innocence and said: "O, gee!
Ain't got the price!"

"What would you do if in your maiden breast
Ambitions should arise? If you should see
But laggard days and nights of deep unrest?"
"I'd drink sage tea."

"You must have lovers by the score, fair maid—
Brave, brawny mountain lads browned by the
sun."

She rolled her lip into a curl and said:
"Hain't nary one."

From out the cabin came a warning cry:
"Samantha, come an' scour this dinner pot!"
She reached a dull-brown hand and said: "Good-
by—
I've got to trot."
—*Denver Post*.

According to a telegram under date of Aug. 26th, the Russian soldiers now staying at Shan-hai-kwan will shortly be withdrawn. They have commenced the selling of the horses now in military use. Colonel Akashi, of the Japanese garrison, left Tientsin on the day of the telegram to pay a visit to various districts in Shantung.

FIRE ON CAMP HILL.

Fire broke out on Camp Hill, Yokohama, about one o'clock on Friday morning in the premises of a Chinese tailor, Nam Shing, on lot No. 184. It seems impossible to find by whom the outbreak was discovered. But there is certain evidence of the place where the flames originated. The occupants of the boarding-house kept by Mrs. Pass were awakened at a time which is doubtful but appears to be shortly before 1 a.m. by one of their number, Mr. Mudgett, giving the alarm of fire, and they found thick suffocating smoke filling their rooms and dictating immediate withdrawal. Moreover there were flames which showed that the rear part of the Chinese tailor's was on fire. To explain the condition of the building it should be said that the structure was merely, so to say, a double house, the tailor's shop forming the lower end of the premises and Mrs. Pass's the upper and larger. The whole affair was, we believe, one of the very oldest erections in the Settlement. Before the Hongkong and Shanghai Banking Corporation moved from No. 62 to No. 2 the business of Messrs. Walsh, Hall & Co., was transacted in this two-storied wooden building. A fire took place at No. 184 some eighteen years ago and the proprietor, Chin Sung (the well-known painter), availing himself of the coincidence of the fire and the bank's removal, bought the business premises and put them up on No. 184.

The people who first emerged, half stupified by the smoke, from No. 184 could see that the flames had already crossed to the roof of their house from the tailor's. They directed their efforts towards awakening the other occupants and to saving some of their own property. In this they were only moderately successful. So dense and pungent was the smoke, probably from the bales of cloth, that one gentleman was quite unable to recover more than the incomplete suit in which he stood, and there was none who did not lose—especially as nearly all were uninsured. As no alarm was received at the brigade station in Satsumacho, the Chinese premises were well ablaze before any assistance could be sent. The flames soon wrapped the building and before a light northerly wind they soon overspread the house of Mrs. Pass. The efforts of the firemen were directed to saving the annex of Mrs. Pass's house, further up the hill, and in this they were successful: also they kept down the fire that partially consumed the out-houses of Chin Sung, the painter, and protected his house. When at its height the fire was startling in its strength and violence. It will be safe to say that practically nothing was saved from the burned buildings. The joint building (the property of Chin Sung) was insured with the Palatine and Guardian companies for yen 18,000. Nam Shing's stock was insured for yen 10,000 and his effects for yen 2,000 with the Union Assurance Company; and the furniture, etc., in Mrs. Pass's house was insured with the Manchester for yen 3,500. The injury to persons seems to have been confined to a policeman who was knocked down by a piece of wall and had his face badly damaged.

A Chinaman named Cha-Liong, 18 years old, employee of Nam Shing, Chinese tailor, No. 184, Camp Hill, where the fire broke out on the morning of August 21st, was arrested by the Bluff police on the 24th. It is alleged that he had forgotten to extinguish some burning charcoal used for the tailoring iron the previous day, and that the accident originated in his neglect.

Fire broke out, at 11.40 p.m., on August 22nd, at Shirane-machi, Naka-Kambara, Niigata prefecture, destroying 118 dwelling houses, 1 local office, 24 godowns, 5 telegraph poles and 1 post box. No person sustained injury.

Fire occurred on the night of August 24th at Hikone burning down some buildings. Three children were killed by the accident.

An outbreak of fire, says a telegram dated Aug. 26th from Otsu, occurred at the village of Kataoka, Ika district destroying 40 dwellings, 30 godowns and sheds, 3 Buddhist temples, and 5 Shinto temples. One Buddhist priest was killed.

LITERARY GOSSIP.

Lord Brooke, the Earl of Warwick's eldest son, was recently in Belgrade, acting as a special correspondent for a London newspaper. He shows a decided taste for writing in his efforts as a young member of the Fourth Estate, and has apparently inherited some of Lady Warwick's literary gifts. Lord Brooke has only recently returned from South Africa, where he acted as aide-de camp to Lord Milner. He is not yet twenty-one.

The New York *Evening Post* calls attention to the fact that with the passing of Leo XIII. the world has lost a personage of no small literary interest. "Almost since his school days he was an industrious writer of Latin verse. His productions in this line may not take rank as great poetry, but they are at least pleasing, and are invariably models of scholarly elegance. Even more than his Latin poems, his encyclicals have given him an enduring name as a writer."

Some interesting letters of Swift and Pope were sold the other day by Messrs. Christie. These included the original letters written by each to his publishers, Motte and Bathurst, concerning the publication of "Gulliver's Travels" and the "Miscellanies." The first lot was very characteristic of the Dean. It was written in a feigned hand and signed Richard Symphon, and it offered the copyright of "Gulliver" for £200, the proceeds to be devoted to poor seamen. This, with other letters, brought £86 2s. The Pope letters went at lower prices.

Mr. Frederic Masson, historian, and M. René Bazin, novelist, have been elected to the French Academy, to the seats left vacant by M. Gaston Paris and M. Ernest Legouvé. M. Masson's reputation rests chiefly on his exhaustive studies of Napoleon and the Napoleon family, which fill some twenty volumes. M. Bazin is the author of dignified and conservative novels, one of which has been translated into English by Mr. Quiller-Couch. According to the New York *Evening Post*, "his style, as mere language, has brought him into the Academy."

If anything was needed to demonstrate the magnanimity and broad-mindedness of the British Premier, it is to be found in the name which stands on the Civil List Pension against the largest amount conferred during the past year. "Mr. Justin McCarthy, in recognition of his services to literature, £250," is the record, and the Irish ex-M.P. and Home Ruler is to be congratulated on so large an annual contribution under the Civil List Act. The next highest amount is £105 to Mr. James Sully, in recognition of his services to Psychology; and £75 a year is given to Miss Rhoda Broughton, "in consideration of her merits as a writer of fiction."

"Handasyde," the authoress of "A Girl's Life in a Hunting Country," and several charming short stories, has written a little account of a devout pilgrimage in the favoured Border haunts of Scott which, even after the floods of writing on the same subject, will be of great interest to worshippers and pilgrims in the land of Scott. She has steeped herself in the atmosphere of Melrose and Abbotsford, and interviewed the few old people who have still a personal recollection of the Master, and also the direct descendants of his favourite servitor and coachman "Pepe." Relics, of course, abound, but she has been privileged to see several particular and authentic ones which are not known to many. It is a fine little study, and will have to be added to the complete Scott library.

There are some benighted people who do not know whether there is any difference between the daffodil and the narcissus, or between either and a yellow lily. Both to them and to the experienced cultivator of one of the most beautiful and famous species of flowers in existence the Rev. S. E. Bourne's "The Book of the Daffodil" will be of the greatest value. It gives a short history of the flower and the knowledge of it that was common among the ancients and in medieval

times. Then it classifies the varieties, gives instructions how best to grow them and to form a collection of them, and illustrates the text with a series of sketches and photographic reproductions. This book, volume sixteen in Mr. John Lane's excellent series of "Handbooks of Practical Gardening," is a worthy successor to the rest.

Mr. Eneas Mackay, Stirling, has in the press "Records of the Stirlingshire, Dumbarton, Clackmannan, and Kinross Militia, Highland Borderers Light Infantry, now 3d Battalion Argyll and Sutherland Highlanders (Princess Louise's)," compiled by A. H. Middleton, Lieutenant-Colonel Commanding. The volume has portraits and other illustrations. The Battalion can trace its ancestry back through the Highland Borderers Light Infantry, the 90th Regiment of British Militia, the Stirling, Dumbarton, Clackmannan, and Kinross Militia, the 5th or Fifeshire Regiment of North British Militia, to the "sogers" provided by the Town and County of Stirling who, nearly 300 years ago, fought for the Covenanters against Charles I., and later for Charles II. against the Covenanters. They were embodied in 1715 and in 1745, and were part of the garrison which defended Stirling Castle when the inhabitants opened the gates of the town to the Young Chevalier.

Mr. John Pollock's new book "The Popish Plot" is spoken of by the London reviewers as exceptionally well written and as throwing an unexpected flood of light into an already well-explored corner of English history. Mr. Pollock has made some surprising discoveries. He says:—

"It is not even in our own day commonly known that the Duke of Monmouth, reputed the eldest of the sons of Charles II., had an elder brother. So well was the secret kept, that during the long struggle to save the Protestant succession and to exclude the Duke of York from the throne, no man ever discovered that there was another whose claims were better than those of the favourite, and who had of his free will preferred the gown of an obscure clerk to the brilliant prospect of favour at Court and the chance of wearing the English crown. For this son, born to the King in the Isle of Jersey at the age of sixteen or seventeen years, the child of a lady of one of the noblest families in his dominions, was named by his father James Stuart, and urged to be at hand to maintain his rights should both the royal brothers die without male heirs."

In the New York *Critic* appears an article by Mrs. Mary King Clarke on "Thackeray's Kindness to Children." The article consists simply of a personal reminiscence, told very quietly and effectively. The writer first met Thackeray in America on a steamer coming from the South; at that time she was "an awkward, over-grown girl between ten and eleven years old." She was wandering disconsolately about the saloon on a rainy day, when a voice called "'Come here, little girl!'" I found I was being addressed by an elderly gentleman, and hesitating a little, I obeyed him:—

His rugged face was not unkindly, and his heart, always tender towards children, discerned that here was a most unhappy child. So he exerted all of his marvellous power and for one hour told me wonderful tales, only stopping when he had changed my sad little face to a most happy one. I attached myself to my new friend and watched his every glance, feeling quite jealous when I saw his eyes brighten as they looked at the pretty girl who sat opposite us at the table. He took a kindly interest in the openly displayed admiration of a dark-eyed Southern youth for the same pretty girl, and apparently took great interest in this budding love affair, which ripened as the days flew by.

We met some heavy storms, when the little steamer seemed at the mercy of the winds and waves. . . . The waves tossed us unmercifully, and once the pretty girl was thrown against my big friend, and clung to him gladly, while her slim lover glared at him fiercely, and I beat her with my childish hands, crying in my wrath, "He's mine; my friend, not yours; go to your own little man!"

There was a depth of sadness in my friend's voice as he caught my little hands and said: "Alas, poor child, what fiery tempests are reserved for you before this hot, jealous little heart shall have learned life's lesson!"

At this time Mrs. Clarke, who was a granddaughter of Charles King, of Columbia College, knew nothing of the identity of the "elderly

gentleman." When New York was reached Thackeray called upon Mr. King, to whom he had a letter of introduction. When Thackeray was asked whom he would like to have to meet him at dinner, he said: "Mr. King, I should like you to ask a little girl I met on the steamer coming from the South; she told me her name was Mary King." The whole story is very pretty and touching—another tribute to the delightful humanity of Thackeray.

In his introduction to "The Festival of Spring from the Divan of Jeladdin," just published, Professor Hastie, of Glasgow University, has something not very complimentary to say concerning Fitzgerald's "Omar Khayyam" and the gentlemen who meet at dinner every year to sing the praises of the poet:—

We confess (says the Professor) that we have hated this new, patched Omar Khayyam of Mr. Fitzgerald, and have even at times been tempted to scorn the miserable, self-deluded, unhealthy fanatics of his cult. But when we have looked again into the shining face and the glad eyes of Jeladdin, "the Glory of Religion," our hate has passed into pity and our scorn into compassion. In the light of that bright Vision we cannot pause—we have "no time" nor inclination for it—to deal as it deserves with this latest literary craze and delusion. The Persian scholars have been amazed, and earnest Critics who still believe in the spiritual purpose of poetry have been distressed by this infatuation of the young, free English mind, whose issue can only be the humiliation of convicted ignorance, spurious idolatry, and vain, remorseful regret after the mad midnight debauch.

STEAM AND SAILING VESSEL TONNAGE.

According to *Lloyd's Register* the shipping of the world consists of 29,943 steamships and sailing vessels, representing a tonnage of 33,643,131 tons. This fleet is divided as follows:

	Number	Tonnage.
Steamers	17,761	27,183,365
Sailing vessels	12,182	6,459,766
Total	29,943	33,643,131

These figures show an increase over last year of 315 vessels and of 204,368 tons. The advance, however, is entirely in steamships. Not only were there fewer sailing vessels built in 1902 than in any previous period in the history of the industry, but a large decrease took place in the number and tonnage of those on the registers of the various countries—290 vessels and 118,000 tons. Of the total tonnage of 33,643,131, nearly one-half of it is owned in the United Kingdom and colonies. A year ago that country had in its possession nearly 14,500,000 of shipping tonnage, but now its tonnage for the first time exceeds 16,000,000. Upward of 14,000,000 of the tonnage is composed of steamships, leaving less than 2,000,000 tonnage in sailing ships. The rest of the nations compared have more than twice as much sailing tonnage, but, on the other hand, their steam tonnage falls short of the United Kingdom by more than 1,000,000. The following are details applicable to each country possessing over or close upon 100,000 tons of shipping, in the order of precedence:

Flag.	Tonnage.	Flag.	Tonnage.
British	16,006,374	Dutch	658,845
American	3,611,953	Danish	581,247
German	3,283,247	Austro-Hungarian	578,697
Norwegian	1,653,740	Greek	378,199
French	1,622,016	Belgian	157,047
Italian	1,180,335	Brazilian	155,086
Russian	809,648	Turkish	154,494
Spanish	764,447	Chilian	103,758
Japanese	726,818	Portuguese	101,304
Swedish	721,116	Argentine	95,780

The Chinese, who come next, have only 60,000 tons, and the other smaller Powers are much below such figures. So far as this table is concerned, it shows that all the countries named have increased their shipping tonnage during the last year.

Mr. S. Fukuhara, a candidate for election to the Hiroshima Prefectural Assembly, was arrested on August 24th on a charge of infringement of the Election Law. His house was searched.

YACHTING.

Two races were sailed on Saturday afternoon. The 21-raters started at 2.30 and went round the Tsurumi mark and the Lightship twice, the competition being chiefly between *Winsome*, *Pete* and *Edna*. *Winsome* led towards the close but was displaced by *Pete* in beating up the harbour. The wind, southerly, was very light and uncertain. Corrected (handicap) times:—

<i>Sunbeam</i>	h.m.s.
<i>Winsome</i>	5-18.05
<i>Pete</i>	5-08.08
<i>Edna</i>	5-07.17
<i>Vixen</i>	5-17.05
<i>Daisy May</i>	5-32.10
	5-26.45

Pete wins the first prize and takes two record points, *Winsome* second with one point.

Ten "Larks" went out round the Lightship and back. No. 4 (W. B. Mason) elected to beat up the harbour via the pier, all the others selecting the breakwater. The wind shifted a little to the westward and placed him in a very good position, yet No. 11 (F. H. Abbey) met him at the buoy. Thence they ran in together, making a pretty race, the result of which placed No. 4 ahead by ten seconds. As, however, she and No. 14 (J. Eytton) had crossed the starting line too soon they were disqualified, and the first prize goes to No. 11, which also wins the handsome silver handicap prize, and two record points. No. 13 (A. I. Manley) is second and gets one record point. No. 10 (Drummond and Watt) is third. The times were:—

No. 1	h.m.s.
No. 2	4-54.42
No. 3	5-01.40
No. 4	4-38.15
No. 5	5-07.05
No. 6	5-02.20
No. 7	4-53.30
No. 8	4-48.32
No. 9	4-38.25
No. 10	4-46.00
No. 11	4-54.35

THE "AMERICA" CUP RACES.

Monday, August 24.

We are enabled to supplement Reuter's telegrams as to the first day's race by the courtesy of a resident who has arranged a special code.

From this source we learn as follows:—

"The first Cup Race was not finished in the time limit.

"Wind very light, dying away to calm.

"Sea smooth.

"*Reliance* had the lead when race declared off.

"Result indecisive and betting still even."

Tuesday, August 25.

The race on Saturday (that is to say the first completed race) is thus described by a private wire which has been courteously placed at our disposal:—

"Race completed. *Reliance* winner.

"Good steady full-sail breeze all through.

"Sails and handling about equal.

"Race won on merits of winner, no flukes.

"Difference in time, after deduction of *Shamrock's* allowance, over four minutes.

It will be seen that Reuter states the winner's lead at the finish to be seven minutes after deducting time allowance. There is here a discrepancy which might be accounted for in more than one fashion, but which will be made clear in course of time and need not now be discussed. It remains evident that *Shamrock* was beaten by from "over four" to seven minutes after crediting her with the 1m. 57s. accorded to her on measurement. That means that *Reliance* crossed the home line six to nine minutes ahead. There is no doubt that in this race the challenger was handsomely beaten. She had the better of the start by four seconds, but before we decide how much or how little that means we must know the relative positions of the yachts. *Shamrock III* might cross the starting line a fraction of a minute ahead and be blanketed by an overtaking opponent fifty yards out. The first point of sailing they met on was going to windward. The mark was laid fifteen miles up wind, and one telegram relates that the fight on tacks lasted one hour and twenty minutes.

Reliance, then, beat *Shamrock* on this point of sailing in an hour and twenty minutes, that is, probably, that at the expiry of this space of time she was demonstrated to the spectators to be ahead by her crossing to windward of the other, and from this point to the turning mark she increased her lead to three minutes. However it must be remembered that a slight circumstance may mean minutes in the courses of these huge craft travelling at steamship speed. At any rate it will not be surprising to learn that *Shamrock* has won the second race if sailed under slightly different conditions. In a fifteen knot breeze with smooth water, equally handled of course, she does not seem to be a match for the American. As to the other point of sailing, running off the wind, the latter added to her lead all the way. There are other conditions of weather which may be experienced, of course, and even under similar circumstances yachts do not always behave in the same way. We are told that *Shamrock* went disappointingly on the first trial; she has certainly not gone well in the first race. But there may be something to be remedied, and when that is done the craft on which the thoughts of so many British yachtsmen are fixed may move a little more satisfactorily. It must have been a splendid spectacle.

It would be interesting to know the exact time that elapsed between the arrival of one yacht and that of the other, because we might then estimate how far distant the challenger lay when to the usual accompaniments of enthusiastic spectators the defender crossed the home line. On the assumption that, including time allowance, *Shamrock* was nine minutes astern and the further supposition that they were travelling over 8 knots an hour, then the challenger was well over a mile out when *Reliance* finished. Six minutes off including time allowance she would have been away nearly one mile.

Wednesday, August 26.

The news that *Reliance* has won two races in succession will be depressing in many quarters. She has undoubtedly proved herself superior to the challenger in windward work, first in a fine full-sail fifteen knot breeze and now in a lighter wind. One can not easily understand what is meant by *Reliance* "crossing" 84 seconds ahead, for it is not easily conceivable, unless, in the case of accident, that a sailing master could throw away a precious minute at the outset of the race. Nor can we suppose it means that when they crossed tacks the defender had gained so much advantage, because no method occurs to us which would compute her lead in seconds. *Shamrock* gained on the run home before the wind, but that is not very consoling, for the *America's* Cup will not be lifted on that point of sailing only.

Thursday, August 27.

Later information seems to show that the *Shamrock* was over two minutes late in starting. That, as we have said, is difficult to understand, and we must wait for some explanation of why the challenger incurred such a delay.

We extract the following New York telegram dated Aug. 1st, which at the moment may be interesting:—

By the time the yachts are called to sail the first race for the *America's* cup the *Reliance*, selected to defend it, will have cost, one way or another, \$435,000 or more. That is a staggering amount to contemplate, but when everything is cleared up at the end of the season it may be \$450,000. In addition to this sum there must be considered that the placing in commission of the *Constitution* and her running expenses reached from \$65,000 to \$70,000, while the *Columbia* has cost J. Pierpont Morgan \$45,000 or possibly \$55,000.

The building and rigging of the *Reliance* cost a fortune. The yacht's construction required the best of workmen, while all standing and running rigging was expressly made and her canvas occupied the attention of a large body of sailmakers for months. The *Reliance* has possibly one hundred different sails and \$15,000 or so will represent the cost of a suit. In this particular the *Constitution* and the *Columbia* have not been so expensive.

Besides the cost of the yachts there is a flotilla of tenders and escorts of the New York Yacht Club and the enormous sums necessary for the pay and subsistence of the crews of the *Reliance*, *Constitution*

and the *Columbia*. With a crew of about fifty-five men on the *Reliance* and the crew on the tender *Sunbeam* there are many men to be looked after daily. The yacht's sailors are paid wages of \$35 per month or more, and there is a scale of prize money arranged by Mr. Iselin.

The racing crews cost prodigiously to feed, as they are men in the best of health, while their work naturally gives them excellent appetites. There are quite as many stewards and cooks on the *Sunbeam* looking after the welfare of Mr. Iselin and his associates and the officers and crew of the *Reliance* and their own ship as are found in a good-sized city hotel. All changes in the yacht's fittings, all alterations or repairs to the rigging and spars are paid for extra, while the docking bills are very large.

The \$450,000 or more that the *Reliance* will cost must not be included in any way with the New York Yacht Club's expenditures in arranging for the races. The nine men who own the defender will bear the burden of that vessel's expense, but the syndicate does not meet the personal bills of Mr. Iselin, the managing owner. Altogether the defence of the cup this year may approximate a million dollars.

A New York dispatch of Aug. 5th said:—Captain Robert Wringe of the *Shamrock III*, and Captain Bevis of *Shamrock I*, had a narrow escape to-night through the collapse of a pier on the Shrewsbury River at the Highlands. With twenty other persons, including several members of the crew of the challenger, the two sailing masters were precipitated into the water, but were not hurt.

Captain Wringe and Captain Bevis, with three sailors, left the *Shamrock* in Sandy Hook bay in the afternoon in the steam launch *Buttercup* and started up the Shrewsbury River for the Highlands of Navesink. On the way the *Buttercup* struck a sandbar and it became apparent that unless she was immediately beached she would founder. Captain Wringe took the wheel and headed her for the beach. The water had risen almost to the furnace door when the bow of the *Buttercup* took bottom.

A great crowd had been attracted to a nearby wharf, where Captains Wringe and Bevis landed after procuring tackle for the purpose of hauling the steam launch out of water. One end of the tackle was fastened to the stern of the *Buttercup* and the other was secured to one of the piles of the wharf. While they were thus engaged the wharf collapsed and all on it were thrown into the water. For a time it was feared that many had been crushed under the timbers, but with the exception of a few who were slightly cut and bruised all succeeded in getting to shore unhurt.

Captain Wringe was for a few moments in serious danger, being grappled by several men who could not swim and who held fast to him until all were rescued by a boat. Captain Bevis reached shore after rescuing a man who was unable to keep afloat. Both captains returned to their yachts after being provided with dry clothing by guests of a near-by hotel.

CHURCH NOTES.

The Declaration of the 4,000 Clergy, the "backbone" of which, to use the Archbishop of Canterbury's word, consists in its frank acceptance of the Ornaments Rubric, as prefixed to the Order for Morning and Evening Prayer in the Prayer Book, as a lawful inheritance in the English Church, was presented to the two Archbishops on July 11th, and the full text of the reply is now before us. It is a statesmanlike utterance, and it suggests the thought that after all this latest manifesto may not die so absolutely without issue as have so many of its predecessors in the troublous times of the last half-century.

His Grace of Canterbury is not a High Churchman, and on that account the "Cordial and whole hearted welcome" which he gave to the clergy who presented it, and his openly expressed opinion of the absolute loyalty of the High Church Party as a whole will be the more appreciated.

"It is especially desirable," he says, "at this time that it should be made perfectly clear that the great body of High Churchmen in this country are, as many of us know perfectly well to be an indisputable fact which is sometimes, one would almost think, wilfully misunderstood outside, absolutely loyal to our Church system and authority and rule."

His sympathy with the more Evangelical part of the deputation was never doubted. By this utterance therefore he would at once put himself on terms with his whole audience, and ensure an attentive and respectful hearing.

In dealing with the Ornaments Rubric, which is

of course the crux of the whole situation, His Grace first of all reminded his hearers of the extreme difficulty of finding out exactly what it allows and what it does not allow. The Declaration asserts a belief that the Ornaments rubric "retains the ceremonial system which was lawful under the first Prayer Book of Edward VI." Yes, says the Archbishop, but "I believe that I am not wrong in saying that every one of those words 'retains,' 'ceremonial,' 'system,' 'lawful,' 'under,' has been the subject of prolonged and most eager disputation on the part of perfectly competent men who have taken an opposite view about each one of the phrases." This is true, and it bears out what was said in the last Church Notes as to the caution which will be observed by all sensible people in dogmatizing about the legality of this or that ceremony in the Church's ritual. Dogmatism is impossible except for those who have profoundly studied the subject, and we may add those who have profoundly studied the subject will, as a rule, be the least inclined to dogmatise.

Some disputed points have been decided by the Privy Council. Yes, but even these decisions, the Archbishop recognised, are not necessarily conclusive. The Church has always claimed the right, a right which is of course exercised by all other religious bodies in England, to interpret its own formularies. And this right, confirmed to it, by the way, in *Magna Charta*, the mere fact of Establishment leaves unaffected. So at least it is contended. Of course there must always be an appeal to the Sovereign (who hears it through his Privy Council) on the part of any one of his subjects who feels himself aggrieved. But each such appeal is considered on its own merits; and a previous decision of the Privy Council is not held to settle the question, supposing for instance, (as in ecclesiastical questions has frequently happened) some new light is brought to bear on a new case subsequently brought before it. The result of this is that the Privy Council has given decisions contradicting its former decisions on several occasions, and there is a want of finality about its judgments in ecclesiastical matters which is not felt when it deals with ordinary cases. "New light" is always considered a sufficient justification for reversing a former decision. It was the recognition of this principle that made it possible for the Privy Council to accept all the findings of Archbishop Benson's Court in the Bishop of Lincoln's case, though, in more than one instance, they contradicted its own previous decisions. And this, no doubt, is what induced the leading Evangelical layman, quoted by the Bishop of London, to deprecate further litigation in the matter of the Eucharistic vestments, because though the last decision of the Privy Council was against their use, it was more than probable, as he declared, that the next would pronounce them to be not merely legal but compulsory.

The problem before statesmen who would take up the Church question to-day, is to establish some court whose decisions would be binding on the consciences of the whole body of Church people. The Privy Council does not supply what is wanted, its jurisdiction being very widely questioned. The Archbishop is well aware of this, and it will explain what will strike some people as remarkable in his address. He refers to the Privy Council and claims a certain amount of deference for its decisions, not on the ground that its interpretations of the law are in these matters necessarily conclusive, but because of the personal ability and piety of the Judges who presided in that court. Granting for the moment, he says, that the jurisdiction of the court is questionable, yet

"When you have, quite apart from when and where it was given, the detailed argument brought out by a man like Lord Selbourne, or a man like Lord Hatherley, or a man like Lord Cairns, all devout, earnest religious men, and all trained lawyers, who were simply trying with all their might and with the power of a great intelligence to come to a decision as to what a thing means, do not let that be brushed aside because you say that the occasion on which it was delivered was in a court to which you do not attach the same importance as other people. The argument stands by itself good or bad by the weight which attaches to the authority of these great thinkers. It does not depend a bit

upon where or when or why it was delivered. It is the judgment of honest men and religious men and, above all, intensely capable and competent men, wrought out upon this subject."

This is an argument which must appeal to everyone so far as it goes; and though many people will no doubt consider that the Archbishop might have taken up much stronger ground, all those who appreciate the delicacy of the situation, and the end which he has in view, viz. the peace of the Church, will recognise his wisdom in not claiming for the Privy Council an authority which would never have been generally accorded to it.

Nevertheless, even such argumentative use of the Privy Council judgments as he has ventured to make, will not escape unchallenged, a fact which he plainly perceived. For since the last decision of the Privy Council, an immense amount of new light has actually and as a matter of fact been thrown upon these subjects. They are already, so to speak, out of date owing to the historical research of many patient workers. The Archbishop therefore supplements his argument by a suggestion which may possibly have important consequences in the near future. Nobody, he says, would assert that the great men whose names he had referred to were either dishonest or incapable. But

"If they were wrong it must be because additional knowledge has now come into our possession which would have altered their opinion had they been able to look at it to-day. That is not only an arguable proposition, but I think an exceedingly strong one; and if so it is, in my judgment, exceedingly desirable that the new light upon the particular points that are still unargued by those in possession of the fuller knowledge should be made use of. I am not prepared to say how that is to be done, but I should imagine that it would not be an impossible thing to bring that result about and to let us find what capable men to-day, perfectly ready to accept new light if it is there, would say upon the subject. Let this room be a witness of it. It was in this room and from this very spot that the Lincoln judgment was delivered by Archbishop Benson in the light of the new knowledge that had come into our possession. That judgment when delivered here was accepted by the lay authorities, and have we the slightest reason to doubt that properly argued discussions and properly argued conclusions upon questions like these, which may differ from conclusions arrived at before on account of the new light which had subsequently been made accessible, would have the same acceptance as was found for other decisions which in the new light were accepted by those in high positions upon whom the authority lay?"

This last passage which we have quoted we take to be by far the most important part of the Archbishop's speech. In it, as it seems to us, he very plainly hints that, if matters could be so arranged, he would gladly preside over another Court like that of his great predecessor, Archbishop Benson, who tried the Bishop of Lincoln. The success of such an experiment would of course depend entirely on the qualities of mind and character which he could bring to this task. There can be no question as to the good result of Archbishop Benson's judgment. It secured to the Church of England a whole decade of comparative peace. We can see no good reason why Dr. Davidson, given the opportunity, should not achieve a like result.

Can it be altogether independently of any such idea that Mr. Russell Wakefield, who drew up the declaration, has issued his friendly challenge to the Dean of Canterbury? Litigation on these questions has now for some considerable time ceased, to the Church's great benefit. Mr. Russell Wakefield, however, is desirous that a friendly suit should be carried in some way before the judgment seat of the Archbishop in person, and to such a suit only technical objections could be raised. He has appealed, through the columns of the *Times*, to the Dean, as representing the Low Church party, to help him. It remains to be seen whether the Dean will take up the challenge.

Judgments were delivered in the Tokyo Appeal in the cases of three educational officials resulting in two being discharged, and a third sentence changed to 3½ months imprisonment with hard labour and a fine of yen 15.

LAW CASES.

CLAIM ON A PROMISSORY NOTE.

The hearing of this case brought by Mr. J. Helm against Mr. G. R. Allen, claiming on a promissory note for yen 627, was resumed in the Yokohama District Court, before Judge Yasuda, on Aug. 21st, when the claim of plaintiff was dismissed and he was ordered to pay the costs.

PETITION FOR SALE BY AUCTION.

In the Kyoto District Court, the Yokohama representative of the Russo-Chinese Bank filed on August 22nd, a petition asking for a decree to sell by public auction the properties of the Heian Cotton Spinning Company, Kyoto. The *Jiji* states that the Bank loaned the Japanese company yen 300,000. A promissory note for yen 150,000, was given to the bank, and for the remainder the properties of the mill were offered as security. The Kigyo, Sangyo and two or three other banks whose credits with the spinning company amount to yen 200,000 are endeavouring to settle the action out of Court.

THE SINGER MANUFACTURING CO.
v. T. IIDA.

The hearing of this case, instituted by Mr. C. Cable, representative of the Yokohama branch of the Singer Manufacturing Co., No. 80, against T. Iida, began in the Yokohama District Court on Aug. 22nd. This action refers to a protest against the distraint of a sewing machine rented to a tailor named to T. Haru, against whom defendant had brought a case of distraint for debt.

The case was adjourned *sine die*.

SENTENCE ON A MURDERER.

A man named K. Uchida (24) living at the village of Suma, Naka-gori, Sagami province, who murdered on April 28th, a woman named Taka Takahashi, with whom he had been living, was sentenced on Aug. 21st in the Yokohama District, to 9 years' confinement with hard labour. The man after murdering the woman buried her corpse in the river bed of the Banyu-gawa, to conceal his crime.

TRIAL OF ALLEGED THIEVES.

The trial of S. Fujita (19) office-boy of Mr. F. W. Horne, No. 70, Yokohama, who was charged with having stolen 42½ dozen files, and various kinds of implements from a godown of his employer from the middle of April to the end of May this year, and also with having got money from the Chinese exchange shop Van Tai, No. 72, by a false cheque; and two others named M. Wakui (31) and B. Murata (55) who are alleged to have assisted him, took place in the Yokohama District Court on Aug. 24th before Judge Yasuda.

OBJECTION TO TEMPORARY SEIZURE.

The hearing of this action, instituted by Mr. H. Victor Gielen, of Messrs. Bavier & Co. No. 209, against Mr. John H. Jewett, late of the firm of Messrs. Bavier & Co., No. 209, Yokohama, began on August 26th, before Judge Kato. It was an objection brought against a decision, given in the Yokohama District Court by Judge Kato on June 10th in the petition of Mr. Jewett, who asked the Court to seize the books of the late firm of Bavier & Co., which remain in the possession of Mr. Gielen, who is carrying on with others the business of the old firm under the same name.

Messrs. Masujima and Hiraoka were present for plaintiff and Mr. Sato for defendant.

Plaintiff's counsel stated that (1) the firm Bavier & Co. represented by defendant was not organized and established according to the laws of Japan; it had been wound-up without an application signed by the senior partner, Mr. Edward de Bavier, who lives in Switzerland. Therefore the existence of such a firm could not be recognized. That (2) the present firm of Bavier & Co. was established on June 30th, 1902, by Messrs. Ed. de Bavier and S. Warming and registered on March 11th this year in the Yokohama Local Court, after which plaintiff joined the firm as a partner. That (3) though bearing the same name, the natures of the two firms are differ-

ent and have no connection with one other. Defendant, therefore, could not claim the seizure of the business books of the existing firm and had no right to do so.

In defence, Mr. Sato explained the conditions under which Messrs. Bavier & Co. were wound-up and the relations which existed between the two firms. The wound-up firm was established in Yokohama in 1866 by Mr. Edward de Bavier and it was registered on December 6th, 1899, in the Yokohama Local Court. It was wound-up on June 18th, 1902, by consent of the partners. Some ten days after the firm had been wound-up, a new firm whose name was also Bavier & Co., was established in the premises at No. 209 where the late firm had also been established. In the new firm, Mr. Gielen, plaintiff, who had been employed by the late firm as manager, became a partner. Many business books and documents of the late firm remained with the new firm as a matter of convenience. Meanwhile defendant had established himself in business in Yokohama with a branch at New York. Subsequently he entrusted Mr. F. O. Stuart, of No. 6, Yokohama, with the duty of examining the books with a view to settling them in an orderly manner, and on the other hand he asked Mr. Gielen to deliver up all books and documents of the wound-up firm which were kept in his office. Mr. Gielen, however, refused to give these up. On this ground, therefore defendant presented a petition to the Court for a decree to temporarily seize the books in dispute, and judgement was rendered in June 10th this year, in favour of petitioner. Temporary seizure of the books was made by a bailiff.

The court here rose, adjourning the case *sine die*.

SENTENCE ON THIEVES.

S. Fujita (19) office boy, late in the employ of Mr. F. W. Horne, No. 70, who was charged with having stolen various implements from a godown of his employer, and also with having received yen 50 from a Chinese exchange shop, Van Tai, No. 72 by means a forged cheque on the Chartered Bank; and two others named M. Wakui (31) and B. Murata (55) who assisted him, were sentenced in the Yokohama District Court by Judge Yasuda on August 26th, to 1½ years, 10 months, and 1 year's imprisonment with hard labour, respectively, while each is to undergo 6 months police surveillance.

TRIAL OF P. FLYNN.

Patrick Flynn, of the U.S. transport *Dix*, who on Aug. 19th, assaulted another sailor named John Foley and a quartermaster named John Mark of the same vessel, then lying in Uraga Shipbuilding Yard, and who was subsequently arrested at Yokosuka, has been committed for trial. The trial takes place on Aug. 31st in the Yokohama District Court before Judge Nakamura.

AMERICAN TOPICS.

An officer of the Southern Pacific Railway in charge of the company's emigration bureau states that the 600 land agents under him are now selling land to farmers at the rate of 100,000 acres a month. It is estimated that between 25,000 and 50,000 farmers have settled in Louisiana and Texas since this work was taken up on a large scale by the Southern Pacific in 1894.

Experimenting with the X-ray in an endeavour to utilize its mysterious light in a business way has almost cost Thomas A. Edison his sight. While trying the effect of the rays on various objects the strange light exerted its power on both Mr. Edison and Charles Dally, an assistant. As a result the noted inventor's sight has been thrown out of focus, while one of Dally's arms has been amputated and he probably will lose the other.

The big seven-masted American schooner *Lawson*, put into commission only a year ago, is to be dismantled and converted into a freight-barge. The *Lawson* was the largest schooner ever launched, and had a displacement of 10,000 tons. She was an economical freight-carrier, but was too large for the coastwise trade. In

addition to this, she was found hard to handle at sea in unfavourable weather, being very slow in stays.

Since the discovery of the Klondike and the establishment of the Government assay office at Seattle, a period of five years, the total receipts of gold dust and gold bullion amount to \$73,364,790, or more than \$14,000,000 per year. Of this amount \$11,285,971 came from the mines of Nome, \$3,428,780 from British Columbia, \$2,654,037 from Treadwell and other Alaska mines, \$1,153,856 from mines of Washington and Oregon. The receipts of this office so far this season are in excess of any previous year in its history, the Klondike showing better than last season, while Nome receipts are a third larger.

The United States Geological Survey reports that the production of platinum decreased from 1,408 ounces, valued at \$27,526, in 1901, to 94 ounces, valued at \$1814, in 1902, the smallest production since 1893. In connection with the platinum there were also obtained from the ores 20 fine ounces of iridium, as against 253 ounces in 1901. The domestic supply of platinum in recent years has been obtained as a secondary product chiefly from gold placer deposits in Trinity and Shasta counties, California. The Russian sources of platinum supply, which furnished about 90 per cent. of the total consumption of the world, are comparatively limited. The imports of platinum into the United States during 1902 were valued at \$1,987,980, as compared with \$1,695,895 in 1901.

The annual report of the auditor for the U.S. War Department shows that during the year enlisted men of the army made 121,709 deposits under the act of May 15, 1872, amounting to \$3,751,616, and that 158,179 deposits were withdrawn, amounting to \$4,802,190, upon which the depositors received \$262,378 in interest. During the year the sum of \$743,139 was placed to the credit of the permanent fund of the home under the act of March 3, 1883, being the amount retained from pay of enlisted men of the United States army on account of 12½-cent. fund, fines by general courts martial and amounts due deserters at large and dishonourably discharged soldiers. There was withdrawn from said permanent fund during the year for current expenses \$254,000. The amount of claims filed by the several states on account of the war with Spain was \$6,657,027. Of this amount \$4,223,682 were allowed, \$1,568,359 disallowed, and \$864,986 are pending settlement.

For nearly three decades the state of Massachusetts has in its censuses caused an enumeration to be made of the aliens in the state. In the instructions given to the enumerators, aliens have been defined as all "male persons of foreign birth twenty-one years of age or over who have not complied with the naturalization laws of the United States." In a paper giving the statistics of aliens in industry in the state, the Massachusetts *Labor Bulletin* for August sums up the results of a comparison of the enumerations made at three censuses by saying that the aliens showed an increase both as regards total population in 1885 as compared with 1875, and in 1895 as compared with 1885. In other words, "the number of aliens in the commonwealth has more than kept pace with the increase in total population and in the total number of males, indicating plainly that the immigrants have not complied with the naturalization laws of the United States, and have failed to become citizens."

Thomas A. Edison is quoted as saying that his long-promised storage battery has been in operation three weeks. This new battery will average more than a third greater mileage for half the weight than will the old lead battery. But the new invention cannot be put on the market in any quantity as yet. The best that can be done now is to make one a day. By October the output will be at least six daily, and about Christmas any demand will be met. The trouble has been that special machines had to be built, but the last of these will be completed next week. Another disadvantage Mr. Edison alleges he has to con-

tend with is paying 40 per cent. duty on a certain sheet steel that must be imported from England or Germany, and then in only limited quantities. By Christmas three rolling mills will be able to make it in this country, and then the present high price for the batteries will be reduced. This battery will drive all other methods of locomotion out of business, and in less than ten years the horrible odor of gasoline on the public highways will be unknown.

Rear Admiral Evans reports that the monitor *Monadnock* in a recent full power speed trial of eight hours averaged 11.78 knots an hour, and that for two hours, with four boilers under forced draught, the speed averaged 12.1 knots. This is a decided improvement in a vessel which, when completed seven years ago, made only 11.63 knots on her trial. The engines and boilers of the *Monadnock* were built at Mare Island under the supervision of Chief Engineer George F. Kutz, U. S. N., and the recent performance reflects credit on the officials and workmen in the navy yard, as well as the present engineer of the vessel, Lieutenant I. V. Gillis, to whom the Secretary of the Navy has written a complimentary letter. The *Monadnock* was placed in commission February 20, 1896, and cost \$2,134,054. The cost of repairs up to July 1, 1902, amounted to \$77,300, an average of one-half of one per cent of the first cost per annum. The *Monterey*, built at the Union Iron Works at a cost of \$2,728,548, and commissioned February 13, 1893, has cost in repairs \$161,330 up to July 1, 1902, being an average of six-tenths of one per cent of the first cost per annum. Both of these monitors have been in Philippine waters since 1899, and from all accounts the *Monadnock* has proved itself the better vessel.

A study of a table of exports from the principal exporting countries of the world, compiled by the Bureau of Statistics of U.S. Department of Commerce, shows some facts of especial interest to the people of the United States. One of these important facts is that the United States, which occupied fourth place in the list of exporting countries in 1870, now shows a larger total in the final column, which represents the latest available year, than does any other country of the world. The United Kingdom, France and Germany showed in 1870 a larger total of domestic exports than did the United States, the figures being for that year: United Kingdom, \$971,000,000; Germany, \$552,000,000; France, \$541,000,000, and from the United States, \$377,000,000. By 1880 the domestic exports of the United States exceeded those of France or Germany, but were still below those of the United Kingdom, the figures for the year being: United Kingdom, \$1,085,000,000; Germany, \$687,000,000; France, \$669,000,000, and the United States, \$824,000,000. In 1890 the United States occupied a similar relation, the figures for that year being: United Kingdom, \$1,282,000,000; Germany, \$792,000,000; France, \$724,000,000, and the United States, \$845,000,000. In 1902, the latest available year for which the figures of the United Kingdom, Germany and France are available, the figures of domestic exports stood: United Kingdom, \$1,379,000,000; Germany, \$1,113,000,000; France, \$818,000,000; while those of the United States for the twelve months ending June 30, 1903, were \$1,392,087,672.

A CHAIR OF JAPAN-SE.

Mr. Robt. A. McLean sends a letter to the English press to call public attention to the fact that King's College, London, has instituted a Chair of Japanese, and has appointed as the first Professor Mr. J. H. Longford, a gentleman who was for more than 30 years in the Consular Service in Japan, and who is a well-known authority on all matters connected with the country. He states further:—

Now that England has a Treaty of Alliance with Japan, it becomes a matter of first national importance that our Naval and Military officers should have some knowledge of the language of a people with whose forces they may, at any time, perhaps soon in the present state of Far Eastern politics, have to co-

operate in Eastern service. The growing commerce between England and Japan might be increased, and competition facilitated with our active and energetic trade rivals if our merchants and their clerical employees understood the Japanese language, and through it the character and wants of the people.

Missionaries might greatly lessen the period that they now require for the acquisition of the language in Japan, and the great cost to their societies before they can hope to be useful in this work, if, before leaving England, they devoted some time to the preliminary study, and tested their capacity in one of the most difficult of Oriental languages. The Japanese take to the English more than to any Western people, and no Eastern country has greater attractions for English travellers. The pleasure and profit of a visit there would be greatly enhanced by even a very slight knowledge of the language, such as could be obtained by a few months' study in England. The Council of King's College have, in creating this Chair, performed an eminent public service, and if the facilities they have provided are taken advantage of by the classes I have mentioned, one which will entitle the Council to the gratitude of the nation.

THE "EMPRESS" COLLISION.

From the *China Mail* of Tuesday, August 18, we extract Captain Marshall's story of the recent collision between the *Empress of India* and the Chinese cruiser *Huang Tai*. The collision took place between 11 and 12 o'clock on the night of August 17. Capt. Marshall says:—

"We were proceeding on our way from Shanghai, when the Chinese cruiser *Huang Tai* overtook us. When about to pass, the cruiser starboarded into the *Empress of India* so suddenly that it was impossible for the *Empress* to get to starboard fast enough, the result being that the cruiser struck her a glancing blow on the fore end of the promenade deck. The cruiser slid along the steamer's side, apparently uninjured, except the damage done to her boats and gearing, but on clearing the ship ran up signals of distress.

The *Empress of India* then lowered her boats and proceeded to the cruiser to find her in a sinking condition. The crew were taken off, though very reluctantly, and the cruiser settled down by the stern at 1.27 a.m. being then off Breaker Point S. 82 E. 15 miles.

As many of the cruiser's crew as could be found were picked up, and the *Empress* proceeded on her voyage, and on mustering the rescued men this morning it was found that thirteen were missing out of a total of 184. As the night was fine and there were several junks in the vicinity it is reasonable to suppose that most, if not all, of the missing were saved. Grave fears, however, are felt for the Captain, who positively refused to leave the ship. The Navigating Lieutenant and the Gunner-Lieutenant who were on the bridge with the Captain also refused to leave, but were picked up afterwards."

The *Empress* brought the rescued men to Hongkong and the matter was at once reported to the responsible Chinese authorities.

The *Empress* had a hole of about 4 feet knocked in her side nearly amidships.

NEWS OF THE WEEK.

Mr. M. Tsuda, Yamaguchi, was arrested on August 24th at Shimonoseki. He is charged with gambling.

The general election of members of the Kanagawa Prefectural Assembly will take place on Sept. 25th.

A telegram from Tientsin states that the Dalny Customs has decided to levy duty on and from September 1st.

A telegram from Shanghai states that the Japanese warship *Nanica* was to leave there on August 26th for home.

The *Niroku* states that a Russian who has been shadowed in western cities as a suspicious person arrived at Wakayama on August 25th.

The *Saikyo Maru*, which took fire off Mutsure island, arrived at Kobe on the afternoon of Aug. 22nd. She is to enter the Kawasaki Shipbuilding Yard for repairs.

The *Miyako Shinbun*, Tokyo, is being prosecuted by the authorities of the Metropolitan Police Board for having published in its issue of

August 25th a statement which is alleged to be injurious to the public interests.

According to a telegram from Mr. A. Segawa, Japanese Consul at Newchwang, the Russian authorities have removed the prohibition on the export of cereals from Dalny for a period of 12 days, commencing August 18th.

A Kobe telephone message in the *Fiji* states that tea transactions in that port seem to have resumed activity. On Aug. 24th, 50,400 *kin* were sold for export; 438 cases brought in to the market from inland; and 3,136 cases are in stock.

The proposed amalgamation of the Seoul-Fusan Railway Co. and the Seoul and Chemulpo Railway Co. which is under consideration by the authorities of the Finance and the Communications Departments, states the *Asahi*, will shortly be sanctioned.

A double suicide occurred on the morning of Aug. 24th in the Yoshiwara, Tokyo. The woman is aged 22 years, the man 25 years. Both sustained fatal injuries in the throat. The man left several letters addressed to relations and friends.

Messrs. Butterfield and Swire inform the Shanghai papers that the recent sudden deaths of the Captain, chief engineer and chief officer of the *Poyang* were due to cholera, believed to have been caused by a salad which the unfortunate men ate.

The general meeting of the shareholders of the Seoul-Fusan Railway Company was to be held on Aug. 25th at the Seinen Kaikan Club, Tokyo, when the dividend for the first half-year was to be declared at the rate of 3 per cent. (6 per cent. per annum.)

According to investigations brought down to last Saturday (Aug. 22nd), banks having money deposits of over a million *yen* are: the Mitsui Bank, *yen* 1,800,915; the 1st Bank, *yen* 1,754,978; the 15th Bank, *yen* 1,216,770; and the Mitsui Bishi Bank, *yen* 1,067,011.

The main body of the standing squadron left Maizuru on August 23rd for Saseho, and the *Yoshino* and *Chitose* arrived on the same day at Takeshiki from Korean waters. The *Matsushima* and two other training ships left Ujina on the 24th for Yokosuka via Mitsuhamama.

A gendarme named T. Shibata (24) belonging to the Toyohashi detachment, and a woman named Nobu (22) attempted to commit suicide by shooting themselves in a brothel on the night of Aug. 21st. The soldier was removed, alive to the military hospital, but the girl died.

On the night of August 22nd a policeman named Fujii, says the *Yorodzu*, inflicted with his sabre severe injury on a man named K. Yamamoto. The man was singing very loudly in Itabashi and the officer tried to stop him. The injured man will prosecute the constable in the Tokyo District Court.

Haru (20) wife of a man named S. Nara, living at Nakasato-machi, Ushigome, Tokyo, and G. Washio, son of Count Washio, living at Benten-machi were arrested on Aug. 20th. It is alleged by the Tokyo papers that the two, having been illicitly intimate, attempted to murder the woman's husband by giving him poison in his milk.

The Osaka Shosen Kaisha has decided to allow 25 per cent discount on passages of Korean emigrants from Kobe, Moji, or Nagasaki for Hawaii; to make a discount of 5 per cent. to such emigrants who are refused a landing at the islands, and who have consequently to return home; and also to give free passage to inspectors of emigrants, at the rate of one inspector per fifty emigrants.

Mr. Jiono, Manager of the *Nagasaki Shimpo*, and three other residents of Nagasaki, jointly lodged on the 17th an application with the Nagasaki Kencho for permission to construct a track for an automatic carriage system between that town and Mogi, a distance of four miles. The promoters, according to the *Nagasaki Press*,

propose to construct a number of carriages, 7 feet by 4 feet, fitted with gas engines of 8 horse power. The capital for the undertaking is estimated at *yen* 35,000.

Tokyo papers state that the family of the late Lord Salisbury have acknowledged the Japanese Imperial Court's dispatch of condolence.

Mr. M. Nishina, candidate for election to the Shizuoka Prefectural Assembly, was arrested on Aug. 26th on a charge of infringing the Election Law.

S. Asano (19) living at Motomachi, Yokohama, and two other youths who attempted to go to America without paying passage, by the Swedish steamer *Marie*, which left here on Aug. 21st, were found by the crew while the ship was off Oshima. The three stowaways were instantly handed over to the island police. The young adventurers applied for relief, to the governor of island, who then communicated with the governor of Kanagawa Ken.

Tokyo papers state that the police authorities of San Francisco recently informed the Japanese Department for Foreign Affairs that a lawyer named William Robert Verves (?) employed by the Union Pacific Railroad Company, has absconded after stealing money belonging to the company. The U. S. authorities have offered a reward of \$1,000 gold for his arrest. It is added that the alleged offender is a native of Pennsylvania and 43 years old. His height is 5 feet and 7 inches and he weighs about 175 pounds.

According to a New York telegram from Mr. Uchida, Japanese Consul, dated August 21st, transactions in raw silk have not advanced since his previous report, because prices demanded can not be met on the market. The cotton market was very active; there is a good demand by spinners and prices are quoted at \$12.74. Owing to information that a plague of insects has appeared in the Texas cotton fields, and to speculative purchases, transactions became brisker. There are 5,435 bales of cotton in stock.

The census of 1901 reveals a tragic fact in connection with the Australian aboriginal. He belongs to a race which is dying out with fatal rapidity. In 1778, the year of settlement, Governor Phillip estimated the native population at 1,000,000. To-day it numbers only 47,000. The aboriginal is extinct in Tasmania, almost so in Victoria, and in New South Wales he numbers less than 4,000. Like the North American Indian, his days are numbered; but, unlike the North American Indian, his losses through war and bloodshed have been insignificant.

A swimming fatality occurred in the harbour last evening, said the *Kobe Herald* of Aug. 26th. Mr. Otsuka Nakaji, 2nd Engineer of the N.Y.K. steamer *Mikawa Maru*, was swimming near his ship at about 6.30 p.m., when he suddenly sank and disappeared. Great excitement occurred on board the steamer and a search was instantly started. News was conveyed to the Branch Office and the Water Police Station, who sent the necessary appliances for the recovery of the remains. The Kawasaki Dockyard Co. also sent several boats equipped with diving apparatus. The body was discovered by one of the Kawasaki divers at 9.30 last night but life, of course, was extinct. The fatality was certified to be due to heart failure. Beyond the fact that he had his house at Shinagawa, very little is known about the unfortunate engineer here.

The Report of the Commissioner for Wei-hai-wei contains some amusing instances of the embarrassing respect which the people have come to entertain for British justice. "The people," say the Commissioner, "positively revel in going to court, and look upon it in very much the same light as going to the theatre or other places of diversion. An injured husband will walk 20 miles to inform the magistrate that he is quite unable to keep his wife in order. An aggrieved rustic will plod wearily a distance of 10 miles to tell the magistrate that his neighbour has stolen six handfuls of grass that belonged to him, and he

will couch his plaint in words of poetic pathos, imploring 'the great man' to help him, in which case his gratitude will be as the ocean in depth, and the vault of heaven in height."

A detailed report regarding the collision between the Japanese warship *Naniwa*, and the sailing-ship *Dundee* is given in a telegram to the *Asahi*, under date of August 24th, from Shanghai. Both vessels were at anchor at the time at Woosung when the rush of the incoming tide sent the *Dundee* swinging across the *Naniwa's* bows. The sailing vessel swept the forward part of the *Naniwa's* deck, carrying away the rail and some of the fittings. According to an telegram received on August 23rd, the *Naniwa* collided with a vessel of 2,000 gross tons, which had dragged free from her anchor in consequence of the enormous inrush of the tide. Damage was sustained by the *Naniwa's* bridge on the starboard side and an anchor chain was broken. The telegram adds that the *Naniwa* was not seriously injured and could proceed at once upon her trip north.

Baron Tsuda Mamichi, who has been suffering from consumption for a long time, was, on August 26th, promoted to the Second Rank of the junior class and received the decoration the Sacred Treasure of the first class. The Baron was born on December 20th, 1829, at Tsuyama, Mimasaka province, and was educated in Yedo. In 1863, under instructions from the Tokugawa Government, he proceeded to Holland, to study jurisprudence and to investigate political matters. After two years he returned home when he was appointed to teach in the Kaisai-jo College. After the Restoration he received various offices as secretary, councillor and judge, after which he was, in 1890, elected in Tokyo a member of the House of Representatives. In 1896 he was appointed by the Emperor a member of the Upper House and in 1900 was promoted to the peerage. In 1902, the degree of *Hogaku-Hakase* (doctor of law) was granted him.

EUROPEAN NOTES.

Paris is mourning the loss of its oldest tree, an elm planted by order of Sully in 1600, in the Rue St. Jacques. It is leafless this year.

Willie Park, senior, four times British golf champion, died at Musselburgh on July 27th. His son, Willie Park, junior, has been twice champion.

If Cuba fails to float her proposed loan of \$35,000,000 in the United States, she will have no difficulty in doing so in England, according to London advices.

The deaths are announced of Sir John Rigby, formerly Lord Justice of Appeal; Mr. Donald Nicol, M.P. for Argyllshire; and Sir William Thackeray Marriot, Member of the Privy Council.

A well-known Parisian journalist declares that King Edward's popularity in France is due to the fact that "he is the embodiment of what the Parisians imagine the old Carolingian Kings of France must have been!" He is in fact "quite le Roi Soleil."

Lieutenant von Saltzmann, of the German Army, reached Constantinople on July 16th, after riding through China and across the Pamirs and Turkestan. He left Tientsin on January and last.

In view of the insufficient depth of the navigable channel of the river Elbe at certain points between Hamburg and the sea for the largest class of sea-going vessels, the Governments of Hamburg and Prussia have decided upon carrying out an extensive project for "correcting" the course of the river, so as to increase its depth permanently.

According to the London *Chronicle*, it is not impossible that the King's Irish visit will result in the appointment of Archbishop William J. Walsh of the diocese of Dublin, to the Irish Privy Council. Hitherto no Catholic prelate has been

on the council, but it is said to have been a cherished dream of Lord Beaconsfield to have on the council a prelate possessing the confidence of the Irish people and of the Pope.

An early result of the Franco-British *entente* was the visit to Brest of Captain Ottley, Naval Attaché to the British Embassy in Paris. He had received special permission from the French Minister of Marine to visit the Naval Port, and to inspect the vessels nearing completion and those on the stocks. A dinner in his honour was given at the Maritime Préfecture on July 21st.

As an idea of the smoking ability of the Belgian, it is sufficient to say that the farmers devote 4,942 acres each year to the cultivation of tobacco; and, notwithstanding the yield of 18,700,000 pounds, nearly 21,000,000 pounds are imported. In 1901 there were cultivated in Belgium and imported a total of 38,966,200 pounds of tobacco, making 66 pounds per capita of the whole population. Besides this, there were imported 59,400 pounds of cigarettes.

A Turin youth, named Ferdinando Borgialli, has just made what is probably one of the most singular attempts at suicide that have ever been recorded. First saturating a cigar in corrosive sublimate, he let it dry and then smoked it literally to the "bitter end." Death did not ensue, because the agony was too long drawn out, which enabled the doctors to apply effective antidotes. Borgialli, however, suffered a long torture from internal pains and convulsions.

Professor Slaby, the wireless telegraph expert, has, after exhaustive experiments, removed all doubt that the surface of the earth acts as an important element in the transmission of wireless electric force, for which many have heretofore regarded the air as the only conductor. He constructed an artificial earth, which was immunized from external influence by covering the floor of his laboratory with zinc. He then experimented with waves on the floor until his theory was proved.

At the opening of the annual conference of the British Medical Association Dr. Griffiths, the President, declared that Great Britain loses annually 60,000 lives that could be saved by several moderate improvements in the sanitary law and in its administration. The loss was largely of children under one year of age, the mortality among them having increased in the past 36 years. This and the diminished birth rate were two ugly facts that were discreditable to the country and modern civilization.

The possibility of the taxation of raw cotton imported into Great Britain from foreign countries while that grown within the empire may be exempted has greatly exercised the manufacturers of the Lancashire district. In reply to a direct question as to whether the rumour was true that the preferential tariff contemplated such action, Mr. Chamberlain, Colonial Secretary has telegraphed as follows: "The statement is absolutely untrue as regards myself. In fact, I have publicly repudiated the suggestion to tax raw materials."

In regard to the intended removal of the magnetic observatory from Kew Gardens, on account of the instruments being disturbed by electric traction, negotiations have been practically concluded with the Duke of Buccleuch for a piece of ground on the farm of Cassock, in the parish of Eskdalemuir, about 15 miles above Langholm. The Duke has expressed his willingness to grant an extensive site. Eskdalemuir is an extensive upland pastoral parish, which has been described as the roof of Dumfriesshire, and is an ideal site for the observatory.

A shoe repairer was recently mending a pair of shoes which belonged to a young lady. While he was mending them an unaccountable drowsiness took hold of him, and after several suspensions of work ended by sending him to sleep. Inquiries brought to light the fact that the mishap was caused by the shoes he was mending. The owner was employed in a scent factory, and

it is thought that the shoes harboured some powerful essence. Thus, when the bootmaker hammered the leather, he disturbed the scented dust that had collected between the soles and sent himself to sleep.

The question of the wretchedly underpaid Church organist is being debated in English papers and, according to the *Weekly Citizen*, has been pluckily tackled by a man and wife, who advertise as follows in the *Church Times*:—

Wanted, situation by married couple, together. Age 33 and 32 (no family). Husband, organist and choirmaster, generally useful. Wife, cook, house-keeper, or teacher. Recommended by Rev., etc. Commenting on this, *Truth* remarks that if the wife is a really good cook she might, from the point of view of wages, be worth more than the organist and choirmaster.

Another serious outbreak of labour troubles is reported from Southern Russia. At Tula a small dispute of no importance was at once, by the discharge of a number of workmen from a Government factory, transformed into a dangerous agitation. Inflammatory appeals were scattered broadcast in thousands and organisations of the peasantry took advantage of the ferment to excite the agricultural population against the landowners, many of whose houses were burned and their lands devastated in the hope that in their impoverished condition they would be compelled to sell at low rates to the occupiers. Troops have been mobilised to quell the movement.

Balloon garden parties are the latest contrivance of high society in Paris for killing time. The idea is the outcome of personal predilection and appropriately enough, emanates from balloonists and fashion leaders so unimpeachable as the Duc and Duchesse d'Uzes, who the other day invited a party of guests to a garden party luncheon in the Aero Club Park, and whiled away the afternoon with a couple of airship ascents, in which the aeronauts were dukes and counts, and the "passengers" were lords and ladies of equally high degree. But everybody voted the novelty a tremendous success, and it is likely to be perpetuated.

Some details are published of the re-numbering of the Indian Army regiments by Lord Kitchener. The scheme extends to all arms of the service—cavalry, artillery, sappers, and miners, and infantry. The re-numbering is required to do away with the jealousy caused by presidential titles, and to obviate the confusion caused by many regiments having the same number. The new system will retain the present numbering of the Bengal Army and continue the numbers awarded to the Punjab, Madras, and Bombay armies, both in the cavalry and infantry. The infantry numbers will run from one to 130. The title of "lancers" and of the mountain batteries will be abolished to prevent confusion with the British cavalry.

A remarkable instance of paying old debts in a mysterious manner has just taken place at Algiers. A few days since an unknown lady, thickly veiled, entered the Bank of Algeria, and asking for the chief cashier, inquired of him if some years back, a person whom she named did not owe the bank a sum of £7,000. Search being made, it was found that, in fact, such a sum, standing against the person named had, more than 20 years since, been written off as a debt hopelessly bad. Informed of the discovery the lady, without speaking, laid upon the table a large roll of bank notes and walked out. The roll of notes was found to contain exactly £7,000.

The British Admiralty are said to be very much excited over the results of the recent trials with new forms of screw propellers. The ideal now is a blade shaped like a Japanese fan. It is an amazing fact that very little was known about the untried possibilities of screw propellers until quite recently, and yet one need not elaborate the importance of the matter to both the Royal Navy and the mercantile marine. It is calculated that at an average cost of £4,000 per vessel the speed of nearly all our battleships and cruisers

can be increased about a knot, with a reduction in the coal expenditure, if we fit them with new screw propellers. Another important point is the reduction of vibration, which at high speed prevents the accurate laying of guns.

Archduke Eugene of Austria had a narrow escape at a level crossing the other evening, while driving home to Innsbruck from Hall. A train was due, and the gates were shut, but the gate keeper, thinking there would be time for the Archduke's carriage to pass, opened the barrier at one side. On the other side, however, the mechanism jammed, the barrier could not be moved, the carriage and horses were on the line, there was not room for the train to pass, or time to get the vehicle out of the way, and the train was signalled. Fortunately the line was straight at this point, and by violently whirling the red light round his head, the gate keeper managed to arrest the engine driver's attention, and thus saved the situation.

Alarming news reaches St. Petersburg from Teheran. It is to the effect that in the Tabreez region there is a movement which amounts to a virtual uprising of the entire native population against the European residents. Moslem fanaticism is at the bottom of the disturbances. It is alleged against the foreigners, who have mainly been attracted by the zeal of the heir to the throne for European progress, that they attract young Persians to schools taught by foreigners and weaken their reverence for Islam. The Kurdish tribes are especially active to reap plunder out of the ferment. Several villages of Armenian settlers have been burned, more than 30 people have been killed, and a threat of rebellion has been made unless all European Government employes are dismissed.

There is an amusing story going round the clubs just now which is well worth telling here. A certain popular young officer, very well known in London, recently lost his heart to a young lady, equally well known. For a time he had an idea that the lady was disposed to favour his suit, and at length he screwed up his courage to the proposing point. To his astonishment, she refused him, and, indeed, laughed at him. Then he took a fearful oath to be revenged on her, and, as the sequel will show, he is in a fair way to accomplish this. The lady's mother has been a widow for some years past, and looks considerably less than her age. In every sense of the word she is a thoroughly charming woman and a capital hostess. What is perhaps even more to the point, she has a decent income of her own. Finding himself balked of the daughter, the young fellow in question has proposed to her mother, and has been accepted. He is now comforting himself with the thoughts of what he will do to the heartless damsel when he is her stepfather.

It will be remembered, says an exchange, that some months ago there was a report that Admiral Maréchal, commanding the French squadron in the Far East, was about to return to France as a result of certain dissensions. This information was contradicted by an official note at the time, it being stated that the Minister of Marine was not aware of any difficulty having arisen. The conflict, however, did exist, and arose out of the actions of Lieutenant Hourst, of the gunboat *Otry*, as the result of certain operations he had carried out on the Upper Yangtze and its tributaries, which were disapproved of by the Government. The correspondence between the Minister and the Admiral became more acute concerning that incident, and it is said that the admiral replied with too great warmth to the ministerial observations. To-day the recall of Admiral Maréchal is no longer in doubt, and has been decided by the Cabinet to whom M. Pelletan submitted the case. According to the *Tablettes des Deux Charentes*, Admiral Maréchal, recalled to France, has been instructed to hand over command to Rear-Admiral Le Dô, and will be shortly replaced by Vice-Admiral Bayle, who was recently promoted, and who will now take charge of the French Far Eastern Squadron for two years. Vice-Admiral Maréchal took charge of the squadron in May last year, and in the ordinary course

of events would have held the command till May, 1904.

The new Russian cruiser *Aurora* recently completed her speed trials off Cronstadt, with satisfactory results. The *Aurora* is described as a "commerce destroyer," and her principal dimensions are as follow:—length, 416 ft.; beam, 55 ft.; mean draught, 21 ft.; displacement, 6,600 tons; i.h.p., 11,600; bunker capacity, 1,450 tons. She is fitted with three sets of triple expansion engines, each set having three cylinders, and being supplied with steam by a battery of 24 Belleville boilers. Her radius of action is calculated to be about 5,600 knots at 10 knots, and at full power about 2,650 knots. That latter estimate was based on the assumption that at full power the speed would be 20 knots. That speed was, however, not attained on the recent trials. In the course of those trials, the *Aurora* made four runs over the measured mile at 18.7, 19.02, 18.97, and 19.2 knots respectively, this giving her a mean speed of 18.97, or 1.03 knots less than the estimated speed, which would reduce her radius of action at full power by about 140 knots. The *Aurora* is scarcely up-to-date as regards steam pressure, since it is reported that the pressure in the boilers was only 235 lb., and at the engines as low as 180 lb. The engines made 134 revolutions per minute.

THE OUTLOOK FOR SILK.

We take the following from the August issue of the *American Silk Journal*:—

In raw silk—quantity and quality of the new crop and the price—lies the key to the situation in the manufacture and trade. Almost everything depends upon the position of the raw silk market from now on.

The facts are substantially these:—The Italian crop is pretty generally conceded to be short about twenty-five per cent. Japan will export from 80,000 to 85,000 bales, against 65,000 to 70,000 for the campaign of 1902-3, now closing. China will almost double her export of this season, say, 75,000 bales or more, against 40,000 to 45,000. Broussa and Syria will yield about the same as in 1902-3. From these figures all whom they may concern may draw their own conclusions.

During the month just closed there was a falling off in the price of most kinds of raw, conservative importers and dealers giving approximate figures, as follows: Italians, about ten cents off; Japan, ten to fifteen off; Chinas (Tsatees), ten cents off; Cantons, fifteen, fifteen cents off; Cantons, re-reels, no change.

There has been very little trading in raw during the month, dealers having little to sell and mill owners not caring to buy more than to cover immediate necessities, which, with so many looms stopped, have not been large. Several of the largest importers are practically without silk; others have five, ten or twenty bales, but no assortments.

All transactions have been for spot goods; nothing whatever done in futures. Small lots of new crop Canton have come into the market, but as the early reelings are always inferior, the price is about twenty cents less than for old. New Japanese silk is due, but is not expected in any quantity before the latter part of the month. It is reported that 2,000 bales are in the Yokohama market, but if so no one seems eager to bid for it at present prices.

Careful investigation serves to convince the writer, that trading in raw will be restricted to hand-to-mouth transactions until the prices at least approximate those of last year, which, in case of Japan, would mean a decline of twenty-five to fifty cents on the various qualities from present quotations. It must be either that or a substantial advance in the price of goods—or a little of both.

And now, it were wise to bear in mind that, under the peculiar circumstances, a decline in raw to last year's figures should cause no shock to the trade, nor even the slightest disturbance in the silk goods market. For the very excellent reason that when the price of raw went kiing upward, prices for goods did not follow—scarcely one little step. So manufacturers, not being able to go on under such a condition, have, as a rule, calmly waited for raw to come down again. When it comes within reach they will operate—not sooner. That is why we have written above that the position of raw is "the key to the situation."

In the absence of wage troubles, and with silks and ribbons in excellent favour everywhere, there is really nothing else to adversely affect the domestic industry save only the question of price.

CORRESPONDENCE.

AN ANSWER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to the letters of "Britisher" and "One whose newspapers have been criticised by the Russian Government," I should say that the "humour" of the first mentioned writer is not "good humour," for "humour" is without nationality and what seems humour to Britishers but only offensive to people of other nationalities cannot really be called "humour." He asks me: "Are not Russians past masters in the art of seizing correspondence and newspapers? Who does not know that any letter from certain European countries, is invariably opened before it can reach its owner, and that too in times of quiet and peace." For this I can ask only: Are there not culprits in England also? And does one case of dishonesty on the part of a Post Office official reflect on a whole department? Certainly there may be found perhaps instances of corruption among the Post Office officials of Russia but the higher authorities always punish such cases when they discover them. For example, in June last General Kuropalkin sent a telegram from Tokyo to St. Petersburg, and because owing to the inefficiency of several leading masters of telegraphic stations (Vladivostok, Blagovestchensk, Irkutsk and Samra) the telegram took three days to reach St. Petersburg, all those functionaries who were responsible for the delay were dismissed. I might here mention that the writers in the *Japan Mail* think that I am "Government correspondent of Russian newspapers," but in this they are mistaken for I am a private individual. "Britisher" sympathise with me, whose sympathy is unnecessary for me, and calls my attention to the recent fate of the St. Petersburg correspondent of the *Times*, who "for merely expressing an honest opinion in his own newspaper, the greatest in the world, relative to the disgraceful massacres in Kishineff, was ruthlessly expelled from Russia at a moment's notice without any explanation being offered for this high-handed act." To this I can answer that this correspondent had to leave Russia not because of honest expressions of opinion, "but because he often sent false information such" as, for example, when he declared that Mr. von Plevhe sent a notice to the Governor of Kishineff telling him not to allow the troops to fire on the rioters. The same sort of false intelligence comes from "special" and other correspondents in Tokyo, London, Berlin and other capitals being often sent with the object of creating trouble between Russia and other countries. And after this sending false news such correspondents correct what they have said. If the Japanese Government supposes that my presence as a correspondent in Tokyo is undesirable, (and if I acted like the St. Petersburg correspondent of the *Times* and sent false information to my newspaper about orders given to its home officials by the Japanese Government I certainly admit that I would be a justly undesirable guest) they can at once tell me to leave Japanese territory. But as a matter of fact during the three years that I have acted here as correspondent for Russian papers, my views have never been against those of Japan's best statesmen. No Japanese, no European papers of Japan ever accused me of false information and I know I have a right to the usual privileges of correspondent as well as anybody else.

The writer of the second letter takes the same view as the writer of the first and I shall not, therefore, devote much time to him. His newspapers if they came from a foreign country and were printed in a foreign language went probably to the Censorship at Moscow and if they contained any thing offensive to the Russian Government, such portions were blacked out and afterwards forwarded to their destination. If they were in the Russian language and contained anarchist views, it is possible that they were entirely confiscated. However I want proof, such as I gave in my first letter to the *Japan Mail* and not mere assertion. This correspondent doubts, if Russian newspapers would dare publish a letter similar to mine, but I recommend him if he knows the Russian language, and I doubt not that he does, to read the letters to the Editor which appear very frequently in the *Novi Kvat*.

In finishing this letter I think it necessary to say that I expected an answer to my protest from the officials of the Japanese Post Office, who might be able to explain why I have been put to such inconvenience with my letters, but, apparently they do not think it necessary to offer any explanation. They apparently think their act is legal so much the more as they rely on the "Anglo-Japanese Alliance": "Britisher and Co." I do not want any further communications that appear on this subject especially from correspondents, who do not offer proofs of what they say and do not send their names for publication.

Please, Sir, excuse me for taking up so much of your valuable space, on which I shall not trespass in future.

I remain yours truly,

N. W. MASHKEVITCH.

21st August, 1903.

THE INSURANCE QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to your leading article in this morning's issue on the Insurance question, I am sure it would interest the Agents of British Companies if you would state how far the arguments adduced apply to them.

Can a Deposit, not required in Great Britain, be enforced here under the Clause in the Treaty as to reciprocal freedom of Commerce?

Can British or other Nationalities, be said to enjoy the same treatment in matters of Commerce, as Native subjects, when they are asked to deposit yen 100,000 whilst Native Companies do not have to make any such deposit?

Yours faithfully,

AN AGENT OF A BRITISH COMPANY.
Yokohama, Aug. 21st, 1903.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I read with interest your article upon the above subject this morning, and regret that I have not the time at my disposal to go into the matter very thoroughly, but will simply sketch the conditions, as you mention them, upon which foreign companies can do business in the United States:

Alabama: In this State, as you say, foreign companies must deposit securities to the amount of yen 400,000, in excess of what would be required of a company organized in Alabama.

Connecticut, Iowa, Kansas, Kentucky, Massachusetts, Minnesota, Mississippi, Missouri, New York and Tennessee require exactly the same guarantees from companies organized in the respective States, or any other State of the Union, as they do from foreign insurance companies.

We find, therefore, that in Alabama foreign life insurance companies are discriminated against to the extent of yen 400,000, but we must not confuse our readers with the idea that it would be necessary for the deposit to be made in each State. As a matter of fact, a deposit of yen 400,000 in Alabama, or any other State, would be sufficient security to allow foreign companies to operate in any State in the Union.

Aside from Alabama, or, in other words, in forty-five States of the Union Japanese life insurance companies can operate upon precisely the same basis as native companies.

When it is taken into consideration that the deposit made in the State which discriminates against foreign companies is not required to be of any particular kind, or even to be American securities, and that they can be sold and replaced at any time by any other security of a like value, it will be seen that the conditions are not onerous.

Furthermore, we must take into consideration that the United States has a population of over 80,000,000 of people and furnished over yen 6,000,000,000 in life insurance last year, with the lowest mortality experience of any country upon the globe. Against this, Japan yielded last year in life insurance something like yen 30,000,000, with an uncertain mortality experience.

In contrast to the conditions imposed by the United States upon foreign companies, I would submit for your consideration the following interview between Mr. Wada, Director of the Bureau of Commerce and Industry at Tokyo, and Mr. J. T. Hamilton of the Equitable and myself:—

Mr. Betts: Will the Japanese Government require in accordance with the order No. 146, a deposit of yen 100,000 upon October 31st, and in addition thereto, upon the 1st of January following, the legal reserve of the foreign companies operating in Japan?

Mr. Wada: Yes.

Mr. Betts: Does the Japanese Government require the native companies to deposit in the hands of the Government yen 100,000 as required in the order 146?

Mr. Wada: No; we think that the fact that we supervise the Japanese companies carefully is sufficient for the protection of the interests of the Japanese insurers.

Mr. Betts:—Does the Japanese Government require that native companies shall deposit any portion of their legal reserve in the hands of the Government?

Mr. Wada: No.

Mr. Betts: Do you contemplate requiring the Japanese companies to comply with the order above mentioned upon the same footing with foreign companies?

Mr. Wada: No.

Mr. Betts: Supposing the companies should see fit

to comply with the order in question, what kind of securities would the Japanese Government demand?

Mr. Wada: Japanese bonds.

Mr. Betts: Do I understand you to say that in the event of the companies complying with this order, the Japanese Government will accept no security other than 5 per cent Japanese Bonds?

Mr. Wada: No. I will designate five kinds of Japanese bonds, bearing 5 per cent interest, any, or all of which the companies may deposit as reserve security, and the yen 100,000 asked for. Inasmuch as your companies at home only earn about 3 per cent interest, we think that our 5 per cent Government Bonds will make you a better investment than you find at home.

Mr. Betts: How can you expect companies like these to guarantee policy-holders that their contracts will be met at maturity, unless the Government that compels them to invest in its securities, can give some guarantee it will not default upon its interest obligations?

Mr. Wada: It is not contemplated that the Japanese Government bonds will shrink in value. We think our bonds quite good as an investment, and our laws are framed in such a way that it gives us the power to enforce this order and we intend to do so. Companies that have no confidence in our bonds should not operate in our territory.

Mr. Betts: Supposing the bonds should depreciate in value, even though we may have paid the full value of the reserve for same at the time of purchase, what effect or bearing would that have upon the deposit?

Mr. Wada: You would be required to purchase additional bonds of the same sort to make good such deficiency.

Mr. Betts: But we could not do that, for the simple reason that we would be depositing more than the reserve in the event of additional bonds being required, consequently affecting the mutuality of our company towards the citizens of other nations.

Mr. Wada: If you did not want to put up additional bonds, you could deposit cash, which of course would not fluctuate in value.

Mr. Betts: But what guarantee would the companies have in the events of the Japanese bonds becoming worthless that the Government would not also make away with the cash? It must be conceded that when a country gets to such a low ebb that its bonds are practically worthless, it would not be a safe country in which to deposit cash. I am not now speaking of Japan alone, I am simply taking the attitude that the company would naturally take towards any Government, let it be British, French, American, or any other, that required such a deposit.

Mr. Wada: This is Japanese law and we shall require the deposit as per the order mentioned, and any company that does not feel disposed to comply with the order in question will have the privilege of withdrawing from Japan.

Mr. Betts: In the event of a threatened depreciation of these bonds would the Government allow the companies to change to some other form of security?

Mr. Wada: Yes, to some other form of the five kinds that will be designated, but no others.

Mr. Betts: Is it desired by the Japanese Government to force foreign companies to retire from the Japanese field?

Mr. Wada: No. We are anxious to encourage in every way possible foreign companies to operate in Japan. They are teaching our people the value of accumulating money for their families, and setting an example that we are anxious for our companies to emulate.

Mr. Betts: Then as I understand it, the Japanese Government requires the foreign companies to deposit their legal reserve, which will amount to nearly their actual assets.

Mr. Wada: No. The legal reserve cannot amount to but a very small portion of any company's assets.

Mr. Betts: I beg your pardon, but take my own company as an illustration. We have about \$400,000,000 assets; \$332,000,000 of which is legal reserve, and \$30,000,000 is deferred dividends, leaving a balance of \$38,000,000, which is surplus, or, less than 10 per cent, consequently you see that nearly the entire assets of a company are invested in the legal reserve.

Mr. Wada: Oh! You do not understand. We do not propose to calculate the deposit in question upon the basis you do. We do not ask any such immense amounts to be deposited with the Government as you indicate. We have a different method of calculating our legal reserve.

Mr. Betts: Ah, indeed! I did not know there were any two methods of calculating legal reserve. I have always thought and understood that a certain amount of money at a certain percentage of interest must be required to meet a given amount at the end of a given period. I cannot understand how there could be any deviation from this rule, inasmuch as a company states upon what basis of reserve it writes business in the contract, consequently there can be no question as to the amount that would be required to meet such contract.

Mr. Wada: We have a different way of calculating reserve.

Mr. Betts: Will you kindly give me your method, so that I can form an estimate of what the companies will have to deposit, in addition to the yen 100,000 demanded?

Mr. Wada: We can't do this until we know how much business the companies have transacted during the past year in Japan.

Mr. Betts: But that can't make any difference; it would be identically the same whether it was calculated upon a basis of yen 1,000 or yen 1,000,000, your formula must be the same.

Mr. Wada: (After much consultation with his advisors), We are not prepared to give this formula now; in fact, we have not gone into the matter sufficiently yet, nor can we do so until we receive some data as to the amount of business that has been transacted in Japan during the last twelve months.

Mr. Betts: Inasmuch as the company which I represent has been doing business in Japan only during 1903, as the New York Life has only done a small percentage of business prior to 1903, would it not be well to defer the whole matter until March 1st, 1904? This would enable all the companies to make a report for a full year's work, and we could then get a better understanding as to what would be required. It would not, in my opinion, be fair to ask the companies to go ahead and put up yen 100,000 and then find the after conditions too onerous to comply with.

Mr. Wada: We have no intention of extending the time of the deposit, nor can we promise that we will give you the formula upon which to calculate the amount of reserve deposit that will be required before October 31st. We can only say that there will be no extension of time.

Mr. Hamilton: I would like to ask a few questions. I understand that there is one company operating in Japan which has already in its possession in London, Japanese bonds amounting to £10,000 or the yen 100,000 asked for. Would that be sufficient to comply with the terms of the order?

Mr. Wada: No. Not unless the bonds were deposited in Japan.

Mr. Hamilton: We have in our contracts an agreement to loan the insured at any time nearly, or quite the full amount of the legal reserve. Now then, assuming that we should deposit with the Government the local reserve in question, and the insured would come forward and demand a loan, in accordance with his contract, would we not be putting into Japan twice the amount of the reserve?

Mr. Wada: That is a private contract between you and the insured, with which we have nothing to do.

Mr. Hamilton: Would the Japanese Government require a company that refused to comply with the order in question and retired from the Japanese field, to put up the legal reserve upon its business already in force?

Mr. Wada: No. (After long consultation with his advisors), I withdraw my answer to the last question. We are not prepared to state at this time whether the Government will require the deposit upon business already in force or not.

Mr. Betts: Supposing the company should comply with the order in question and would put up the reserve asked for, let us assume that a policy-holder has a policy with one of the companies for yen 10,000; at the end of 10 years, or some other period, he comes forward and demands yen 5,000 from the company and gives a receipt certifying that he has borrowed so much money, and consequently only has so much interest in the policy upon which the reserve has been deposited; would the Government accept such a certificate or receipt as a reserve deposit upon the original contract upon which the insured had already received the benefit?

Mr. Wada: No. As I said before to Mr. Hamilton, this would be a private arrangement between your company and the insured, and one of which the Government would not take cognizance.

Mr. Betts: Is not this understood. You say you are trying to protect the interests of Japanese insurers; we accept your statement in good faith, but when your insurers release the company of a certain portion of its obligations, is there any reason why the Government should require a reserve upon a contract that does not exist?

Mr. Wada: Such is our law and must be complied with.

Mr. Betts: Now then, I understand that in the event of a company purchasing Japanese bonds, as designed by the Government, and these bonds depreciate in value, we are not to be allowed to dispose of same unless we reinvest in another security, which would naturally be affected by the depreciation of the first security in question?

Mr. Wada: Yes, you are to understand that. It would be to the interest of your companies to protect our bonds and keep them at a proper value.

Very truly yours, (Signed) BASIL H. BETTS.

J. T. HAMILTON.

P.S.—I do not remember the answer to the last question. J. T. H.

Comment upon the above interview is unnecessary. I can only say that I have never for an instant taken the ground that some deposit or security should not be made in Japan for the protection of Japanese policy-holders, but *that* deposit should be a stated sum. If Japan is determined, however, to violate her treaties, and it cannot be denied from your standpoint, as you say in your article of August 11th:—"However, without considering the actual phraseology, we entirely agree that the spirit of the treaties is to place foreigners and Japanese on an equal footing in Japan for purposes of trade and manufacture," the deposit should at least be commensurate with the amount of business that has been done in Japan.

Furthermore, the securities should be securities recognized as good, by the world at large, and not restricted to the promise to pay of any Government, and should be changeable at the will of the companies making the deposit; always provided that satisfactory securities were substituted.

Japan should not forget that the restrictive laws which she seems anxious to emulate have only been passed after the insurance business has been developed and thoroughly exploited, and it would be also well that she remember that the very interests that she is now seeking to antagonize have been the interests that have done most towards bringing about many acts of kindness by the American Government towards Japan.

Certainly as the order now stands, Japan places herself in the position of seemingly trying to force her bonds upon the insurance interests and to profit by the order in question. You will notice that in no case do the laws of the different States require that any deposit shall be in bonds issued by them. I am not sure, but I think the Canadian law quoted applies equally to native and foreign companies.

Very truly yours,

BASIL H. BETTS.

"CAPTURED" AT YOKOHAMA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a prominent position on Southsea esplanade, close to the *Victory's* anchor, stands a large piece of ordnance, attached to the wooden carriage of which is a copper plate bearing the following legend: "Captured at Yokohama in 1865. Presented to the Borough of Portsmouth by Queen Victoria."

To the resident and tripper the word "Captured" conjures up visions of a bloody engagement, but to the intelligent Japanese naval officers, well versed in the history of their country, who so frequently visit Portsmouth the huge muzzle-loader is an object of ridicule.

They know that Great Britain has never been at war with Japan.

I was in Yokohama in 1865 and my opinion is that the cannon in question was either seized at a Kanagawa fort or taken at Shimonoseki, some two days steam from Yokohama, when an international naval expedition was despatched to punish the feudal prince of Choshu. The bombardment of the forts at Shimonoseki was an unimportant and almost bloodless affair.

Be this as it may, I trust that by agitating the matter in the columns of your widely circulated paper that "Proud Bully that holds up its head and lies" may be relegated to some obscure corner of the Borough, where it will not meet the eye nor hurt the susceptibilities of our patriotic friends and allies.

Yours etc.,

J. BLACKMORE.

The Lodge, Nelson Road, Southsea,
July 20th, 1903.

ITALY'S RAW SILK CROP DEFICIT.

New York, July 26.

An article in the *Soleil* gives some attention to the Italian silk crop, and through the courtesy of H. L. Gwaller & Co., raw silk importers, the following data is furnished the *N. Y. Commercial*:—

"There have been in Italy this year practically two crops of cocoons; that is the crop of the hatchings which had not suffered from the frosts of April 20, and which yielded about 40-50 per cent of the normal production; and a second crop raised from the hatchings which had been artificially retarded and which cannot be estimated at more than 20 per cent. As was to be expected the cocoons of these hatchings are of a poor yield, which will still further reduce the production of raw silk this season.

"Taken all together the Italian crop presents an apparent deficit of 30 per cent. in cocoons, but translated into silk it is estimated by good judges that the deficit will scarcely be less than 40 per cent., because of the poor yield of the cocoons reported from most provinces.

"If last year we had a crop of 4,000,000 kilos of silk, there may therefore not be more than 2,500,000 kilos to be expected this year in Italy. From figures

to hand so far the total production of the world's crop is estimated as follows:

	Kilos.	Kilos.
Eastern Europe:	1902.	1903.

Asia	10,060,000	10,960,000
Total production	16,778,000	16,240,000
Tot. vis. stocks June 30th ..	1,100,000	600,000
Total supply	17,878,000	16,840,000

"It would therefore follow that the total supply of raw silk at the disposal of the consumption this year will scarcely exceed 16,840,000 kilos, against 17,878,000 kilos last year, viz., there will probably be about 1,000,000 kilos less than for the last season, while on the other hand since several years the total yearly consumption has equalled about the world's yearly production of raw material.

"The total supply of raw silk at the disposal of consumption for the last four years is as follows:

Season.	Kilos.
1899	18,526,000
1900	18,721,000
1901	19,219,000
1902	17,878,000

"This, compared with the estimate for the current season, 1903, 1,684,000 kilos, shows a deficit of 1,000,000 kilos against last year, while compared with 1901 the difference is 2,500,000 kilos and 2,000,000 kilos, as compared with 1900 and 1899."

THE NEW POPE.

A Rome despatch of August 4th said:—The conclave after being in session four days, to-day elected Giuseppe Sarto, patriarch of Venice, as Pope to succeed Leo XIII. and Sarto now reigns at the Vatican and over the Catholic world as Pius X. To-night all Rome is illuminated in his honour.

His election and the assumption of his holy office were marked by a striking demonstration and impressive ceremonies at the Vatican which ended only this evening. To-morrow the new Pope, clad in his full Pontifical robes and with all the ritualistic ceremony, will receive the members of the diplomatic corps, the Cardinals and the Bishops, who will then offer their official homage, this notwithstanding the fact that twice to-day the Cardinals and many high officials of the Vatican went through a similar ceremony. The date on which the coronation of Pius X will take place has not yet been decided, but the impression prevails that it will be August 9.

Although the election was over at 11 o'clock this morning and was announced to the world forty-five minutes later by the appearance of the new Pope at the window of St. Peter's, the conclave was not formally dissolved until 5.30 o'clock this afternoon. The Cardinals then returned to their various apartments in Rome, with the exception of Cardinals Rampolla and Oreglia, who temporarily retain their official suites in the Vatican, and Cardinal Herrera Espinosa, who is too ill to be moved for several days. It was to the sick Cardinal that the new Pope paid his first visit after being formally proclaimed Pontiff. The Cardinals will remain in Rome for to-morrow's ceremony, and should the coronation be fixed for next Sunday they are not likely to return to their homes until after that ceremony. With the exception of the Spanish Cardinal, Herrera, all of the prelates are in fairly good health.

The election of the patriarch of Venice this morning was unanimous. After Monday's ballots it was a foregone conclusion that he was the only candidate sufficiently acceptable to all to secure the necessary two-thirds that the laws of the church require. One of the Cardinals said to-night that he believed Pius

X would follow the broad lines of Leo's policy, although he probably would not accentuate it. This voices the general feeling here, which is one of satisfaction.

The new Pontiff is a man of simple origin and, although not a prominent candidate, he had been frequently mentioned as one of the many Cardinals who might be taken up as a compromise. In several respects he resembles his predecessor, notably in his reputation for culture and piety. Having been associated with no factions, this fact alone won him much favour from foreign Cardinals who were without a special candidate. Pius X was humorously described as a "country mouse who could not possibly find his way about Rome." Venetians, who know the new Pope well, say that he will soon be as much beloved as Pontiff as he was yesterday as the patriarch of the poor of the Adriatic. In appearance Pius X is a handsome man. He has a fine, erect figure despite his 68 years.

When he pronounced his first benediction to-day at St. Peter's his voice rang out with splendid resonance. In every way to-day he showed beyond a doubt that he had dignity and personality in keeping with the best traditions associated with the famous Pontiffs who for centuries have ruled the Vatican.

All the members of the Sacred College declare that they are well satisfied with the election of Cardinal Sarto, but the party opposed to Rampolla believe this their special victory.

When the first ballot was taken it showed that the Sacred College was divided into two groups, the stronger one for Rampolla and the lesser one for Serafino Vannutelli. The other votes were scattered, but included four for Sarto.

On the subsequent ballots, while the principal two parties were losing ground, Sarto gradually gained, drawing strength from both ends and the middle, until the ballot on Monday afternoon, when his vote had increased to thirty-seven—within six of the necessary two-thirds.

When the result of this ballot was announced in the conclave Cardinal Sarto was so overcome with emotion and so touched by the unlooked for confidence reposed in him that he could no longer control his feelings and to the surprise of all he broke down, declaring that such responsibility and honour were not for him and that he must refuse it, if elected. Tears rolled down cheeks when he announced his determination to refuse the dignity. He was so palpably sincere that consternation reigned in the conclave and the Cardinals spent the whole evening and much of the night in convincing him that his election was the will of providence and that he must accept.

Several times he almost fainted and had to be revived by the use of salts. He seemed happy but broken down even after all the other candidates had retired and on the final ballot he looked a statue of resignation. Cardinal Casati, as scrutineer, was reading out the vote. When forty-two votes had been recorded for the patriarch of Venice the scrutineer arose and lifted his red zucchetto, saying:

"We have elected a Pontiff."

But from many sides Cardinals cried out: "Continue." As the vote approached fifty, however, the Cardinals, as of one accord, surrounded the new Pontiff, and, according to tradition, demanded to know if he would accept the Pontificate.

Cardinal Sarto's lips trembled so that he, could hardly articulate, but after a visible effort he said:—

"If this cup cannot pass from me—"

There he paused, but the Cardinals around him insisted that it was necessary for him to answer "yes" or "no."

Thereupon he replied firmly, "Yes."

Cardinal Gibbons, speaking to a representative of the press, said that the election of Cardinal Sarto had produced the best impression in the entire Sacred College, because, being a man of such piety, tact and culture, he was best fitted to be the head of the church at the present time.

Pius X, the former Patriarch of Venice, whom the hands of his confreres of the Sacred College have raised to the supreme dignity and spiritual rulership of the Roman Catholic world, is the same age as was the late lamented Leo XIII when he was chosen to sit in the seat of St. Peter. He has just turned his sixty-eighth year, having been born at Riese, in the diocese of Treviso, in the north of Italy, June 2, 1835.

Pius X first studied at a seminary at Treviso, continued his education at Padua, the seat of one of the great universities of the world, and finished at the Sacra Theologia at Rome. He was consecrated priest in 1858, being in his twenty-third year, at Castel Franco, the birthplace of the great master, George. For nine years following he was just a plain parish priest. His first cure was at Tombolo, a village in the province of Padua, of some 3,000 people. These were the first to appreciate his virtues. His kindness was untiring. He sought to fill the wants of his flock and never a murmur was heard when he was called in the middle of a winter night to a deathbed.

which proved to be nothing of the kind. He gave freely of his very small means, until he often went without meals himself, but he kept many a poor family from starvation.

In 1867 he was appointed parish priest at Salzano, which was considered an important promotion, being a village of 3,341 souls. Still, he was exceedingly sorry to leave Tombolo, having become attached to the people. The peasants, when he left, made a most enthusiastic demonstration crying "Viva Don Giuseppe," while many women whose children he had nursed wept copiously. He distinguished himself so much at Salzano that he was kept there only two years, which is remarkable in the career of an Italian parish priest. His talents attracted the attention of the Bishop of Treviso, who appointed him canon of the cathedral of that diocesan city.

In 1875 he was elected chancellor of the bishopric of Treviso, then spiritual director of that seminary, judge of the ecclesiastical tribunal, and finally vicar general. Greater preferment awaited him, however. Pope Leo, who had highly appreciated his cleverness, piety and modesty, appointed him in November 1884, at the age of 49 years, Bishop of Mantua, where he remained until he was elected to the patriarchate of Venice. Venice alone of all the important cities of Italy has only patriarchal rank, while many smaller cities are archiepiscopal seats. The acceptance of the more humble office, however, cost him but a little patience, for on June 12, 1893, after some two years' service as patriarch, he was created and proclaimed Cardinal. He has for his titular church in Rome St. Barnardo.

His preferment to the Venetian patriarchate was the solution of a very troublesome question. The Italian Government maintained that the presentation of the candidate for the office was one of the prerogatives of the King as heir to the ancient privileges granted by the Pope to the republic of Venice. Sarto's selection ended the contention, for though chosen by the Pope he was a great favourite with King Humbert himself and entirely acceptable to his Ministers. So the exequatur, which had been long withheld, was granted to him. The Italian Cabinet had no feeling against Sarto personally. In fact, he might quite well have been their choice if the papacy had not wished him, but it was a political question on which, however, they soon gave way.

In Venice he distinguished himself as a thorough reformer, suppressing all abuses, restoring the dignity of the clergy and the earnestness of religion. To him is due the revival of a Gregorian chant in the beautiful churches overlooking the lagoons, and to him is due the strict liturgical rules. Sarto became the idol of the Venetians. When his gondola went through the canals the people rushed on the bridges and along the sides of the canals, kneeling and saluting, the women exclaiming:

"God bless the patriarch." He used then to say that he did not like to go out of sight of the lions of St. Mark, which now he will never see again, if, as is almost sure, he follows the rule inaugurated by his two predecessors, never to leave the Vatican.

He has very modest tastes, having retained almost the same habits as when he was a mere curate at Salzano. He was severe but just with his clergy. There is nothing he dislikes so much as publicity, detesting the praise and compliments of courtiers. Frankness is another of his principal qualities, although he is somewhat timid. As the Italians say, he has no harm on his tongue or pen. Even so, Pius X often wrote truths which were perhaps unpleasant. In a few cases in which he came to Rome, on returning when asked if he enjoyed the gorgeousness of the Papal court and the magnificence of the functions, Sarto answered: "When I am there I feel like a fish out of water."

The relations of Sarto with the House of Savoy are well illustrated by what occurred two months ago, when the King of Italy went to Venice to open the international art exhibition. King Victor Emmanuel gave orders that the patriarch be given precedence over all the local authorities, but Sarto, having arrived while the King was speaking to the prefect, who is the highest Government official in the province, refused to be announced, and said he would not disturb his Majesty.

He remained in an ante-chamber, affably conversing with the generals and admirals gathered there. When the King learned of his presence he came to receive him on the threshold of the chamber and kept him in conversation and had him accompany him afterward in a gondola, while all the soldiers and guards rendered Sarto military honours. Naturally this does not mean that Sarto, once Pope, will fundamentally change the policy that the church has adopted toward the Vatican state, but certainly his personal feelings will be favourable to moderation.

"Sarto" in Italian means "tailor," and Pius X when a young seminarist, being rather elegant in his priestly robes, his companions used to joke, saying that he evidently knew the business.

Advices from Riese, the birthplace of Pius X and a village of 4,000 inhabitants, state that the Pope's

mother, now dead, when living therein occupied a small peasant's house, having in her humility always refused to live with her son Giuseppe, as even his modest establishment was considered by her to be too luxurious in comparison with what she was accustomed to. The older brother of the Pope, Angelo lives in the village of Dellegrazie, province of Mantua, being the postman of the district and receiving \$80 a year for his services. He adds to his income by keeping a shop in which he sells tobacco and pork. His two daughters are the belles of the village, being known for miles around as the "handsome Sarto sisters." When Pius X was Bishop of Mantua his brother Angelo used to often go there for reasons connected with his postal service. The other clerks would ask him jokingly why his brother did not find him a better position. Angelo, with sturdy independence, answered that he preferred only to be what he could make himself. Still, following papal precedents, the tobaccoist and postman of Dellegrazie should become a royal count.

Rome, August 4.

The excitement about St. Peter's to-day was intense and when the election of Cardinal Sarto was announced the enthusiasm of the great crowd knew no bounds.

The crowd commenced to gather at about 10.30 a.m. to await the rising of the smoke from the Sistine Chapel. Hundreds of carriages stood in the blistering sun, which seemed hotter than ever. The colonnades were blocked with people, but even there the anxious watchers could scarcely escape from the severe heat. When the quarter after eleven o'clock struck the crowd left its shelter and stood bravely in the sun in the belief that the smoke would appear within a few minutes, as it had consistently given its signal at about this hour since the conclave commenced.

Minutes sped on and still no smoke was seen. When the bells sounded half-past eleven the Ministers and others left their carriages and joined the watchers on the steps of the Basilica. Inside St. Peter's many also were waiting, and the suspense brought thousands running from the near-by streets, the delay on the fourth morning of the conclave being interpreted to mean that a decision had at length been reached. The troops spread themselves across the square and nervous anticipation possessed them all. Hundreds of surmises passed from mouth to mouth. Minutes seemed like hours.

SARTO'S COAT-OF-ARMS THIRST FORTH.

St. Peter's boomed out the three-quarters of the hour, and there was still no sign. A second later the great central window of St. Peter's facing the piazza swung slowly open. A loud shout arose and all rushed madly toward the cathedral. At the open window half a dozen Vatican attendants appeared. Suddenly there broke out into the fierce sunlight a gorgeous banner, bearing a Cardinal's arms. Reinforcements of troops crossed the piazza at the double-quick. They closed their ranks and held back many who strained every nerve to get close to the window.

For a minute or so none knew to which Cardinal belonged the arms so significantly displayed. Then the rumour arose that they were Sarto's, but few persons were absolutely sure of their identity. The tension was soon relieved. Cardinal Macchi, in his Cardinal's robes, carrying a large red book and preceded by a glittering cross, appeared at the window. A wild shout went up. Cardinal Macchi waved both hands for silence. In a second a solemn hush fell on the scene, broken only by a sharp word of command from an officer and the rattle wherewith the troops brought their rifles to the present.

In clear tones Cardinal Macchi read the preamble, the people below being scarcely able to sustain themselves until he reached the word "Sarto," when a terrific roar went up. Those out of hearing of the Cardinal's voice joined in the acclamation, and the whole square became one mass of men and women throwing hats in air, shouting and cheering at the top of their voices.

EXCITEMENT OF THE CROWD.

Vainly the Cardinal waved his hand for silence. The long-pent-up feelings of those who had watched the smoke of the ballots for four days now found an outlet, and for some minutes they could not be suppressed. Finally it was quiet enough for Cardinal Macchi to proceed and say that the new Pontiff had taken the name of Pius X. Then, with a blessing on the crowd, the Cardinal disappeared from the window and the attendants quickly drew up the banner.

Those below made a rush to go into St. Peter's, and a mad scramble ensued for the Basilica. Thousands dashed toward the four huge doors, and, in spite of their width, a desperate jam occurred, in which women narrowly escaped injury. Like a roaring wave the people swept into St. Peter's, still cheering and waving hats. Within pandemonium reigned. Those already standing in a good position to see the gallery window where Pius X. was momentarily expected to appear were hurried back to the farther end of the nave by the irresistible impact of those

seeking entrance. "Pope Pius" and "Sarto" were the cries which could be faintly heard above the din that was raging from end to end of his historic cathedral.

The attendants at the gallery window who had hung out the same banner as was previously displayed from the window in front now hastily drew it up. With every sign of excitement they motioned to the crowd to go back to the steps of St. Peter. A great cry arose. Those who, a few moments before, were fighting their way into the cathedral, now struggled with redoubled energy to get out. It was the climax of the excitement—the new Pope was going to bless the world from the outside of the Basilica, which had not been done since the days when the Vatican ruled Rome. It was a revolution which each seemed to think had been brought by Divine favour, and a terrific effort was made to get out in time. With extraordinary rapidity the Basilica was almost deserted. The attendants hung the banner outside, and as all the thousands waiting in the piazza saw it and realized what was intended a great shout of approval arose.

PANDEMONIUM IN BASILICA.

Then came a sudden revulsion. As quickly as the banner could be set up it was drawn down. The plans had been again changed. The last rush that immediately followed for the doors of St. Peter's was almost indescribable. How so many people entered the Basilica in so short a time without injury will always remain a mystery. Inside the pandemonium increased: A wheat pit in its wildest moment could not compare with the stately nave of St. Peter's at this moment.

At the gallery window stood Cardinal Mathieu, Mgr. Merry del Val and several other Cardinals. The centre place was vacant. Among the seething mass below, which never ceased waving hats, two members of the American pilgrimage, Father Lynch of Niagara University and Father McGowan of New York, held aloft American flags. These swayed brightly around the nave as the bearers were alternately borne forward and back by the ebb and flow of the throng.

NEW PONTIFF APPEARS.

In a few minutes terrific cheers burst forth from every throat. There, with the sun streaming upon him, was the new Pope. His rich red papal robes shone resplendent amid the more sombre colours of those who stood beside him. For a few moments the tall form remained perfectly still—the Pontiff was gazing at the crowd beneath. The deafening roar of cheers showed no signs of diminishing. Mgr. Merry del Val and others waved for peace, but none came. Then Pius X raised his hand. In the twinkling of an eye the crowd, mad with excitement but a moment before, became dumb and a deathlike silence prevailed throughout the Basilica. It was broken only by the clear, strong voice of the new Pope.

"Auditorium nostrum in nomine domini" (Hear us in the name of the Maker) he chanted, like the keys of a magnificent organ struck by a master hand. The response swelled up from the crowd below. There was another chant and another response. Then came the benediction, such as few will ever forget. All crossed themselves, and with magical rapidity the scene ceased to be one of deep devotion. Loud cheers burst from the people as the Pope started to go back to the Vatican by way of the terrace. The acclamation continued long after Pius X had disappeared. Then the thousands streamed out, all happy at the conclave's choice of Pontiff and heartily glad that the suspense had ended.

Berlin, August 4.

A dispatch to the *Lokal Anzeiger* from Rome asserts that Cardinal Gibbons played the chief part in frustrating the election of Cardinal Rampolla.

HONGKONG AND SHANGHAI BANKING CORPORATION.

The seventy-sixth ordinary half-yearly general meeting of shareholders in the above Corporation was held at noon on Aug. 15th in the City Hall, Hongkong. Mr. A. J. Raymond (chairman of the Court of Directors) presided.

The Chairman said—Gentlemen,—I think you will consider the report, which I have just read, a very satisfactory result of our working for the half-year. The division of profits recommended by your directors will, I hope, also meet with your approval. It is a continuation of the policy which has enabled the Bank to attain its present strong position. Looking at the figures, you will observe a considerable falling off in the current account deposits. Six months ago our London Office held a portion of the instalments on the recent issue of Imperial Japanese Government Bonds; that money has since been paid over, and more than accounts for the reduction in the gold amount. The decrease in silver amounts

is also chiefly due to the withdrawal of various Government funds, temporarily deposited at some of our Eastern branches. The corresponding reduction on the other side falls under the headings of Bullion in Transit, and Bills Receivable. Bills Discounted, Loans and Credits, show a reduction of \$2,000,000, but compared with the corresponding date last year they are \$8,000,000 higher. The only other item calling for special mention is Bank Premises account; this is now \$1,311,142.54 against \$829,123 on 31st December last, and the increase is largely due to the purchase of a property in Shanghai adjoining our premises there, which it was thought desirable in every way to acquire for the Bank. We have also had occasion to enlarge the office accommodation at some of our other branches, which as my predecessors have pointed out, is what we must be prepared for as the natural outcome of our increasing business. With the \$200,000 written off, as proposed in the present report, the account will then stand at \$1,111,142.54. There has been almost an entire immunity from losses, indicating that the large business in which we are engaged is in a sound and healthy condition. At some points trade has suffered by threatened disturbance in the political atmosphere of the Far East, but we hope that the war clouds which are hanging around will soon pass away. The import of cotton goods and yarn also received a check, due to the sudden and sustained advance in the price of the raw material but, as it happened, this unexpected rise in cotton served to relieve the situation for many of our friends, especially in the North of China, where heavy stocks had accumulated and where trade was for a time brought to a deadlock by financial difficulties which the native dealers had to contend with: those difficulties, I am pleased to say, are gradually being surmounted. During the half-year we experienced more than the usual fluctuations in the price of silver, the tendency of which has been upward, and the consequent rise in exchange caused, at times, an exceptional demand for gold remittances, but we are glad to think that, whilst duly protecting the Bank's own interest, we have been able to meet all the demands made upon us for exchange. At our last meeting, reference was made by my predecessor in the chair to the question of establishing a national and uniform coinage for China, and though no decisive steps have as yet been taken with regard to this matter, it has the support, and is receiving the serious attention of all who are interested in trade in this part of the world. He also referred to the currency question in other countries around us; since then the Philippines and Straits Settlements have declared for gold, but in both those countries, and also in Siam, the currency is in the transition stage, which tends to dislocate exchange and interport trade for the time being. China continues to prove an attractive field for new banks, but we are in a good position to hold our own and meet competition as it comes along. We are happy to say that our friends all round loyally support us, and, so long as there is the "open door," we can look forward with confidence to the future, and feel assured of obtaining our full share in the expansion of trade, which is bound to come as the natural sequel to the opening up of a country by railways, and we hope to see increasing activity in these enterprises throughout the Chinese Empire. Gentlemen, the highly satisfactory figures now before you have been produced in what I may fairly describe as more than ordinary difficult times for exchange banking, and I am sure you will all agree that our thanks are due to our managers and agents, and the staff generally, for their successful efforts. (Applause). It was with great regret that we recently heard of the death of Mr. David Jackson, our Yokohama manager. Mr. David Jackson had spent 25 years in the service of the Bank in various parts of the East. He was everywhere popular and was one of our most able and successful managers. In conclusion I am glad to be able to state that the business for the current half-year has opened well. If any shareholder desires any further information I will be pleased to answer any questions.

There were no questions, and the Chairman moved the adoption of the report and accounts as presented.

Mr. W. J. Gresson—Gentlemen, I have much pleasure in seconding the adoption of the report and accounts as presented. The Chairman has so fully informed us of the prosperous condition of the Bank that I do not think there is anything that I can usefully add, but in congratulating the managers and staff on the results of their efforts as shown by the last six months' working I am sure I express the voice of all shareholders. (Applause.)

The motion was put to the meeting and carried *unanimously*.

On the motion of Mr. J. S. Van Buren, seconded by Mr. C. H. Thompson, the appointment of Messrs. F. Shellim, H. W. Slade, and E. S. Wheeler to the Court of Directors in place of Messrs. D. M. Moses, G. Balloch, and G. H. Medhurst, resigned, was confirmed.

The CHAIRMAN—That is all the business, gentlemen. Dividend warrants will be ready on Monday. Thank you for your attendance.

Mr. Murray Bain—We should pass a most hearty vote of thanks to the Board of Directors, the Chief Manager, and the staff for the excellent services they have rendered during the last half-year. Some of us, I dare say, remember, since the establishment of this institution, a large number of directors and chief managers, but I don't hesitate to say that at the present time our interests are in charge of a body of men who could not be equalled during the history of our bank. It appears to me, gentlemen, that the mantle of Sir Thomas Jackson of happy memory has fallen very gracefully upon the shoulders of Mr. Smith, and I think you will agree with me when I express the hope that he will long be spared among us to wear that mantle with comfort and satisfaction to himself and to the mutual advantage of us all. We have heard a great deal of late about fixity of exchange, and about great revolutions that are going to take place with regard to the currency of China. It is a difficult problem, and it is not for anyone to pretend to understand it fully. But there is one thing that is pretty certain, and that is that we may rest assured that we have a board of direction and of management that are fully equal to any emergency that may arise, and we can look forward confidently that, when the time comes, they will see as safely through. I ask you to pass a hearty vote, not only for excellent services rendered, but in the confident hope that they will serve us also in the future.

The vote of thanks having been passed with acclamation, the meeting dispersed.

REPORT ON WEI-HAI-WEI.

Commissioner J. H. Stewart Lockhart, in his report to Mr. Chamberlain for the year 1902, makes the following interesting observations:—

POPULATION.—No proper census of the inhabitants has yet been taken, but the population is estimated at 124,000, spread among 330 villages, which includes a population of 4,000 resident on the island of Liu Kung. Shantung is always regarded as an overpopulated province from which there is large emigration to Manchuria. In my opinion the people, though not wealthy, are far removed from being poverty stricken. In my journeys through the territory I have been struck by the healthy and well-nourished appearance of adults and children, and by the almost entire absence of beggars. Extreme poverty wears an aspect very different from that which prevails throughout the villages of this territory. My view as to the condition of the people is supported by the opinion of Chinese from the south of China, who state that the population of China is roughly divided into three classes—the rich, the fairly well-to-do, and the poor, and assign the inhabitants of this territory to the second class.

ADMINISTRATION.—The Commissioner is appointed by Commission under His Majesty's sign manual and signet, and discharges his functions under the Wei-hai-wei Order in Council of July 24th, 1901. Both Major Cowan, Acting Commissioner, and Mr. Hare, Assistant Commissioner, left Wei-hai-wei and Mr. Dupree died soon after my arrival. Mr. Walter was appointed Secretary to Government to discharge the duties formerly performed by Mr. Hare, as well as to carry on the work of magistrate, both on the island and on the mainland.

Soon after my arrival I appointed a Council of Merchants resident on Liu Kung Tao to advise me regarding the affairs of the island. Mr. Bridges, of the firm of Messrs. Lavers and Clark, was appointed Chairman, Mr. Fergusson, of the firm of Messrs. Cornabe, Eckford and Co., and Mr. Duncan Clark, of the firm of Messrs. D. Clark and Co., members of the Council. On the departure of Mr. Fergusson for England, Mr. Larkins, of the same firm, was appointed to take his place. I have found the advice of the Council of great assistance to me in a variety of matters, and I am much indebted to them for the help they have given.

FINANCES.—Though the accounts are not yet made up I am able to state that the revenue was considerably in excess of the estimate of \$18,700, whilst the expenditure has been less than the approved estimate of \$142,500. The Grant-in-aid from Imperial Funds was \$12,000, as compared with £11,250 for the previous financial year. The Grant-in-aid for the current financial year is £9,000. The balance in the bank to the credit of this Government on March 31 last amounted to \$82,693, £6,891, which is a much larger saving than that originally estimated, viz., £4,000.

PUBLIC WORKS.—Last year's experience makes it clear that the roads of this Dependency must be substantially made and properly bridged to be able to bear the strain which they have to support during the rainy season. Steps have accordingly been

taken to metal and improve the bridges of the road from Half Moon Bay to Flagstaff Point, a distance of five miles, which passes through those parts of the territory most frequented by Europeans and Chinese, and also to metal and repair the roads on the island of Liu Kung. The roads in the outlying districts, which are not metalled and which are not properly bridged, will have to be gradually improved. In the meantime they are being maintained so far as practicable in a proper state of repair.

Formerly there was no suitable pier on the island available for the use of the general public. To meet this want a stone pier has been erected and has been found to be of great use. The pier on the mainland at Port Edward, which was constructed in 1901, proved to be too low, which rendered landing and embarking at high tide a somewhat wet process. I accordingly caused it to be heightened so as to make it capable of use in all states of the tide. The question of the erection of a pier in deep water on the mainland, alongside which steamers may be able to load and discharge cargo is engaging my attention. Although provision was made in the estimates for last year for the commencement of a Government House, no steps have been taken to erect one, as I deemed it advisable to defer the work until other matters of a more pressing nature had received attention.

POLICE.—When I came to Wei-hai-wei it had been decided to disband the Chinese Regiment. The consideration, therefore, of what steps should be taken, after the disbandment of that regiment, to secure the maintenance of peace and good order and the protection of lives and property of the inhabitants of this Dependency, became one of pressing importance.

After due deliberation I came to the conclusion that the most effective and economical plan would be to continue the system of policing the territory through the headmen of the villages, and to retain it so long as it continued to work satisfactorily, instead of dotting police stations throughout the territory in charge of inspectors, who would be unable to communicate with the people except through interpreters, a system which almost invariably results in corruption and malpractices. That system, which is suitable to the whole of the territory, except the town of Port Edward and the island of Liu Kung, is based on the fact that the unit of society is the family or village and not the individual, as in the west. As regards the policing of the town of Port Edward and the island of Liu Kung, I considered that a small number of police under a European inspector would be sufficient for present requirements, and I further suggested that a European officer should be appointed for intelligence work and to act as a link between the central Government and the village headmen.

The decision to disband the Chinese Regiment has been modified, and it was with much pleasure that I learned that it is to be continued at a strength of 16 officers, 6 non-commissioned officers, and 454 men. This garrison, though larger than that which I recommended, ought to prove in every way satisfactory. The behaviour of the men is excellent. They have given practically no trouble to the Civil authorities, and I doubt whether any other garrison town could show fewer offences on the part of the troops than Port Edward, where the regiment is stationed.

EDUCATION.—The Wei-hai-wei School is intended for the sons of Europeans resident in China. It has now about thirty pupils, and its prospects are regarded as so promising that the headmaster, Mr. Beer, intends to erect a new building capable of housing a larger number of pupils. So far as climate is concerned, no healthier place than Wei-hai-wei could be found in the Far East for a school, and as there are many European residents who, in these days of depreciated silver currency, are not able to afford the expenses of sending their sons home to be educated, it is not unlikely that they will avail themselves in increasing numbers of the Wei-hai-wei School. In order to encourage the study of English among the natives of Wei-hai-wei, I think it would be advisable to establish a Government school at Port Edward primarily for the teaching of English, but in which instruction should also be given in the subjects taught in Chinese schools. It would be sufficient at the start to place an English speaking Chinese in charge of the school, who should have an assistant to teach Chinese. Later, when the progress of the school warrants the outlay, a European master might be appointed.

CLIMATE.—The summer heat is never really excessive, and being of a dry nature never causes that feeling of lassitude so common, for instance, during the summer in Hongkong. June, July, and August are the warmest months. The fact that punks are seldom used shows that the heat is not felt to any great extent. Those who visit this place are at once sensible of the benefit of the change. The value of such a climate to a power like Great Britain, possessing such immense interests in the Far East, is apt to be overlooked. The sight of 7,000 blue-jackets in the harbour of Wei-hai-wei on Coronation Day,

August 9 last, enjoying a delightful climate, whilst their less fortunate mates were sweltering in other parts of China, or even Japan, was an object lesson which might have helped even the most pessimistic to realise that Wei-hai-wei on account of its climate alone, is a valuable dependency of the Empire. A striking feature in the medical history of Wei-hai-wei is the immunity it has hitherto enjoyed from enteric and malarial fever, insidious foes only too common in the Far East.

Soon after I arrived at Wei-hai-wei my attention was called to a sulphur spring in the immediate neighbourhood of Port Edward. This spring had been used by the Japanese during their occupation of Wei-hai-wei. Baths were erected by them which still remain, but which have not been properly maintained, and now require to be renewed. Having obtained specimens of the water from the spring, I sent them to the Governor of Hongkong to be analysed. From the report it appears that the water is "a natural sulphur spring water, containing substances of a high remedial value," and is likely to be useful as an alternative and for rheumatic complaints. As it is well known that the Japanese are skilled in the construction and arrangement of sulphur baths, I have entered into an agreement with two Japanese gentlemen, who have undertaken to construct baths in the Japanese style of material which will be imported from Japan. The building will be maintained and managed by the two Japanese, who have undertaken to erect it with the aid of a subsidy from this Government.

TRADE.—I have to thank Mr. Bridges, of the firm of Messrs. Lavers & Clark, which has been established in Wei-hai-wei for some years, for a report on trade for 1902. In the opinion of Mr. Bridges, progress in trade has been arrested owing to a feeling of uncertainty as to the intentions of the Imperial Government regarding this Dependency, but that feeling having apparently been removed, he is hopeful that there will be commercial development in the future, and the starting of industries, especially as there are already signs of the Chinese taking an interest in local trade. During the year 1902, 146 steamers exclusive of Admiralty colliers, Government transports and a small steamer running with mails to the neighbouring port of Chefoo, entered this port, representing a tonnage of 151,809 tons.

The imports and exports, as Mr. Bridges points out, are small, but everything must have a beginning. There seems no reason why Mr. Bridges' anticipations of an increase should not be fulfilled. As to the starting of new industries, arrangements are being made for manufacturing locally pongee silk, and it is probable that Wei-hai-wei may become a centre for the manufacture of bean oil and bean cake, in which there is a very large trade at Chefoo. The trade prospects of Wei-hai-wei have been much discussed during the past year both in the press and elsewhere. The opinions expressed have been either very optimistic or unduly pessimistic. The facts of the case do not seem to justify the holding of either extreme view. Whilst on the one hand the situation of Wei-hai-wei does not seem to warrant the anticipation that it will become a second Hongkong, on the other hand it possesses potentialities, which, if fostered, ought to entitle it to rank higher than that of a second-class watering place. There can be nothing "dead certain" about it, and it is, therefore, idle to indulge in prophesy regarding it. But if the finances of this Dependency are carefully nursed and its government economically administered, there seems no reason why Wei-hai-wei should not at least pay its way in time without being dependent on the Imperial Exchequer for financial assistance, and if capital be attracted to its shores, it appears to be fairly certain that a trade will be created.

LAND.—At present owners of land receive exactly the same treatment as they did from the Chinese Government, and I do not think it would be advisable to make any immediate change, even if that were feasible. The Land Tax in 1901 amounted to \$6,480, whilst last year a sum of \$14,300 was collected. The increase is due to the fact that the previous collection was not made in accordance with Chinese custom. In the Shantung Province, for purposes of land taxation, the value of the silver tael, in copper cash, is fixed at a rate which is more than double the market rate. In 1901 the market rate was taken as the basis of collection, whereas this year I directed that the tax should be collected in accordance with Chinese custom, the result being that the revenue from land has more than been doubled. The land in this Dependency is very lightly taxed, and the people in the country are not at present subjected to any other form of taxation. The Land Tax is paid by each village through its headmen, who brings the amount due by his village to the office of the Secretary to Government, and receives receipts, which he distributes among his fellow villagers. One cannot fail to be struck with the punctuality with which the tax is paid. Such promptitude reflects great credit on all concerned and shows how effective the Headman

system is for the purpose of collecting the revenue from land.

MINING.—The territory has been visited from time to time by mining engineers, who have prospected for minerals, but up to the present year no steps had been taken to work any minerals. A company, entitled the Wei-hai-wei Gold Mining Company (Limited) with a capital of \$600,000 has recently been floated in Shanghai and intends to start mining for gold without delay. The property is so situated that, when mining is started, it seems almost certain that the working will have to be carried on in both Chinese and British territory. To meet this difficulty I have suggested to the Governor of Shantung that this property should be worked under regulations to be drawn up by the Governor of Shantung and the Commissioner of Wei-hai-wei, and that the royalties, if mining proves successful, should be divided equally between the Government and that of China. I have every hope that this arrangement will be accepted.

CONCLUSION.—Taking all things into consideration, I think the progress made during the past year may be regarded as satisfactory. There can be no doubt that various changes in the administration of this dependency and the uncertainty that existed in the mind of the public as to the policy of the Imperial Government regarding Wei-hai-wei, have tended to impede the development of this place. But now that the administration is more settled and the public is beginning to realise that every encouragement will be given to trade, it is hoped that in the future commercial enterprise will show increased activity.

Wei-hai-wei is not altogether destitute of dismal and *nil Admirari* critics. But there are also amongst its residents those of a more sanguine temperament, for in an essay on the dependency by one of the schoolboys of the place occurs the following encouraging statement:—"Like all other British possessions and dependencies, Wei-hai-wei must be a success." It is with such a note of cheerfulness rather than with gloomy forebodings that I prefer to end my first annual report.

Various appendices contain the different departmental reports, the main points of which have been noted by the Commissioner. We may, however, quote the following from the report by Mr. Walter, Secretary to Government:—

The Magistrate's Office from time to time issues Proclamations, in Chinese, notifying the people of the wishes of the Government. I may cite a story as showing how quickly the import of a notice spreads and filters through the people. A Chinese conjuror, who had come from a far city to Wei-hai-wei where he sojourned a few days, gave a performance at the magistrate's house a few days after the notice about wheelbarrows had been issued. During the course of his *séance*, the wizard gave some very life-like imitations of various phenomena in daily life, including the sound made by the Chinese wheelbarrow. Before giving this imitation, the man of legerdemain put on a face that baffles description, and solemnly announced in Chinese, "Fine of one dollar." The roars of laughter that greeted his announcement from the crowd that were flattening their noses at the magisterial windows, showed how thoroughly the people enjoyed the apt allusion.

The people, and especially the villagers, are courteous and pleasant to foreigners, a feature in which they differ markedly from the rude, noisy Chinese of the South. They are phlegmatic by disposition, and slow to take offence, and speaking generally, the standard of village morality is fully as high as that which obtains in most parts of the agricultural districts of England. Respect for the traditions of the ancients, and veneration for the words of the aged, parental affection and filial obedience, these are among the most striking traits in the character of the peasants living in this district of Shantung, a province hallowed and revered through the ages as the birthplace of one of the world's greatest teachers.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE "AMERICA" CUP.

London, August 21.

The *Shamrock* has been remeasured and now receives 117 seconds from the *Reliance*.

Later.

The first race for the America Cup has been abandoned. *Reliance* was leading.

London, August 22.

The *Shamrock III's* performance in the first race was disappointing, but the wind was fluky, and it is expected that the coming contests will be close.

London, August 23.

Reliance won the first race by seven minutes after deducting time allowance. The course, which was sailed in a fifteen knot breeze and in splendid weather, was fifteen miles to windward and back. *Shamrock* started four seconds ahead. After eighty minutes close racing *Reliance* passed her, turning the outer mark three minutes ahead. Thence she steadily increased her lead on the run home.

London, August 26.

Reliance won the second race by 79 seconds after deducting time allowance. The course was 30 miles, triangular. The wind when they started was a seven knot breeze but variable. *Reliance* crossed 84 seconds ahead, leading by a quarter of a mile, which she gradually increased till after rounding the second mark she led by a mile and a half. Running home *Shamrock* gained considerably.

London, August 27.

The *Shamrock* was 2 minutes 36 seconds late in starting, of which about 36 seconds were disallowed according to rule.

TURKEY AND THE POWERS.

London, August 21.

It is announced in Rome that the Italian Government has resolved to act in accord with the others Powers in regard to Macedonia. The Italian fleet has been ordered to concentrate at Sicily in order to be nearer Turkish waters, if the Powers decide to send squadrons thither.

Turkey has accepted all the Russian demands and has requested the withdrawal of the Russian squadron.

London, August 22.

The rumours of a Bulgarian mobilisation are semi-officially denied but the Bulgarian Press is bellicose.

London, August 23.

A revolutionary movement has broken out in the eastern districts of Adrianople close to the Bulgarian frontier. This is regarded as an alarming development, as the Turks are certain to send a large force, and it will necessitate the strengthening of Bulgarian troops on the frontier, rendering a collision possible. The insurgents have captured and burned Vasiliko and twelve villages in the vicinity.

London, August 24.

The Bulgarian and Greek subjects residing in Roumania have received orders from their respective Governments to return home for mobilization without delay. The Sultan has ordered immediate compliance with all Russia's demands. The Russian squadron at Inada has been ordered to return to Sevastopol.

London, August 25.

Troops were despatched on the 24th to Adrianople, where a panic prevails. The rising has become general in the vilayet.

London, August 27.

The total number of Turks called out on a war footing in Macedonia is 310 battalions.

LORD SALISBURY SINKING.

London, August 22.

Little hope is entertained of Lord Salisbury's recovery.

Later.

Lord Salisbury is slowly sinking.

London, August 23.

Lord Salisbury is dead.

London, August 25.

In the *Court Circular* the King deeply deplores the loss of the great statesman whose invaluable services will ever dwell in the memory of his compatriots.

London, August 26.
Lord Salisbury will be interred privately in the family burial vault on Aug. 31st. A memorial service will be held in Westminster Abbey.

CANADA AND JAPAN.

London, August 22.
Canada is negotiating a commercial treaty with Japan.

THE HUMBERT CASE.

London, August 23.
Madame Humbert and her husband have been sentenced to five years' solitary confinement.

FRANCE AND ABYSSINIA.

London, August 25.
It is reported from Aden that strained relations exist between the French and the Abyssinians owing to the refusal of the French to pay heavy Abyssinian dues on traffic by the Djibuti Railway.

WHITTAKER WRIGHT.

Whittaker Wright has been released on bail of £50,000.

NEW GOVERNOR OF BOMBAY.

London, August 27.
Lord Lamington has been appointed Governor of Bombay.

ROOT RESIGNS.

Mr. Elihu Root, U.S. Secretary for War, has resigned, and Taft will be his successor.

(RECEIVED AT THE LEGATION OF FRANCE.)

RUSSIA AND TURKEY.

Saigon, August 21.
Russia is sending the Sebastopol squadron into Turkish waters. This demonstration is causing some sensation.

THE INEVITABLE.

Saigon, August 23.
Turkey accepts all the demands of Russia.

THE HUMBERT CASE.

Later.
Therese and Frederic Humbert have been condemned to five years confinement and 100 francs fine; Emile Daurignae to 2 years imprisonment; Romain to 3 years. After the pleadings Therese Humbert made a declaration which she finished by saying that the real name of Crawford is Regnier, the same who is said to have been formerly the intermediary between Prince Bismarck and Marshal Bazaine.

THE RUSSIAN SQUADRON.

August 24.
Russia has recalled her squadron.

MISSING SHIP.

Saigon, August 26.
It is reported at Marseilles that no news for 33 days has been received from a steamer en route for Colombo, having on board Admiral Gueydon, 50 men and seven passengers for Tonkin. This ship is considered to be lost.

(RECEIVED IN TOKYO.)

SEIZURE OF JAPANESE SHIPS.

August 25.
The Japanese Commercial Agent in Vladivostok reports that a secret trading vessel was captured in Kamchatka by the Russians, and her crew of 278 men were sent to Vladivostok; 250 of them have been released and forwarded to Japan by the *Aikoku Maru* and *Ise Maru*.

THE ANGLO-CHINESE TREATY.

The treaty concluded last September between England and China at Shanghai, which was to be ratified within a year from the date of its signature, has been

ratified and the ratifications have been exchanged. With the exception of the 8th Article, relating to *likin*, the treaty has now gone into force.

THE YONG AM-PHO LEASE.

With reference to the lease of land at Yong Am-pho, the statement that an agreement has been signed by Russia and Korea is untrue. In answer to three protests addressed by Japan to the Korean Government, the latter has replied that it has taken careful notice of the protests.

(FROM THE "JIJI SHIMPO.")

BALKAN TROUBLES.

London, Aug. 19.
The Mahomedans at Salonika are indignant and the conditions are generally dangerous. The insurgents have defeated the Turkish regulars in the neighbourhood of Monastir in which engagement two hundred of the latter were killed. Severe fighting has occurred at Gerenik(?). The insurgents are extending their influence.

London, August 20.
The Turkish Government has ordered 50,000 reservists to be called up. It believes that with this reinforcement the troops now employed will be able to confine the area of the present disturbances.

Russia has demanded that the Chief of the Macedonian Commissioners, whom the Powers requested the Turkish Government to appoint last spring, shall be reprimanded.

Great Britain supports the proposals of Austria and Russia with regard to Macedonian reforms. The British Mediterranean squadron is returning to the Levant.

Great Britain, Russia and Turkey are all purchasing large quantities of coal to be used on their ships. With the view of furthering the interests of peace, the Russian Squadron has returned to Sevastopol.

The insurgents have occupied Verilico (?) strait where they blew up the official buildings. They killed all the Turkish regular soldiers who were encamped at Malotirova (?). Bulgaria is quiet.

London, August 25.
There is a rumour that Bulgarians have been killed at Adrianople, and that the Christians are in a state of fear.

Some other villages near Adrianople, where Bulgarians are living, have again been attacked.

LORD SALISBURY.

London, August 21.
Lord Salisbury's condition is very grave. According to information to-day, he has grown very weak.

THE MACEDONIAN TROUBLES.

It is stated that the Porte has acceded to the demands of Russia under certain conditions. The Russian squadron is still near Constantinople.

THE MANCHURIAN QUESTION.

According to the *Cologne Gazette*, Manchurian affairs are in a serious state. Russia, adds the same paper, is much displeased with the present conditions in Manchuria under which she has always been treated with contempt.

THE DEATH OF LORD SALISBURY.

London, August 24.
The death of Lord Salisbury has evoked world-wide sympathy.

RUSSIA'S INTENTIONS.

According to a correspondent of the *Times*, Russia believes that she must, in spite of all consequences, oppose Japan whose dominion it is wished to extend in Korea.

(FROM THE "ASAHI SHIMBUN.")

London, August 21.
The Russian Ambassador at Constantinople has explained to the Turkish Government that Russia had no hostile intention in despatching the squadron but wished merely to obtain acceptance of her demands, as early as possible. The demands included the discharge of military officers in Macedonia and the re-appointment of others; as officers of the gendarmerie to appoint officers of other countries in Europe, and to release persons who are detained on suspicion.

GREECE AND MACEDONIA.

The Greek Government is greatly distressed by the Macedonian troubles. It has requested the Powers to take means to settle them immediately.

London, Aug. 24.
The Russian demands have been fulfilled by the Porte. Among the demands, referring to Macedonian reform was the reprimand of Hylimi Pasha, Inspector-General.

THE BALKAN TROUBLES.

London, August 25.
A number of fugitives including the Governor of Iniaia and eight hundred other officials have arrived at the Bosphorus. According to them, the insurgents disturbing eastern Adrianople are Bulgarians properly armed. The Turkish regulars have abandoned Iniaia and other sea places of the vilayet.

(FROM THE "DEUTSCHE JAPAN-POST.")

RUSSIA AND TURKEY.

Berlin, August 21.
Russia's action in sending part of the Black Sea squadron to Turkish waters, on the ground of demanding reparation for the murder of the Russian consul at Monastir, is now said to be intended to enforce further demands on Turkey, and to imply also a warning in regard to Turkey's meddling in Macedonia and with Bulgaria. It is declared that the Russian squadron will withdraw from Turkish waters as soon as the demands are complied with. The British Mediterranean squadron is being strengthened.

RUSSIA AND TURKEY.

Berlin, August 21.
It is affirmed in diplomatic circles that the despatch of British and Italian warships to Salonica is in accordance with Russia's wishes. The ultimatum sent by Russia to Turkey is so framed as to be probably acceptable to Turkey.

PRUSSIAN STATE RAILWAYS.

The Prussian State Railway receipts for the second quarter (April to June) show an increase of 25 million marks as compared with last year, indicating an expansion of trade.

THE ARMS EMBARGO.

Berlin, August 25.
The Kaiser signed yesterday the order to terminate the prohibition of the import of arms into China.

THE BALKAN CRISIS.

Berlin, August 24.
The Russian Black Sea Squadron, which had been at Iniaia Bay, in Turkish waters, is returning to Sevastopol.

TO CRUSH JAPAN.

The St. Petersburg *Viedomosti* writes in the most violent terms against Japan urging that it is of more urgent necessity to crush Japan than to make any attempts in the direction of Constantinople.

A REPORTED TRIPLE ALLIANCE.

All statements concerning an alleged alliance of the German Empire with France and Russia against Japan are baseless.

(FROM THE "N.-C. DAILY NEWS.")

MR. CHAMBERLAIN'S ZOLLVEREIN.

London, August 19.
The Congress of Chambers of Commerce at Montreal has passed a resolution that the Colonies should contribute to the cost of Imperial Defence, with the reservation that Canada should adopt her own method of carrying this out.

Mr. Arnold-Foster, Secretary to the Admiralty, speaking at Belfast, said that while he believes in Free Trade, he has been studying the question intently since Mr. Chamberlain raised the matter and is now convinced that a very great alteration of our present system is needed.

London, August 20.
There is a partial deadlock at Montreal, the Manchester delegates having dissented from the terms of the commercial policy of the congress.

MACEDONIA.

Greece has appealed to the Powers to put an end to the excesses in Macedonia, from which the Greeks are the greatest sufferers.

London, August 18.
The Bulgarian Premier has assured the diplomats that the memorandum as to Turkish responsibility was not intended in the slightest to provoke a rising in the country.

London, August 20.
The telegraph line between Sofia and Constantinople has been cut.

The Metropolitan at Salonica has received a message to the effect that the inhabitants of Krushevo were terribly maltreated, and some succumbed, but it does not mention any wholesale massacre.

London, August 21.
The Russian Embassy has explained to the Porte that the dispatch of the squadron was not a hostile demonstration, but simply intended to hasten the acceptance and application of Russia's demands. The Russian demands include the dismissal of various officials in Macedonia, and the reinstatement of others; the immediate appointment of Europeans to command the gendarmerie; and the liberation of prisoners arrested only on suspicion, or for giving information to the foreign Consuls.

THE WAR PARTY IN THE ASCENDANT.

The promotion of Admiral Alexieff to the Viceroyalty of the Far East is considered to be a triumph for the war party in Russia.

Admiral Alexieff is the leader of the faction which advocates holding the Russian gains in the Far East at any cost, and which favours heavy expenditure at Port Arthur.

RUSSIAN PROVOCATION IN KOREA.

The Times correspondent at Seoul describes the situation created by the rivalry between Russia and Japan as very serious, and the extension of Russian activity into Korea as most ominous.

LITTLE WAR IN WEST AFRICA.

A force of thirty white men and five hundred blacks has stormed Burmi in Northern Nigeria, killing seven hundred men, including the Emir and most of his chiefs. Major Marsh and four men were killed, and three officers and sixty-two men of the British force wounded.

(FROM THE "MANILA CABLE NEWS.")

GOVERNOR TAFT TO BE SECRETARY OF WAR.

San Francisco, August 14.

William H. Taft, Civil Governor of the Philippine Islands, is to enter the Cabinet. He will be Secretary of War. Elihu Root will retire in December next. Governor Taft is to succeed Secretary Root. Luke E. Wright, now vice governor of the Philippine Island, will be successor of William H. Taft as Civil Governor.

August 12.

The President of the United States confirms the statement sent yesterday that Secretary of War Root, will retire from office and that William H. Taft, Governor of the Philippines, will be appointed Secretary of War; and that Luke E. Wright will succeed Taft as Governor if Taft accepts portfolio.

VESUVIUS THREATENING.

Naples, August 12.

Mount Vesuvius, which has been active for a fortnight now, is threatening to destroy all within a radius of a few miles.

Most of the dwellers in the shadow of the volcano have moved, but there are many whose poverty and interests will not permit them to desert their homes except in an extremity. These are seriously menaced by the present eruption.

STRIKES IN POLAND.

Berlin, August 12.

News from Cracow, Poland, is that during a battle between troops and strikers over fifty of the strikers were fatally injured.

POPE PIUS X.'S HEALTH.

Rome, August 12.

Alarming reports concerning the health of the Pope are being circulated here. Pius X. fainted at mass to-day in the Papal chapel in the Vatican. He soon recovered consciousness and is resting easily in his bed. His physicians say that the strain of the Conclave and the subsequent ceremonies and press of business have affected his heart. He was ordered to rest as much as possible. It is not believed that the Pontiff is constitutionally weak or that he is apt to die, but rumours have been going the rounds that he will not live long. He is not old, naturally robust, and doubtless will recover completely.

RESTORING THE FORESTS.

Under the general direction of Gov. Bates, plans are in progress for restoring the forests of Massachusetts by the work of convict camps. This will be the first experiment of the kind in the United States. It will probably attract the notice of sociologists all over the world, says the Boston Advertiser.

The work will be done on a large scale, and practically every section of this state where forests are needed will eventually benefit by the policy. As for the state, there is good reason for saying that the profits of the undertaking will in time be big enough to wipe out the present state debt. Possibly it may make all state taxes unnecessary.

The state will take lands by the right of eminent domain. Only land now considered worthless but good enough to plant trees on, will be taken. Outside of the large cities of Massachusetts, such land exists almost everywhere. The land long ago refused to pay taxes on it. It is, to all practical purposes, public land to-day. The back taxes on such land are enough to wipe out any claim to ownership that might be set up. There is other land, almost as worthless, on which small taxes have been paid, the land being assessed

sed at only a nominal price. This land also, if taken by eminent domain, could be bought for little more than the expense of condemnation.

In almost every case, this land was once the site of a forest, but the wood has been cut off. As it is good for nothing else but woodland, the owners will be glad to get anything for it. The takings by the state, therefore, will amount in all to a good many thousand acres, probably. The total cannot yet be stated, because even the state officials have not yet decided upon that total.

It is calculated that if the right kind of trees can be made to grow, on the investment of a small sum, the state in 30 years will get something like \$20,000,000 from the sale of the standing timber, and that thereafter, the income of the state will amount to millions of dollars every year.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 5TH, 1903.

SUMMARY OF NEWS.

PRINCE ARISUGAWA, who had been at Ikao, returned to Tokyo on Aug. 27th.

THE Crown Prince arrived at Nikko in the evening of Sept. 1st from Shiohara.

U.S. SOLDIERS numbering 1,245 have arrived at Nagasaki from Manila *en route* for home.

THE shareholders of the Oto Bank, Kyoto, met on Aug. 27th and decided to wind up the concern.

MR. M. ASADA was on Aug. 27th elected for Kanagawa prefecture as a member (highest tax payer) of the House of Peers.

THE Chinese cruiser *Wong Tai*, which sunk recently after colliding with the *Empress of India*,

was carrying down arms to the Imperial authorities at Canton. These have therefore been lost.

SOME merchants of Tainan, Formosa, contemplate establishing a bank with a capital of yen 150,000.

A HUNDRED and thirty Korean emigrants arrived at Nagasaki on Aug. 28th *en route* for the United States.

SPORTSMEN will be interested to learn that snipe are already in the Yokohama market, despite this being the close season.

OWING to the breaking of a chain in the coal mine at Oyabu, Fukuoka, three persons were killed and four injured on Aug. 28th.

A TELEGRAM dated Aug. 30th from Kumamoto states that an eruption has occurred on Kirishima mountain. The damage done was not ascertained.

THE Nisshu Fire Insurance Company, Tokyo, held a general meeting on Aug. 30th when it decided not to pay a dividend for the first half of this year.

A PASSENGER train collided with a goods train at 1.15 p.m. on Aug. 30th at Omori station and one car of the latter was derailed. No one was injured.

A CASE of cholera was reported on the night of Aug. 31st in Tokyo. The patient died the following day. The usual isolation measures were carried out.

THE term of service of Prince Konoye, president of the House of Peers, is to expire this month. The *Asahi* states that he will be re-appointed by the Emperor.

THE *Official Gazette* states that the Emperor of Japan acknowledged, on Aug. 25th, the appointment of Herr. Friedrig von Syburg, German Consul-General at Yokohama.

THE *betto*, numbering 24, of the Yokohama omnibuses which run between Matsukagecho and Hiranuma station, struck on Aug. 31st and since then business has been suspended.

A GENERAL meeting of the Hokuyetsu Railway Company was held on Aug. 29th in Tokyo, when a resolution was passed to issue debentures amounting to yen 2,000,000.

A MAN named H. Uchida living at Ushigome, Tokyo, who attempted to murder his wife, was on Aug. 27th, sentenced in the Tokyo District Court to 6 years' minor confinement.

THE warship *Naniwa*, which sustained damage in collision with the British vessel *Dundee* at Woosung, arrived on Aug. 30th at Yokosuka, and the following day entered dock for repairs.

THE tea export of Kobe amounted to 9,778,803 lbs. from the coming-in of the new crop down to Aug. 29th. Comparing the figures with those of the previous year, there is an increase of 1,598,852 lbs.

It is stated in a telegram from Tainan that a heavy storm prevailed on Aug. 31st in Formosa. The railway in the southern part of the island was severely damaged and traffic is not expected to be re-opened for some time.

MR. G. G. WARDER, Government officer on the tobacco estates round Maruda Bay, British North Borneo, was murdered by an escaped convict at the end of last month. He had three large spear wounds in the back.

OVER fifty men were gambling at Kubo-yama,

Ota, Yokohama, about 1 p.m. on Sept. 1st, when eighteen police officers appeared on the scene and arrested twelve of the gamblers. The others escaped.

S. HONDA (55), a clerk of the rooth Bank, Tokyo, committed suicide, on August 29th, at the cemetery of the Buddhist temple, Ichijoji, by hanging himself with a cord. Insanity is reported to be the cause.

THE construction of the Osaka Electric Tramway being completed, Mr. Tanikawa, engineer of the Department of Communications, inspected the railway and electrical power house on Aug. 26th. Traffic will shortly be opened.

THE Sanyo Railway Company held a general meeting on August 31st when it was decided to construct a line between Arai and Wakayama at a cost of yen 600,000. It is expected that the works will be completed the following year.

THE Yokohama Emigrant Company has received an order for 1,000 Japanese workmen from the Mexican Railway Company. The Japanese firm has applied to the Department of Foreign Affairs for passports for the number specified.

A MAN named J. Shoji (46) formerly in the employ of the Tokyo Municipal Office, attempted on the evening of August 30th to commit suicide by cutting himself in the throat. He was removed to the Tokyo Hospital. The cause has not yet been reported.

THE members of the Imperial Educational Society who recently held a meeting in Tokyo and decided to oppose the proposed abolition of the Department of Education have drafted their views and circulated them among educational men throughout the Empire.

DURING the Osaka Exhibition, the income of certain railways naturally increased. The *Yokohama Shimo* publishes a gross estimate for the Tokaido line of yen 1,200,000; that of the Sanyo line, yen 800,000; and that of the Kwansei line, yen 600,000.

OVER 2 hundred villagers on Aug. 27th, surrounded Fuji District Office, Shidzuoka prefecture, and assumed a threatening attitude. It is stated by the *Nichi Nichi* that all the villagers of Kamiide refused to pay their taxes and their property was consequently seized.

MONDAY, Aug. 31st, being the birth-day anniversary of the Crown Prince, Marquis Ito and other peers and high officials sent telegrams of congratulation to His Highness, who is now staying at Shiohara. At noon His Highness entertained to dinner the officials who are attending him.

ACCORDING to the latest official investigations, the new crop of Japanese tobacco is expected to reach 12,000,000 or 13,000,000 *kwan* (*kwan* = 3.7565 kilos.). Harvest has already commenced in Kumamoto, Kagoshima, Ebaraki and some other prefectures. Sales will begin in the middle of September.

DECORATIONS have been conferred by foreign sovereigns on Japanese as follows:—Mr. Y. Nakamura, President of the Iron Foundry, the First Treasure Star of the Second Class, and Major Eto, First Treasure Star of the Third Class, both by the Emperor of China; Governor Sufu, the Crown of the First Class by the German Emperor, and Baron Hayashi, Minister in London, and his wife, jubilee medals to commemorate the coronation of the King of Great Britain.

KOREA.

Friday, August 28.

Seoul appears to be torn by conflicting emotions. Its statesmen are represented as convinced that Japan and Russia are on the eve of an amicable settlement with regard to Manchuria, and that, consequently, they are not likely to come to blows about the Yalu Valley. The Emperor, for his part, has declined to grant audience to Mr. Hayashi in connexion with the Yong Am-pho affair, which refusal, if it may be interpreted in the sense that His Majesty is removing himself from the complication would be decidedly welcome. Meanwhile it is alleged that the Russian Minister has been instructed from St. Petersburg to oppose the opening of Wiju, and that he has accordingly formulated another protest against that step, whereas America is urging its speedy consummation. We are disposed to regard these rumours about Wiju with considerable distrust. Russia would be deliberately placing herself in a very invidious situation did she take the line attributed to her by rumour. What right has she to oppose the development of the Far East? Her own commerce is not affected by the contingency. She has no commerce worth mention. Hence if she puts obstacles in the path of trade expansion and the opening of new marts, she exposes her conduct to the most invidious construction. We do not suspect her of such tactlessness.

Meantime the *Fiji Shimpō* continues to speak editorially in very emphatic terms. The upshot of its advice is that Japan should abandon protests and warnings and should adopt practical measures. Doubtless she would thereby expose herself to much criticism at the hands of Western Powers, but where the safety of the State is in question that consideration should not weigh too heavily. Japan's national existence is bound up with the fate of Korea.

The debentures of the Seoul-Fusan Railway have been taken up as follows:—

	Yen.
First Bank.....	1,900,000
Commercial Bank.....	1,500,000
Yasuda Bank.....	400,000
Industries Bank.....	200,000
Total	4,000,000

The applications received by these banks from individuals totalled 210,000 yen, and the Yokohama Specie Bank took 1,000,000 yen worth of debentures.

Saturday, August 29.

Tokyo newspapers state that the Russian Representative spent many hours at the Foreign Office in Seoul on the 27th instant, pressing for the signature of the Yong Am-pho agreement. Accounts differ as to whether Mr. Pavlov passed the whole day or only the whole afternoon in this effort, but all are unanimous in asserting that the Korean Foreign Minister, having received instructions from the Court not to sign the agreement, and having, prior to the receipt of these instructions, pledged himself to sign it on the 26th instant, was in a serious dilemma. No resource suggested itself to him except to fall back upon diplomatic sickness, and he therefore remained shut up in his house while Mr. Pavlov was dunning at the Foreign Office. It is impossible to pity the Korean statesmen in their dilemma. They have behaved with such fatuous shortsightedness that whatever results ensue can not be called undeserved. No satisfactory exit now presents itself, for if they satisfy Japan they will offend Russia, and if they

concede Russia's demands they will have to face a large measure of Japanese wrath. What suggests itself as a matter of interesting speculation is whether Russia ever seriously contemplated the possibility of carrying this enterprise to a successful conclusion without embroiling the relations between Japan and Korea, and without provoking the inveterate opposition of the former power. If she had any such expectation she must have been singularly ignorant of Japan's mood, and if she did not have it, then her procedure seems almost wantonly inimical to peace.

Sunday, August 30.

The latest news from Seoul is that the Minister of Foreign Affairs, the Vice-Minister and the Chief of the Conference Bureau have resigned, so that the foreign-affairs machinery of the empire is completely dislocated. It is added that the Russian Representative, incensed by the failure of the Foreign Office to sign the Yong Am-pho agreement, threatened on the 27th instant to make a direct appeal to the Emperor. Whether M. Pavlov carried out that intention there appears to be some uncertainty. Some accounts indicate that he sought an audience and was refused on the same plea as that given to Mr. Hayashi, namely, that the Court does not transact business during the summer recess; others suggest that no application was actually made by M. Pavlov but that if it were made the Court's attitude might be inferred from the fate of Mr. Hayashi's similar attempt. At all events it is plain that the Korean Government is much embarrassed, finding itself caught in a vise from which procrastination and evasion furnish the only temporary means of escape. The impression is that Korea's hope is to placate Russia and Japan by signing the Yong Am-pho lease at the former's request and opening Wiju at the latter's. But it is more than doubtful whether Japan would be content with such an arrangement.

The *Kokumin Shinbun* publishes the draft of an agreement said to be the amended form to which the Korean Foreign Office was prepared to grant its assent when recent interruptions occurred. There are eight articles:—

- Art. 1.—Provides for the delimitation and mapping of the ground at Yong Am-pho by a joint commission.
- Art. 2.—Declares that there shall be no extension of the settlement beyond its original limits.
- Art. 3.—Says that the Lumber Company shall pay no rent over and above local taxes.
- Art. 4.—Provides that the land must be returned to the Korean Government at the expiration of the period of the lease.
- Art. 5.—Interdicts the disturbances of any graves inside the settlement boundaries.
- Art. 6.—Forbids the committing of any acts of violence by the employees of the Company or the loosing of horses and cattle in the neighbouring district.
- Art. 7.—Empowers the Company to buy any rafts of timber cut outside the limits of the lumber concession at a fair market price but interdicts their forced purchase.
- Art. 8.—Stipulates that Korean subjects committing offences against the law within the limits of the settlement shall be handed over to the Korean authorities, and that employees of the Company committing offences outside the settlement shall be apprehended by the Korean authorities and handed over to the Company for delivery to the nearest Russian Consul.

This last article is vague, perhaps owing to the exigencies of telegraphic abbreviation. We can not discover whether the law-breakers alluded to in the last paragraph are to be conveyed by the Korean authorities to the nearest Russian Consul, or merely handed over to the Lumber Company. And where, we wonder,

is the nearest Russian Consulate. Probably at Antung, for it is not at all likely that a consul will be posted at Yong Am-pho. Should such supposition be correct, we are to conclude that the judicial business of the whole Yalu Valley will be managed from a far distant place in the territory of a foreign country.

Art. 9.—Provides that every employee of the company travelling outside the timber-felling limits must be provided with a permit from the Korean Government, and that if any one be found without such permit he shall be apprehended and handed over to the nearest Russian Consul.

It will be observed that in places the limits of the settlement are spoken of, in others the limits of the timber-felling concession. But what are the limits of the timber-felling concession? That is precisely one of the grand points in dispute. The agreement above epitomized provides for the delimitation of the proposed settlement, but does not provide—and we have not heard that any other provision has been made—for the delimitation of the concession.

The *Fiji Shimpō* continues its campaign in favour of obtaining concessions for the Seoul-Wiju and the Seoul-Wonsan railways. The Korean Government has declared its intention of building these lines itself, and has even organized a railway bureau for the purpose. But that is a mere formality. The roads will never be constructed if the work be left to Korea. The Seoul-Wiju line would be 250 miles long, and its cost might be estimated at 30 millions of yen. In short, it resembles the Seoul-Fusan Railway in length and cost. Of course if Japan presses for these concessions she must look for unexpected opposition in unexpected quarters, but no apprehension of that kind should deter her. It is a matter of almost life-and-death importance. The *Fiji* further urges that greater expedition should be employed in constructing the Seoul-Fusan line. Only 22 miles are now open to traffic—11 at either end—and although the roadway will be completed, according to present forecasts, by the end of 1905, it will not be open throughout for traffic until the close of 1907, which is much too remote a date. Four years mean a long time when measured by the progress of events now-a-days in the Far East.

We should gladly add our own voice to that of the *Fiji Shimpō* in this matter, but our readers know that we have long urged the very course which our Tokyo contemporary now so ably recommends.

The *Nippon* writes cleverly but with something of the wisdom that follows the event. It declares that by Russia's deliberate contrivance the Manchurian question has been thrust out of sight by the Korean. Anybody could see that this was Russia's design from the outset, yet apparently the Japanese Ministry did not see it, and to that extent they must be said to have committed a blunder and been outmanœuvred by Russia. The *Nippon* seemingly fails to note that if Russia's doings in the Yalu Valley were planned originally as a mere diversion, Japan would have been playing her rival's game had she attached vital importance to them. In our opinion the point is that Russia, like a skilful general, was always prepared to convert her Yalu feint into a real attack if opportunity presented. The question is, has she found an opportunity for herself. May it not prove that she has rather created one for Japan? We believe that the outcome of the present situation will be to secure for Japan in Korea a situation such as she would not have gained for many years, and might never have gained at all, had not Russia

allowed herself to be visited by a sudden access of pragmatic activity. But our belief is founded on the hypothesis that Japan plays her cards boldly and wisely at this critical point in her career.

We have commented from time to time on the exceptionally strong attitude taken by the *Fiji Shimpō* towards the Korean problem. The *Fiji* is generally so conspicuously moderate in its expressions of opinion that when it speaks with such unwonted emphasis corresponding importance attaches to its words. Very similar as to circumspection and balance is the character of the *Kokumin Shimbun*, and it will therefore be thought significant that the latter also should have taken off the gloves at this juncture and entered the field as a rival of the *Fiji* in advocating strong measures. There are slight differences between the programmes of the two journals, but we shall not be doing an injustice to either if we say that they agree in urging an independent policy. Their view is that Japan has hitherto been too passive. That she has waited to be moved by events, and that her motive of action has generally been the imminence of facts almost accomplished. The result of such a line of procedure is that her whole strength has to be employed for the purpose of averting the consummation of some ambitious design on the part of others, and in the sequel she is not found to have materially advanced her own interests in any degree. That is illustrated by the present complication in Korea. The Tokyo statesmen are engaged seeking solely to prevent the signing away of a parcel of land to Russia, and if they succeed, they will merely have staved off a peril without materially improving their country's position in any way. Following that line of argument to its logical conclusion, the two leading Japanese journals insist that Japan must take her courage in both hands and must seek to achieve for herself results which will render her practically secure against unscrupulous enterprises on the part of others. As to the results to be thus accomplished, there is a difference of suggestions. The *Fiji* limits itself to railways. It advocates the speedy completion of the Seoul-Fusan line and the obtaining of concessions for the Seoul-Wiju and Seoul-Yuensan roads. But the *Kokumin* regards the railway problem as only a feature of the situation. It would have Korea opened wholly to foreign trade, travel and residence, and it would have the privilege of owning real estate extended to foreigners. Our contemporary does not use the word "foreigners" in this context. It says "Japanese," but of course the most-favoured-nation clause deprives that language of all taint of exclusiveness. In brief the idea of the two newspapers is that Japan must assume an active initiative instead of following the policy of passive prevention. We are not at all surprised that such a view should find currency in intelligent Japanese circles. It is inevitable.

It is stated that the Korean Government is disposed to adopt a temporizing policy with regard to the opening of Wiju. A decision has been adopted at a Cabinet meeting in the sense that the opening of the Yalu port should be made conditional on the closing of Pyong-yang. This project having been submitted to the Sovereign, he is said to have instructed his Ministers to consult with the Foreign Representatives on the subject. Of course there is not the remotest chance of inducing the Foreign Powers to agree to the closing of the Tadong for the

sake of opening the Yalu. Important interests have already sprung up in consequence of the accessibility of Pyong-yang, and it would be a strange policy to sacrifice existing facts to uncertain contingencies. Korea is merely paltering in this matter. Yet her hesitation is very natural. She evidently feels that if, while refusing to sign the Yong Am-pho lease, she further agrees to the opening of Wiju, which St. Petersburg opposes, Russia will be antagonized all along the line.

Meanwhile Mr. Hayashi has not resigned himself to accept the Emperor's refusal of an audience. It appears that his Majesty pleaded the summer recess as a reason for not receiving diplomatic visitors, but as the summer recess has never hitherto been invested with that importance Mr. Hayashi is not disposed to assist in establishing such a precedent. The Emperor is in a rather "tight" place. Unless his memory be very treacherous he must still recall the fact that seven years ago he was a fugitive in the Russian Legation making promises which his sense of gratitude should now impel him to carry out.

Tuesday, September 1.

It appears that the form of agreement published by us yesterday, an agreement of nine articles, was a draft amended by the Korean Minister of Foreign Affairs and sent by him to the Russian Legation for approval on the 27th instant, namely, on the day before he resigned. M. Pavlov peremptorily refused to accept Li's amendments, and accordingly Li retired from office. It is not easy to say precisely what were the amendments proposed by Li, but they seem to have been connected chiefly with the questions of jurisdiction and of purchasing timber cut outside the limits of the concession. The point of interest is that the Foreign Minister's draft leaves untouched the matter of leasing the lands at Yong Am-pho. If the lease be granted collateral details sink into insignificance. Japan seems determined either that there shall be no lease, or that the radical change of situation which the lease would create shall be compensated fully by other changes of a sweeping character.

In the *Asahi's* Seoul correspondence we find it stated that M. Pavlov addressed a very strong note to the Korean Minister of Foreign Affairs. It is uncertain whether the note preceded or followed the Minister's resignation, but in all probability it was the proximate cause of Li's retirement. M. Pavlov is represented as having declared that after distinctly promising to sign the Yong Am-pho agreement the Minister had suddenly drawn back, which strange change of attitude he, M. Pavlov, considered it his duty to report to the St. Petersburg Government, and the situation would thereby be seriously complicated. The note concluded by bidding the Minister understand that he had brought this trouble upon himself. In addition to this very strong communication M. Pavlov is said to be pressing for an audience with the Emperor.

It is impossible not to condemn in very unequivocal terms the procedure of Russia in this matter. Her attitude in the Yalu Valley seems to us to be one of pure aggression, and further to be defiantly indifferent to Japan's well known and deeply rooted sentiments. History will have a curious story to tell should the St. Petersburg Government support the claims of its very active representative in Seoul. What makes all this stranger is that the Russian Government is understood to be negotiating for a

tranquil settlement of the whole Far-Eastern problem, and that St. Petersburg certainly does not desire war.

The *Asahi* recalls in this context the celebrated incident of the Russian attempt to obtain a footing in Tsushima, when the efforts of the Japanese Commissioner, Oguri Bungo no Kami, to obtain the withdrawal of the trespassers failed completely, though Oguri was a much abler and more resolute man than the Korean Minister Li has the credit of being. The finale of that matter was that the British Admiral on the station induced the Russians to leave Tsushima, and the inference drawn by the *Asahi* is that Japan's wisest course at this juncture would be to cease pressing Korea, who is perfectly helpless, and to approach Russia direct. But our contemporary fails to notice one important point, namely, that Korea herself seems to be a consenting party to the Yong Am-pho lease, and that her objections are limited to some petty details. Indeed it is surprising that M. Pavlov paused to wrangle about the trifles said to constitute the last basis of disagreement. One imagines that for the sake of securing the lease itself, he would have waved minutiae relating to jurisdiction and to the purchase of fortuitous rafts.

Wednesday, September 2.

M. Pavlov's official notes to the Korean Government seem to be assuming a more and more menacing tone. Having failed to obtain an audience of the Emperor, he is reported to have informed the Government, in the declared sequel of telegraphic communication with St. Petersburg, that Korea had flagrantly violated her promise and that the responsibility of any consequences which might arise must rest on her head. But surely M. Pavlov is somewhat extreme in such statements. An engagement made by the Minister of Foreign Affairs is not an engagement made by his Government, and still less is it an engagement ratified by his Sovereign. Even assuming—a wholly unwarrantable assumption—that Li Do-chai's promises were binding on the Cabinet of which he is a member, there would have remained the Emperor's unquestionable right to reject any agreement made by his Ministers. It is therefore inexplicable that M. Pavlov should utter menaces against Korea on the alleged ground of a breach of national faith. But there is a possibility that the Emperor himself may have given some definite promise to M. Pavlov with regard to the Yong Am-pho agreement, and that the Russian Representative's indignation has consequently more warrant than appears at first sight. The whole of this Yong Am-pho affair is quite irreconcilable with any recognized code of international morality and if it has ended in an apparent breach of faith on Korea's part, that would not only be consistent with the origin and progress of the aggression, but would also be altogether pardonable seeing that Korea has to choose between taking a step that would imperil her own safety and endorsing an act on Russia's part which was a direct violation of treaty engagements. Truly it seems a little laughable that M. Pavlov should make a display of righteous indignation about broken pledges. What is Russia doing now but breaking her pledges? It appears to us, who certainly have no disposition to exaggerate her doings or to use language calculated to strain an already tense situation—it appears to us that she is breaking pledges all the time and that, even setting aside the Manchurian record, nothing could easily be more farcical than this loud

complaint against Korea for refusing to recognise interests created in open defiance of existing compacts. The public has first to be convinced that Russian subjects had any right to purchase lands at Yong Am-pho before it consents to blame Korea for declining to recognise that right. At all events the position now is that Korea has refused to sign the lease agreement. What is to be done, however, about the Russians actually settled at Yong Am-pho and about the works of construction they have already commenced there?

Thursday, September 3.

M. Pavlow, according to the *Nichi Nichi*'s correspondence, has taken a step which, if rightly described, seems to indicate that something very like a mood of recklessness has overtaken him. Baron Gunsburg, on behalf of the Lumber Company, having pressed Mr. Cho, Chief of the Imperial Estates Bureau, to sign the "hung-up" agreement about Yong Am-pho, and having received for answer that Cho had no power to take such a step, M. Pavlow thereupon announced that as nothing was to be gained by further negotiation with the Foreign Office, his countrymen must proceed to give practical effect to the agreement just as though it had received the signature of the proper Korean officials and the endorsement of the Emperor. When the story of this incident is considered in outline, it certainly assumes a striking aspect. A party of Russians proceed to purchase from Korean subjects lands altogether beyond the limits of the area indicated by the treaties as lawful for such transactions. At first the Korean officials show a disposition to condone this arbitrary and illegal act by repurchasing the lands from their Russian holders, and then granting leases of them to the latter. But before this extraordinarily fatuous manoeuvre can be carried out, the Koreans, becoming sensible of its suicidal nature, draw back and decline to carry the business any further. Thereupon the Russian Representative announces that since he can not obtain Korean official sanction for the trespass committed by his nationals, they shall continue to trespass just as though such sanction had been obtained. Generally it is possible to find excuses or at least explanations of Russia's doings, but we can not discover a shadow of explanation or excuse in this case of Yong Am-pho. It is from first to last an act of defiant aggression, and that M. Pavlow's Government is with him in such doings can not be credited without the most unequivocal evidence.

The Korean Minister of Foreign Affairs having persisted in his resolve of retiring, the duties of the post are to be discharged temporarily by the Vice-Minister, Li Ching-ha. We do not suppose that any official procurable by the Korean Government will be able to direct the affairs of the Foreign Office in the face of M. Pavlow. For whereas to refuse the signature of an agreement which no independent country would dream of accepting, is a comparatively simple matter, what is poor weak Korea to do if the Russians insist on treating the Yong Am-pho agreement as an accomplished fact? How are they to be removed from the place and compelled to return to their own side of the Yalu? What is the use, we wonder, of the Tsar's pacific intentions if he allows his officers and officials at the front to behave as M. Pavlow is behaving, and how long does Russia imagine that she can continue slapping both cheeks of Japan's face without exhausting the sufferer's patience? The very anxiety we all feel to see the peace pre-

served renders these doings intolerable, for unless Japan be far more than human she can not continue to endure in silence. Does any one suppose, can any one suppose for an instant, that were the places of the two empires interchanged, Russia would still be found quiet and forbearing? It is unhappy to think that one of the greatest Powers in the world, having at its head a monarch of undoubtedly humane and peace-loving propensities, should be thrust by the intemperance and indiscretion of its officials into such a position as Russia now occupies in the Far East.

Friday, Sept. 4.

It must be confessed that if the *Asahi Shimbun*'s utterances may be taken as a measure of Japanese ambition in Korea, this country's ideas are very moderate. What the *Asahi* indicates as chiefly necessary is that the privilege of municipal organization should be granted to the Japanese communities in Korea. They do not now enjoy that privilege. They are solely under Consular direction, and it is therefore impossible that they should build schools, make roads, or undertake measures of sanitation. There is no ostensible reason why they should not be permitted to institute a system of local government after the Japanese model. If that were done, the *Asahi* says that nothing would be required except the opening of Yong Am-pho and Wiju. It is a mistake to allege that the Japanese would not go to north Korea. They would go there readily if an opportunity offered, and instead of there being only some twenty-three thousand Japanese subjects in Korea, there would soon be a hundred thousand or more. The problem of railways would then assume a different aspect. The *Asahi* notes incidentally that if Japan had devoted to the development of railway enterprise in Korea a part of the money she has spent during recent years in establishing unprofitable lines of steamers to London, Seattle, Melbourne and elsewhere, the situation would be more satisfactory to-day. It is disheartening to find an otherwise moderate and thoughtful article disfigured by such a reflection as this last. One imagines that a writer having access to the leading columns of such a journal as the *Asahi* should be able to see beyond the four corners of an office ledger. Even were the question of mere pecuniary profit alone vital, which, we wonder, would have paid better, lines of ocean-going steamers or lines of railway in undeveloped regions. Russia can afford solid materials for that comparison. But it is very much more than a question of *yen* and *sen*. Without her mercantile marine Japan would be virtually impotent from a military point of view. She would be like an army taking the field minus a land-transport corps.

A report reaches the *Nichi Nichi Shimbun* from Seoul, to the effect that Li Yong-ik is pressing the Emperor to sign the Yong Am-pho agreement. This is a strange piece of news. Had it been transmitted a few months ago, it would have sounded credible enough. Li Yong-ik was serving as interpreter to the Russian Legation when the King of Korea took refuge there in 1896, and for a long time afterwards he had the reputation of being a strong pro-Russian partizan. But recent events were understood to have changed his complexion, and his sharp collision with Li Kon-thaik finally drove him, it was supposed, into the Japanese camp. It may very well be, however, that means have been found to recall him to his own allegiance.

If so, a new complication is created. The only thing to be said is that the Sovereign of Korea seems to be thoroughly frightened, and we doubt whether even Li Yong-ik can restore his courage for anti-Japanese purposes.

The *farceurs* at present directing Korea's foreign affairs are said to have informed the Representatives of the Powers in Seoul that the Korean Government proposes to shut Pyong-yang and open Wiju. To this silly proposal Russia is said to have objected *in toto*, her objection extending, of course, to the opening of Wiju, and England, France and America have objected to the closing of Pyong-yang. Korea seems to have a very inadequate conception of her own position. She is apparently essaying the device of facing both ways.

As to the audience question. Mr. Li Chung-ha, acting Minister of Foreign Affairs, is said to have informed the Japanese and Russian Representatives that a considerable time must still elapse before the Emperor can receive them, and that, consequently, if they have any important business to discuss they had better communicate it to him, Li. The Emperor is obviously disposed to efface himself, which is the wisest course he can adopt under the circumstances.

THE PASSING OF A CARICATURIST.

The death of Mr. Phil May, the inimitable portrayer of the "Guttersnipe," drew forth some very appreciative words of praise from the American press. We find the *New York Evening Post* saying that "he had just that touch of exaggeration which marks the true caricaturist, or the great draughtsman for that matter, and he saw his rather sordid world much as it likes to take itself—with a wink. He belongs in that distinguished line of English draughtsmen with the pen, of which Charles Keene is the consummate example, who have shown an almost national genius for the swift delineation of character by the simplest means. A comedian or a great artist Phil May certainly was not. Of complicated situations he had rather little understanding, and his best work lay in a kind of deft and humorous portraiture of individual cockney types. But within its limitations his art was perfect." The *Brooklyn Eagle* credits him with the possession of the "feeling for line and form and the sense of character that great painters must have, but the invitations of his time were toward a transitory and amusing rather than a serious output. He became known, and with desert, as the creator of some of the happiest and funniest figments in that sometimes humorous publication, *Punch*. He had a more dashing and individual style than Leech, more humour than Keene, more vitality than Du Maurier, and in his sketchy and suggestive manner he has not been unaptly likened to Whistler." While the *Boston Transcript* says:—"It was not alone the cunning of hand that made May's black and white work of such conscious power. It was the fact that May knew St. Giles better than St. James. The children of the streets attracted his attention and his sympathy because he knew what it was to be poor, and some of his caricatures and drawings conveyed lessons which could not have been enforced with columns of literary effort. His heart felt the sorrows of the poor, while he realized the humorous aspects of their situation in life as shown in their aping of the ways of Belgravia. It was because May knew that he was so well able to portray."

THE RUSSIAN MINISTRY.

The resignation of Mr. de Witte is rather unexpected. If any member of the Russian Cabinet was firmly seated, we might have supposed it to be the eminent financier whose abilities all Europe recognised. Moreover there are rumours in well-informed quarters suggesting that this event should be regarded seriously. The Minister of Finance was recognised as one of the pillars of the peace party, and there have been indications which suggest that his resignation is to be connected with an act directly attributable to the influence of the war party, namely, the appointment of Admiral Alexieff to the position of Governor-General of Russia's Far-Eastern dominions. It is stated on seemingly good authority that the nomination was made by the Tsar at the recommendation of General Kuropatkin on the latter's return from his recent tour in Siberia and Manchuria, and that neither Count Lamsdorf, the Minister of Foreign Affairs, nor Mr. de Witte were either consulted or informed in any way. If that event be the cause of the Finance Minister's resignation of one of the most important and influential positions in the Government, a disquieting inference would suggest itself, namely, that the war party is in the ascendant and that the man at the front is to be supported in all his aggressively expansive proceedings. It has to be remembered that Mr. de Witte himself paid a visit to the East some time ago, and there is a suspicion that the pacific views taken by him of the situation have been found in conflict with those subsequently formed by his more ambitious colleague, General Kuropatkin. The saving clause, however, is that the Tsar can not be imagined as taking any step or giving any impulse of a belligerent character. It would be unwise, therefore, to form any definite conclusion as to the meaning of this Ministerial change, which may, after all, have its origin in circumstances entirely unsuspected by the general public. Besides there is an altogether different view of the matter. For early in the summer the promotion of Mr. de Witte to the position of Prime Minister of the Czar's Cabinet was foretold in the German press. It was also pointed out that Mr. de Witte, who began life as a railway clerk in South Russia, would then take the chair once held by Prince Gortchakoff, and great things were predicted of him in that position. Yet there are some who still doubt his capacity, for despite his shrewdness as a financier many economists consider his system of finance as the bane and blot of Russia's economic conditions. At present it is Russia's hope to keep off her creditors until her vast railroad systems may be placed on a paying basis, a task which might appal the boldest minister. She does not, however, appear to be daunted by the burdens which her railroad programme has and will impose. Although the trans-Siberian has already cost three hundred millions and yet remains unfinished, she has begun other railroad projects which will prove to be very costly. One new road from St. Petersburg to Viatka will do away with the long detour by way of Moscow, while the next most important line will connect the terminus of the trans-Caspian road with the trans-Siberian. This will pass through Turkestan, providing what is expected to be a most valuable "feeder" to the trans-Siberian. Coal and mineral deposits are among the sources of wealth that the Russians expect to develop by the new line. The man who planned these railways was

M. de Witte and if he relinquishes the post of Minister of Finance it may be that his enterprises have proved too costly. Meanwhile, the cable tells us, his immediate task is to arrange some new commercial treaties.

The *Shogyo Shimpō* takes the view that M. de Witte's removal from an active post in the Russian Cabinet to a mere sinecure must be regarded as a triumph of the war party, and an indication that Russia intends to follow the route of force in the Far East. Our contemporary denies that any progress is being made with the negotiations relating to Manchuria. It maintains that Russia's plan is to occupy attention with North-Korean incidents, and when she gets the affair of Yong Am-pho settled she will show a still bolder front about Manchuria. The *Shogyo* maintains that there is not and there ought not to be the smallest connexion between the two things, and that if Japan allows herself to be deluded by mixing them up, she will emerge from the complication with absolutely empty hands.

The *Asahi* takes the same view of M. de Witte's withdrawal from the Finance Department. It considers that his fiscal policy has proved too costly and that the report presented by him to the Throne after his return from East Asia was subsequently found to conflict with the conditions described by General Kuropatkin and confirmed by Admiral Alexieff, whom the *Asahi* regards as the head and front of the war party.

THE "SAISEI GAKKO."

In the year 1889 Dr. Hasegawa Tai, a physician who subsequently distinguished himself by vehemence in the Diet, established in the Hongo district of Tokyo a private medical school which by degrees assumed large dimensions. At that time a special *raison-d'être* existed for such schools, namely, that the law prohibited any appropriation of local taxes to medical schools, and consequently private enterprise found exceptional encouragement in that field. Thus, since the time of its establishment the *Saisei Gakko* has turned out seven thousand graduates, a majority of whom are now practising medicine. There is also a hospital connected with this school, a hospital which attracted public attention some years ago by the death of certain patients in a conflagration. Quite suddenly this school and the annexed hospital have been closed by Dr. Hasegawa. It appears that two events drove him to such an extraordinary step. He applied some time ago to the authorities to have the school raised to the rank of a degree-conferring college, but the Education Department refused the application on the ground that such a privilege could not be conferred on a private medical school. But inasmuch as four privately established law-schools have been elevated to the rank of colleges, and inasmuch as the same distinction has been accorded to the Waseda School of Count Okuma and the Takanawa School of Mr. Fukuzawa, Dr. Hasegawa considered that his institution was unfairly discriminated against. The resentment inspired by that incident seems to have been raised to passion point by the recent publication of an Ordinance removing the veto on the employment of communal taxes for purposes of medical education, which Ordinance was immediately followed by evidences of local activity that must soon have deprived Dr. Hasegawa's school of much of its usefulness. He accordingly adopted the singular resolution of abolishing the institution without a day's

notice, thus throwing into the greatest consternation and embarrassment 2,000 students whose names are on the books, especially 800 of them who are regularly attending the classes, as well as all the shops and lodging houses in Hongo which owe their origin to the existence of the school. The act is scarcely reconcilable with any hypothesis of complete sanity on Dr. Hasegawa's part. We recall the fact that, several years ago, he rose in the House of Representatives and denounced the Department of Education as "a den of thieves." His last escapade looks like a deliberate attempt to create trouble in educational circles. But before forming a judgment, we want to know why the Department discriminated against private medical schools. Had Dr. Hasegawa's personality anything to do with the matter?

There is now an explanation of the attitude of the Authorities in refusing to accede to Dr. Hasegawa's application that collegiate rank should be conferred on the *Saisei Gakko*. The giving of such privileges to private medical schools is a matter of special difficulty inasmuch as their available funds never suffice to furnish an equipment suitable for the thorough training of students in the practice as well as the theory of medicine. The *Saisei Gakko* is not thoroughly equipped. Dr. Hasegawa himself admits that it is not. His request, however, was that the deficiency should be overlooked for the moment. This the authorities declined, and the result was his singularly abrupt closing of the school.

THE INSURANCE COMPANIES.

The *Hochi Shimbun* says that foreign insurance companies doing business in Japan seem desirous of furnishing their security money in the form of debentures of the Industries Encouragement Bank (*Kwangyo Ginko*). This Bank's paper carries 4.5 per cent. interest which is raised to 5.5 or 5.6 per cent. by means of premia given to purchasers of its securities. The idea attributed to the insurance agents is that by abandoning the system of premia the Bank would save all the expenses involved by that system, and the debenture-holders—whose subscription would not need to be induced by any such reward—might receive a certain interest of 5½ per cent. The Industries Encouragement Bank was the first of the institutions established by the Government for the purpose of assisting the development of the country after the war of 1894-5. Interest on its paid up capital is officially guaranteed, and although we do not hear much of its doings, it is understood to be a sound institution.

With regard to the deposits of 100,000 yen that have to be made on the 31st of October by foreign insurance companies doing business in Japan, it is announced that the following securities will be accepted, namely, pension bonds (*Kinroku Kosai*), consols (Seiri Kosai), war bonds (Gunji Kosai), naval bonds (Kaigun Kosai) and government bonds (Teikoku Kosai). All these securities carry 5 per cent. interest except a part of the government bonds. They will be taken at 90 yen, and the deposits are to be made through the Governors of Kanagawa, Osaka and Hyogo.

Baron Rosen, Russian Minister at Tokyo, returned from Nikko on Sept. 1st accompanied by his family, and by Prince Koudacheff, Secretary of the Legation.

CHINA.

Tuesday, September 1.

There seems to be some dissatisfaction in Japan about the quality and attainments of the men chosen at the request of the Chinese and sent from this country to assist the work of reform in the Middle Kingdom. Several severe criticisms have already been heard on this subject and the *Yomiuri* now discusses it in a leading article. It appears that the applications from China are generally addressed either to the Department of Education, or to the Department of Foreign Affairs or to the *To-a Dobun-kai*, and the point made is that in selecting men to meet the demand, personal considerations are allowed to weigh much more heavily than scholastic attainments. In short, men are despatched whose chief claim, in some cases, is that they can not earn a livelihood in Japan. Their distressed circumstances are their chief qualification. Our contemporary alleges that in certain instances they have not been able to use the ideographs correctly, and inasmuch as a caligraphic error shocks a Chinese student more than any other failing, such instructors have of course lost caste at once.

If this criticism be well founded it is certainly timely. Japan has a great mission to perform in the East, and nothing would be more regrettable than that she should abuse her opportunities.

Wednesday, September 2.

It is stated by the *Asahi's* Peking correspondent that the excitement caused at first in Chinese official quarters by the appointment of Admiral Alexieff has entirely subsided, and that the event is now regarded with the most languid interest. This report may be supplemented by a telegram to the *Jiji Shimpō* which says that the talk of war, recently current among Russian residents of Peking has ceased to be so loudly audible as it was formerly, but that it is nevertheless noticeable that Russian officers at the front are sending home their wives and children and that the Chinese employes of the Russian authorities are being returned to their homes.

The *Hochi Shimbun* publishes a Japanese translation of a song said to be constantly sung by Russian soldiers in Manchuria, especially when they are in their cups. The gist of the song is that Russia has laid China across her knees; that she regards Japan as worthy of one volley but not able to endure more; that England is half paralyzed in her eyes, and that nothing can check her career of conquest. It is added that this song has been for some time in the mouths of the Cossacks, but that its real import was not recognised until quite recently when some Japanese acquainted with the Russian language managed to jot down the words.

An interesting statement is made by the *Nichi Nichi Shimbun*. It relates to railways. Considering that the Yangtse Valley is the richest and most populous part of China and that it has been recognised as England's sphere of political influence, and considering also what an important part railways have come to play in the practical exercise of such influence, the expectation was that Great Britain would take care to secure for her own subjects the concessions for all railways leading to the Valley. But England has not been able to establish any monopoly for herself. The fact is regarded by some critics as a diplomatic failure on her part, though in truth no such con-

summation could reasonably have been anticipated. The Yangtse Valley may be said to have become the focus of several Powers' railway enterprise. Japan, however, is not among those Powers, and her absence has been regarded with some surprise. But Japan is busied with Korea. She has the Seoul-Fusan and the Seoul-Chemulpo lines in her hands, and she might have had the Seoul-Wiju if she had accepted the proposal of French concessionaires who offered to sell it to her some years ago. Subsequently Russia tried to get it, and the result was a declaration by Korea that she intended to build the line herself. Japan, however,—and it is here that the *Nichi Nichi's* statement becomes particularly interesting—has obtained Korea's promise that in the event of her not building the line herself it shall be conceded to this country, and an intimation in that sense has been made to Russia. There being, then, little probability that the Koreans will seriously undertake the work, Japan may reasonably expect to have it in her hands soon, and when she obtains it the question will arise of building by way of continuation a road from the opposite bank of the Yalu to connect with the Russian system in Eastern China. Russia herself is said to have such a line in her thoughts at present, and if that be so the cross-Manchurian road may become a matter of rivalry between the two Powers.

Friday, Sept. 4.

We read in an *Asahi's* Peking telegram that Viceroy Yuan has decided to send twenty-four students to Japan, who will be employed as teachers in the schools of Chili after they have completed their course in this country. From this fact it may be inferred that the pessimist rumours circulated from time to time about a completely re-actionary movement in Peking are, to say the least, exaggerated. Viceroy Yuan, at all events, continues to work along the lines of progress, and if Viceroy Chang Chih-tung has associated himself with the party which demands the surrender of the Shanghai journalists and agitators, the fact does not by any means suggest that Chang has changed his principles. His own record places him in a very delicate situation with regard to all movements of the Kang-Yuwei type, and moreover, if we desire to view this Shanghai question fairly and impartially, we must admit that to any Chinese statesman the attitude assumed by the Foreign Powers in Shanghai may well seem equivocal. The Treaty of Tientsin says distinctly:—"If criminals, subjects of China, should take refuge in Hongkong or on board the British ships there, they shall, upon due requisition by the Chinese Authorities, be searched for, and on proof of their guilt be delivered up. In like manner if Chinese offenders take refuge in the houses or on board the vessels of British subjects at the open ports, they shall not be harboured or concealed but shall be delivered up on due requisition." From a Chinese point of view that article is conclusive, since it can scarcely be expected that the doctrine of asylum for political suspects should be practically recognised in Peking. Besides, the article is, in effect, an extradition treaty without limit or discrimination. It takes no note of kinds of offence, but speaks of offenders of every class. We should be sorry to see it interpreted in the broad sense suggested by its language, but we are very sure that a European or American statesman in Viceroy Chang's place would insist up such interpretation, and if Viceroy Chang takes that line, surely it is extravagant to infer

that he has turned his back on all his principles of progress.

CHILDLESS AUSTRALIA.

With the Labour Party forcing the local legislatures to enact laws intended to discourage emigration and with a rapidly declining birth-rate, Australia is confronted by a most serious problem. Recently published statistics show that the lowest Australian birth-rate is only 3 per 1,000 above that of France. A few years ago it was considerably higher, but the real decline is shown by the total number of births in wedlock compared with the number of women of child-bearing age. In New South Wales, between 1886 and 1901, the number of married women increased by 63,219; but the number of children born in 1901 was almost the same as in 1887. Taking the whole of the Commonwealth and New Zealand, there are annually 20,000 fewer births than there would have been had the birth rates of ten years ago been maintained. This shows a decline of 200,000 in the natural increase of Australian population during the decade. The New South Wales Government statistician, commenting on these facts, says:—"There have been very striking changes in the birth rates for the periods mentioned, and a persistent and astonishing decline among women of every class. It would seem that an increasingly large number of women make up their minds not to have children, or to delay child-bearing as long as possible. After each successive confinement, an increasing proportion of women, still of child-bearing age, cease to give birth to any more children, and the extraordinary condition of things has now come to pass that the fertility of women who have had two children is less than that of women who, in 1891, had nine children."

Mr. A. R. Colquhoun when writing on Australia in his "Mastery of the Pacific" drew attention to this strange development in a newly settled land and sought an explanation for it. He thought that the ever strengthening desire for a more comfortable and ease-loving style of living accounted for much, while a secondary cause was the mad striving after pleasure which infects all classes of Australians. A correspondent of the *Globe*, we observe, puts this latter feature at the head of the list of causes. Writing from Sydney under date of June 16 he says:—

The increasing reluctance of Australasian women to accept the responsibilities of maternity is traceable to several causes, one of the principal being the increasing love of pleasure. The numerous holidays and lessened hours of labour have strengthened the popular taste for outdoor amusement, and weakened the feeling in favour of household enjoyment. Then the warm sunny climate has a somewhat enervating effect on the younger population, which seems to pass the greater part of its existence in the open-air. All this assists in loosening the ties of domestic life. There is too much holiday-making and too little industrial occupation. Yet professional agitators like Tom Mann talk of the slavish condition of the Australasian labouring classes compared with that of their English brethren! Another difficulty consists in the early age at which Australasian children become emancipated from home control. The moment a boy and girl can earn a few shillings per week a start on their own account is made, followed by an early marriage, but no children. At holiday time nothing is more common than to find young married couples, uncumbered with families, taking part in excursions, picnics, and other forms of al fresco enjoyment. Where there are families most of the parents appear of middle-age.

The prospect does not appear attractive to well-wishers of the race. And besides, how will it all end? Shall we really see a practically baby-less Australia?

POLITICAL NOTES.

Monday, August 31.

In the *Nichi Nichi Shinbun* we find an interesting analysis of the condition of the *Seiyun-kai* compiled from the opinions of several members. The outward aspect of the Party is quiet at present. There is no idea of actively opposing the Government. From such procedure the Party is deterred by its record. It may and probably will raise questions about minor issues and dispute them with more or less vehemence, but so long as the Cabinet does not seek to obtain the Diet's consent to any scheme of increased taxation, there will be no serious collision. As to the Party itself, however, things are not so well with it as its present tranquil attitude might suggest. What with defections and expulsions, its effective strength in the Lower House has been reduced from over 190 to about 140, and even among these remaining 140 there are many who secretly incline to the seceders. Then there is the problem of the hostility of the local branches, whose opposition has assumed dimensions quite unexpected. No very serious attention used to be paid at head-quarters to the mood of the localities, but there is now a very different idea as to the importance of this matter. There is much anxiety, too, about the *Doshi Shukai*, which is under the leadership of Count Itagaki and includes in its ranks many politicians of long training and experience who, moreover, have grown to maturity in the same garden where the *Seiyun-kai* leaders themselves were cultivated. When such men put their hand to the political plough, they are pretty sure to make a deep furrow. Among them are some who, impatient of the loss of prestige involved in their expulsion or secession, would hasten to retrieve their situation by organizing an opposition party. But the craftier and more far-seeing section are quietly biding their time, which time will be the outbreak of fresh dissensions in the *Seiyun-kai*. Such outbreak can not be very distant, for the substitution of a consultative council of 30 for the previous standing committee of 12 has not in any sense remedied the abuses it was intended to correct. The Council is just as arbitrary and masterful in its methods as ever was the Committee, and dissatisfaction is steadily growing. Thus though the Party seems tranquil and though its leaders are labouring to preserve the *status quo*, there are both within and without its ranks elements which merely await an opportunity to raise a new commotion.

If this decidedly unfavourable view of the *Seiyun-kai's* condition were published by any of the Opposition journals, less credence would attach to it, but in the columns of the *Nichi Nichi* it looks ominous.

Tuesday, September 1.

A strong movement is on foot against the projected abolition of the Education Department. The opponents of the measure are taking steps to form a league for that purpose, and have issued a manifesto inviting cooperation. They do not attempt in this document to enter into any analysis of the evils likely to result from doing away with the Department. Their line of argument is general, namely, that the *Mombusho* has been in existence for 30 years; that it has had a large share in the progress of the nation; that education is the basis of international competition in modern times; that Occidental countries which have not a department of education are contemplating the organization of one; that

the economy effected by abolishing the Department would not exceed 100,000 *yen*, and that such a paltry saving when compared with a state income of 200 millions, constitutes no sort of reason for a measure so radical. It appears that Professors Kato and Tsuji have convinced themselves by interviewing officials that this step is actually contemplated, though the Ministry can not yet be said to entertain a unanimous opinion.

Thursday, September 3.

The *Tai-Ro Doshi-Kai* held a meeting in Tokyo on the 1st instant. *Tai-Ro Doshi-kai* is a word difficult to translate. *Tai-Ro* does not mean "anti-Russian" and assuredly it does not mean "pro-Russian." Its significance is simply "towards Russia," and thus, if a clumsy translation suffice, the term becomes "society of fellow thinkers with regard to Russia." Some twenty persons' names were advertised to deliver speeches and about a thousand collected to form an audience. The affair is described as an exceptionally animated and enthusiastic gathering, but Tokyo journals do not give any detailed account of the speeches delivered. We gather from what they do say that the utterances of several of the orators would not bear reporting, so uncompromising and vehement were they. Indeed some of them had to be stopped by the police. Among the twenty speakers the majority are probably quite unknown to our readers, but they will recognise the names of Messrs. Otani Kahei, Kusume Gen (conspicuous as a principal seceder from the *Seiyun-kai*), Takahashi Hideomi and Hoshi Matsusaburo (a member of the House of Representatives). It need scarcely be said that the gist of all the speeches was a strong protest against Russia's procedure and an affirmation of the necessity of fighting. There was no dissentient voice, and although neither the orators nor the audience can be described as representing the most influential class in Japan, they unquestionably do represent a growing power in the land. What our knowledge of Japanese character always prompts us to fear is that suddenly the strain Russia is putting upon the nation's great patience may over-tax it. Should that day come the competence of any statesmen, however able, will be found impotent. However little attention be paid by outsiders to meetings like that of the *Tai-Ro Doshi-kai*, they are signs of the time which should not be overlooked.

THE HUNAN (KONAN) KISEN KAISHA.

The Hunan Steamship Company held its second semi-annual meeting on the 1st inst., Mr. Kato Masayoshi being in the chair. This Company can not yet be said to be in full working order. Mr. Kato, in his speech, alluded to a subject which had been causing some anxiety to the shareholders, namely, the difficulty of obtaining a landing place at Hankow. This has been solved by the Nippon Yusen Kaisha's acquisition of the McBain Company's property, including a wharf at that place. Approached by the Directors of the Hunan line, the Directors of the Nippon Yusen Kaisha have intimated their willingness to afford landing facilities at their newly obtained wharf, and it is hoped that the necessary arrangements will soon be completed with the British Authorities, in whose settlement the property stands. Mr. Kato said that could this matter be settled, as he trusted it would, the Hunan Company need not put up any

capital on account of real property in Hankow. The following accounts were read and passed:—

Profit	Yen.
Brought over	4,716
Government subsidy	148
Total	11,157
To Reserve	16,021
To dividend (at rate of 6 per cent per annum)	236
To next account	11,250
Total	4,535
Total	16,021

AN INSURANCE INCIDENT.

The Manufacturers Insurance Company of Canada is reported by Japanese journals to have had one of the experiences to which foreign companies doing business in Japan will always be liable. It was a very simple fraud. In the village of Hadano, near Odawara, there lived a man named Suzuno Mohachi, who eked out an impoverished existence by cutting tobacco. At the age of 35 he had long suffered from lung disease, and the duration of his life was known to be limited to a few months. This invalid's condition suggested an opportunity to one Suzuki Tadagoro, a well-to-do man of the village. He applied to the Company's agent, Kambe, for an eight-thousand *yen* policy on the life of Suzuno, and he submitted for medical examination one of his own employees, a stout fellow called Iwata. The Company's agent was privy to the scheme, and altogether six persons had part in it, including Suzuno himself. The premium was to be paid quarterly, and after two payments the man Suzuno died. Naturally the suspicions of the company were aroused. They undertook a careful investigation, with the result that Kambe is now a fugitive from justice and his four surviving accomplices are in jail awaiting trial.

REV. WALTER ANDREWS.

It will be with extreme regret that the many friends of the Rev. Walter Andrews hear of his resignation of the post he has so long occupied in Hakodate. No kinder hearted man, no truer friend of the Japanese people, no more indefatigable missionary has ever lived in this country. For over 20 years his name has been so associated with Hakodate and with the work of the Church Missionary Society in Hokkaido, that to many of those who had the pleasure of knowing him the place will seem lonely without him. As a cyclist Mr. Andrews had few equals. His ride from Awamori to Osaka was an easy task when compared to the break-neck Hokkaido mountain roads which he habitually traversed in all weathers, often carrying his cycle for miles through shine or snow. In many parts of Ezo he was known as the *Jitensha no Danna*. So full of sympathy was his heart that he would frequently take a journey of 20 or 30 miles over the roughest conceivable roads to visit a sick convert. But in recent years he has shown signs of weariness and seems to have reached the conclusion that he is no longer equal to the strain which the carrying on of such arduous work involves. His loss to the Mission will be almost irreparable, for the combination of qualities which he possesses is extremely rare. We trust that Mr. Andrews may find congenial work in England and that his health may improve as the years roll by.

THE TOKYO RAILWAY.

Saturday, August 29.

The dispute between the sections of the Tokyo Street Railway Company continues unabated. Indeed things are growing more complicated. Legal proceedings are in progress in two courts. There is first, in the Tokyo District Court, the application made by Mr. Amenomiya for a temporary injunction pending the settlement of the case instituted in the Local Court, the latter case being the radical question whether the decisions adopted by the partial meeting of shareholders are binding. In reply to Mr. Amenomiya's injunction, the amalgamation party lodged a protest, and Mr. Amenomiya's Counsel thereupon moved that the framers of this protest should be required to withdraw it. The Court approved this last motion, whereupon the amalgamation party appealed from the approval. There is no visible exit from the meshes of the legal net in which the whole affair has now become involved, and the *Nichi Nichi Shinbun* urges that the necessary quorum of shareholders should apply for an extraordinary meeting, at which the whole of the present board of directors should be deposed. But are the advocates of amalgamation sufficiently strong to be sure of carrying their point in a general meeting? Meanwhile it is remarkable that the shares of the Company retain their market value. They have indeed fallen a little. A few days ago the 25-yen-paid-up shares were quoted at 59; now they stand at 57. One of the pressing embarrassments is that the time approaches when the shareholders must pay up the third call if they desire to augment their capital from 3 millions to 15 millions. Documents relating to this call have been issued by Mr. Amenomiya, on the one hand, and by Mr. Toyama, the acting chairman, on the other. So the shareholders have a very substantial reason to ask themselves "under which flag?"

Monday, August 31.

It need scarcely be said that the Tokyo public begin to show signs of impatience at the singular display of helplessness made by the shareholders of the Tokyo Street Railways. Deeper and deeper the Company's affairs are sinking into the slough of legal disputes, yet the shareholders sit with folded hands as though they had no material interest in the issue. Weeks have been spent wrangling in the law courts about a simple problem of procedure, and there is no discernible prospect of the main question coming up for decision. Yet it appears that the shareholders who side with Mr. Amenomiya are altogether in a minority, and thus the upshot is that the smaller section of the Company has virtually taken the larger by the throat and threatens to shake the life out of it by sheer aggressiveness and activity. There would be difficulty in conceiving a more flagrant display of business incompetence than that made by the majority. They have the machinery for convening an extraordinary general meeting; they have, it is confidently affirmed, the strength to carry their points at such a meeting, and they have every reason to hold it, for assuredly their whole enterprise will go to pieces if things continue as they are. Yet only now is talk of an extraordinary general meeting becoming audible.

Tuesday, September 1.

The amalgamation section of the Tokyo Street Railway Company have at last adopt-

ed the course plainly suggested by the situation. They have applied for the summoning of an extraordinary general meeting at which they propose to introduce a motion for the removal of the names of Messrs. Amenomiya and Tachikawa from the Board of Directors. The anti-amalgamationists, on their side, are said to welcome this project as affording an opportunity to procure the removal of the whole of the obstructionists, that is to say, obstructionists from their point of view. Meanwhile Mr. Amenomiya's specious declaration that if the Company refrain from amalgamation, fares can be reduced to a uniform charge of 3 *sen*, seems to have produced an effect upon the citizens. Fifteen wards of the city have contributed five men each to form what they call the *Gaitetsu Doruritsu Domei-kai*, or society for the independence of street railways. They have held a meeting, and have decided to address petitions to the authorities and to urge the resignation of Baron Senge, Governor of Tokyo, who is understood to be in favour of amalgamation. It strikes us that only heroic measures can save the Company from complete shipwreck. The history of electric-railway enterprise in Tokyo has been a veritable disgrace to the city.

Wednesday, September 2.

At the head of the *Gaitetsu Doruritsu Kisei Domei-kai* (Street Railway Independence Accomplishment Union), to which we alluded in our last issue, are Mr. Oi Kentaro and ex-Judge Takano. These two gentlemen, accompanied by 23 fellow-thinkers representing five districts of Tokyo, waited upon the Minister of Home Affairs, and declaring that the question of amalgamation did not concern the shareholders only, but had material interest for the citizens at large, asked that the Home Office should interdict the proposed amalgamation. Baron Kodama simply acknowledged the receipt of the representation. Thereafter the deputation proceeded to interview Baron Senge, Governor of Tokyo, who seems to have been no less reserved than the Home Minister, and subsequently they visited the Mayor, Mr. Ozaki Yukio, from whom they elicited nothing beyond a vague statement that he intended to do his duty. Mr. Oi Kentaro is celebrated for his connexion with the stormy side of domestic politics. At one time he gained notoriety by his leadership of the *Soshi* of Tokyo. Mr. Takano's long campaign in support of his protest against being removed from the Formosan Bench, is well remembered by the public. We can not think that the cause of the anti-amalgamationists is promoted by prominent association with these two men.

Friday, Sept. 4.

There are sundry rumours about this unhappy question. Some say that the anti-amalgamation party have been induced to abstain from frivolously prolonging the proceedings in the law courts. On the other hand, since everything goes to show that the judicial decision will be against him, Mr. Amenomiya has approached the *Densha Tetsudo* Directors with a proposition that a sum of 300,000 *yen* should be paid over to him and his friends in consideration of their abstaining from further opposition. The *jimmun* observes that, from the point of view of Mr. Amenomiya's disposition, this story is not incredible, but practical men will be disposed to think that Mr. Amenomiya is entitled to due consideration as the principal projector. Another version has it that an influential shareholder

among the amalgamationists having proposed to intervene, was informed by Mr. Amenomiya that all parties desired peace, but that in seeking a settlement the system of three-*sen* universal fares must be kept in view. With all respect to Mr. Amenomiya we regard that as mere claptrap. He must know perfectly well that a system of universal three-*sen* fares is not yet possible in Tokyo. Meanwhile it is agreeable to contrast solid progress with this vapoury wrangling. A trial trip has been made over the Sukiya-Kanda section of the Street Railway's line, and it is expected that a part of the road will be opened for traffic at the end of this month. On the other hand the progress of the work in the Kojimachi district is disgracefully slow, and the populace in that region must be seriously inconvenienced, for their chief thoroughfare has been almost impassable during the past fortnight.

THE CHIEF PRODUCTIONS OF KARUIZAWA.

Oh! you bards of Karuizawa!
Have you not forgotten something
When you write of streams and mountains
And the noble tennis fray?
I'm not a poetic creature,
So, forgive me if the feature
Which I mention's not poetic—
But, I'd like to have my say.

Oh! you bards of Karuizawa!
When you sit on your verandahs
With the gnats and the mosquitoes
And the horseflies buzzing round:
Does your patience ne'er forsake you?
Don't you cry: "The dickens take you!"
Or are you lost in wonder
At the millions that abound?

If, when walking in the garden,
In the morning, noon, or evening,
There's a wicked little insect
Always ready to attack!
Well—my ankles were tremendous,
And so stiff—"The Lord defend us!"
Was my only exclamation
As I crawled upstairs—to pack.

Oh! ye moths, and oh! ye spiders,
Oh! ye beetles, and ye hornets,
And the thousand creepy-crawlies
That attack one's form and face!
Well, I think that altogether
It is very doubtful, whether
I, in spite of all attractions,
Care to patronize the place.

VERITAS.

THE SHORTER COURSE.

Hurry the baby as fast as you can,
Hurry him, worry him, make him a man;
Off with his baby clothes, get him in pants,
Feed him on brain foods and make him advance.
Hustle him, soon as he's able to walk,
Into a grammar school; cram him with talk,
Fill his poor head full of figures and facts,
Keep on a jamming them in till it cracks.
Once boys grew up at a rational rate,
Now we develop a man while you wait.
Rush him through college, compel him to grab
At every known subject, a dip and a dab.
Get him in business and after the cash
All by the time he can grow a moustache.
Let him forget he was ever a boy,
Make gold his god and its jingle his joy;
Keep him a-hustling and clear out of breath
Until he wins—nervous prostration and death.

Boston Transcript.

THE RUSSO-JAPANESE PROBLEM.

The *Jiji Shimpō's* Peking correspondent quotes a "trustworthy foreign correspondent" as declaring that an agreement has been formulated between the Japanese Representative in St. Petersburg and Count Lamsdorff, on the lines that, provided Russia abstain from placing obstacles in the way of Japan's railway enterprises in Korea, Japan, on her side, will recognise the interests already acquired by Russia in Manchuria. If that were credible it would be a very one-sided arrangement indeed, for Russia is already pledged by the Protocol of 1898 not to hamper the development of the commercial and industrial relations between Japan and Korea (*n'entraver point le développement des relations commerciales et industrielles entre le Japon et la Corée*). The value of that Protocol has not, indeed, proved very great. It commences with a solemn declaration that "the Imperial Governments of Japan and Russia definitely recognise the sovereignty and the entire independence of Korea and mutually engage to abstain from every direct interference in the affairs of that country." With such a promise there is no possibility of reconciling the doings of M. Pavlov in Seoul, and were Japan now to surrender her right to a voice in the settlement of the Korean affair, receiving in exchange a rewritten copy of the Protocol of 1898, she would deserve the fate that always overtakes fatuous folks. This telegram published by the *Jiji* seems to have been forwarded to Japan by two routes, namely, direct from Peking to Tokyo and round by London and Berlin. It may be dismissed as misleading.

Meanwhile China appears to be growing uneasy about the Russo-Japanese negotiations. Her officials in Peking are said to be sounding the Japanese Legation as to the bases of the pourparlers, and to have also telegraphed to their Representative in St. Petersburg directing him to seek information. On the whole, however, the Chinese statesmen, being persuaded that the negotiations tend to a peaceful issue, are disposed to await the result quietly.

There could scarcely be a more striking illustration of China's national impotence than the fact that she is altogether excluded from a discussion which concerns the fate of a large portion of her territory. But it can not be honestly urged that she deserves anything better. She was kept in the front as long as there existed any possibility of recognising her proper place, nor was it until her impotence had been completely demonstrated that a sentence of practical neglect was passed against her. If she does not acutely feel the humiliation of having her vital interests disposed of without her own knowledge or connivance, that is merely another proof of her unfitness to guard these interests.

DEGENERATION.

Ever and anon the medical press of Great Britain has raised a warning cry against the perils which attend the herding of large populations in highly congested areas. For a long time the cry fell on deaf ears, but recently the publication of two Government reports upon the physical degeneration of children attending the elementary schools of certain big towns in England and Scotland seems to have struck a note of alarm which has sounded throughout the Kingdom. Quickly following upon these reports comes "A Memorandum on the physical unfitness of men offering themselves for enlistment in the Army," which has been drawn

up by the Director-General of the Army Medical Service. This memorandum was deemed of such importance that the British War Office ordered its immediate publication. The paper starts with giving figures to show that during the period 1893-1902 there were medically examined for enlistment 679,703 men, of whom 234,914 were rejected as medically unfit for service, giving a rejection ratio of 34.6, or one man out of every three examined. Next the compiler states that "no official record is kept of the number of men turned away; but there is reason to believe that the number is a large one, though whether it is sufficiently large to bring up the figures of the rejected to 60 per cent. we have no means of saying." The memorandum then goes on to state that examination of the statistics dealing with the causes of rejection by examining medical officers of men seeking enlistment brings into prominence the fact that the majority are rejected on account of causes indicating poor physical development, namely, under chest measurement, under height, and under weight. Defective vision may also be regarded in many cases as resulting from developmental defect. Statistics are given relating to the principal causes of rejection for the 12 years 1891-1902. Commenting thereon, the Director-General observes that bad teeth and flat feet occupy a comparatively low place in the list. But with regard to loss or decay of teeth, it must be pointed out that the numbers rejected on this account during the past four or five years have shown steady increase, until this cause of rejection has come to regularly occupy a high place on the list. Whether the increase in the rejections for bad teeth is an indication of increasing prevalence of physical unfitness is open to question, the increase may partly, at least, be due to the more common use of articles of food which readily undergo acid fermentation, and partly also to examining medical officers having gradually come to place a high value on soundness of teeth as a matter of the greatest importance in its relation to the maintenance of the physical efficiency of the soldier on service. The main inference to be drawn from a consideration of the figures is that the bulk of the rejections arise from causes indicating the operation of agencies antagonistic to healthy physical development. A large proportion of the population lives in towns, and this has been estimated at 77 per cent., or 25,000,000. Of this town population about 25 per cent. (probably at least 6,000,000) appear from trustworthy investigations, to be not only poor, but living in actual poverty, so as to be unable to rear their children under conditions favourable to health and physical fitness. The bulk of the men who seek enlistment belong to this section of the population, and a very large proportion of the men who wish to join the Army prove physically unfit for military service. The Memorandum has naturally attracted a good deal of attention and some of its conclusions are warmly debated. With regard to the food question, Colonel Dukes points out, we see, that it is not so much insufficient food as the lack of the knowledge of food values which causes so much trouble and works such havoc among the poorer classes. Mr. Rider Haggard's remedy, of course, is a return to the land of the population which the big towns have drained from the country during the last half century; while Lord Londonderry would have a more general indulgence in gymnastics by children attending the elementary schools. While the physical condition of the lower classes is

thus gradually and steadily degenerating, the "physical tone" of the lower middle, middle and upper middle classes throughout the three Kingdoms is as steadily rising, due, it is confidently said, to the "craze for athletics which the public schools and universities have so strenuously fostered since the days when Charles Kingsley stood forth as the exponent of muscular Christianity and Judge Hughes set up the high ideals of 'Tom Brown's School-days.'" So there is still comfort to be drawn, especially when one looks around and notices how the girls of these classes are growing taller, broader, and stronger with each succeeding generation, beating even their brothers. Verily with these well-formed "daughters of the gods" as the future mothers of the race there are bright auguries ahead of better things to be.

RADIUM: FUTURE WONDERS.

An intensely interesting article dealing with the practical uses to which radium can and may be put appears in a recent literary supplement to *The Times*. The writer first calls attention to the fact that some of the most hopeful and important of the uses to which this wonderful element can be applied are in the field of medicine: "Instead of the cumbrous focus tube nearly as large as a football, and the manifold and expensive items of an X-ray outfit, a glass tube, somewhat smaller than a toothpick, containing from one-tenth to one-fifth of a grain of radium has already been successfully employed in the treatment of cancer. Since the little tubes can be inserted into cavities no bigger than the nostril, it is obvious that a great many cases which could not possibly be successfully treated with X-rays can easily be treated by radium. A case of Mr. Mackenzie Davidson at the Charing Cross Hospital may be cited as illustrating the work of English medical men in this field. A rodent cancer of the nose, which had recurred after operation and had been treated unsuccessfully with X-rays, was subjected to a short exposure to radium. Four exposures, aggregating about an hour, were given at intervals of a few days. In three weeks the diseased part was healing well, and in six weeks, after two further exposures, the cancer had disappeared completely—almost miraculously as it seemed, not leaving even a visible scar. A similar success with an otherwise incurable cancer has been reported from Vienna, from the clinic of Professor Gussenbauer. The great problem of the application of radium for illuminating purposes belongs to the second class—that is, the application would be perfectly practical if the supply of radium were somewhat more abundant than it is at present. A small fraction of an ounce of radium, properly employed, would probably provide a good light sufficient for several rooms, which, at any rate, during the present century, would never need renewal. Rutherford has calculated from his own experiments and those of Curie that the energy stored up in one gram of radium is sufficient to raise 500 tons a mile high. An ounce would therefore suffice to drive a 50 h.p. motor-car at the rate of thirty miles an hour round the world. This possibility of our being able in the future to control the store of energy in radium and to liberate it for use as required at any desired rate is of course the most interesting feature of radioactivity at the present time. But it must be confessed that science holds out scant prospects of its fulfilment."

THE KAMCHATKA SEIZURE.

The *Fiji Shimpō* publishes a telegram from Kobe the gist of which is that the eleven Japanese vessels recently seized by Russian cruisers in Kamchatkan waters were really poachers although so much has been urged in their defence. It is stated that while pretending to be lawful purchasers of fish cured by Russian subjects, and while obtaining licenses for that purpose by the aid of coöperation with Russians, the masters of the vessels really engaged in fishing operations. No nets appear to have been found on board the ships, but it is alleged that this evidence had been destroyed by cutting the nets into small pieces and throwing them over-board. Of course there have been previous instances of strong repressive measures on the part of the Russian authorities, but generally the punishment meted out to the poachers has been the confiscation of their fish and fishing implements. The seizure of eleven vessels, varying in size from 180 to 90 tons, and the imprisonment of 28 men constitute a step so striking that public opinion is necessarily excited. But the idea appears to be that the Russians are strictly within their rights.

NOTES ON CURRENT EVENTS.

A perfect rage for climbing Fuji seems to have possessed the more athletic portion of the Yokohama community this summer. As soon as the regular track was declared open, early in June, the climbers began to ascend and still we hear of parties being formed each week end to tackle the big ascent. We are told that an American lady who has seen no less than 73 summers was recently among a party who ascended Asamayama. Owing to the long spell of fine, clear weather mountaineers this summer have been all well rewarded for their pains in fine sunset effects and even more beautiful sunrises, the canopies of clouds which spoilt so many trips last summer being entirely absent.

The three cruisers forming the training squadron returned to Yokosuka on the 27th instant, having visited Hongkong, Australia, Singapore, Manila, the Dutch East Indies and Korea. The voyage extended to 194 days and the total distance traversed was 1,700 miles. The officers report that their reception at Sydney was quite extraordinary, something not to be readily forgotten.

The *Chino* says that the Cabinet Ministers have agreed to the following reduction in the Budget for next year as compared with the current year:—

	Millions.
Department of Communications	4½
Department of Agriculture and Commerce.....	4
Department of Home Affairs	3
Department of Finance.....	3
Department of War	2½
Department of the Navy	2
Departments of Justice, Foreign Affairs and Education.....	2½
Total.....	19½

There may still be some difficulties in carrying out this programme, but on the whole it will probably be put in operation. As to the administrative reforms accompanying it, they will be announced in the *Official Gazette*.

The *Shogyō Shimpō* has an interesting article on the subject of the Tokyo Stock Exchange. It tabulates the following com-

parative figures showing the volume of transactions on 'change:—

	1903. Yen.	1902. Yen.	Difference.
January	212,190	273,890	— 61,700
February	251,680	572,100	— 320,420
March	294,780	530,130	— 235,350
April	221,710	284,280	— 62,570
May	208,150	265,130	— 56,980
June	123,150	216,400	— 93,250
July	187,420	100,920	+ 86,500
August (28th days)	153,270	154,080	— 810

Of course a part of this remarkable falling off is attributable to the Ordinance issued in July of last year and not finally annulled until August of the present year. But our contemporary thinks that a much more potent factor is the nation's uncertainty and uneasiness about foreign affairs, and it complains that if the Government did not maintain excessive secrecy, the people's business would not be so much affected.

It is most satisfactory to learn that Dr. Baelz has agreed to remain another year in Japan for the purpose of giving his valuable advice to the Prince Imperial. The eminent physician is not so accessible to patients in general as he used to be, his time being much occupied with scientific research. But his presence in Japan under any circumstances is a guarantee that the best possible medical advice is obtainable in serious cases. We imagine that the Imperial family, so many members of which have profited by Dr. Baelz' skill, would not be easily reconciled to the idea of his final departure from this country.

It is stated that the Toyo Kisen Kwaisha has completed arrangements for the purchase of the well-known *Kiaotschou*, the big German steamer of twelve thousand tons now employed on the mail service. Messrs. Samuel Samuel and Company are reported to have acted as intermediaries, and the price is put at 2,300,000 yen. The steamer will be handed over to her new owners on her return from her present voyage to Europe, and will thenceforth ply on the Yokohama-San Francisco route. We take this item from Japanese papers.

Religious statistics of the German empire, according to the recently tabulated results of the census of 1900, show that 62½ per cent. of the population are Protestant, almost all members of one or another of the various State churches, in all 35,231,104. Of Roman Catholics there are 20,321,441, chiefly in West Prussia, Posen, Silesia, Westphalia, Rhenish Prussia, Bavaria, and Alsace-Lorraine. Of Greek Catholics there are 6,472, and of "other Christians" 103,792. In the whole German empire there are only 586,833 who register themselves as Jews—fewer perhaps than in the borough of Manhattan, and yet there is an anti-Semitic political party in the Reichstag which, to be sure, succeeded in electing but one member last June. Only 17,535 profess themselves as of none of these faiths. The *Messenger*, in discussing these figures, points out that "if Roman Catholics would vote for ultramontane candidates in every district where they are a majority of the electorate, they would choose 146 representatives where they actually have 100. Evidently, with a very large number of Roman Catholic voters, political conviction outweighs priestly pressure at the polls."

Experience has evidently been of little value to the English society journal which had to pay last year a substantial sum to a charity for a "Peer's Daughter's" account of a gala performance which never occurred,

for after criticising singers who never sang, the *Lady's Realm* has now given an account of a Goodwood which never happened. As a contemporary points out, the August number was issued on 27th July, and in a prophetic description of Goodwood the King and Queen, who were still making their tour in Ireland, were numbered among those who witnessed the racing! The exigencies of illustrated journalism may involve an occasional "anticipation of events," but, in the words of Lord Curzon, that anticipation should be "intelligent."

A total attendance of seventy young men, with a daily average of twenty, is reported for the month of August at the Hayama sea-side vacation home conducted by the Tokyo and Yokohama Y. M. C. A's. Frequent excursions by land and sea, lectures, concerts, social and religious meetings were provided for those in the home. These Associations hope to have in time a sea-side club house which will be open to their members during the whole year.

Reports received by the Department of Agriculture and Commerce from the various localities indicate that the rice crop will probably be 31.6 per cent. over last year's crop and 12.6 per cent. greater than an average yield. The 210th day passed quietly, no storm having been anywhere experienced. In the face of these facts the market price of rice has fallen greatly. Deliveries for next month are quoted at from 12.10 yen to 11.65 yen per *koku*.

"Mabel, Countess Russell," says the London correspondent of the *N.C. Daily News*, has publicly announced that she has forgiven her second husband, the footman who married her under the guise of a prince, and has returned to live with him as his wife. This is of course quite the proper romantic ending of tragi-comedy. It is the Lady of Lyons and Claude Melnotte over again; and doubtless the people in Court who cheered loudly when the mock prince was let off with a nominal punishment will wish him the traditional life of happiness ever afterwards. He is in future to be known as Mr. Archibald Stuart, but his wife announces that she will continue to call herself "Mabel, Countess Russell," claiming that the Cowley case has given her the right to do so. This, however, is not quite accurate; all that the Cowley case decided was that there was no law which enabled Lord Cowley to prevent the wife who divorced him from continuing to use his name. According to custom and etiquette a divorced wife, whether the divorce was obtained at her instance or her husband's, should not continue to use his name; but under the law of England a man or woman can call himself or herself anything he or she pleases, so long as a false name is not adopted for purposes of fraudulent misrepresentation. Under the Cowley case the wife of Mr. Archibald Stuart has no moral right to call herself Countess Russell, but no one can prevent her from doing so if she pleases.

The *Shogyō Shimpō* has collected reports from 11 districts throughout Japan with regard to the prospects of the rice crop, and sums up the results by saying that a harvest of 47,812,170 *koku* may be expected, which is 7,549,290 *koku* above the average yield (40,262,880 *koku*). That means, in money, a difference of some 80 millions of yen. The crop of last year was much below the average.

JAPAN'S RESPONSIBILITY.

IT is curious to observe how, in default of something more interesting to say, or perhaps because of a sudden access of pacific fervour, newspaper critics from time to time repeat the contention that for all the catastrophes which have overtaken China in recent years Japan is responsible. For example, we read in a recent issue of a Kobe contemporary the allegations:—"It was Japan which afforded Russia the opportunity to make her next great stride southward. It was Japan which waged a war that could easily be avoided and which at bottom had as an impelling motive aggrandisement and territorial expansion. It was Japan which finally exposed the nakedness of China and the utter inability of her armies to cope with a disciplined force, etc." What strikes us about such a line of argument is the singularly depraved moral condition it attributes to Powers which are supposed to have profited by the object lesson thus furnished. For the logic of the contention is that nothing restrained the aggressive appetite of Occidental States except the apprehension that it might not be indulged without danger. In other words, if any international robbery can be perpetrated with impunity some European nation is always ready to commit the crime. "Japan showed how easily Peking could be threatened by a hostile force. Consequently the Japan-China war was no sooner at an end than Russia 'persuaded' China to sign certain agreements, &c." Are we really to conclude, then, that underlying all the fine inter-state canons of the West there is the miserable principle that nothing preserves a country from being fallen on and torn to pieces by its nominal friends except the latter's uncertainty about the difficulties attending the perpetration of the crime? That is what it comes to. Japan demonstrated the decrepitude of China and immediately the wolves of the West rushed in to rend this helpless prey. One would suppose that the critics might be more astute. They might see, one imagines, that in thus endeavouring to impose the ultimate responsibility on Japan, they really lay a far worse accusation at the door of European nations. For certainly of the two we respect the man who goes boldly in and knocks down the burly wayfarer rather than the man who waits to pick his pockets until he is prostrated and helpless. Besides, it has always seemed to us that the object-lesson furnished by Germany at Kiao-chou quite eclipsed the object-lesson furnished by Japan in Manchuria. Kiao-chou was one of the most haughtily contemptuous acts of aggression ever perpetrated. The force immediately at Germany's disposal was almost ludicrously inadequate to make any impression upon China—even upon China weakened as she was—and had the Peking Government declared war, that force could not have been augmented. Nothing done by Japan in 1894-5 can be compared with the

splendid audacity of Germany in 1897. In short, the demonstration afforded in Shantung by the Germans was far more complete and striking than the demonstration afforded by the Japanese in Liaotung or at Wei-hai-wei. That, however, may be matter of opinion. But there can be no second opinion about the fact that in laying at Japan's door the aggressive sins of European nations, the doctrine is proclaimed that want of opportunity alone checks the predatory impulses of the Occident.

YONG AM-PHO.

IT is now certain that Korea has assumed a deferential attitude towards Japan's remonstrances in the matter of Yong Am-pho. On the other hand, the latest intelligence from Seoul indicates that M. PAVLOW is pressing vehemently for the signature of the lease convention, and as he appears to have the support of the Court, the signature may become an accomplished fact at any moment. Thus a situation certainly very interesting, if not very critical, has been created. The reality of Russia's presence at Yong Am-pho and in the Yalu Valley may weigh more with Korea than the menaces of Japan. Yet the alternative that this country bids her face ought to alarm Korea seriously. If she yields to the strikingly arbitrary demands preferred at Yong Am-pho, she will suddenly and involuntarily find herself in the presence of an accomplished fact which probably has the greatest terrors for her, namely, the forced opening of her whole territories to foreign trade, travel and residence. Unless her ideas have undergone a radical change during the past twenty years it is inconceivable that she should regard that contingency with any degree of complaisance. Of course it would be idle to speculate at this stage what practical steps Japan would take to give effect to her threat, but as to the threat itself we can not but extend to it a strong expression of applause. The statesmen of Japan seem determined to prove to the world that they are not actuated by any motives of aggressive self-seeking. The natural way to meet this Yong Am-pho complication, the way sanctioned by precedent, would have been to threaten the exaction of some reparation securing equivalent advantage for Japan alone to the exclusion of other Powers. Instead of taking that line, this country confines itself to declaring that should Korea give *post-facto* approval to an illegal act performed in defiance of her right to maintain treaty limits, then Japan will at once adopt the logical conclusion that those limits have been abolished by Korea herself and that the peninsular empire is constructively thrown open not to Japan alone but to all the Powers of the world. That is a fine broad platform, thoroughly consistent with the attitude that Japan maintained throughout the Boxer complications.

It is also a platform more liberal than the situation suggested by the Anglo-Japanese Alliance or the Russo-Japanese Conventions, for in all these documents there is plain recognition of Japan's special interests in Korea, whereas she now takes a step equivalent to declaring that she seeks no exceptional protection for her interests there, but is willing that all nations should have access to Korea on an equal footing. Of course that manner of treating the crisis is exactly consistent with the route that England and Japan are pursuing in Manchuria. In the face of a menace of Russian aggression they merely demand that Manchuria shall be kept open to the trade of the whole world, and in the face of a menace of Russian aggression in Korea, Japan declares that if Korea yields, the opening of the peninsula to the whole world will follow immediately. It appears to us that Japanese statesmanship may be justly congratulated in this instance.

FINANCE.

THE *Hochi Shimbun* publishes a statement to the effect that the Cabinet has agreed upon a schedule of reductions in the case of the various Departments of State. Figures are given by our contemporary, but we do not reproduce them, as they are identical with those published some days ago in these columns. The economies contemplated aggregate twenty millions of *yen* in round figures. One point, however, is made clear by the *Hochi's* intelligence, namely, that the idea—if it was ever seriously entertained—of abolishing the Department of Education has been abandoned. The Mom-busho's annual appropriation is set down for a reduction of 400,000 *yen*, the smallest retrenchment of all, but still considerable when we observe that the appropriation shown in the current Budget totals only 480,000 *yen* for the Department proper, and 7,260,000 *yen* for general educational outlays. A saving of 20 million *yen* will, it is believed, amply suffice to cover the apprehended discrepancy between incomings and outgoings.

In this context we may refer to a belief said to exist in financial circles that radical reforms ought to be introduced in the systems of *sake* and tobacco taxation. These reforms would not tend to increase the burdens of the people. They would merely prevent evasions and leakage now responsible for heavy losses to the Treasury. The firmly entertained conviction is that if drastic steps were taken to prevent such evasions and otherwise to correct defects of method, an increase of something like 50 millions of *yen* could be obtained from these two sources. It is to be observed that 25 years ago the quantity of *sake* brewed in Japan and paying taxes at the low rates then levied, was over 5 million *koku*, independently of a considerable quantity privately brewed for domestic consumption. During this quarter of a century the population has increased by

several millions, and the wealth of the nation having also grown, a much greater consumption of *sake* should be witnessed. Moreover, domestic brewing has been stopped, nominally at all events. Yet the returns show to-day that less than 4 millions of *koku* pay duty to the Government. Evidently, at the very lowest calculation, a million and a half *koku* must evade taxation, which means a loss of 22½ million *yen* to the Treasury. Then there is the tobacco monopoly. It produces at present a revenue of some 12 million *yen*. But the best informed persons believe that the quantity is about equal to that consumed in France, where the Government monopoly gives a revenue of 130 million *yen*. There must be something vastly defective in the Japanese system or methods, and it is said that the Authorities, having satisfied themselves as to the origin of the defects, have prepared some legal correctives which the Diet will be asked to sanction next session. In all probability a fierce conflict will rage about this change. Large interests are involved, and already we hear of agitation fomented by the dealers in *sake* and tobacco. The public at large, however, will probably sympathise with the authorities, for, in the first place, the consuming classes are scarcely benefited at all by the tax-evasions of the producers, and in the second the alleged intention of the Government is to devote a part of the funds thus obtained to reducing direct burdens, as well as to reforming local taxation and to furnishing funds for productive public works.

AQUATIC SPORTS.

The sports of the Yokohama Amateur Rowing Club took place on Saturday afternoon in delightful weather. The verandah of the Boathouse was well filled with ladies, and a considerable number of men watched the events with interest. During the afternoon tea was served for the ladies, a band played selections and after the sports there was dancing in the Boathouse. The arrangements, which were excellent, reflected credit on the Committee: Messrs. H. C. Litchfield, President; F. J. Hall, Captain, Dr. F. Wheeler, Rev. W. Weston; Messrs. M. Schellenberg, W. Goddard, O. Strome, H. E. Hayward, F. Lammert, J. S. Cartwright, Hon. Treasurer, C. Thwaites, Hon. Secretary.

The programme opened soon after 3 p.m. with a 50 yards race, for which eleven had entered though only five started. Goddard came in first, but he was pressed by Luther who, however, could not overhaul him. Irwine, Kingdon and Lipman also competed. Time, 47 seconds.

The Tournament came next. In the first round H. Hearne knocked out J. Lipman; against the burly figure of A. Kingdon, G. Kenderdine exhausted his arts in vain and soon went overboard; H. W. Kilby overcame R. C. Bowden; R. Meiklejohn knocked over J. E. Moss; E. Dentici similarly disposed of F. Pollard. The finals were reserved for a later part of the programme.

For the blindfold race 22 had put down their names and a dozen or thirteen started in a straggling fashion, several taking the water far behind the main body. The bandages covering the eyes of the competitors appeared to do their duty effectively in general, and while some men swam towards the Grand Hotel some wandered in the shallow water at the hatoba. Schwabacher finished first but his bandage had come off and so he didn't count. Pollard therefore got first prize, Dentici second.

Walking the Greasy Pole attracted a goodly

crowd of competitors for the honour of gaining a flag fixed at the end of the Pole. Contrary to precedent there was no duck, the Committee having decided, in response to hints in these columns and elsewhere that though it was nirth-provoking to see a lot of people in the water and in boats chasing one duck, still the duck had a point of view. Perhaps that is not exactly their decision, but it may serve the purpose. At any rate on Saturday there was only a flag, and possibly because the competitors lacked the encouragement offered by the horrified quackings of a bewildered biped in a basket, nobody attained success. Irwine was awarded the prize, for having gone nearest to the flag.

The Tournament again brought out Kilby and Kingdon, the former making a determined stand against his weighty opponent but being sent overboard at last. Next appeared Irwine and Meiklejohn, the former prevailing; E. Dentici beat Russell.

In the semi-final Kingdon and Hearne had to meet each other, and the former was adjudged winner. Irwine then met Dentici and after a prolonged struggle got him over.

The final was fought by Irwine and Kingdon. The former knocked the latter out in the first round by absolutely storming the position, but his wary opponent won the second round after a fierce contest in which Irwine's boat was swamped. In the third bout Irwine got home at the very outset and Kingdon went under. Irwine therefore won the Tournament.

The Water Polo was a good game and resulted in a tie, goal to goal.

The Obstacle Race was amusing. The participants, of whom there were a dozen, had put on fancy costume—they wore gaudy hats and small but likewise gaudy parasols. The idea was that they should, after getting over a pole above water, swim to a sampan moored athwart the course, get in, put on a garment, in most cases of the shirt-waist variety, and then with a parasol open in one hand, try who could get home first. Herbert Goddard cleared the pole first but lost time in dressing, Irwine coming in first, Goddard second, Russell third.

The Sampan Race was the last item on the card and was as usual the cause of much amusement. Some of the competitors could hardly navigate their boats to the starting line, and these, of course, when the signal was given had a number of accidents. A sampan manned by O. Poole and Irwine came in an easy first, Abbey and Mason second.

YACHTING.

Three races were on Saturday's programme, one of them being under the rules of the Mosquito Yacht Club. Two cruisers started, *Wanderer* and *Asagao*, the latter getting away the quicker and being very prompt with her spinnaker. She soon established a substantial lead, going very fast in the fresh southerly breeze, and rounded the Widow Buoy at 3.00.30, twenty minutes and ten seconds ahead of her rival. She had increased this lead to twenty-four minutes at the Lightship and had further augmented it when she again rounded the Widow Buoy. She passed the Lightship on the way home at 4.37.00, *Wanderer* being timed at 5.15.00, and they finished as follows:—

<i>Asagao</i>	h.m.s.
<i>Wanderer</i>	5.06.35
	5.48.05

On handicap *Asagao* took first prize, the "Nina" Cup, and two record points, *Wanderer* second with one record point.

The 21-raters of the Mosquito Yacht Club sailed round the Lightship and the Mandarin Mark with the result that *Vixen* came in first and won the first prize; *Edna* finished second and was ten seconds outside her two-minute time allowance, *Winsome* third.

In weather which fully tried their sea going qualities the "Larks" were sent round the Lightship. Nine started, but only six weathered the Lightship, the others finding it expedient to return home. In the result the prizes were awarded as follows:—

1st (Drummond and Watt)	No. 10
2nd (F. H. Abbey)	No. 11
3rd (Mason)	No. 4
4th (Manley)	No. 2

There was some diversity of opinion about the finishing line, but No. 10 got the verdict and so takes first prize and the handsome handicap cup.

BASEBALL.

In spite of the counter attractions of the Aquatic Sports quite a large crowd, including many ladies, gathered at the Cricket Ground on Saturday afternoon to witness the two games of baseball. The first match between the U.S. Naval Hospital and the Club started at 2 o'clock, the former team batting, and so poor was the Club's infield that four runs were scored before the side was put out. The Hospital showed a decided improvement in general play and batting, Donaher, the new pitcher, covering himself with glory by the way he handled the ball. So slack was the play of the Club during the first six innings that the score was 11-1 in favour of the Hospital until Thom managed to hit a liner past third bringing in two men and scoring a home run for himself. The Club Nine played better ball after this and managed to bring the score up to ten runs before they were put out in the ninth inning by the Navy men, who had increased their runs and finally won a well-deserved victory by 13-10. Merriman for the Club played a splendid game.

Tea was served in the Pavilion during the intermission that ensued.

The "Bachelors" vs. the "Stars" game began shortly after four o'clock, Edwards pitching for the "Stars," the other battery remaining the same as in the previous game. The "Bachelors" seemed in high spirits and soon rapped the ball out for several runs. A good game resulted, the score at the end of the fifth inning being 7-7. Thom soon after was slightly hurt and was obliged to change his position to first, Waddilow trying his hand at catching, where he succeeded admirably for the first time. The "Stars" now forged gradually ahead, winning by six runs, 13-7. Thom pitched the last two innings. Mr. W. S. Stone umpired with great energy throughout the two games, Mr. Hamburger acting as scorer.

SEPTEMBER MONEY MARKET.

Tokyo papers print tables showing the amount of money required during the month of September to meet various calls.

	Yen.
Land tax, 1st payment	5,841,083
Income tax, 1st payment	2,194,413
Hunan Steamship Co., 2nd payment, at yen 7.50 per share	225,000
Nanai Railway Co., 6th payment, at yen 10 per share	80,000
Nippon Industries Encouragement Bank guarantee on acceptance of debentures, at yen 2 per yen 20	100,000
Tokyo Municipal Loan, 3rd payment at yen 35 per yen 100	365,050

	Yen.
Interest on 5 per cent. Government Loan Bonds	1,274,400
Interest on Nagasaki Harbour Work Loan Bonds	20,625
Dividend of Yokohama Specie Bank	1,170,000
Dividend of Toyo Kisen Kaisha	195,000
Refund of debentures of Hankaku Railway Company	100,000
Interest of various other mercantile companies	108,400
Interest of debentures of Nippon Industries Encouragement Bank	46,250
Refund of debentures of Nippon Industries Encouragement Bank	25,000

The *Asahi* states that the Minister for Agriculture and Commerce has specified to the foreign insurance companies in Japan, the kinds of bonds which are to be accepted by the Department in lieu of cash deposits. At the same time, he notified them that every letter addressed to the department must be sent through the local government office. Hitherto such communications had been addressed directly to the Minister.

ANTIQUARIANISM RUN MAD.

We thoroughly agreed with the comments of the *Spectator* as contained in the following note:—

It is stated that at a sale at Christie's on Friday week thirteen Apostle spoons, known to be probably of Henry VIII.'s time, were sold for the astounding sum of £4,900! It is not known whether the purchaser is an American millionaire or devotee of old silver; but in either case the sale illustrates a mania as striking as the tulip mania of the seventeenth century in Holland. We must say that we record the incident with regret. There is nothing whatever in an Apostle spoon to interest anybody greatly except an antiquarian, and the payment of such prices must discourage true art, artists finding that the wealthy are more interested in anything odd, rare, or unique than in any product of their skill or thought.

LITERARY GOSSIP.

It is doubtful, remarks a London gossip, how many of us will live to see the official life of Lord Beaconsfield, but we need not wait long to enjoy Mr. Wilfrid Meynell's "Unconventional Biography" of the great statesman. Messrs. Hutchinson announce the book for an early date. It will deal with the personal and anecdotal rather than the political side of Lord Beaconsfield's life, and will be profusely illustrated.

Frythra has now entered into the sphere of interest of archaeology. Signor Conti-Rossini, an Italian explorer, in some excavations on the right bank of the Bana, has discovered an engraved rock, almost covered with carvings of giraffes, camels, horses, and serpents. There are also inscriptions in the ancient Ethiopic character without vowels, making reference to the tribe of the Kasons, of the period of the kingdom of Meroc.

It was as long as 1867 that Miss Rhoda Broughton—whom we noticed last week as being the recipient of a Civil List pension—published the first of her novels which attained general popularity, "Cometh up as a Flower." In connection with this early work there used to be a story told which may or may not be authentic. Miss Broughton's father was a clergyman in North Wales, and "Cometh up as a Flower" was written without her parents' knowledge. When in due course a copy of the book arrived at the Rectory, her mother would not allow her daughter to read it!

There is not a little wonder expressed in many quarters (remarks the *Westminster Gazette*) at the high price—£1,000—which has been paid by the Burns Monument and Cottage trustees for the most perfect copy known of a Kilmarnock Burns. The Lamb copy was sold in 1897 for £372, hitherto the highest price; this copy, bought from Mr. G. S. Veitch, Paisley, has label on the back and is in every way faultless. Mr. Veitch purchased it for £10. It appears that a copy could be had in the early fifties for one shilling; that was the price paid by Mr. James Stillie for one purchased at a sale at Leith. William Pickering paid £5 for a copy, and one was catalogued in 1870 for eighteen guineas.

Messrs. Archibald Constable & Co. will publish in August an important work on Commercial South Africa under the New Conditions, by Mr. Stafford Ransome, author of "Japan in Transition," "Modern Labour," &c. The author has just returned to England after making a prolonged study of the subject on the spot, on behalf of *The Engineer*. The book, though written from an engineer's point of view, is in a style rather popular than strictly technical, and should appeal to all who wish to understand the present situation in South Africa, and its commercial and industrial possibilities. The ultimate success of that country as a British possession must largely depend upon its engineering possibilities.

The French National Fête was made this year an occasion for a very pretty little demonstration of sympathy on the part of the nobility towards the Army. There were then, at the instance of

the Duc de Chartres, forwarded for distribution among all the colonial garrisons, 458 volumes of miscellaneous reading, and 38 loose volumes, filled with illustrated accounts of the presidential visits to Algeria and London. The distribution was made by the Red Cross Society. As more than 30 members of the nobility have followed the Duke's lead, it must be no small library that is now outward bound. Probably the demonstration is not free from after-thought of royalist propaganda, but benefit to the distant garrisons will outweigh its political bias.

The Bookman prints some interesting facts, given on the authority of Dr. Guthrie's sons, about the circulation of his books and his income from them, as well as from articles in magazines and from editorship. "The Gospel in Ezekiel" was his most popular book. Up to the date of Dr. Guthrie's death, the sale in Great Britain and America amounted to over 100,000 copies. Since then the sale has been continuous and considerable, amounting in all to 30,000 in the United Kingdom and 50,000 in the United States. For magazine articles he got £5 each from the *Christian Treasury*, and later, £30 each from *Good Words*. As editor of the *Sunday Magazine* he received £1,000 per annum, but for several years before his death this was reduced to £750, owing to his insisting that £250 of it should be given as additional remuneration to Dr. W. G. Blaikie for the larger share of the work which he, as sub-editor, had to do, in consequence of Dr. Guthrie's increasing age and infirmities.

The excavations being made in the Place de l'Opera for the Paris underground railway have resulted in a discovery that was in its way pathetic. Only a mustard pot was unearthed, but in this mustard pot there was epitomised, condensed, and confected a whole period of the nation's most eventful history. "Maille's Mustard," so ran the inscription on the pot, "Confectioner to the King and to the King of England and the Emperors of Austria and Russia." The Comte de Provence had "created" the recipe for this mustard, and had given it to Maille, and Talleyrand, who went as near to worshipping boiled beef as he went to worshipping anything, made it fashionable. Even at the Congress of Vienna he always preceded the entrees with "a little boiled beef"—and Maille's mustard, and it is recorded that over the beef he secured from the diplomats many a little concession that had been resisted in conference. And Maille dubbed himself confectioner to the Sovereigns represented at the Conference. No wonder that a mustard pot so famous is to go to the Carnaval Museum of a grateful nation.

Libretto means "a little book," but little books, like gems, require for their production artists of special genius and knowledge. Years ago it was written: "Notwithstanding the large number of operatic works which find favour with the public, it would be difficult to select from among them a dozen libretti which satisfy a healthy and educated mind." The author, remarks the *London Musical Courier* mentions several operas which have been injured by bad libretti, instancing especially "Il Flauto Magico," with Schikaneder's idiotic pseudo-Freemasonic text, and tells us that Beethoven, the first musician of the age, and Goethe, the first poet of the age, both regarded as the best the libretto of Cherubini's "Les Deux Journées." It is a simple story in three acts, each of which is short and decisive, full of action and easy of comprehension. Beethoven placed in the second rank the book of Spontini's "La Vestale," and Goethe that of "Il Matrimonio Segreto." Since those old days things have gone from bad to worse, and in modern opera the libretto is really a negligible quantity, while in modern comic opera it is usually a thing to shudder at. Wagner, we know, solved the difficulty by writing his own libretti, except that of "The Flying Dutchman." He wrote them also long before his labours resulted in a music drama.

The sale at Christie's of a portrait of "John Harris, publisher and bookseller of the Bible and Crown, St. Paul's Churchyard," has reminded a

correspondent of many details of that famous shop of Newbery's, to which Harris succeeded. During his connection with it the firm became the recognised business patrons of many celebrated men of letters. Dr. Johnson, Oliver Goldsmith, Dr. Dodd, Smollett, and many more owed much to the appreciation their works met with at the "Bible and Crown," and there are many instances on record where assistance was rendered by the firm to indigent authors, quite irrespective of any prospective profits which Harris or his firm looked to obtain. Harris was a spectator of that famous affray in 1773 between Oliver Goldsmith and Evans, the publisher of the *London Packet*, which is thus described by the *London Chronicle* of March in that year:—"Dr. Goldsmith, supposing himself ill-treated by a letter in the *London Packet*, went to the person's shop who published it, and struck him on the back with his cane. A scuffle ensued, and the publisher made uncommon use of his nails, and was at length knocked down. He then arose, seized a stool and attacked his antagonist till, some people coming in, they were parted. Thus ended the contest between the son of literature and the publisher. The latter bears a black eye and the author a scratched face."

Messrs. Macmillan & Co. have just issued a book by Mr. Carl Lumholtz, entitled "Unknown Mexico," which seems to be a rich mine of interesting things dealing with a little-known country. The author spent some years with the aboriginal tribes of Mexico and thus acquired at first hand the knowledge which he now puts into print. Mr. Lumholtz's volumes are especially rich in descriptions of the social and other customs among the tribes he visited. Here is a Tarahumara courtship:—

"The custom of the country requires the girl to do all the courting. She is just as bashful as the young swain whom she wishes to fascinate, but she has to take the initiative in love affairs. The young people meet only at the feasts, and after she has gotten mildly under the influence of the native beer that is liberally consumed by all, she tries to attract his attention by dancing before him in a clumsy way up and down on the same spot. But so bashful is she that she persistently keeps her back turned towards him. She may also sit down near him and pull his blanket and sing to him in a gentle low voice a simple love-song such as 'Beautiful man to be sure.' If occasion requires, the parents of the girl may say to the parents of the boy, 'Our daughter wants to marry your son.' Then they send the girl to the boy's home that the young people may become acquainted. For two or three days perhaps they do not speak to each other, but finally she playfully begins to throw pebbles at him. If he does not return them, she understands that he does not care for her. If he throws them back at her, she knows that she has won him. She lets her blanket drop, and runs off into the woods, and he is not long in following her."

FIRES.

An extensive fire occurred on Aug. 27th at the village of Otsu, Takatsu province, destroying over two hundred houses. Details have not yet been given.

An outbreak of fire occurred early in the morning of August 29th at Hodogaya, destroying seven houses. The cause is reported to have been sparks from the locomotive of a passing train which caught hold of the thatched roof of one of the houses.

Fire occurred on August 30th about 4 p.m. at Iwabuchi, Tokyo, destroying five houses. The cause is reported to be sparks from the locomotive of a passing train.

Early in the morning of Aug. 31st, three fires occurred in Tokyo. One was at Shitaya, destroying a house and damaging three others. Another was at Sida-machi, Kojimachi-ku, burning down three houses. The last one was at Hirakawa-cho, destroying two houses and damaging three others.

On Aug. 30th fire occurred at the cocoon steaming store, Fukaya, Saitama prefecture, destroying four buildings.

A quantity of powder exploded at a firework factory in Hanazakicho, Hyogo, on Aug. 31st with the result that five workers were more or less injured.

LAW CASE.

TRIAL OF P. FLYNN.

The trial of P. Flynn, a sailor of the U.S. transport *Dix*, who is alleged to have assaulted other sailors named John Foley and John Mark of the same ship on Aug. 19th in the compound of the Uruga Shipbuilding Yard, took place in the Yokohama District Court before Judge Yasuda and Public Prosecutor Shikko on Aug. 31st.

After the usual examination with regard to name, age, nationality, etc., the Public Prosecutor explained the statement of the prosecution.

The accused was then examined and stated that he was a sailor belonging to the U.S. transport *Dix*, which arrived on July 26th or 27th at Uruga to have repairs done in the shipbuilding yard. John Mark and John Foley were senior sailors under whom accused was employed in the ship. The relations between the senior sailors and the accused were not easy, and the former disliked the latter because accused was always drinking. On the night of Aug. 18th he was drinking at a Japanese grog-shop, Wada House, at Uruga, where after two hours Foley, Mark and some other shipmates came in to drink. They all met in a bar room. After drinking, the accused showered a glass of beer on Foley and Mark, on which a dispute began, but it was pacified by other sailors. On the following day about 11 a.m., the accused was in the lavatory of the shipbuilding yard when Mark came in, and they met. Accused remembered that Foley and other sailors followed Mark. Some unpleasant words were then exchanged between the accused and Mark but he (accused) did not remember what he said. Suddenly Mark and two or three friends assaulted the accused striking him with their hands. The accused could not escape from such a narrow room, but he struggled to protect himself. Having found that there was no means to get away from their assaults, accused took a knife from his pocket and stabbed Mark on the right side with it, on which Foley advanced to defend Mark and tried to take the knife from accused. Accused was afterwards told by some one that Foley had sustained an injury to his left hand with which he had snatched at the knife. The accused added that Mark arranged to attack him (accused) before the quarrel. He bought the knife at Nagasaki which he used in the quarrel, and always kept it with him. In conclusion accused insisted that his use of the knife was in self-defence.

The Public Procurator, after having summarized the facts given by the various witnesses, and the statement of the accused in the preliminary examination, asked the Court to punish the accused in accordance with the Penal Code, Arts 301 and 300.

Patrick Flynn, was sentenced to twenty-five days' imprisonment with hard labour in the Yokohama District Court before Judge Yasuda and Public Procurator Shikko on Sept. 2nd, and was ordered to pay yen 21.91 to the injured men as expenses of surgical treatment. According to the sentence, the accused is punished under the second clause of Art. 301 and Art. 310 of the Penal Code but in respect of extenuating circumstances, the sentence is lowered.

THE PLAGUE IN YOKOHAMA.

A fresh case of bubonic plague appeared on August 28th at Kanagawa. The patient is a coolie named T. Yamazaki (36) who had been suffering from fever since the 22nd when he was employed on a vessel in the harbour. He died in the evening of the 28th. A woman named Take (26) living in the same house has been also suffering from fever for a few days. The sanitary officials examined her on the morning of August 29th, and believe she is plague-infected. Seventeen dwellings were isolated. Another case of suspected plague was found on August 29th by Dr. K. Miyamoto, Hodogaya, in the person of a charcoal merchant at Ishikawa who was bitten on August 8th by a rat which he had attempted to catch.

The residence of a man named T. Yamazaki,

Kanagawa, who has died of the plague, was burned on August 30th by the police.

M. Kitai, charcoal merchant, living at Ishikawa, Yokohama, who was suspected of having plague, was on Aug. 31st proved to be suffering from a common disease.

The following is a Simla despatch of the 6th August:—Plague continues to increase in Western and Southern India but remains dormant elsewhere. Last week there were in all 3,342 deaths in India, being an increase of 1,052 on the total of the previous seven days. The Bombay Presidency, including Bombay City, reports no less than 2,825 deaths and Karachi is again infected, reporting two deaths. The Madras Presidency returns 101 deaths, Mysore 229, Coorg 2, Hyderabad State 27, and Central India 65. Bengal, including Calcutta, returns only 18 deaths and the Punjab 240. The United Provinces, the Central Provinces, Assam and Kashmir are clear.

AMERICAN MATTERS.

The latest fad in the way of a cure for dyspepsia is bread made of sea water. A Philadelphia baker makes a specialty of this bread, and the dyspeptics who use it declare that it aids them.

The Guaranty Trust Co. of New York pays a dividend of ten per cent for the first half of the present year, and carries forward gold \$444,147. Its reserve fund is gold \$5,000,000, and the deposits gold \$42,000,000.

"Gassing" trees has become so large a business in California that a Los Angeles man has an outfit for it which cost \$10,000. Tents are used to confine the gas to the trees and protect the operators from the deadly prussic acid which is liberated from a saucer at the tree's root.

Dr. Kendrick C. Babcock, professor of American history in the University of California, has been formally elected president of the University of Arizona at Tucson by the Board of Regents. The choice of the board was unanimous. Dr. Caldwell, professor of botany in the University of Chicago, was the only other candidate.

Mr. John Clayton Gifford, formerly of Cornell University, is exploring the new Luquillo forest reserve in Porto Rico on behalf of the Bureau of Forestry at Washington. He reports the discovery of new gold streams, the soil in which is crudely panned by a few natives, and huge aromatic gum trees of an unnamed species.

Geological experts from Princeton College who have been excavating for remains of prehistoric animals in the Fish Creek country, Montana, have brought in their first shipment for the college. The bones are those of a huge dinosaur, measuring more than 70 feet in length. Three other expeditions from Princeton are working in the West this summer.

The sum of \$100,000,000, according to Silas Thompson, editor of the *Railway News*, represents the increase of the pay rolls of the railroads of the United States during the last year. "Some of this, probably \$50,000,000," he said, "is due to the natural increase of the business of the country, but the balance comes from the concerted action of the conductors and trainmen in securing increased pay. This movement, to which the Rock Island is the latest to yield, began a year ago in Kansas City."

Very little of an encouraging nature concerning shipbuilding or the American merchant marine in the foreign trade of the United States is to be noted in this year's "Blue Book of American Shipping," which is issued by the *Marine Review* of Cleveland. It is pointed out that not a single contract has been let for a vessel for the foreign trade of the United States during the past two years. During the fiscal year ended June 30 last 1,536 vessels, of 456,076 gross tons, were built in the United States, compared with 1,657 vessels, of 473,981 gross tons, for the previous fiscal year. Vessels now under construction indicate a further

lessened output for the coming fiscal year. The principal decrease for the past year has been in steel steamers built on the great lakes, which number forty-one, of 131,660 tons, compared with fifty-two, of 161,767 tons, for the preceding year.

A preliminary report on electric light and power plants in the United States for the year ending June 30, 1902, was made public on August 3rd by the Census Office. The report includes central stations only and not those operated by electric railways. The total number of establishments was 3,619, of which 2,804 were private and 815 municipal. The total cost of all plants was \$502,181,511. The total earnings from operation were \$83,585,410, of which \$25,459,437 was for arc lighting, \$46,272,494 for incandescent lighting and the remainder for other electrical service. The gross income was \$85,145,423 and total expenses \$67,688,075.

Miss Clara Barton, President of the American Red Cross, proposes to organize a national relief society, with branches in every city and town in the United States, with branch No. 1 in her native town of Oxford. The plan has been formulated in anticipation of the time when she must lay down the work. It is her ambition that something permanent for the aid of humanity be established. Miss Barton proposes that a national fund be established to be at ready command of a finance committee of men of national reputation when calamity breaks upon the country. She suggests that the organization be known as the National Society of Red Cross.

Sir William Van Horne is quoted as saying that "there is altogether too much talk of an all-Canadian route by people who are entirely ignorant of the situation. That prospect would not solve the transportation question of the west. The bulk of the wheat en route to the seaboard would continue to go by the lakes to Georgian bay ports, then east by rail or by Buffalo and the Erie canal. The long haul around the great lakes is as much dreaded as it is unprofitable. Never will grain of the Canadian west be hauled to the Atlantic seaboard voluntarily by any Canadian railway by rail route alone. No railway will do it unless forced to do so."

A distinct advance in the elegance and refinement of hospitality is reported from Asbury Park, facetiously remarks the *New York Evening Post*. At a dinner there the menu was printed on the back of \$20 gold certificates. The object of fashionable entertaining, as every one knows, is to show people how much you can afford to spend. Hence the happy invention of dinner favours. No sane man would sit through a "swell" dinner without some substantial reward, such as a gold matchbox. Since these favours are not readily converted into cash, the genius who last winter substituted orders for a ton of anthracite was a public benefactor. But the Asbury Park host, with a refreshing directness, says: "Why beat about the bush? If they'll only come pay 'em cash." We feel, however, that \$20 is a ridiculously small honorarium. Any man who accepts a dinner invitation for less than \$100 ought to be boycotted as a scab; and the Amalgamated Association of Diners-Out must insist that all hosts sign a scale with \$100 as a minimum wage. The maximum—should be a bunch of stock, say, a block of 1,000 shares of United States Steel common or 10,000 International Mercantile Marine common.

In a letter written from Duluth to the *Hill Street Journal*, Mr. Thomas F. Woodlock, editor of that paper, states that the position of the Great Northern Railway in the iron-ore field is one of great interest and importance. As an owner of enormous bodies of iron ore it must be reckoned with by the United States Steel Corporation sooner or later. The full resources of the Great Northern have not yet been disclosed or proved so far as iron ore is concerned. Nothing better illustrates the extraordinary genius of Mr. Hill and his men than does the development of the enormous Masaba iron-ore business in the past few years. The visitor to the range can hardly believe that

the industry is barely ten years old, and in reality seven or eight years at most. Looking into the future, the possibilities of the range seem almost unlimited. The industry is receiving the closest attention at Great Northern hands, and that company is likely to be the dominant factor in the range henceforth. Whatever happens, whoever finally gets the ore, Great Northern stockholders are assured of a large permanent revenue from it in the future.

Efforts are being made by the Government to extend the manufacture of cheese in the United States and to increase its consumption. Recent experiments with the common American brand of cheese show its food value to be very great. Notwithstanding its remarkably nourishing qualities, cheese is eaten only to a limited extent in the United States. In fact, it constitutes less than half of 1 per cent. of the total food consumed in the country. After years of study, scientists have evolved a plan to popularize cheese in the United States. They are convinced that the system of making large cheeses, which in the retail trade are carved into awkward slices, has greatly handicapped the industry. The cheese thus prepared and sold is not strikingly tempting. Noting that print butter brings a higher price than that article in bulk, and is in far greater demand, Prof. E. H. Farrington reasoned that cheese put up in pound packages, each one bearing the imprint of the maker, would enhance its sale. What recommends the methods particularly is that it opens a profitable field to individual dairy farmers. At present less than 6 per cent. of all the cheese manufactured in the United States is made on farms. Factories control the industry. They turn out annually about 300,000,000 pounds.

Another straw which shows the continuing prosperity of the United States is the Government return of post office receipts for the year. On these receipts the annual readjustment of postmasters' salaries is based, and consequently they are made up with more than ordinary care. Under the readjustment made a year ago, the increase of receipts at 2,070 of the 4,740 presidential offices justified an increase in the salary of the postmasters, the rate of increase being 43.6 per cent. On the readjustment just completed the rate of increase was 50.5 per cent. This means that more than half of the presidential postmasters will receive advanced salaries during the present year. The highest percentage of increased business is to be looked for in the newer sections of the country. Indian Territory leads with a gain of 132 per cent., with Idaho second with 119 per cent. and North Dakota third with 116 per cent., while Connecticut brings up the rear with only 23 per cent. New England is the only section of the country which falls below the average percentage, the six states in that division showing an average increase of only 36.8 per cent., and but for the 52 per cent. returned by Rhode Island would be much lower. The average increase for the middle states is 56.4 per cent., while the seven southern states have an average gain of 70 per cent. The middle west has an average gain of 59.1 per cent., while the states on the other side of the Mississippi increased 63.2 per cent. The highest sectional average is that of the three Pacific coast states, Oregon with 87 per cent., Washington with 73 per cent. and California with 58 per cent., making an average of 72.6 per cent. The increase of New York, 55 per cent., is above the average for the entire country.

NEWS OF THE WEEK.

During August, the export of coal from Moji amounted to yen 1,607,798.

Dr. K. Saito, Higashi-tonami, Toyama prefecture, committed suicide on Sept. 1st.

The British cruiser *Amphitrite* arrived at Nagasaki on Aug. 31st from Wei-hai-wei.

A Peking telegram dated Aug. 27th, states that Russia intends to remove to Harbin the office of

the Governor-General, to which Admiral Alexieff has been appointed.

Mr. Yang-su, new Chinese Minister at Tokyo, is expected to arrive in the capital at the beginning of October.

The new warship *Uji*, built at the Kure Dock Yard, left there on Sept. 1st for Takamatsu, whence she started for Kobe on the following day.

A number of Chinese workmen employed on the railways and mines in Honan, says a Tientsin telegram dated August 31st, have gone on strike. They are dissatisfied with the foreign inspectors.

The price of silver in Formosa seems to be advancing gradually. According to a telegram which was received on Sept. 2nd at Osaka, it had risen *sen* 3 since the previous report, making the quotation *sen* 95.

Tokyo papers state that the authorities have given their consent to the opening of the port of Wakamatsu, Chikuzen province, to foreign trade in response to a petition by the inhabitants. The fact will shortly be notified.

A soldier named C. Shikawa belonging to the 11th company, 1st regiment, who was in manoeuvres on Narashino plain, committed suicide by shooting himself and jumping into a well on the morning of Sept. 1st. The cause is not given.

The Japanese Bureau for the affairs of the St. Louis Exhibition has decided to pay a subsidy of yen 100,000 to the Nippon Exhibition Union and one of yen 15,000 to Mr. Y. Yamaguchi, who intends to establish a tea-shop in the Exhibition.

A telegram dated Sept. 2nd from Tientsin states that Viceroy Yuan had decided to send twenty students to Japan to be educated there, and that they will be employed as teachers in Chili province after having completed their studies.

The American & Oriental Transport Line steamer *Brieschel* was quarantined at Nagasaki with a suspected case of cholera on board, but we learn that she has now been released as the case was found not to be cholera. She sails for Kure to-day (Saturday.)

A man named K. Nakamura (55) living at Shitaya, Tokyo, and two others were arrested on Sept. 1st on a charge of having forged yen 5 notes. At the same time their dwellings were searched and copper plates, many hundred counterfeit notes, and printing machines were found.

The former warship *Nisshin*, which was offered for sale by tender at the Sasebo Naval Station, has been purchased by Mr. I. Kawaguchi, Osaka, for yen 23,850, this being the highest tender. The *Nisshin* has been out of commission for many years.

The crop of rice in this prefecture is expected to be 421,546 *koku* (*koku*=4,9629 bushels). Comparing it with that of last year, there is an increase of a little over 35 per cent, and comparing it with the average there is an increase of about 15 per cent.

A man of suspicious appearance was arrested on Sept. 2nd at Nagoya. He had a revolver, some bombs and some poisonous materials. It is alleged that he confessed, in examination at the police office, that his intention was to assassinate the Prime Minister. He is named T. Okabe, 32 years old.

The *Yorodzu* states that Mr. S. Osaka has filed a libel petition in the Tokyo District Court against the Dempo Tsushinsha, a news agency, claiming yen 50,000 as damages, on the ground that the defenders had circulated a statement that the petition was a "dog" of the Russian Government.

According to Tokyo papers, the proposed abolition of the Department of Education seems to have been abandoned; it will now be reorganized. The department will really be reduced to a Bureau of Educational Affairs, with sections governing General School Affairs, Special

School Affairs, Technical School Affairs, Text Books and Charts, and School Sanitation.

Vice-Admiral Konzmitz, Commander of the Russian Squadron, arrived at Kobe on Aug. 26th from Nagasaki. He proceeded at once to Kyoto where he took rooms at the Kyoto Hotel. The following day he paid a visit to Arashi-yama. He was expected to return to Kobe on the 28th and to leave at once for Nagasaki.

The Italian armoured cruiser *Carlo Alberto* arrived on Aug. 28th at Miyadzu from Masampo, Korea. After staying there for two days, she will leave for Hakodate. The Russian cruiser *Okazny*, which was detained at Nagasaki in consequence of the appearance of cholera, left there on the 27th for Port Arthur.

Another arrest for infringement of the Election Law occurred on Aug. 27th in Shizuoka prefecture. Eighteen men, including the candidates for the Prefectural Assembly and their supporters, were removed to the Court from the Fuji police station. Fourteen of them belong to the *Seiyukai* and the remainder to the Progressists.

In that famous list of Popes which is supposed to have been compiled by St. Malachy some centuries ago, Leo XIII. bears the name of "Lumen de Caelo"—Light from Heaven, while that of his predecessor, Pius IX., was "Crux de Cruce"—Cross of Crosses. The mottoes come sufficiently near to a description of the career of these two Popes to make them at least interesting coincidences, and to rouse one's curiosity as to the personality of Leo's successor, who is described in the same document as "Ignis Ardens"—The Burning Fire.

The Chinese tailors of Yokohama who claim Shanghai as their original habitat held high jubilee on Sunday. Their shops were all profusely decorated and towards evening a procession headed by a Chinese band and brought up in the rear by a Japanese gang of musicians!—save the mark—marched along China Town and thence along the Bund back to Hommura. In the procession were several very huge grotesque masks which had been specially imported from Shanghai. Some eight Japanese priests marched in the procession.

The *China Mail* hears that arrangements have been made to start a brewing company in Hongkong. As breweries have been conducted successfully in Manila, Shanghai, and in Japan for some years, there seems no reason, says our contemporary, why similar success should not attend a Brewing Company in Hongkong, provided it is under able management. The amount of beer consumed in Hongkong in the course of a year must be enormous, and the consumption is more likely to increase than decrease, in spite of the efforts of the Temperance Party.

The *Shanghai Mercury* gives the following account of the recent collision between the Japanese cruiser *Naniwa* and the sailing ship *Dundee* :—

During the fresh gale which was blowing on Aug. 23 the British ship *Dundee*, at anchor at Woosung with 105 fathoms of chain out, suddenly broke her hold and drifted down on the Japanese cruiser *Naniwa*, doing some damage to the cruiser's top work, such as rails, etc. The accident occurred so suddenly that before the Captain of the *Dundee* could let go his second anchor he had fouled the Japanese cruiser under his lee. The Japanese promptly slipped her anchor and 75 fathoms of chains and sheered off clear of the sailing ship which had apparently suffered no damage. The *Dundee* was towed up on the night's tide and made fast to the Standard Oil Co.'s wharf where she will discharge her cargo of kerosene.

The S.S. *Manchuria*, belonging to the East Asiatic Line, reached Port Said last month from Vladivostok and Chinese ports with a general cargo and about twenty Russian and German passengers. Shortly after her arrival a fire was discovered in the reserve hatch; in which were stowed bales of tobacco and a great deal of copra. The steamer was taken in tow and brought into a dock isolated from the rest of the ships, and futile attempts were made to extinguish the fire. Soon

after midnight the whole ship, with the exception of the forward part, was ablaze. Although the ship was filled with water, the depth of the dock did not allow of her being completely sunk, so that the upper part of the ship was above the water level, and the fire raged fiercely for more than a day. The passengers were all safely landed.

The *North China Daily News* reports that there is quite an epidemic of cholera in the Shanghai shipping world. On August 25th Mr. T. Weir, Marine Superintendent of the China Merchants' S. N. Co., received a telegram from Wenchow that Mr. A. Adair, chief engineer of the *Poochi*, had died of cholera. Mr. Adair hailed from the banks of the Clyde and was most popular in Shanghai, not only in shipping circles, but with the general public and also as a footballer. The same day cholera broke out aboard the C. E. and M. S. *Yungping*. In the morning Chief Officer H. Watson was taken ill and was sent to the Hospital in charge of the Chief Engineer, Mr. W. Riebe. Mr. Riebe delivered his charge safely, but on his journey back to his ship in a sampan was himself taken ill and was lifted from the sampan to the ship in an almost insensible condition. He died aboard the ship at 1.30 p.m.

The *North China Daily News* learns that on her arrival at Shanghai on the 29th ult. the R.M.S. *Empress of India* was to be arrested on behalf of the Viceroy at Nanking, the owner of the cruiser *Huangtai*. There having been loss of life, the *Empress*, if in fault, is liable for £15 a ton, say £90,000, and a bond, we presume, will have to be given for this or some smaller sum by the agents of the Canadian Pacific Railway. We learn, continues the paper, that Messrs Stokes and Platt are retained for the *Empress* and Messrs. Drummond and White-Cooper for the *Huangtai*. The theory that the *Empress* struck the *Huangtai* with her starboard propeller when the two vessels closed is supported by the fact that the four blades of the former's starboard propeller had to be changed in Hongkong, and in addition four or five plates on the starboard side had to be dealt with, and some superficial damage to the superstructure made good.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

A new monthly magazine called the *Tsūsoku Shūkyō-dan* has been started by the Roman Catholic Mission under the editorship of Mr. Maeda Chōta, the well-known translator of L'Abbe Lignier's numerous works. The object of this periodical is to supply information on religious subjects for the benefit of illiterate readers. The language used is to a large extent colloquial. The subjects treated are:—The interpretation of the Bible, ecclesiastical history, the lives of saints and various ethical topics. An attempt has been made to furnish subjects for quiet meditation and to nourish and comfort the minds of those women and children who are unable to read and comprehend high-class journals. The magazine covers about 60 pages and sells at 5 sen a copy at No. 20, Tsukiji, Ni-chōme, Tōkyō.

Since the publication of the late Mr. Nakae Tokusuke's *Ichinen-yūhan* and the *Zoku-ichinen-yūhan* no work has caused so much stir in the Japanese religious world as Rinkō's *天人論*, *Tenjinron*. Rinkō is the nom de plume of Mr. Kuroiwa Shōroku, the present Editor of the *Yorozu Chōhō*. This work has been fully reviewed in a number of newspapers and magazines. In order to show what is its general tenor we make a few extracts from the press notices of the book. The Rev. R. Minami writes in the *Shinjin* (No. 8) in the following strain:—There are many parts of the *Tenjinron* which awaken our sympathy. On page 53 the author says, "Nature teaches man the path he is to follow, from Nature we must inquire, from Nature we must learn; Nature we must follow, to Nature we must be united. Is not this man's highest aspiration?" Again he says:—There is in the universe a great spirit which is ever active

and which both sustains and transforms. By attaching ourselves to this spirit we unite ourselves to Nature (the Universe, *Hanyū*). At death we return to a spiritual existence (*rei ni ki suru*) and thus live for ever. But to this state only those who are joined to the Spirit of the universe (*冥合 meigō su*) attain." By the terms *Uchū*, *Hanyū* and *Rei* (Universe, Nature, and Spirit) Mr. Kuroiwa surely means what we religious people call "God." On p. 159 the term 大自觀, *Dai Jikwan* (The Great Self) appears. This is (1) evidently another name for the same Being. On p. 144 it is contended that it is only by means of the union between the Divine Being and man that the highest ethical development can take place. Mr. Kuroiwa professes not to know much about religion, says Mr. Minami, but as a matter of fact the conclusions which he has reached in the main accord with those arrived at by believers in the Christian religion. The author's discussion of Monism (一元論, *ichigenron*) seems to me very unintelligible. He says of spirit and matter that they are "different, yet the same" (*hatsu ni shite ichi nari*). He does not distinguish between the real essence or being and phenomena. Consequently it is impossible to say whether he favours idealistic monism or materialistic monism. But the book is certainly to be regarded as a philosophical defence of Monism.

The *Chūō Kōron* says, Mr. Nakae's works preached annihilation and hence were out of harmony with the sentiments and opinions of a large section of the reading public, but the *Tenjinron*, in that it makes evolution and energy its leading principles, reflects the spirit of the age and accordingly enjoys great popularity.

In the *Tsūsoku Shūkyō-dan* Mr. Maeda Chōta criticizes the *Tenjinron* unfavourably. He quotes from the preface the following remarks:—"The foundation of Monism was surely laid in the last century when the doctrine of evolution was firmly established, and it would seem as though in this twentieth century the mists in which the subject of cosmogony has hitherto been enveloped would be cleared away and that we should witness a union of the theories of theists and atheism, of materialists and spiritualists." And again:—"It is true that even when Monism is accepted there is in some respects a difference between materialistic Monism and idealistic Monism, yet in the main they are the same, whether they be designated Pantheism, Panlogism, or what not." From the above observations, says Mr. Maeda, we can judge of the nature of the whole work. We can see that it is an attempt to blend incompatible elements. It is a typical Japanese production, in that it lacks consistency and unity of view and purpose. The Japanese head is apt to be full of the most contradictory notions. There is no attempt at systematization. It is because of this that a certain European scholar once observed: *Nihon ni wa gabusha nashi; mono-shiri nomi*. (In Japan there are no scholars, but only savants.) Our learned men do not elaborate a system of thought and hold to it in the way that is done in the West. Lack of unity, coherence, consistency, mark the writings of Dr. Inouye Tetsujirō, Dr. Motora and Dr. Nakajima. These writers are fond of using such terms as eclecticism, synthesis and the harmonization of ideas (*Sanshaku yōchū* 參酌路線) but these serve only as watchwords to mislead the unwary. In the multifarious ideas to which these writers give expression there is an entire lack of unity. . . . The *Tenjinron* is Eurasian in character, it commingles elements which have no real affinity, and hence it is not a work that can be recommended.

In Nos. 1036 and 1038 of the *Kirisutokyo Sekai* the views of Baron Kaneko Kentarō on missionaries are stated at considerable length.

(1) The term 小自觀, *Shō Jikwan* is used for man, he being the lesser "Self" of the Universe. Dr. Inouye Tetsujirō substitutes for these the terms 大我, *Taiga*, and 小我, *Shōga*, the "Greater Ego" and the "Lesser Ego."—(WRITER OF SUMMARY.)

under the title, *Kaneko Danshaku ōi ni senkyōshi 100 huan su*. Here is the substance of the two articles that have appeared. In conversations with Dr. Pentecost at the Imperial Hotel the Baron remarked that few of the missionaries have received a University education and that many of them are unacquainted with Japanese customs. The Baron then observed that Mr. Murphy of Nagoya had been guilty of an offence against the press laws in circulating indecent literature. This happened when the Baron was Minister of Justice. He (the Baron) was asked to deal leniently with Mr. Murphy because he was a missionary. The Baron further said that to him the missionaries appeared to be a very unlearned set of men and that it was perhaps on this account that Christianity had spread for the most part only among the lower classes. It was his opinion that in Japan if Christianity is to prove a success it must begin with the upper classes and work downwards. But at the present time certain influences (socialistic) tended to stir up hostility to the upper classes among labourers, mechanics, and the like. "This from a national point of view was a serious abuse. The *Kirisutokyo Sekai* replies to the above charges as follows:—(1) The majority of Christian missionaries are undoubtedly graduates of universities. (2) Mr. Murphy's offence against the press laws consisted of the multiplication by means of a copying press of a number of copies of an appeal to the public in favour of the abolition of licensed prostitution. (3) Dr. D. C. Greene and another missionary called on the Baron when he was Minister of Justice and represented to him that Mr. Murphy's offence was of so trifling a nature that it called for lenient treatment. (4) As regards the assertion that the work of missionaries is mostly among the lower classes, we don't think it worth a reply, says the *Kirisutokyo Sekai*. In a leading article in the *Mainichi Shinbun* Mr. Shimada Saburō condemns the part played by Baron Kaneko in this matter as lacking in dignity. The whole affair seems to be somewhat trivial and appears to have originated with a passage at arms between Dr. Pentecost and Baron Kaneko at the Imperial Hotel in which a good deal of feeling was shown on both sides. It may be pronounced to be an instance of an attempt to base very sweeping charges on slender premises.

* * *

The suicides at the Kagon Waterfall having exceeded 10 in number, various religious organs comment further on the craze. In the *Fukūin Shimpō*, No. 418, Mr. Arima Sumikiyo writes as follows:—Suicide was approved of by Epicurus and his followers and was habitually practised by the Stoics. It is highly honourable according to our Bushidō, which teaches that under certain circumstances it is morally compulsory. The saying:—*Shinubeki toki ni shinazareba, shinuru ni masaru chikoku ari* (Not to die when one ought to do so involves shame that is worse than death) well expresses the teaching of the Bushidō on this subject. Confucianism neither directly encourages suicide nor directly condemns it. But an argument against it is furnished by the manner in which filial piety is taught. The body of the child having been received whole from the parents, care must be taken not to injure it in any way up to the time of death. In the second and third centuries of the Christian era, while the influence of Imperial Rome was still visible in the Christian Church, there were writers who regarded suicide with favour. The Bible does not condemn it in so many words, but arguments against it can be deduced from the writings of St. Paul. . . . In our country suicide was not universally approved of in former times, and one of the effects of Christian teaching in the sixteenth and seventeenth centuries was to change a certain section of public opinion on this subject. When Ishida Katsushige, one of Hideyoshi's retainers, was defeated at the battle of Sekigahara, it is recorded that he was at once advised to prepare for death (*saigono go-yoi sōrae kashi*). To this advice he replied:—"I have of late been suffering from my inside; give me some garlic rice-gruel. (*nira-ōsui*)." After taking this he went sound asleep. Aroused by Honda Masazumi, who inquired,

"Supposing you are taken prisoner before committing suicide, what then?" he replied, "Don't you know that the strength of a warrior is as fleeting as the morning dew? To take his own life, instead of waiting for another to kill him, is the course followed by empty-headed soldiers. Did not his Highness Yoritomo hide himself in the hollow of a tree in the Dohi wood rather than do this? But what is the use of talking to a man like you of the proper course to be adopted by great generals on occasions like these? You have no ears for such things." This Katsushige was a Roman Catholic believer and therefore it was that he spoke thus. When Konishi Yukinaga, another Christian, was on one occasion urged to commit suicide, he replied that such a proceeding was contrary to the spirit of his religion. It was not that he was afraid, but that he thought the bearing of the unbearable demanded more courage than the escape from a painful situation by means of death. And this to-day is the attitude of all sincere Christians to suicide. Their lives are in God's hands and they do not feel at liberty to cut them short at will.

In the *Shinjin* (Mr. Ebina Danjō's organ) Mr. Uozumi Veiyū comments on the same subject in the following strain:—A man's faith ought to be sufficiently influential to mould his whole character. A man of decided character is always a power in the world. The faith that has been attained without passing through a time of doubt is not of much value. The blind, unquestioning faith in dogmas which have been handed down to us is of no value whatever. In order really to believe one must have experienced doubts of some kind. But there are those who are thoughtless and shallow enough to give up religion altogether when troubled by doubts. People should earnestly set about the task of solving their doubts.

The *Seikyō Shimpō* (Greek Church) regards the Keron series of episodes as the natural result of the pernicious influences of the age, and makes them the text of a sermon on female degeneracy. Emotionalism and a certain wildness of sentiment characterize the minds of many young people, says this organ. The matter published on the third page of many newspapers furnishes numerous instances of young men and young women who sink into depths of despair and end by destroying themselves. Specially to be pitied are the women of to-day, to whom the new customs give freedom of action unknown in former times—freedom that is fraught with danger to ill-educated persons, who are guided almost exclusively by their feelings. Loss of refinement, modesty and other female graces have been the result of the occidentalizing process to which many of our women have been subjected. There are many Mission Schools for women throughout the country, but in late years, owing to adverse influences, they have been poorly attended, and what is much to be regretted is the fact that even these schools are bowing to the spirit of the times, following the fashion of the age, and forgetting the great purpose for which they were established, (*Sara ni uryōbeki wa chikagoro Kirisutokyo shugi no gakkō sura, shidai ni zokkwa* [俗化] *shi, jisei ni kōbi, ryūkō wo oi, jiko no daiteishin wo nasuren to suru keikō aru koto, kore nari*). What we desire to see is Christianity that refuses to trim, that holds to its principles in the face of the world.

Commenting on Fujimura's suicide, the *Kirisutokyo Shinhō* says:—Fujimura was no doubt a product of the age, a singular mixture of the old and the new in the world of thought. Full of the notion that there is no better way of showing great earnestness than by committing suicide when baffled, and desirous doubtless of attracting the attention of a listless public to the importance of the great problems of life over which he was pondering, he hit on a novel method of destroying himself. But the mistake he made was to suppose that what he could not explain was inexplicable.

* * *

A new work on the book of Genesis has been published by the German Mission Publishing

Company, known as the Shinrisha, which bears the title of *Soseiki Gairon* and sells at 30 sen a copy. This book, we are told in Mr. Haas' preface, is a translation of the principal parts of Professor Hermann Gunkel's work—a book that caused no little stir in theological circles when it appeared. Mr. Nakamura Seiro is the translator. In the original work, *Die Sagen der Genesis*, the Berlin University Professor takes the view that the Bible is not verbally inspired nor is it historically reliable. It is to be regarded as a story with a distinctly religious significance and to be interpreted accordingly. The book of Genesis is full of beautiful poetical ideas and embodies the cosmological notions of the ancient Hebrews. Professor Gunkel's work is the result of the application of the higher criticism to this ancient record. Mr. Haas is of opinion that Japanese students of the Bible need information as to the results of recent scholarly analytic study of the scriptures, and that this new volume will enlighten them on a variety of hitherto obscure points of interpretation.

Another work issued by the same press is the *三大世界教, Sanrai Sekai-kyō* (The Three Great Religions of the World), which is a translation made by Mr. Aoki Ritsugen of Mr. Robert Falke's *Zum Kampfe der drei Weltreligionen*, published last year. This, it is stated in the preface, is a very up-to-date book which discusses the characteristics of Buddhism, Islamism and Christianity on broad lines. Mr. Haas informs us that the author of the German work has been consulted in the preparation of the translation and that at his suggestion the Japanese edition has been altered in various particulars in order to be made to suit readers here. Three tests have been applied to the three great religions, in order to determine if possible wherein each has most excelled. (1) The lives and characters of their founders have been compared. (2) The amount of influence they have exercised on mankind and the amount of energy they have imparted to various institutions and agencies have been estimated. (3) Their cosmopolitan tendencies have been compared. It has been asked which of the three religions is most universal. The silly notion that Christ derived his teaching from Buddhist sources is dismissed as a mere idle conjecture, which is unsupported by a tittle of evidence. Mr. Haas asks which of the three religions is destined to finally prevail? And his answer is Christianity. He points to the progress already made by this religion against the other two, alludes to the fact that there are now 120,000 Christians in Japan, and adds that if converts go on increasing at the present rate (about 6,100 per year) in 177 or 178 years Japan will become a Christian country.

The *Sensōteki Kirisutokyo* (Militant Christianity) is the title of a work issued by the Salvation Army Press, written by Mr. Yamamuro Gumpel. Some time ago Mr. Yamamuro, after considerable inquiry and study of the lives of the poorer classes, published a book called *Heimin no Fukuin*, which, according to the *Kirisutokyo Sekai*, was a new departure in Christian literature as regards style, combining as it did simplicity of language with full expression of the leading Christian ideas. It has had a wide circulation and the author has now produced another work, designed to serve as a sequel to "The Gospel for Plebeians," which brings out the truth that Christianity has a big battle to fight, that Christ came to send a sword on the earth.

The *Shōrai no Shūkyō* (price 70 sen), published by the Shin-Bukkyō-dōshi-kai discusses the form which religion is likely to take in the future. In this book the views of some 30 scholars on this topic are presented side by side, some of those quoted being Buddhists or Christians, others mere philosophers. Among the Christian writers the names of Dr. Motora Yūjirō, and Messrs. Shimada Saburō, Tokutomi Ichirō and Ebara Soroku appear.

The *Shōri no Fukuin* (Victorious Gospel), price 30 sen is issued by the *Shinjin* press, 109 Omotechō, Koishikawa, Tōkyō. The author is Mr. Ebina Danjō. The subjects treated as they appear in the table of contents are as follows:—The *Samurai* according to the New Bushidō. The

Victory of the Spiritual Life. The Voice of Divine Truth. The Christ of God's Revelation. The Meaning of Christ's Resurrection. St. Augustin's Ideas. In an appendix the views of Fichte and other German philosophers are discussed.

The *Daijō Bukkyō-Shiron* (price 70 sen) is a treatise on the Mahayana Buddhism by Dr. Maeda Eun, which discusses most fully the claims of the Mahayana doctrines to be considered a fair representation of the actual teaching of Shaka Muni. To specialists the work ought to prove a special boon. It is said to be thorough and scholarly throughout.

The second volume of the valuable series of works written by Dr. Murakami Sensei known as the *Bukkyō Toitsuron* has been published. The title is *Genriron* and the price 2 yen. The work deals especially with the fundamental principles of the creed. Judging from the stir in Buddhist and other learned circles caused by the publication of Dr. Murakami's first volume, this fuller exposition of his views is likely to furnish a text for much criticism.

* * *

In the *Tōyōtōsugaku Zasshi* Dr. Motora says:—Though both Christ and Shaka preached about a paradise beyond, in accordance with prevailing opinions in their day, had they been born in our age they would doubtless have accepted Darwinism and would have consigned the doctrine of a future life to a very subordinate place in their systems. The teaching about paradise and heaven does not constitute the essence of religion and, resting as it does on mere popular tradition, it is of minor importance (*Gokuraku ya, Tenkoku wa keshite shūkyō no essence de naku, kokumin no densetsu ni motoruita sasai no koto de, etc.*). The strength of Buddhism is not affected by refusing credence to the traditional teaching about Shami-sen (a fabulous mountain said to form the axis of the universe), or by the rejection of scores of other mythical notions.

In a somewhat remarkable article published in the *Tōyōtōsugaku Zasshi* from the pen of Dr. Katō Hiroyuki entitled *Jichi* (自治) *to Dotoku to no kwankei* (the relation of self-government to morality) bold and uncompromising expression is given to the view, fast gaining ground among certain sections of thoughtful men, that the popular form of government which Japan is striving to make a success is unsuited to the national character and uncondemned to a high moral tone. The situation, says Dr. Katō, is just this, that our old system of thought has been thoroughly undermined by Western influences, and as yet it has not been replaced by anything that can be considered effective from a moral point of view. For the smooth and efficient working of popular institutions a large amount of public spirit is required. In that quality your people are very deficient, and hence it is that our autonomous forms of government are proving anything but a success. We can't get rid of the Constitution or the Diet, but the application of despotic Imperial pressure seems to be quite necessary in cases where there is no proper sense of duty. Dr. Katō's words are so remarkable as coming from a scholar who has always been in favour of representative government that we quote a few lines from them: *Kempe wo hai shi, Gikai wo hai suru waake ni wa yukanu ga, Nihon no gotoku kōkyō-shin* (公其心) *no usuki kokumin ni wa, tsumari kenryoku wo motte kore wo appuku shinakereba naranu*. Dr. Katō, then, regarding the results of Japan's experiment from a purely moral standpoint, has no hesitation in pronouncing the existing form of government to be a failure. In order for government by a majority to succeed, says Dr. Katō, that majority must be educated up to a high moral standard. Power entrusted to people whose moral standard is low is sure to be abused. Despotic government which enforces a high moral tone is infinitely better than popular government which encourages corruption of every kind. Judged by a purely utilitarian standard Japan's modern form of government may be pronounced a failure, says Dr. Katō. This sentiment has been in the air for some time, but nobody, as far as we are aware, has hitherto ventured to give

public utterance to it in so unequivocal a manner as that adopted by Dr. Kato.

Commenting in the *Tōyōtetsugaku Zasshi* on the pictures of Christ which have been painted in various ages the Rev. R. Minami, the well known Christian writer, says:—Sacred art reflects the prevailing ideas of each age. The most ancient picture of Christ represented him as a very young man of extremely gentle mien, with a lamb in his arms. In the third century a far graver and severer look was given to the face of Christ. In the fourth and fifth centuries it was deemed necessary to draw attention to his Divine origin, hence the halo of light which characterized the pictures of that time. During the Middle Ages the worship of the Virgin Mary was at its height, and so in the pictures of that time she appears in attendance on her son. With the rise of Protestantism came various new representations of Christ. The latest pictures, says Mr. Minami, represent Jesus as the friend of the workingman, whose burdens he is endeavouring to lighten.

* * *

In No. 419 of the *Fukui Shinbō* there is an account of Mr. Fukumoto Sei's investigations in Luzon. He has collected a number of manuscripts bearing on the spread of Christianity in Japan in the sixteenth century. He says that as a result of Xavier's visit to Kyūshū in 1549 Shimazu, Ōtomo, Ōmura, Arima and other *daimyō* were converted to the Christian faith, and that in 1568 Oda Nobunaga openly professed Christianity and built a church in Kyōto called the Nambanji. He further states that in Kyōto alone there were at this time over 50 Christian *daimyō*, and that several of Hideyoshi's concubines were Christians. The names of the following well-known men all appear in the documents which Mr. Fukumoto examined, with Christian names attached to their ordinary names: Ōtomo Yoshishige (Francisco), Ōtomo Yoshinune (Constantine), Maeda Toshitō (Augustine), Gamō Ujisato (Jean), Kuroda Yoshitaka (Simon), Takayama Hida (Dario), Takayama Yūshō (Juste), Naitō Tadatōshi (Jean); his younger brother, Thomas.

* * *

An article in the *Shinjin* entitled *Risō no Fukkatsu* (The Revival of an Ideal) represents various leaders of thought in Japan as disappointed with the result of their efforts to establish a high moral standard. Count Itagaki is quoted as saying that there is no such thing as an ideal in the political party which he has led for so many years. His own ideal has not been followed by his disciples. Count Okuma some little time ago confessed that the notion which he formerly entertained in reference to the sufficiency of material civilisation was a mistaken one. The late Mr. Fukuzawa in the closing years of his life arrived at the conviction that something more than mere utilitarianism is needed to raise a nation to a high moral plane. The reliance of the Mombushō on Confucianism as a basis for moral teaching has proved an utter failure. It can not be said that the efforts of Christians to renovate the nation have been successful. Divinity schools are forsaken. The twentieth century evangelistic services resemble one of the old festivals which cause a little excitement only while they last. What permanent good has this movement done? Many are turning away from the religious world in disgust and entering the business or political world. Everywhere dissatisfaction and restlessness appear. Mutual contempt may be said to be the attitude of the various sections of society to each other. The religious world and the business world despise each other. The same is the case with the political and educational worlds, and so society is split up into numerous factions, each with its own watchwords, antipathies and prejudices. Where they are not fighting with each other, the various parties are engaged in patching up unsatisfactory compromises. Compromise is the order of the day. The Government has come to an understanding with the Seiyūkai. Religion and education, politics and education, politics and religion are all engaged in trimming with a view to more union. But what does it all mean? Nothing

more than superficial agreement, while fundamental principles are as much at variance as ever. Dr. Inoue Tetsujirō has propounded the view that religion and ethics may unite in the respect with which they hold Real Being, as distinguished from all mere phenomena. We ourselves have long been inclined to this opinion. Union in fundamental far-reaching principles is the only union worth having. In an infinite, spiritual, all-powerful Being we Christians believe. Permeated with the Spirit of God we can overcome all opposition and by the display of charity we can win men's heart. . . . To the leaders of thought in this country we would say, cling to your ideals and expect to see them realized.

* * *

Commenting on the various Japanese press notices of the late Pope the *Kōyō* says that they reveal considerable ignorance of the real cause of his great success. Apparently thinking that the office of Pope is incapable of being logically defended, they have, says the *Kōyō*, laid great stress on the talents, the learning and the wide sympathies of Leo XIII., but the real truth is that the late Pope obtained his world-wide reputation as an administrator of the Papal See, and not on account of his philosophy or his general scholarship. To represent Roman Catholicism as out of date and effete and the head of that church as only remarkable on account of his personal character and talents, displays profound ignorance of the real situation of affairs in the Western world.

CORRESPONDENCE.

BRITISH TRADE CABINETS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A Cabinet containing the names of the leading British manufacturers has been supplied to H.B.M. Consul in Yokohama for purposes of public reference. The cards in this cabinet are conveniently arranged and indexed so that the buyer can immediately find the name of the manufacturer of the particular line in which he is interested.

It is encouraging to us to learn that the cabinets we have supplied to British Consulates are being greatly appreciated as giving information frequently sought of Consuls and which it might not otherwise be within their power to furnish.

As great expense has been involved in placing these cabinets in the various commercial centres, we would venture to ask the courteous co-operation of the Press in informing the public of the convenience thus placed at their disposal.

We have pleasure in sending you, under separate cover, an explanatory pamphlet detailing the methods of our working.

Thanking you in anticipation, and offering you our services at any time, we are, Sir, yours, faithfully,
COMMERCIAL INTELLIGENCE BUREAU, LTD.
London, July 20th, 1903.

INFANTICIDE IN CHINA.

(FROM THE "N.-C. DAILY NEWS.")

The author of more than one well-known book on Chinese subjects has committed himself to the opinion that the evil of infanticide is non-existent in China. His acquaintance with the works of other writers might have taught him that the only general statement with regard to things Chinese which one can make without fear of contradiction is that every general statement is more or less misleading. Whatever may be the state of things in that part of the Yangtze valley with which he is acquainted there is no room for doubt that in other parts of China infants are still done to death in a cruel fashion.

In Chekiang and Fukien towers can be seen on or near the city walls, into which babies are thrown. In some parts of Kuangtung a "baby basket" is hung in a sheltered position, and in or around it babies, living or dead, may often be seen. These baskets are visited by messengers from the Buddhist nunneries, and among the nuns are not a few whose lives have been preserved in this way. Foundling hospitals, opened by natives or foreigners, are supplied with inmates from the same source, or taken from the breast of that arid natrix, a Chinese roadside. As a matter of course the majority of the unfortunates are girls; but on occasion a boy may be found. In the latter case the reason is not far to seek. If a child is afflicted with fits, and the parent fail to cure it, they believe that the "monkey spirit"

has possessed the child and put it away lest the evil should return upon themselves. It needs a strong reason like this to induce parents to part from the hopes bound up in a boy.

But exposure is the lesser evil, as it gives the child a chance of life. Infanticide pre- and post-natal is still far from uncommon. A country woman, applying last week for the post of *amahi*, offered it as a recommendation that she had borne twelve children, seven of them of daughters. Of these seven she admitted that only two were allowed to live. A group of Kuangtung women selected, at random, was interrogated on this point. They raised fingers one, four, three, two in answer. One of them had to requisition the fingers of both hands to express the number of daughters whose lives she had taken.

Among the causes of infanticide poverty is chief. The "feed" of a daughter and the cost of her clothes are large items in a poor man's expenditure. And then in China, our proverb is reversed, being made to say "a daughter is a daughter till she's made a wife: Your son's a son all the days, 'of his life!'" While she is with the family she is too young to do much for her keep. "Thus, however, much you spend in feeding her (飼 the word used for feeding a cow), she is, and will always be a 'runaway bogie' (走鬼子). 'Your money goes into the pocket of her future husband, and in nothing advantages you.'" "But what about the price (價; price of goods) you will get for her?" "Oh, that will barely cover the cost of her outfit." The result of such a calculation is generally the exposure, or death of the unconscious little intruder.

Among minor causes are the delay in raising a family caused by the rearing of a female infant and the dislike for large families. A case is on record of a mother who killed her infant girls wishing to spare them the manifold unhappinesses that had fallen to her own lot through marriage.

In the majority of cases it is the mother-in-law who destroys the little life. Angered beyond endurance at the undutiful conduct of the woman who brings to her son a daughter instead of the longed-and-prayed-for boy, it does not cost the fierce old lady a qualm to put her grand-daughter out of the way. Less frequently it is the mother herself who is responsible. She is not so ready to compass the death of even a girl when the little thing is laid before her. And yet doctors tell of the cries of rage with which some women will greet the announcement of the birth to them of a daughter. Few, however, go the length of one who revenged herself on the third unhappy little intruder by hacking off its limbs. Least of all is the father likely to be the agent; yet we know a man who himself killed five girls under his wife's eyes and despite her protests. In many places are to be found women who will take over the child and guarantee that it will not trouble you again.

The methods of getting rid of these undesirables are various. Most merciful is the sale or gift of the baby to anyone who will undertake to rear it, or the handing of it to a nunnery or orphanage. Placing it in a receptacle provided for the purpose, such as the "babybasket" comes next. Exposure by the wayside indicates the minimum of mercifulness. Beyond that lies murder pure and simple in a descending scale of cruelty. Asked how she put an end to her babies one woman covered her mouth and nostrils with her hand. Any receptacle with fluid matter in it offers itself as a means of getting rid of the difficulty. A knife, hoe, or club can be had anywhere, and is used on occasion. The little spark is so easily extinguished, and the appeal of helplessness falls on such stony hearts! To persons living by the sea side it is a simple matter to throw the baby into the water, or lay it within reach of the incoming tide. For pre-natal murder the simples of the spouse are always to be had. These, not infrequently, bring two lives to an end instead of only the one aimed at.

If these tragic details, drawn entirely from native sources, need proof it is not far to seek. There lives, in a seaboard village not far from where we write, a young woman, whose maiden name was "Come from the Sea" (海來). When she was born her mother called in the father to kill her. He was at first unwilling, but eventually took the baby down to the shore and laid her below high-water mark. That day the tide did not come in as far as usual, and the baby lay and cried. Angered by the sound of the little voice the mother sent out an older child with a handful of soot which he was to put into his sister's mouth. The wind was strong, and the boy frightened, so the soot was blown away, and still the baby cried. Then at last the father's love overcame his dislike to a "scene," and carrying the little one back to the mother he compelled her to rear it. That baby is now the mother of a family, but her experience fails to procure mercy for her own daughters.

One often sees a placard posted on the walls of rest-houses urging people to abstain from two evils—the slaughter of cows, and the killing of infant girls. These are no doubt set out in the order of importance.

There is in circulation a pamphlet entitled "Save the children." Printed first in the fifth year of the present reign, it has been produced many times, and circulated as an act of merit. It opens with 32 pages of illustrations alternating with exhortation and warning. Of the 15 pictures given six describe the punishments here and hereafter which will follow infanticide; three indicate the fate of those who exhort to, or help in the deed; one deals with prenatal murder; and one describes the fate of a man who ridiculed attempts made to stay the evil. On the other side four pictures illustrate the rewards enjoyed by those who save babies from destruction.

The second part of the book is a copy of a proclamation issued by the Viceroy and the Governor-General of Canton forbidding infanticide, and encouraging the opening of Foundling Hospitals. Within the proclamation is embodied the substance of five enactments dealing with infanticide, which were added to the Statute Book in the 27th year of Ch'ien Lung:—

- 1.—Infanticide is equivalent to the deliberate murder of children. The punishment to parents will be 60 blows, and banishment for a year.
- 2.—Slave girls destroying infants will be treated as if they had deliberately murdered the head of the house. They incur the death penalty.
- 3.—A grandmother killing her infant grandchild will be treated as a murderess, and strangled.
- 4.—Neighbours who do not interfere to prevent the crime, or learning of it fail to inform the authorities, will be punished in the same fashion as if the victim were an adult.
- 5.—The Tipao who deliberately conceals the crime will be punished.

In these enactments two things are worthy of note. The comparative leniency of the first enactment admits a right on the part of the parent to dispose of the lives of his children which is at the root of the evil. The existence of these laws in the statute book indicates that the evil of infanticide was, at the time of their promulgation both serious and wide-spread.

The third division of the book is made up of an essay and poems exhorting the people to discontinue the practice. Appeals to the laws of heaven and earth, to reason, and to humanity are numerous, and a Buddhistic colouring is given to several of the poems by reference to the punishment of Hades, and also by the warning that indulgence in the practice may consign the offender to the doom of being born a woman in the next re-birth.

The book closes with directions to those who would open foundling homes, or set on foot a fund for the nourishment of children abandoned by their parents. Along with the directions go some very practical warnings against the indiscriminate distribution of money lest people who would in the ordinary course bring up their children, might be induced to abandon, or threaten to abandon them for the sake of the nursing-money they hoped to gain.

While the practice is far from being extinct in the eastern part of the Canton province it is far less common than it once was. Several factors contribute to bring about this result.

Private and official influence have been directed against it for a long time,—so long that among the proverbs of the people is embedded one which says "Fierce as are the tiger and the wolf, they do not injure their own young." The issue of this interference, in laws on the one hand, and benevolent institutions on the other, has helped to educate sentiment against the evil.

A much speedier, and more direct result has followed the introduction of Christian teaching into China. It may safely be assumed that infanticide is unknown in the families of those who have connected themselves with the Christian Church, Roman Catholic or Protestant, throughout the Empire. And in addition the practice and teaching of the converts has produced a body of opinion outside the bounds of the Churches which is independent of, but supplementary to, that mentioned above.

A third factor is the advance in the price of girls during recent years. Whereas formerly a baby girl could be purchased for two hundred cash and a piece of cloth, an infant daughter-in-law is now worth a dollar, sometimes more. A marriageable girl some years ago brought less than thirty dollars, but now in many places she will bring at least one hundred. The cause of this advance may be the increasing prosperity of these southern provinces; it is due in part at least to the scarcity of the female element due to the slaughter of former years. The result however is that the chances of life for a girl born now have advanced enormously.

The improvement is no doubt lasting. Influences are abroad which seal all the good attained and make it permanent. But as long as the Chinese regard infants as not possessed of souls, and therefore no more valuable in their infancy than the beasts that perish, just so long will the practice of infanticide call for efforts directed towards its suppression.

While these notes refer to the eastern part of the Canton province in particular; and more generally

to the provinces bordering on and south of the Yangtze, it would be interesting to know how far they hold good of other parts of China.

K. N. G.

CORONATION OF POPE PIUS X.

Rome, August 9.

The ceremony of the coronation of Pope Pius X. took place to-day in the basilica of St. Peter's, in the presence of the princes and with all the solemnity and splendour associated with this, the most magnificent rite in the Roman Catholic Church.

As Cardinal Macchi, the dean of the Cardinal deacons, placed the triple crown on the head of the venerable Pontiff the throng of 70,000 persons gathered within the cathedral burst into unrestrained acclamations, the choir intoned a hymn of triumph and the bells of Rome rang out a joyful peal. It is fifty-seven years since the Romans and Europeans assisted at such a function in St. Peter's. The great basilica, popularly supposed never to have been quite filled, was overflowing with humanity. The papal throne, a bewildering mixture of gold, red and silver—was erected in front of the high altar.

Contrary to custom on these ceremonial occasions, there were no galleries, so the basilica bore more of its normal aspect. On the altar, which was dressed in white, stood the famous silver-gilt candlesticks and a magnificent crucifix. All the available standing space within the cathedral was divided into sections by wooden barriers, which, to a certain extent, kept the vast crowd in order.

In the early hours after sunrise a thick fog hung over Rome and one bank of the Tiber could not be seen from the other, while from the Angelo bridge one seemed to look into a fathomless abyss instead of the river. The effect was especially magnificent on entering the piazza of St. Peter's. At times Michael Angelo's great dome disappeared completely from view, while at others it appeared through an overflowing mist. The morning wore on and the fog disappeared and the sun shone with all its intensity until it became unbearably hot, and the stones, columns and statues seemed to radiate the heat on the thousands waiting to enter the church.

At 6 o'clock in the morning the ringing of bells announced the imminent opening of the doors and a commotion at once began among the crowd. But ten minutes had to elapse before the doors were opened, and each seemed a century to the waiting crowd which for hours had been standing before the closed portals. The police and Italian soldiers had a difficult task in maintaining order, as the crushing and fatigue had begun to tell on the patience of the people.

MANY WOMAN FAINT IN THE WILD RUSH TO ENTER THE BASILICA.

When the doors were opened the rush was terrific. Many who started from the bottom of the steps outside were lifted off their feet and carried into the cathedral. It was a great human torrent let loose, thousands of persons rushing, crushing and squeezing amid screams, protests, gesticulations and cries for help. But once in the cathedral there was no escape and the compactness of the crowd proved to be the safety of those who were caught in it. Women fainted in comparatively large numbers, and even men were overcome by heat, but no serious accidents were reported. Fortunately there were very few children present. After their entrance the people had further long hours of waiting, and it is computed that the majority were on their feet altogether ten hours before the ceremony.

Those who had received special invitations, including the high ecclesiastics who were not participants in the procession, the diplomats and the Roman aristocracy, had a reserved entrance through the sacristy of St. Peter's. Prince Massimo arrived accompanied by his daughter-in-law, Princess Beatrice, the daughter of Don Carlos, and they were given prominent seats. Duke Robert of Parma was the only other member of the royal family to attend. Among the aristocracy there was a great mixture of those Roman nobles who remain faithful to the papacy and those adhering to the Quirinal. Sir Thomas Esmonde, representing the Irish Parliamentary party, was received by two Knights of the Cape and Sword—one of these F. C. McNutt, an American—and conducted to the diplomatic enclosure.

Inside the Vatican palace there was no less movement and bustle as the papal procession, composed of about 500 persons, all of whom had gathered early in the apostolic palace, was formed.

The Pope seemed to be the only tranquil one among the multitude. He arose unusually early and took a stroll in the Vatican garden. Then he allowed himself to be dressed by the Cardinals. He evinced no nervousness, and even said jokingly to the master of ceremonies, who the other day suggested that he should use the plural form in speaking of himself:

"We feel very well this morning, but we may be different on returning from our coronation."

Just before entering the sedia gestatoria he asked for his spectacles, and when the master of ceremonies discreetly answered that his Holiness would look better without them, he said:

"I have no desire to appear what I am not," and he wore them during the entire ceremony.

STALWART PONTIFF CENTRAL FIGURE IN LONG PROCESSION.

The procession was a long time in getting under way, but afterward as it moved through the magnificent halls and corridors of the Vatican it recalled former days, when all was colour and picturesqueness within the palace. The Pope was the central figure in the long procession. White robes and the mitre were worn without an effort, making a vivid contrast to those memorable occasions on which Pope Leo XIII. wore them, for Leo seemed always unable to support their weight. Over the Pontiff's head a canopy was held by eight men, while the historic ostrich feather fans with peacock tips gave a touch of barbaric splendour to Western eyes.

Surrounding Pope Pius were the Noble Guard in new red uniforms and gleaming helmets and carrying drawn swords, while in front marched the Cardinals, a gorgeous bit of colour with many handsome faces among them, the Cardinal-Bishops in their capes, the Cardinal-priests wearing chasubles and the Cardinal-deacons in their dalmatics.

Another figure which evoked murmurs of admiration and craning of necks was the chaplain, in his crimson cape, proudly bearing the cushion on which reposed the famous triple crown, so soon to rest on the head of Pius X. He was accompanied by the pontifical jeweler and by a special guard composed of Swiss, and was followed by the choir of the Sistine chapel.

Before leaving the Vatican the Pope went to the Sistine Chapel to worship before the sacrament exposed therein; then he passed through the sala regia and the Constantine staircase into the portico of the basilica. He there seated himself on a throne erected directly before the holy door and with seats around for the members of the Sacred College, the chapter of St. Peter's and the papal court. At the right of the throne stood Prince Orsini, the assistant to the papal throne, who withdrew his recent resignation of the post in order to participate in the function.

Immediately beside the Pope were the majordomo, Monsignor Cagiano; the master of the chamber, Monsignor Bisleti; the master of ceremonies, Monsignor Riggi, and Dr. Laponni.

The Pontiff was very pale, but composed.

CARDINALS OFFER GOOD WISHES AND THE POPE REPLIES.

The low ceiling sent back an exquisite echo of the "Tues Petsus," sung by the Sistine choir, whose voices were heard outside in the piazza of St. Peter's. Cardinal Rampolla, advancing with dignity, knelt at the foot of the Pope. He then said:

"I offer an act of obedience to your Holiness and wish you a prosperous and glorious pontificate."

The Cardinal recalled that the bodies of the first Pope and of St. Paul rested in the basilica, which fact, he said, was of good augury for the work of the new head of the Catholic church.

The Pontiff was visibly touched, and, answering in a trembling voice, warmly thanked the Cardinals for their good wishes.

"Good wishes," he said, "are extremely precious."

The procession then re-formed and proceeded to the door of the basilica, through which Pius X gave an almost terror-stricken glance, whispering to Dr. Laponni:

"Shall I ever be able to go through with it?"

The people in the basilica had in the meantime become impatient, and when the gleaming cross which preceded the cortege was seen it was greeted with great applause. On the appearance of the Pontiff himself it seemed as though the people would seek to carry him in their arms so great was their enthusiasm. Cries of "Pius, our Pope, our father!" and "Long live Pius X!" were raised, notwithstanding the large placards posted throughout the basilica saying "Acclamations are forbidden." Leaflets to the same effect were distributed among the crowd. The cries continued until the Pontiff was compelled to arise and bless the multitude and at the same time he made a sign for more reverential behavior. Silence was enforced when the choir announced its entrance with the "Ecce sacerdos Magnus," which was accompanied by the sweet notes of the silver trumpets.

TRANSITORY GLORY ACHIEVED BY MAN IS ILLUSTRATED.

A quaint ceremony was then carried out, the master of ceremonies knelt three times before the Pontiff, each time lighting a handful of hemp which surmounted a silver torch and as the flame flashed and went out he said:

"Holy father, thus passeth away the glory of the world."

The procession then proceeded, the Pope's face meanwhile illuminated by a smile. At the chapel of the sacrament there was another halt and his Holiness left the sedan chair and prayed at the altar. On re-entering the chair he was carried to the chapel of St. Gregory, where he officiated at mass, being assisted by Cardinals Macchi, Di Pietro, Segna and Vannutelli. Then all the Cardinals donned their silver capes and white mitres and the Pope was borne to the throne amid renewed acclamations and waving of handkerchiefs and hats.

Then was presented a magnificent picture to which no pen could do justice. The central figure was the venerable Pontiff, seated on the throne. Two lines of Cardinals clad in silver and scarlet reached to the high altar, with its burden of burning candles and sacred vessels, while around stood the papal guards, the Pontifical court, monks and officials. The cathedral was illuminated with twinkling lights, while the marble columns and walls rendered the colour scheme more vivid. Overhead was the most magnificent dome in the world, up to which floated the harmony of the music.

From the throne Pius X, surrounded by his suite, walked to the high altar, standing over the crypt of St. Peter, into which meanwhile Cardinal Macchi descended to pray. The altar was surmounted by a baldachino supported by four historic bronze pillars taken from the Pantheon.

The appearance of the Pope in that elevated position called for another burst of enthusiasm. The Pope then blessed the altar, and, after saying the "Indulgentiam" the maniple, a symbol of the cord with which Christ was bound on his capture, was placed, with great ceremony, upon the Pope's arm. At the same time prayers for the coronation were recited by Cardinals Vannutelli, Mocenni, Agliardi and Satolli.

Returning from the crypt Cardinal Macchi placed upon the shoulders of the Pope the Pontifical palium and attached it with three golden jeweled pins, saying:

"Receive this sacred palium as a symbol of the fullness of the Pontifical office, in honour of Almighty God, the most glorious Virgin Mary, his mother; the blessed Apostles St. Peter and St. Paul, and the holy Roman Catholic church."

Mass was then celebrated with great pomp and ceremony, the voice of the Pope becoming gradually more firm until it was even audible in the most distant corner of the immense church.

Following this Cardinal Macchi performed the rite of incensing the Pope, whom he subsequently kissed three times on the cheek and chest, as did Cardinals Segna and Vannutelli.

SENIOR CARDINAL DEACON BESTOWS THE TRIPLE CROWN.

On the Pope's return to the throne the Cardinals offered their last obedience to the Pontiff, kissing his hand and feet and receiving embraces by him twice in return. The bishops and archbishops kissed his foot and right knee, while the abbots kissed only his foot. The Holy Father then walked to the shrine of St. Peter for the culminating rites of the extremely fatiguing ceremony.

The whole Sacred College gathered about the Pope, singing Palestrina's "Corona Aurea Super Caput Ejus," while the choir burst forth into song. Cardinal Macchi then recited the Paternoster, and offered the following prayer:—

"Omnipotent and ever eternal God, dignitary of the clergy and author of sovereignty, grant thy servant, Pius X., grace to fruitfully govern thy church so that he, who by thy clemency, becomes and is crowned as father of kings and rector of all the faithful through thy wise dispensation may govern well."

"Amen," rang out from all corners of the Cathedral, from the choir, the people, the clergy and the patricians.

Cardinal Deacon Segna then raised the Pontiff's mitre and senior Cardinal Deacon Macchi placed on the white head the triple crown.

At this moment the church was filled with the ringing of bells, the blowing of silver trumpets, the triumphant strains of the choir and the acclamations of the multitude, which could not be repressed. When comparative silence had been restored Cardinal Macchi addressed the Pope in Latin as follows:

Receive the tiara ornament, with three crowns. Remember thou art father of princes and kings, the rector of the world, the vicar on earth of our Saviour, Jesus Christ.

"Amen" again burst forth from the concourse. Pope Pius X. was almost overcome and had scarcely strength left to impart the apostolic benediction. Cardinals Macchi and Segna granted plenary indulgence to all present and the procession then reformed and left the basilica in the same form as it came.

The Pope was visibly fatigued and his right hand shook as he raised it time after time to bestow his blessing.

When the ceremony was over all exits to the basilica were opened and within less than an hour the hall was empty.

POPE EXHAUSTED BY THE ORDEAL OF HIS CORONATION.

Strong as Pius X. is physically he supported the ordeal of his coronation to-day perhaps with less fortitude than did Leo XIII. when he was crowned, although Leo was merely a shadow of a man. But he possessed will which nothing could break. This evening when the Pontiff received the Duke of Parma he said to him:

Not counting the election, to-day was the most tremendous experience of my life. I must find a way to stop the noise in the church. It is an offence against religion.

Although there was a tremendous crowd at St. Peter's to-day not a single untoward incident occurred and the perfect order is attributed to the good organization of the military and the police. Premier Zanardelli, although not well, remained in Rome purposely to direct the policy of government. He left immediately after the coronation, saying:

Rome and Italy have given proof to the world of the freedom of the church.

The officers of the Vatican refused diplomatists accredited to the Quirinal any facilities for being present at the coronation. Nevertheless, some of them were there as civilians, through the courtesy of their colleagues of the French embassy to the Vatican.

The only member of the Pope's family present was his nephew, Parolin, who is a parish priest.

Cardinal Gibbons, after participating in the coronation ceremonies, started for the villa of the American College at Castle Gandolfo, accompanied by Monsignor Kennedy, rector of the college. The Cardinal will spend a few days in rest.

To-night all of the churches and religious institutions and many private houses were illuminated in honor of the occasion.

The Pontiff was so fatigued by the ceremony that the meeting of the consistory, which was to have been held to-morrow, was postponed.

THE PORT OF LONDON AND THE GROWTH OF MARITIME COMMERCE.

The history of the port of London, the oldest and the greatest of modern seaports, is in many ways an epitome of the history of modern commerce. As commercial methods changed from generation to generation, the accommodation afforded at the docks and quays of the city was modified; as trade routes rose or declined in importance, the character of the shipping on the River Thames altered; as new commodities came into prominence or ceased to be in demand even the merchandise handled underwent successive transformations. That there have been many changes is not in itself especially remarkable, but at London we have, owing to the antiquity of the port and the peculiar longevity of its institutions, buildings and public structures a visible and tangible record, as it were, of the commercial progress of the century.

The older docks, like the West and East India, the London and the St. Katherine docks, are in their present aspect, construction and equipment strongly reminiscent of what London was—and indirectly of what the commercial world was—one hundred years ago. The merchants of London had made a splendid start toward making their country the greatest commercial country in the world and their city the greatest commercial capital. They had already formed connections in every corner of the globe, the products of every zone were already being transported to their warehouses and London was becoming the world's chief distributing centre. The old docks, with their vast warehouses and their ivory, wool and other markets are now becoming obsolete, to be sure, but they still stand as sturdy witnesses of the city's greatness and progressiveness at that early day. They are also evidences of how business in those days was handled. Then the merchants were also the ship-owners. They had to provide facilities for holding and storing their merchandise until vessels were ready for its distribution or until it could be advantageously disposed of. More than this, the merchant importer—who was at once ship and dock owner—was likewise in many instances the exporter at the other end as well, having his own agents collecting his supplies for him in various foreign markets. To-day all of these functions have been separated and new ones interposed. The merchant, the ship owner and the dock owner are entirely distinct. The importer is rarely affiliated in any way with the exporters with whom he deals. The distribution of merchandise has become specialized to such an extent that at present the importer is as a rule a middleman or commission merchant rather than a wholesaler.

These changes are all reflected in the methods of handling business. Instead of being warehoused by the importer an increasingly large proportion of the imports arriving at London are now rushed on board railway trains and whirled away to their point of

final destination. Hence, in the newer docks at an old port like London we find scores of miles of railway track and long storage sheds instead of immense warehouses. The lighters which encumber the River Thames are also interesting relics of by-gone business methods and are being steadily superseded by quicker and safer rail carriage.

Another transformation that has taken place in maritime commerce is the rapid growth of ocean steamships. Throughout the nineteenth century there was a steady increase in the size of ocean-going vessels in obedience to the now widely recognized principle that the greater the size the lower the operating cost. According to Mr. Douglas Owen the average tonnage of the 4,210 vessels entering the port of London in 1820 was 185, against 943 for the 11,306 vessels entering in 1899. These figures fail to indicate adequately the actual increase in size of the larger ships, since in the tonnage returns the small vessels make a disproportionately heavy showing, being for the most part coasting steamers or vessels running to nearby continental ports. Thus a 1,000-ton steamer running to Antwerp would make ten voyages when a 5,000-ton steamer for Australia would make one. The average tonnage reported for the eleven voyages would be 1,364, whereas the real average of the two vessels is 3,000 tons. The situation may be better understood by referring to the Parliamentary returns on vessels exceeding 2,000 tons gross now in commission. In the report of the Port of London Commission the following statistics are given on this point:—

NUMBER OF STEAMSHIPS (EXCLUDING WAR VESSELS) EXCEEDING 2,000 TONS.

Tonnage.	1886.	1896.	1899.	1901.
2,000 to 2,999	943	2,010	2,120	2,177
3,000 to 3,999	317	804	1,090	1,311
4,000 to 4,999	110	323	414	560
5,000 to 5,999	40	214	395	578
5,000 to 6,999				400
7,000 to 9,999				107
Over 10,000				64

Progress in marine architecture has not yet reached its limits, either in point of size or speed, and it is certain that the next few years will witness the addition of an immense fleet of ocean leviathans to those already existing. Such vessels create new problems for almost every port and put every facility to the extreme test.

The present agitation for an entirely new scheme of port and dock control for the city of London has arisen primarily because the dock companies have of late years been unable to earn a sufficient income upon their costly and elaborate plant as to warrant them in making great outlays in improvements. The confusion incident to having a five-fold division of port authority has also long been recognized, and the proposals for placing the administration of the port on a new footing all contemplate doing away with this divided authority. In spite of these serious drawbacks, however, the port has continued to gain steadily in traffic and to retain its lead. The following table from statistics prepared for the Port of London Commission shows the increase in the tonnage entered at the port of London as compared with other leading European ports:—

TONNAGE ENTERED IN 1890 AND 1899 AND INCREASE DURING DECADE.

Port.	1890. Tons.	1899. Tons.	Increase. Tons.	Perc. Cmt.
London ...	15,388,228	13,141,455	2,246,773	17
Liverpool...	9,468,115	8,408,378	1,059,737	13
Glasgow ...	3,550,146	2,874,555	675,591	23
Southampton	2,784,013	1,668,943	1,116,070	67
Hull	3,115,748	2,530,435	585,313	23
Bristol	1,556,089	1,231,047	325,042	26
Hamburg...	7,765,950	5,201,825	2,564,125	49
Rotterdam	6,323,072	2,918,435	3,404,647	116
Antwerp...	6,842,163	4,517,698	2,324,465	51
Havre.....	3,868,381	2,816,277	1,052,104	27
Marseilles.	6,166,298	4,669,441	1,496,857	32
Genoa	4,557,430	3,393,612	1,163,818	34
Trieste	2,181,746	1,471,464	710,282	48

On the face of these returns London appears to be advancing much less slowly than many of its rivals, the percentage column making a decidedly bad showing as regards the increase in tonnage. This, however, is misleading. Actually only three ports gained more in tons than did London namely, Rotterdam, Hamburg and Antwerp. It is inevitable that a port enjoying an enormous traffic should show a smaller gain in percentage than minor ports where the total traffic is small and the arrival of a single new line may make a great increase in percentage. This may be aptly illustrated by Sir Henry Le Marchant who showed that a new line between London and Rotterdam bringing in repeated voyages 200,000 tons to the seaports would give London a percentage of 1.25 increase on its total of nearly sixteen million, while Rotterdam would show a gain of 3.12 per cent. on its total of six million. Had the smaller port been the percentage of increase would have been

ten. Another fact lost sight of by many writers in discussing these statistics of relative tonnage is the vast difference between the tonnage entering a port of call and that entering a port of final destination as regards the business thereby brought to a port. Southampton, which has made the largest increase in percentage of any British port is largely a port of call, many large steamers touching there to leave or take on passengers and mail, but receiving and discharging no merchandise. Several of the ports on the above list are to a greater or less extent ports of call where steamers leave or take on only a portion of their cargo. In the tonnage statistics no allowance is made for this, but they are credited with the total tonnage entering. London is exclusively a port of final destination, and the entire contents of every vessel that arrives there is discharged, so that in this case the figures are a positive index to the volume of traffic actually handled. Even in the case of Hamburg, Rotterdam and several other ports which are not primarily ports of call there is proportionately less done to the cargoes landed than in London, since a large part is at once loaded on trains or canal boats and forwarded to the interior, while at London vast quantities are stored, forming the reservoirs whence many staple markets of international importance draw their supplies.—*Dun's Review*.

SOME MODERN POETESSES.

A French correspondent writing to the *Academy* from Paris severely takes to task some ladies who have lately attracted the attention of the French world of letters. He says:—

Four women have lately claimed and won attention in French letters as poets: the Countess of Noailles, of Greco-Romanian origin; Mme. Henri de Régnier, of Cuban origin; Mme. Mardrus, the wife of a distinguished Orientalist—I am not sure if she is of purer French origin than the two former; and Renée Vivien, an Englishwoman. There is yet another whose name has a fine cosmopolitan ring, Mme. G. de Montgomerie. Two of these poets are French only by marriage, but they have acquired a notable place in modern French literature, Mme. de Noailles and Mme. de Régnier. Foreigners, one with Eastern blood in her veins, her exterior that of the irresponsible heroine of a Turkish tale; the other with that of an Iberian Creole in hers, and with something in her bearing as irresponsible and "inconscient" as her sister-poet, these two women writers astound us by the absolute absence of morality in their work and their point of view, by the incredible and amazing animality of their conception of life, and their perfectly abnormal incapacity to appreciate or even realise any single one of the fine issues of experience, any of the ennobling elements of existence. Both are artists in the fullest sense of the word, as far as vision and expression go. If would be difficult to name a poet more exquisitely susceptible to every refinement of physical sensation, with a more charming sentiment for physical nature than Mme. de Noailles, but this is the beginning and end of something that almost touches in its limitations, genius. Look not for a single idea, a single thought, in her polished, original, and delightful verse. It is the superlatively good poetry of an expressive animal, who lives by sensation, smell, and glance. It is much to have put into what might have been merely a gross conception of existence something of the inexplicable majesty, charm, and mystery of nature as Mme. de Noailles has done, but when we read in cold blood a poem like "Eva" (I heard it recited by the poet before its publication, at my late friend's, M. Gaston Paris, and found it shocking that a young woman in a mixed assembly of men and women should expound such a nefarious philosophy), we realise the dastardliness of one protected by fortune and rank from all the pitiable consequences of frailty, belonging to the privileged few who can impose their follies and caprices on society and not suffer for their sins. "Eva," she cries, "be without pride, without prudence, without fear. Infinite and profound nature bends over those who suit themselves in pleasure." And this is the gist of all her poetry. The same may be said of Mme. de Régnier. She, too, triumphs by a sincere lack of morality. It is by no means the immorality of a vicious person, but that of a charming and brilliant animal who cannot conceive that there should be consciousness of wrong in sexual relations. The suffering of thwarted desire, of satiety, of having taken the wrong person for lover or mistress, these are the psychological limits of illegal love. The difference between these poets is that whereas Mme. de Noailles' novel "La Nouvelle Espérance" is utterly bad, the prose scarcely readable, pretentious, twisted, quite un-French, the characterisation feeble to the degree of inanity, the immorality exasperating in its stupid unaccountableness, Mme. de Régnier's novel "L'Inconscient" is admirably artistic, finished, original and aimable even in its trifling

unconsciousness of evil. Mme. de Régnier is an artist in prose, Mme. de Noailles is only an artist in verse. When "L'Inconscient" was running through the *Revue de Paris*, an eminent Frenchwoman said to me that she was ashamed a woman had written such a book. I cannot share this view. A woman has as much right to write an immoral book as a man, and when we read her book our only consideration should be its value or its worthlessness. Independent of her sex, Mme. de Régnier's book is shameless and detestable, but it is charmingly done. And so, turning to Renée Vivien's poetry, I come back to the problem of the hour—why these cosmopolitans, who write excellent and sometimes even exquisite French, should prove themselves creatures without soul or sense of morality or decency. For Renée Vivien, the English-woman, goes one better than her Oriental and Créole sister. At a lecture given here by M. Ernest Charles on her poetry, many women hissed and some left the hall in indignation. A friend of mine who was present, a French mother of a family, told me she had not conceived it possible that any one would dare to write such things in our day. Alas! in France there is no censure, and Renée Vivien, with her strange tastes, was wise to choose the French tongue. She manages it admirably, so much must be admitted. Her goddess is Sappho whom, as the *Debats* ironically noted, she familiarly calls Psappha, and possibly deems herself in advance of the rest of humanity.

I am one of those impervious to the claims of Sappho. I hear of the marvellous things she has written, and see among the fragments, perhaps, a single line. "I loved thee, Athis, long ago"; or, "Thou forgettest me"; or, "Unless thou lovest another more than me"; or, "Athis, thou dost detest the thought of me, and thou fliest towards Andromeda"; or, "For Andromeda she has a splendid reward"; or, "Behold now what I sang so well in order to please my mistresses"; or "Those to whom I have done well are those who outrage me"—and I find that on these simple, insignificant lines an incredible legend is built. Some of the fragments even consist in such cries as:—"O beautiful, O gracious one"; "You are nothing for me"; "My care"; "I regret and I seek"; "Sleep on the bosom of thy tender mistress"; "Towards you, lovely one, my thought is not changeable." Renée Vivien interpolates her French interpretation of these lofty and luminous lines with the impassioned renderings of Mr. Swinburne. The French renderings are in form impeccable. There is a sobriety, a classic chiselling of expression in the verse of Renée Vivien which are remarkable. One regrets the subject, and feels that a woman's talent in our days might be more worthily employed than in incensing the memory of Sappho. The legend is a hideous one, and had best be left a literary curiosity without prompting such lines as—

Douceur de mes chants, allons vers Mytilène.
Voici que mon âme a repris son essor
Nocturne et craintive ainsi qu'une phalène
Aux prunelles d'or.

Allons vers l'accueil des vierges adorées:
Nos yeux connaîtront les larmes des retours.
L'ombre de Psappha, tissant les violettes
Et portant au front de fébriles pâleurs,
Sourira là-bas de ses lèvres muettes
Lasses de douleurs.

Renée Vivien belongs to the school of Pierre Louys. It is a lamentable school, and its consequences for us in modern life are odious. It is absurd to say that "artists," as certain writers dub themselves with silly pride, are irresponsible, and should be allowed to write as such. In the recent scandal of the Black Masses we have seen that the disequilibrate criminal, the wealthy young baron who organised them, had a satanic volume of Huysman's on his table when arrested. Who can say what part that book played in the sorry creature's degradation and ruin? And may not poetry like Renée Vivien's accomplish moral catastrophe elsewhere?

PRESIDENT ROOSEVELT ON LYNCHING.

President Roosevelt has written a letter to Governor Durbin, of Indiana, which we reproduce in full:—

"Oyster Bay, N. Y., Aug. 6, 1903.

"My Dear Governor Durbin: Permit me to thank you as an American citizen for the way in which you have vindicated the majesty of the law by your recent action in reference to lynching. I feel, my dear sir, that you have made all men your debtors who believe, as all farseeing men must, that the well-being, indeed the very existence, of the republic depends on that orderly liberty under the law which is as incompatible with mob violence as with any form of despotism. Of course mob violence is simply one form of anarchy; and anarchy is now, as it always will be, the handmaiden and forerunner of tyranny.

"I feel that you have not only reflected honour on the state which for its good fortune has you as its

chief executive, but upon the whole nation. It is incumbent upon every man throughout this country not only to hold up his hands in the course you have been following, but to show his realization that the matter is one of vital concern to us all.

"All men must feel the gravest alarm over the growth of lynching in the country, and especially over the peculiarly hideous forms so often taken by mob violence when coloured men are the victims, on which occasions the mob seems to lay most weight, not on the crime, but on the colour of the criminal. In a portion of these cases the man lynched has been guilty of a crime terrible, horrible beyond description, a crime so horrible that as far as he himself is concerned he has forfeited the right to any kind of sympathy whatsoever.

NO SYMPATHY FOR CRIMINALS.

"The feeling of all good citizens that such a hideous crime shall not be hideously punished by mob violence is due not in the least to sympathy for the criminal, but to a very lively sense of the train of dreadful consequences which follow the course taken by the mob in exacting human vengeance for an inhuman wrong. In such cases, moreover, it is well to remember that the criminal not merely sins against humanity in unpardonable fashion, but sins particularly against his own race, and does them a wrong far greater than any white man can possibly do them. Therefore in such cases the coloured people throughout the land should in every possible way show their belief that they, more than all others in the community, are horrified at the commission of such a crime, and are peculiarly concerned in taking such measures as will prevent its recurrence and bring the criminal to immediate justice. The slightest lack of vigour either in denunciation of the crime or in bringing the criminal to justice is itself unpardonable.

Moreover, every effort should be made under the law to expedite the proceedings of justice in the case of such an awful crime. But it cannot be necessary in order to accomplish this to deprive any citizen of the fundamental rights to be heard in his own defense, which are so dear to us and which lie at the root of our liberty. It certainly ought to be possible, by the proper administration of the laws, to bring swift vengeance upon the criminal, and the efforts of legislators, justice and citizens should be addressed to securing such reforms in our legal procedure as to leave no vestige of excuse for those misguided men who undertake to reap vengeance through violent methods.

TOO MUCH DELAY.

"Men who have been guilty of a crime like rape or murder should be visited with swift and certain punishment, and the just effort made by the courts to protect them in their rights should under no circumstances be perverted into permitting any mere technicality to avert or delay their punishment. The substantial rights of the prisoner to a fair trial must, of course, be guaranteed as you have so justly insisted. That they should be made subject to this guarantee, the law must work swiftly and surely, and all the agents of the law should realize the wrong that they do when they permit justice to be delayed or thwarted for technical or insufficient reasons. We must show that the law is adequate to deal with crime by freeing it from every vestige of technicality and delay.

"But the fullest recognition of the horror of the crime and the most complete lack of sympathy with the criminal cannot in the least diminish our horror at the way in which it has been customary to avenge these crimes and at the consequences that are already spreading therefrom. It is, of course, inevitable that where vengeance is taken by a mob it should frequently light on innocent people, and for the wrong done in such a case to the individual there is no remedy. But even where criminals are reached, the great wrong done by the mob to the community itself is well nigh as great. Especially is this true where the lynching is accompanied with torture. There are certain hideous sights which, when once seen, can never be wholly erased from the mental retina. The mere fact of having seen them implies degradation. This is a thousand-fold stronger when, instead of merely seeing the deed, the man has participated in it. Whoever in any part of our country has ever taken part in lawlessly putting to death of a criminal by the dreadful torture of fire must forever after have the awful spectacle of his handiwork seared into his brain and soul. He can never again be the same man.

"This matter of lynching would be a terrible thing even if it stopped with the lynching of men guilty of the inhuman and hideous crime of rape, but as a matter of fact the lawlessness of this type does not stop and never can stop in such fashion.

VIOLENT MEN ENCOURAGED.

"Every violent man in the community is encouraged by every case of lynching, in which the lynchers go unpunished, to take the law into his own hands whenever it suits his own convenience. In

the same way the use of torture by the mob in certain cases is sure to spread until it is applied more or less indiscriminately in other cases. The spirit of lawlessness grows with what it feeds on, and when mobs with impunity lynch criminals for one cause, they are certain to begin lynching innocent or alleged criminals for other causes.

"In the recent cases of lynching, over three-fourths were not for rape at all, but for murder, attempted murder and even less hideous offenses.

"Moreover, the history of these recent cases shows the awful fact that when the minds of men are habituated to the use of torture by lawless bodies to avenge crimes of a peculiarly revolting description, other lawless bodies will use torture in order to punish crimes of an ordinary type.

"Surely no patriot can fail to see the fearful brutalization and debasement which the indulgence of such a spirit and such practices inevitably portend. Surely all public men, all writers of the daily press, all clergymen, all teachers, who in any way have a right to address the public, should with every energy denounce such crimes, and support those engaged in putting them down. As a people, we claim the right to speak with peculiar emphasis for freedom and for fair treatment of all men without regard to difference of race, fortune, creed or colour. We forfeit the right so to speak when we commit or condone such crimes as these of which I speak.

CORNERSTONE OF REPUBLIC.

"The nation, like the individual, cannot commit a crime with impunity. If we are guilty of lawlessness and brutal violence, whether our guilt consists in active participation therein or in mere approval and encouragement, we shall assuredly suffer later on because of what we have done. The cornerstone of this republic, as of all free governments, is in respect for and obedience to the law. Where we permit the law to be defied or evaded, whether by rich man or poor man, black man or white, we are just so much weakening the bonds of our civilization and increasing the chances of its overthrow and of the substitution thereof of a system in which there shall be violent alternations of anarchy and tyranny. Sincerely yours,

—THEODORE ROOSEVELT."

THE COUNTY CRICKET CHAMPIONSHIP.

The following table shows the position of the English counties down to 10th August:—

	Played.	Won.	Lost.	Drawn.	Points.	Per-centage.
Middlesex.....(12)	11	6	0	5	6	100.00
Yorkshire.....(1)	21	12	4	5	8	50.00
Sussex.....(2)	18	5	4	11	3	42.85
Notts.....(3)	18	6	3	9	3	33.33
Worcestershire..(9)	16	7	4	5	3	27.27
Lancashire.....(5)	21	7	5	9	2	16.66
Essex.....(13)	18	6	5	7	1	9.09
Kent.....(7)	15	5	5	5	0	—
Warwickshire... (6)	14	3	4	7	1	14.28
Surrey.....(4)	21	6	8	7	2	14.28

Derbyshire.....(10)	13	4	7	2	3	27.27
Hampshire.....(15)	11	1	6	4	5	71.42
Leicestershire... (11)	15	1	7	7	6	71.42
Gloucestershire..(14)	14	0	7	7	7	100.00

Figures in brackets represent position last year.

NEWS FROM VARIOUS SOURCES.

The U.S. State Department has been informed by Mr. Choate, Ambassador to England, that the first meeting of the Alaskan Boundary Commission will be held at 11 o'clock on September 3rd in the British Foreign Office.

An important Parliamentary return issued in London on Aug. 13th shows that the imports into the British Colonies from the United Kingdom increased £6,000,000 from 1890 to 1900. The Colonies' exports to Great Britain increased £22,500,000. Great Britain's trade with the Colonies in 1900 was £316,500,000 and with foreign countries £167,500,000.

In the House of Commons on July 30th, Mr. Chamberlain stated that His Majesty's Government had refused to prohibit the employment of Asiatics in the mail steamers going to Australia, and if the Commonwealth persisted in its objection, the mail contracts would be on a different footing after 1905. The Commonwealth would make its own arrangements.

Some difficulty having occurred in recovering the cost of rations drawn by newspaper correspondents who accompanied the China Field Force, the Government of India have decided that correspondents shall only be allowed to accompany Indian military expeditions on condition that their employers deposit

a sum of 1,000rs. at the commencement of the operations to cover the cost of such rations, &c., and a similar sum every six months afterwards, besides giving a guarantee for the payment of any excess.

In the gun trials conducted by the Chilean Naval Commission, Messrs. Vickers, Sons, and Maxim have established a record in power for their 7½-in. naval or coast defence guns. One of these guns, made for the new Chilean battleship *Libertad* at the company's Sheffield works, developed with its 200 lbs. projectile a muzzle velocity of 3,003 ft. per second under normal conditions of pressure, showing muzzle energy of over 12,500 ft.-tons. In other words, these guns, using capped shot of Vickers' pattern, can perforate the latest type of 6-in. armour at a range of between three and four miles.

The first International Congress of Wireless Telegraphy, which opened at Berlin on August 4th, adjourned on August 14th after resolving to keep its proceedings secret for the present, and to publish them later. It is learned, however, that the majority reached an agreement regarding the principles of the control of International communication by wireless telegraphy. A semi-official statement issued regarding the Congress, renders it probable that Germany will soon call a more general conference to give final shape to the points agreed on, in the form of a treaty.

A dispatch was printed in London on Aug. 11th from Warsaw dated the previous Friday which said that an American association said to comprise 37,000 farmers had addressed itself to the Russian Ministers of Finance and Agriculture, requesting their assistance in raising the current prices of agricultural produce, particularly wheat, and saying that the association projects a great union between the wheat growing countries of the world for the purpose of fixing an annual minimum selling price. In view of M. de Witte's abhorrence of trusts, the correspondent adds, it is doubtful whether he will accept the bait.

In connection with the reports that Russia is storing vast supplies of steam coal at Port Arthur a South Wales correspondent states that the Russian Government placed orders early in the year for about 80,000 tons of Cardiff coal, and delivery is steadily proceeding. Three vessels took large consignments for that destination during the last week of July and others are being chartered for Port Arthur. There has not been so much coal shipped from Cardiff for that port in any previous year, but it does not appear that any further contracts for the Far East have recently been placed in South Wales by the Russian Government.

A Melbourne dispatch of Aug. 11th said:—The chief organ of the protectionists in Australia thus defines their attitude toward preferential trade: "We require to have the next federal parliament formed on a protectionist basis, led by a protectionist government, not to amend the present tariff, but to guard it intact and to be prepared to negotiate a preferential tariff with Great Britain on the basis of increasing the present duties against the foreigner to the verge of prohibition, thus throwing into the trade of the motherland all the Australian imports now coming from Germany and America." To that end the protectionist organ has been proceeding for months past.

A telegram from Rome dated Aug. 12th said:—Vesuvius is again causing intense alarm in the surrounding region. The eruptions of the volcano were very heavy to-day. From a fresh opening at the base of the principal crater, two streams of lava are issuing, and in a few hours covered a large tract. One stream is going swiftly towards the village of Ottajano, the direction taken by the famous eruption in 1872. The whole district round the volcano is shaken by frequent earth-shocks, and a panic prevails, the population crowding the churches to pray, or gathering in open spaces for safety. Experts affirm that so far there is no reason to fear a serious disaster.

An extraordinary meeting of the shareholders of the Cunard Steamship Company was held, on July 19th, in Liverpool, at which it was decided that in future no foreigner should hold office as a Director, or be employed as an officer of the Company, and that no share should be held directly, or indirectly, for the benefit of a foreigner or a corporation under foreign control. This alteration in the Articles of Association was a condition precedent to the arrangement with the Government by which the latter advanced two millions to the Company to build two large and high-speed steamers, and also pay an annual subsidy of one hundred and fifty thousand pounds.

General von Witzleben, who is regarded as one of the best authorities on the Russian army, has written an article estimating the strength of the Russian army in the Far East. He thinks the following an accurate estimate of the army in the Amur military district, viz., 80,000 infantry, 14,000 cavalry,

4,000 field artillery, with 168 guns, 4,000 siege artillery, and 4,000 technical troops. The writer adds that heavy bodies of troops can easily be pushed up to the Amur from the reserve of infantry brigades, the brigade of rifles, the Third Siberian Regiment of Cossacks, and the reserve artillery division. With these reinforcements the Amur forces could be easily raised to 150,000.

A New York telegram of August 15th said:—Mr. Joseph Pulitzer has provided the sum of \$2,000,000 to establish a school of journalism at Columbia University. A new building for the school will be erected on Morningside Heights at a cost of \$500,000. An important feature will be an advisory board to be nominated by the donor and aid in devising a course of instruction. In making the announcement of Mr. Pulitzer's gift, the *World* to-morrow will say:—"Students purposing to enter upon the career of journalism will find accessible here courses of study that will for this profession be equivalent to what other professional schools supply for other professions, while young men already engaged upon the newspaper, and desiring to advance themselves more rapidly by the cultivation of their aptitudes, may find in these courses a valuable assistance. It is believed that this will be of advantage to them immediately, and ultimately, to the press of the whole country."

The Director of Kew Garden has communicated to *The Times* the text of a report made by Dr. Prout, the principal medical officer of Sierra Leone, from which it appears that the high expectations formed of the so-called "mosquito plant" are baseless. Captain Larnmore, R.A., resident in Northern Nigeria, announced last April that this variety of basil possessed the property of driving away mosquitoes, and even, if they came into contact with its leaves, of killing them; while collateral confirmation as to the prophylactic efficacy of allied basil was furnished by so high an authority as Sir George Birdwood. Unfortunately, Dr. Prout's experiments show that mosquitoes neither avoid the plant nor are killed by it, while even fumes from its burning leaves strong enough to drive human beings out of the room merely reduced the majority of mosquitoes subjected to their action to a temporary stupor. The disappointment occasioned by the very positive results of these experiments will, of course, be considerable.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

TURKEY TO CRUSH DISAFFECTION.

London, August 28.

It appears that Turkey, realising the danger of delay, has decided to crush the insurgents by an overwhelming force.

BAD CROPS IN ENGLAND.

Continuous heavy rains in England have caused widespread damage and the harvest prospects are of the gloomiest. The army manoeuvres have been postponed in consequence of the state of the crops.

THE CZAR TO TRAVEL.

The Czar, accompanied by Count Lamdorff, will visit the Emperor Francis Joseph in September.

THE CUP RACES.

Later.

The cup race is off. Owing to *Reliance's* skilful jockeying, neither crossed the starting line till after the handicap gun was fired, *Shamrock* thus losing 107 out of her 147(?) seconds handicap. It is the worst tactical defeat sustained at the start in any American Cup race. *Reliance* kept the lead on a fifteen mile windward stretch, turning the outer mark some minutes ahead of *Shamrock*.

[Either *Reliance* has won this race, the third, or she has not. The telegram leaves something uncertain.—Ep. J.M.]

London, August 28.

The *Reliance* outsailed the *Shamrock* throughout in the last race. She led by twelve minutes at the outer mark, and towards the latter end of the race it became a drifting match against time on the part of the *Reliance*.

London, August 30.

The yacht race has been postponed till Monday owing to a gale.

London, September 1.

The cup race on Aug. 31st was not concluded. The course was fifteen miles to windward and back. There was a heavy sea and a six-knot wind. *Reliance* cleverly deprived *Shamrock* of the windward position, and steadily increased her lead till after two and a half hours she was two miles ahead, the wind then dropping.

London, September 3.

The Cup race has been postponed, there being no wind on the 2nd.

REPORTED ASSASSINATION OF AMERICAN VICE-CONSUL.

London, August 28.

The American Vice-Consul at Beirut, Syria, has been assassinated. President Roosevelt has demanded satisfaction for the outrage and has ordered the European squadron of the United States, now in the Mediterranean, to proceed to Beirut forthwith.

London, August 29.

An attempt which has been made to burn the American missionary college at Kharput, Armenia, has increased the excitement in America in connection with the Beirut affair. The American squadron has left Villefranche.

THE REVOLT IN ADRIANOPLE.

The revolt is gaining ground in Adrianople.

THE BEIRUT AFFAIR.

London, Aug. 30.

The assassination of the Vice-consul at Beirut, as officially announced at Washington, now appears to have been an error in transliterating the Government cipher telegram. It now appears that a man actually fired at the Vice-consul, but missed.

London, September 3.

The American Minister refuses to accept the excuse that the Beirut affair was merely a casual shot fired during some wedding celebrations. He is pressing for a settlement of various outstanding disputes, which the despatch of an American Squadron is expected to accelerate.

THE "SUPAO" CASE.

It is announced in Washington that the State Department instructed its representatives in China to decline to surrender the Shanghai journalists.

TROOPS FIRE ON A CONSUL.

A detachment of troops passing the Austrian Consulate at Uskub fired a volley at the Consul. Nobody was injured, but there are grave indications of uncontrollable fanaticism and want of discipline among the troops.

In diplomatic circles in Constantinople the situation is regarded as being of the most serious nature.

SERVIANS WISH TO INTERFERE.

London, August 31.

A mass meeting held at Belgrade urged the Government to interfere on behalf of the Macedonians.

THE USKUB AFFAIR.

It appears that the volley fired at the Austrian Consulate was simply the act of a party of Albanian reservists unintending any evil. It was quite accidental that the shots struck the Austrian consulate.

FROM HONGKONG TO CEYLON.

London, September 1.

Sir H. A. Blake, G. C. M. G., Governor of Hongkong, has been appointed Governor of Ceylon.

DO NOT LIKE IT.

The German press is dissatisfied with

American intervention in the Near East as likely to upset the political calculations of Germany, Austria and Russia.

M. WITTE.

M. de Witte has been appointed President of the Committee of Ministers at St. Petersburg, retaining supreme direction of the Ministry of Finance.

KING EDWARD IN VIENNA.

London, September 2.

King Edward had a most cordial reception in Vienna. The streets were elaborately decorated. At a banquet given at the Hofburg cordial toasts were exchanged recalling the close and confidential relations which have existed between the royal and imperial Houses and the two countries.

King Edward has appointed the Emperor Francis Joseph a Field Marshal of the British Army.

PRINCE FERDINAND.

Prince Ferdinand is returning to Sofia.

THE CZAR.

London, September 3.

The Czar of Russia will probably go to Vienna earlier than was expected in order to confer with the Emperor Francis Joseph about Macedonia.

KING EDWARD'S VISIT.

The enthusiasm in Vienna in connection with King Edward's visit is unabated. The streets are constantly thronged with people waiting to see the King. Never in recent years has the visit of a foreign monarch to Vienna caused such immense crowds and evoked such cordiality.

(RECEIVED AT THE LEGATION OF FRANCE.)

KING EDWARD IN VIENNA.

Saigon, September 3.

The King of England is visiting the Emperor of Austria in Vienna.

MACEDONIA.

The situation in Macedonia remains always serious. The Sultan of Turkey is continually calling out troops to put down the rebellion. No new encounters of a serious nature have taken place.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

PEST IN NEWCHWANG.

Eleven cases of pest occurred among the Chinese at Newchwang on the 31st of August, according to a report received from Mr. Consul Segawa on the 31st ult.

PEST AT NEWCHWANG.

Newchwang, September 2.

An English physician has pronounced the disease which has broken out here to be true pest. The malady is spreading among the Chinese in Inkow.

FINE WEATHER.

Mokpo, September 2.

The weather is excellent, and the crops of rice and cotton are very good. The thermometer at noon to-day registered 87°.

FLOODS AT WIJU.

Wiju, September 2.

There has been no change here. Since the 20th of last month heavy rain has fallen. The Yalu is in high flood and many timber rafts have been wrecked. There has been great injury to crops and other property.

(FROM THE "DEUTSCHE JAPAN POST.")

MORE RUSSIAN SHIPS FOR THE FAR EAST.

Berlin, August 28.

A Russian squadron is expected in Kiel shortly, to coal, en route to the Far East.

THE BALKANS.

It is thought that Russia regards the Balkan out-

break as a means to divert the attention of Europe and leave Russia a free hand in the Far East.

Bulgaria will probably be held to blame if the Balkan disturbances continue. Italy is prepared to act in Albania, if there should be any further obstruction to the execution of the reforms demanded by Austria and Russia and agreed to by Turkey.

A MACEDONIAN CONFERENCE.

It is reported in the British and French press that a Conference of the Powers on the Macedonian question is imminent. Russia, however, will not welcome a conference, and other powers are not likely to interest themselves in the idea.

FLOODS IN SILESIA.

Later.

M. Emile Loubet, President of the French Republic, has sent 5,000 francs for the relief of sufferers from the floods in Silesia.

RAILWAY ACCIDENT IN ITALY.

Berlin, August 29.

A collision has occurred at Udine (Upper Italy) between a military train and a goods train. Nine men were killed and eighty injured.

MURDER OF AN AMERICAN CONSUL.

The American squadron which visited lately European ports has been despatched to Beirut (Syria) on account of the murder of the American Consul there.

RUSSIAN FINANCE.

The Russian Government Bank has increased its issue of currency by twenty-five million roubles owing to a greater demand for money. The gold reserve exceeds the authorized issue of notes to the extent of 476 million roubles.

THE AMERICAN TREASURY.

The Secretary of the Treasury in New York has deposited in the state banks 40 millions of dollars to cover any emergency which might happen during his absence on holiday leave.

TYPHOID AMONG GERMAN TROOPS.

Berlin, August 30.

There has been an outbreak of typhoid at Hammelberg, in Southern Germany. It was at first reported that 400 soldiers were attacked, but it turns out there were only 150, and they have all quite recovered.

THE BEIRUT AFFAIR.

The Wali of Beirut reports that there was an attempt on the life of the U.S. Vice-consul there, but no injury was done. The U.S. squadron is, notwithstanding, proceeding to the spot.

RUSSIAN MINISTERIAL CHANGES.

M. de Witte has been relieved of the portfolio of Finance, and appointed President of the Cabinet. M. von Pleske, director of the National Bank, is appointed Minister of Finance.

St. Petersburg, August 31.

M. de Witte has been authorised to undertake the negotiation of new commercial treaties.

THE DIRECT NEGOTIATIONS.

Berlin, September 1.

The London *Times* states that negotiations are proceeding between Japan and Russia concerning Korea and Manchuria. This report is believed at Berlin to be correct, and in Berlin official circles the news is received with satisfaction.

THE BALKANS.

King Edward and Emperor Francis Joseph at Vienna have discussed the Balkan situation, taking as their basis the maintenance of the *status quo*. Probably the Powers will shortly send a collective warning to Bulgaria.

THE RECENT ADMINISTRATIVE CHANGES IN RUSSIA.

It is believed at Berlin that M. de Witte, the new President of the Cabinet, will be nominated Chancellor of the Russian Empire. His successor as Minister of Finance, M. Pleske, is said to be a friend of Germany and willing to make concessions in commercial negotiations.

NEW N.D.L. HARBOUR.

Berlin, September 2.

The Norddeutscher Lloyd is willing to construct harbour works at Blanche Bay in New Britain (now known as New Pomerania).

GERMAN FINANCES.

The returns for 1902 for the German Empire show a deficit of 30½ million marks on the Budget estimates.

BERLIN NEWS.

General von Habuke of the infantry and General Count Haeseler of the cavalry have been appointed members of the Prussian upper chamber.

FURTHER HONOURS FOR M. WITTE.

M. Witte, formerly Minister of Finance of the Russian Empire and now President of the Council of Ministers, has received the additional appointment of member of the Supreme Council of the Empire.

AMERICA AND THE NEAR EAST.

Berlin, September 2.
It is announced that America will probably send two cruisers to Beirut.

THE SULTAN OF TURKEY.

The celebration of the Sultan's accession to the throne has taken place quietly at Constantinople.

KING EDWARD AT VIENNA.

The visit of King Edward to Vienna is looked upon by the English press as a strengthening of the *status quo*. The friendly demeanour of Austria is also generally noted.

King Edward has appointed the Emperor Francis Joseph a Field-Marshal of the British Army.

REVOLUTION AT PANAMA.

A revolution has broken out at Panama (Colombia).

M. PLESKE'S SUCCESSOR.

M. Timashev, the former colleague of M. Pleske, has been appointed Governor of the Imperial Bank, in succession to M. Pleske, the newly appointed Minister of Finance.

(FROM THE "JIJI SHIMPO.")

BALKAN TROUBLES.

London, August 27.

A special train from Buda Pesh to Constantinople has been blown up at Kretchvalgard (?) station near Adrianople with the result that some cars were destroyed and seven persons were killed. A revolutionist carrying explosives was found among the passengers.

The Porte has assured the Powers that Bulgaria is assisting the insurgents.

RUSSIA AND JAPAN.

The *Viedomosti*, published in St. Petersburg, says that immediate measures must be taken against Japan which is an enterprising and aggressive danger to Russian territory.

NEW RUSSIAN WARSHIPS.

London, August 21.

The new Russian battleship *Slava* of 13,600 tons, the cruiser *Oleg* of 6,670 tons, and *Gemichug* of 3,000 were launched at St. Petersburg last Wednesday.

THE RUSSIAN NAVAL RE-ENFORCEMENTS.

The Russian battleship *Cesarevitch* (13,100 tons) and many other warships are expected to be added gradually to the Pacific Squadron.

U.S. CONSUL ASSASSINATED.

Mr. Taggersen (?) U.S. Vice-Consul at Beirut, Asiatic Turkey, was assassinated last Sunday. The U.S. Squadron has been despatched to the place from Nice and reparation has been demanded.

THE BALKAN INSURGENTS.

It is stated that after several battles at Adrianople, the insurgents have gained a victory.

The Turkish soldiers who have been mobilized are organized into 350 battalions of which Naschel (?) Pacha is Commander-in-Chief.

M. DE WITTE.

London, August 31.

M. de Witte, Minister for Finance, has been appointed President of the Committee of Ministers St. Petersburg. M. Pleske has succeeded to his portfolio.

FUNERAL OF LORD SALISBURY.

The funeral of Lord Salisbury took place to-day. It was wholly private.

KING EDWARD.

King Edward this afternoon arrived at Vienna where the Emperor of Austria received him at the railway station. The streets were brilliantly dressed and the people warmly welcomed the King.

THE BALKAN CRISIS.

The Turkish regulars have recovered their ground in Neveska (?) and killed two hundred Bulgarians.

ERUPTION IN HAWAII.

According to information from Honolulu, Kilauea, the volcano, has commenced active eruption.

THE MOROCCO TROUBLE.

The troops of the Sultan of Morocco have been routed at Taza, sustaining great loss.

(FROM THE "ASAHI SHIMBUN.")

THE RUSSIAN SQUADRON.

London, August 27.

The Russian Black Sea squadron is reconnoitring near the Bosphorus.

BALKAN AFFAIRS.

A meeting of citizens has been held at Sophia and decided that the Bulgarians shall be persuaded to submit their disputes to the arbitration of the representatives of the Powers, in order to settle the affair in favour of the Macedonians.

MACEDONIAN REFORM.

London, August 28.

The Macedonian Committee have presented to the

Porte and the Powers, a reform bill to the effect that representatives elected by the natives and appointed by the Powers shall control domestic administration and troops of the Powers shall be stationed in the country.

BALKAN AFFAIRS.

London, September 1.

Information from the Balkan has been received to the effect that according to the Turkish side the insurgents will be subdued within a week, while news from Sophia states that the conditions are becoming more critical.

The Bulgarians are opposing the intention of the Government to resist armed men who are about to pass over the national frontier. The Bulgarian Government is in a difficult situation.

The insurgents in Adrianople vilayet have occupied important places along Black Sea coast.

ILLNESS OF LORD ROBERTS.

Field-Marshal Lord Roberts is ill.

(FROM THE "N.-C. DAILY NEWS.")

THE TROUBLE IN MACEDONIA.

London, August 24.

The Russian demands on the Porte have already been executed. They include the reprimanding of Hilmi Pasha, the Inspector-General of Macedonia.

The Turkish Grand Vizier is going to Macedonia on a tour of inspection.

London, August 25.

Refugees who have arrived at the mouth of the Bosphorus to the number of 800, include the Governor and officials of Iniada.

They declare that the bands operating in Eastern Adrianople consisted of Bulgarians in uniform armed with rifles.

The Turks have abandoned Iniada and other places on the coast of Adrianople.

THE WAR IN NIGERIA.

London, August 22.

Burmi was the last stronghold of the Sultans of Sokoto, and its fall completes the destruction of the great Mahomedan empire of Nigeria, and has established British rule over a vast territory.

STRENGTHENING THE U.S. SQUADRON.

Hongkong, August 22.

The U.S. cruisers *Albatross*, *Cincinnati*, and *Raleigh* have left for Chesoo.

[The *Albatross*, formerly the *Abreu*, is a cruiser of 3,769 tons' displacement and 20 knots' speed, built at Elswick in 1899. The *Cincinnati* and *Raleigh* are sister-ships of 3,213 tons' displacement and 19 knots' speed, built in 1892 at Brooklyn and Norfolk respectively.—ED.]

THE ZIONIST MOVEMENT.

London, August 24.

It was announced at the Zionist Congress at Basle that the Imperial Government has offered a portion of British East Africa for the purposes of Jewish colonisation.

FATAL FIRE AT BUDAPESTH.

London, August 25.

In a fire at a fancy goods warehouse, above which were residential flats, at Buda-Pesh, the inmates jumped from the windows. Thirteen were killed and sixteen injured and it is believed that fifty others perished in the flames.

THE EXPORT OF ARMS TO CHINA.

An Imperial decree has been issued at Berlin removing the prohibition of the export of arms and war material to China.

TRANSVAAL WAR COMMISSION'S REPORT.

London, August 26.

The report of the Transvaal War Commission has been published.

It condemns the absence of a plan of campaign, which resulted in a plentiful crop of misunderstandings.

It condemns the grave deficiencies in stores.

It acknowledges the prompt and effectual treatment of the situation when the country was in the midst of a great war, but notes that the home defence was left dangerously weak.

SHANGHAI-NEWCHWANG RAILWAY.

Tientsin, August 27.

It is reported that the Russians, having secured the bonds of the extramural railway line, are now arranging to assume control of the direction.

Mr. M. T. Liang, Director of the Imperial Railways of North China, went yesterday ostensibly to view the damage done to the line, but it is believed that he has really gone to consult the Russian officials.

MACEDONIA.

London, August 27.

The total number of Turkish troops called out on a war footing in Macedonia is 350 battalions, say 330,000 men.

Later.

It appears that Turkey, realising the danger of

delay, has decided to crush the insurgents with an overwhelming force.

The Russian fleet is still cruising off the Bosphorus. A great mass meeting held at Sofia has resolved to invite all Bulgarians to assist in securing the triumph of the Macedonians; and to memorialise the representatives of the Powers to secure their intervention.

London, August 28.

The Macedonian Committee has sent to the Sultan and Powers a scheme for the administration of Macedonia by representatives of Europe, assisted by native representatives, with an international army of occupation.

The Sultan has now appointed Nassir Pasha as Commander-in-Chief in Macedonia, instead of Ibrahim Pasha, who was originally designated.

A bomb was thrown at the dining-car train south of Adrianople; two carriages were wrecked, seven persons killed, and eighteen injured.

THE ZIONIST MOVEMENT.

The Zionist Congress has accepted the offered territory in East Africa. It is an elevated tract two hundred miles long between Mau and Nairobi.

Mount Mau is about 100 miles due East of the Victoria Nyanza.

TRIAL OF WHITTAKER WRIGHT.

Whittaker Wright has been remanded to the 15th of September.

NEW COTTON FIELDS.

Two reports recently received by the U.S. Department of Commerce and Industry bear with unusual significance on present cotton-crop conditions in the United States and forecast some shadows in the future path of the great industry of growing and manufacturing the "staple." The cultivation of cotton is just now receiving considerable attention in Antigua in the British West Indies. Montserrat has for a few years been raising a small quantity of high-grade cotton and is showing an inclination to largely increase the acreage this year. The agricultural department of the West Indies and the Agricultural Society of Antigua have been making efforts to induce the planters to put a part of their land in cotton. Several public meetings have been held. The last meeting, at which the Governor presided, was held on June 29. The Cotton Growers' Association of Manchester, England, has shipped—and they are on the way to Antigua—a gin and a press as a loan, free of charge, to the island. The Agricultural Society, with headquarters at Barbados, intends to furnish another gin and an engine and to erect a building on land furnished by the Government. In this "central factory," as it is called, they will receive all cotton and bale it free of cost to the planter, excepting only the actual cost of labour; or they will remove the seed and bale the cotton for the seed, at the option of the planters. In addition to this the agents of the Royal Mail Steamship Company announce that they are instructed to receive all cotton raised in Antigua consigned to the Cotton Growers' Association at Manchester, England, and forward the same free of all charges for freight and handling. It is announced in the press that promises for the planting of about four hundred acres of cotton this year were made at the recent meeting at Government House. Much of the seed is now in the ground.

From Coburg comes the information that an association has recently been formed by a group of French merchants and spinners for the study and development of the culture of cotton in the French colonies, particularly in Africa. Reference is made in the prospectus to the efforts of the British empire to encourage the growing of cotton in Egypt and India and to a German society for promoting the cultivation of cotton in Togoland and other German colonies. South ern Algeria is considered by a writer in the *Depeche Coloniale* as deserving the attention of the French Colonial Cotton Growing Association. The oases created by the public work department of Tunis in southern Algeria means of artesian wells have proved extremely fertile, and with palms and other trees to shelter the cotton from the winds would well serve the purpose of the association. In support of suggestion, the writer quotes from a report to the Tunisian department of agriculture to effect that samples of cotton had been collected

at El Oudiane, El Hamma and Nefta, and that the better grades grown at Gabes had been valued by Havre brokers at \$193 per metlar. The cost of transport per metric ton is estimated at \$19.30 from Tozeur to Gafza by cart, \$6.18 from Gafza to Sfax by rail, and \$4.84 from the latter port to Marseilles.

REMARKABLE HARVARD STUDENT.

A correspondent of the New York *Tribune* gives some details with reference to the remarkable experiences of Mr. Marcellus F. Graupner, who, though still a young man, has tramped across the Continent of North America 20 times, has twice braved the dangers of the Alaskan gold mines, has "hobbed" his way once around the world, and, at a conservative calculation, has travelled, without scrip or purse, an aggregate distance of 115,000 miles. The writer says:—Graupner is a genius at travelling. On a dizzy track, on top of a swaying freight car or doubled up in a sandhole on a gravel train, it is all the same to him. No matter where he wishes to go or how little money he has, he gets there. Railroad men all over the country know or have heard of the "college hobo." Graupner has "hobbed" since he was a young boy. He first started out at the age of about 15, partly because his parents, who lived in Guthrie, Okla., had some financial reverses at that time, and partly because of that spirit of adventure which has made him a veritable "globe trotter" since then. He was an ambitious boy, and he wanted "to see the world." But he had no money. There was only one thing to do. That was to board the nearest freight train and trust to his own resources and—to luck. Since that day Graupner has seen more of the world, for less money, than probably any other living man.

In spite of all his wild life and rough experiences, Graupner has always been anxious for an education, and for that purpose, after he had knocked about the world for ten years or so, he entered Harvard as a special student in the fall of 1899. Having no money, he depended on his own efforts to defray the expenses of his education, but in this, as in everything else, he showed his native resources and energy. He secured the agency for some of the largest publishing houses in the country, and sold books to Harvard students, doing a business that in a single year netted him nearly \$1,000. As usual, he did this against big obstacles. The rule at Harvard is that "no book agent, pedler, &c." shall enter any of the college dormitories, and it was with this ukase that the young student had to contend. The fact that he was a student, however, helped him, and, armed with his little green bag (the same that all the Law School students and Harvard professors use), stuffed with books, he invaded the wealthiest dormitories and disposed of his goods to the wealthiest undergraduates in the university. All the wealthy students knew him and patronised him. He sold the very choicest sets of books—books which none but a rich man could afford to buy—and consequently he lived like any other college student in '99 College House.

At the same time he worked faithfully with his studies and engaged in other activities. It seemed as though, with all his work, he could not wear out his energies, so that winter found him slaving in the Hemenway gymnasium, anxious to establish a record as an intercollegiate strength champion. For a time he led the college in this branch of athletics and to-day it is one of his proudest reflections that he was once "strong man" of the Crimson university. One year at Harvard, however, was not enough to cure Graupner of his "hobo" tendencies. The summer following found him again restless and itching to stride out into the world once more. So in 1901 he was off to Nome, sleeping, eating, and riding with the common tramp, and thinking only of making some great find which would bring him back to Boston a wealthy man. Nome, however, did not agree with the "college tramp" in 1901, and the end of it all was that he broke down as completely as a man can break, and, after a 300-mile tramp through rain and mud—a tramp in which his clothes gave out and he was all but starved—he landed finally in civilisation hardly able to hold up his head. Still he did not give up the idea that there are gold and a fortune in the Klondike. Last summer found him repeating the experiment, and last summer he met with the same lack of success. A few weeks ago Graupner once more felt "the call of the West," and so one day, when a friend went around to call on him, he found the ambitious young "hobo" with a belt of cartridges, a "seven-shooter," a long knife and a happy smile, ready to leave Cambridge again. "Yes," said Graupner, "I have determined to go away. I'm off to Arizona to be a bad man. This with a broad, complaisant grin. "It's too slow around here." And so he went away."

PASSENGERS.

ARRIVED.

Per British steamer *Empress of Japan*, from Vancouver, B.C.:—Mr. and Mrs. Pearson, Mr. D. Strachan, Major Von Etzel, Miss Buckland, Mr. and Miss Lonholm, Miss Langstreth, Miss Le Coates, Capt. Mrs., and Miss Parrish, Miss Aldrich, Miss Craig, Miss Tweedie, Miss Armstrong, Mr. and Mrs. Tenkins, Mr. Thornton, Mr. P. Gleddon, Mr. R. W. Borthwick, and Mr. T. A. Barnes, in cabin; Mr. E. T. Faukes, Mr. T. Bana, Mr. Tung Tue Kam, Mr. Y. Lew Tong, in intermediate. In Transit:—Dr. and Mrs. Wainright and 3 children, Lieut. S. Bailey, Mrs. Beach, Misses Beach (2), Mr. Fung Tsu Yin, Mr. Ah Sun, Mrs. du Bose and son, Mr. Holcombe, Mr. M. Grick, Mr. Rehnitzer, Mr. Miskin, Prof. Sharp, Mr. F. Bodley, and Dr. Rennie, in cabin; Mr. Wilson, Mr. Duran, Mr. Le Duck, and Mrs. Lee Yow, in intermediate; 141, in steerage.

Per American steamer *City of Peking*, from Hongkong via ports:—Major H. Kirby, Mrs. Kirby, Mr. M. S. Veisum, Mrs. S. W. Fountain and servant, Miss Fountain, Capt. H. Jarvis, Mrs. R. de B. Layard, native servant and governess, Miss Layard, Mr. R. de B. Layard and native servant, Mr. R. Kaho, Mr. H. Goldman, Mr. Summers, Miss Summers, Mr. Kenmore, Mr. Ko Hai Sung, Mr. R. Schwob, Mr. R. Masujima, Mr. E. B. Clegg, and Mrs. E. B. Clegg, in cabin. For Honolulu:—Mrs. Chang and servant, and Miss Chang, in cabin. For San Francisco:—Mr. E. E. Webster, Mr. R. L. Stafford, Mr. J. Robertson, Mr. J. E. Spencer, Mr. A. H. Hearri, Dr. E. B. Bryan, Mrs. Leang H. Sien and servant, Mr. Leang H. Sien, Mrs. Shuen, Miss Wong, Miss Leang H. Sien, Mr. C. F. Applequist, Mr. S. P. R. Thomas, Mr. J. J. Eaton, Mr. E. C. Phillips, Mr. B. F. de Vore, Mrs. E. C. Phillips, Mrs. W. J. Sissons, Miss Sissons, Mr. W. J. Sissons, Mr. W. W. Pettit, Mr. W. J. Simms, Mr. H. R. Clark, Mrs. M. Smith, and Dr. Ellen C. Gage, in cabin.

Per British steamer *Empress of India*, from Hongkong via ports:—Major E. C. Carter, Dr. Jose Albert, Capt. Clement, Miss I. Clifford, Mr. Oldham, Mr. E. Quelch, Mr. A. Shewan, Mr. Champion, Mr. W. S. Valentine, Mr. H. S. B. Brindley, Mr. T. de Berigny, Bishop Brent, Mr. C. J. Arnell, Mr. H. W. Jefferies, Mr. R. D. Hoyt, Mr. Southey, Mr. H. W. Dobbie, Mr. H. H. Bristow, Mr. W. C. Wood, Mr. G. Arone, Mr. A. R. Firth, and Mr. Minnett, in cabin. For Vancouver:—Miss C. Watson, Major H. H. Brown, Mr. T. H. Phillips, Capt. J. R. Bryan, Dr. D. H. Doherty, Mr. and Mrs. Howes, Major and Mrs. Brockman and child, Mr. and Mrs. St. G. Little, Mr. W. Jamieson, Mr. W. Burns, Capt. Anley, Mr. and Mrs. Button, Miss M. Miller, Rev. P. Barnhardt, Mr. R. E. Monogue, Mr. J. H. McMichael, Mr. R. D. Hunt, Mr. H. Bing, Mr. B. Matsuki, Mr. H. C. Knowlton, and Mr. Anderson, in cabin; 23, in intermediate; 345, in steerage.

DEPARTED.

Per French steamer *Gironde*, for Marseilles via ports:—Dr. E. Blanc, Mr. Casimir Mery, Mr. Leonce Boucard, Mr. C. J. Thompson and native servant, Miss H. Schumacher, Mr. E. Gueville, Mr. R. G. Blackwell, and Mr. H. F. J. Corbett, in cabin; 3, in steerage.

Per Japanese steamer *Kumano Maru*, for Australia via ports:—Mr. and Mrs. G. S. Knowles, Mr. G. C. Alcock, Mr. Daniel, Mr. G. Gertz, Mr. C. V. Gulcare, Mr. Y. Yukino, Lieut. K. Mukai, Prof. S. Terano, Mr. Brindley, Mr. Smith, Mr. H. Kurobe, Mr. Wm. C. Kein, Capt. Mosley, Dr. Macleod, Mr. Crisslia, Mr. Paul Klessch, Mr. V. Du Boise, Mr. Lincoln, Mr. E. L. Vail, and Mr. James Boyd, in cabin; Mr. H. Murota, Mr. G. Murase, Mr. T. Hayano, Miss Tung Ho, Mr. Ting Chae, Mr. L. A. Weeks, Mrs. Grassenbocher and child, Mr. T. Furuya, and Mr. Pearce, in second class; 31, in steerage.

Per British steamer *Empress of Japan*, for Hongkong via ports:—Mr. A. E. Collins, Mr. A. Pedoulac, Vice-Consul Gen. A. H. White, Mr. and Mrs. C. S. Barff, Mrs. and Misses (2) Menzies, Mr. H. A. Little, Mr. and Mrs. S. Moutrie and child, Mr. and Mrs. F. P. Pratt, Mrs. Simpson and child, Mrs. De Muref, Mrs. D. E. Wolfe, Mrs. and Misses (3) Keileys, Mr. Keileys and native servant, Miss Vaughan, Miss Banes, Dr. H. R. Macauley, Miss Ben Yusuf, Mr. C. Crowther, Mr. E. H. Smith and native servant, Mr. A. K. Firth, Mr. Oketo, Miss Crossley, Miss Hetch, Mr. W. G. Clarke, Mr. F. B. Deacon and native servant, Mr. J. W. Heitman, Mr. and Mrs. Stevogel, Mr. Wm. A. Steehler, Mr. W. M. Kuprecht, Mr. Hart Buck, Mr. F. M. Shay, Rev. H. Loomis, Mr. and Mrs. Barto, and Mr. Stiebel, in cabin; Mr. P. Capleton, Mr. Thos. Taylor, Mr. Jos. J. Smith, Mr. F. Proctor, and Mr. Wm. Bissett, in intermediate.

Per American steamer *City of Peking*, for San Francisco via Honolulu:—Mr. C. F. Applequist, Mr. J. Baradach, Dr. E. B. Bryan, Mrs. Chang and servant, Miss Chang, Mr. H. B. Clark, Mr. J. J. Eaton, Dr. Ellen C. Gage, Mr. A. H. Haerri, Mr. Emile Krug, Mr. W. Mitchell, Mr. W. W. Pettit,

Mr. E. C. Phillips, Mrs. E. C. Phillips, Mrs. H. P. Priest, Mr. James Robertson, Mr. Carl Rhode, Mr. J. Robertson, Mr. Walter Seale, Mrs. Shuen, Mr. Leang Hsun, Mrs. Leang Hsun, Master Leang Hsun, Mr. W. J. Sissons, Mrs. W. A. Sissons and child, Mr. J. E. Spencer, Mr. B. L. Stafford, Mr. L. Swartjes, Mr. S. P. R. Thomas, Mr. B. F. de Vore, Mr. E. E. Webster, and Miss Wong, in cabin.

Per Japanese steamer *Kosai Maru*, for Shanghai via ports:—Mr. R. W. Horsey, Mr. Browne, Mr. N. Ochiai, Mr. T. Goodridge, Mrs. Y. Hashiguchi, Mr. M. Hattori, Mr. J. W. Williams, Mr. K. Wada, Mr. Lee, and Mr. K. Takisawa, in cabin; Mr. H. Miyake, Mr. Chu Ut Sei, Mrs. K. Nakagawa, Miss Y. Nakagawa, Mr. N. Otsuka, Mrs. K. Nakano, Mr. and Mrs. Lee and 2 children, Mrs. Lin and 3 children, Mr. S. Ota, Mr. G. Dicken, Mr. Moo, Mr. Cho, Mr. Bae, Mr. Chin, and Mr. Lik, in second class; 25, in steerage.

THE SECOND LONGEST BRIDGE SPAN IN BRITAIN.

Illustrating the cantilever bridge at Connel Ferry, near Oban, *Engineering* says that it comes second only to the immense structure which crosses the Firth of Forth at Queensferry, so far as the length of the main span is concerned, the structure illustrated having a clear span of 500 ft., while the two piers are 524 ft. apart, centre to centre. This bridge is the most important feature of a new railway 25 miles long, which is to be opened shortly as an extension of the well-known Callendar and Oban Railway in Scotland, worked by the Caledonian Railway Company. The cantilever bridge crosses the narrowest part of Loch Eive at the falls of Lora, which at spring tides have a drop of about 4 ft. in a length of 100 yards, or thereabouts. The current, both at flood and on ebb, is very rapid; although it would be difficult to gauge the exact speed, owing to the number of eddies and whirlpools, the average velocity cannot be less than 10 or 11 knots at ordinary spring tides. This current made it necessary to place the piers for the bridge clear of the channel, towards the sides where the current is somewhat slacker than in the middle. The total width of the waterway is 690 ft., and the two piers are 524 ft. apart, centre to centre; the headway is 50 ft. between high-water level and the underside of the central girders. The total height from high water to the highest point of the bridge is 125 ft. The independent middle span, which is carried by the two cantilever spans, has a length of 233 ft.; but, as is usual in such structures, this centre span was built out in continuation of the cantilevers from each end, temporary connections being made at the ends of the centre span until a junction was formed at the centre of the structure. The land approaches consist of three masonry arches on each side, each of 38 ft. 6 in. span; the width of the piers is 22 ft. 4 in. There are eight stations on the railway, which passes through a country rich in scenic attraction and full of historical associations, and made more widely known by one or two of the charming romances of Robert Louis Stevenson, notably "Kidnapped."

"PARSIFAL" AND BAYREUTH.

A good deal of strong feeling has been aroused in German musical circles by the purpose of M. Conried to produce "Parsifal" in New York. Mdme. Cosima Wagner, the widow of the composer, has written a letter in which she points out that Wagner himself expressed the strong wish, and even the positive direction, that "Parsifal" should not at any time be produced anywhere but at Bayreuth. It is not, therefore, any question of the interests of Bayreuth or anywhere else, but simply of whether the will of the author should be respected. None of the Bayreuth artists will appear in the American production, which Conried affirms his purpose of persevering with, and Herr Mottl, although under engagement to conduct for Conried's series, has explicitly declared in a Munich journal that he will not conduct "Parsifal," which will thus be introduced to America in the picturesque guise of a pirate.

SERIOUS DAMAGE TO BATTLESHIP.

Washington, August 13.
Acting Secretary Darling to-day received from Captain Emery, commanding the *Indiana*, the senior officer present, the report of the board appointed to investigate the accident to the hull of the *Massachusetts* yesterday at East Harbour, Maine. Captain Emery reports that two compartments of the battleship are full of water—in all about 300 tons. Slight leaks in other compartments are reported and although ship there is a crack about eighteen inches long and a half inch wide. A second crack extends four feet across the plate and fourteen inches in the seam. Orders have been sent to the Brooklyn navy yard to get the dock there in readiness for the *Massachusetts*, which is to go there for repairs, which may cost a large sum. One hundred thousand dollars was spent on the *Massachusetts* when she grounded in New York harbour in 1899. The pilot was suspended for that accident.

Bar Harbour, Maine, August 13.

Late this afternoon divers who had been examining the United States battleship *Massachusetts*, which had her forward plates cracked while leaving the harbour in a fog yesterday, found that she was more seriously damaged than was at first thought to be the case, as the ship was settling aft as well as forward. The ship will be moved into more shallow water so that if anything gives way she will not sink deep enough to cause excessive damage. The divers were unable to locate any crack in the after part of the ship.

A MACEDONIAN APPEAL.

A Sofia telegram of Aug. 10th said: The delegates here of the Macedonian Committee have addressed an appeal to the chief representatives of the Powers as follows:

"Sofia, August 10.

"Your Excellency: The members of the Macedonian committee have the honour to bring to your notice the following resolutions with the request that you communicate it to your government.

"The Mussulman's systematic persecution has compelled the Christians in Macedonia and the vilayet of Adrianople to institute a general uprising. They have had recourse to this extreme measure after exhausting all pacific means to secure the intervention of Europe to enforce the provisions of the Berlin treaty. At the present moment intervention is the only means of remedying the evil and stopping bloodshed. The sporadic efforts of the Powers to secure reforms have failed. They have resulted merely in a recrudescence of Turkish fanaticism and greater oppression.

"It is evident that reform measures to be efficacious must be made by the appointment of a Christian governor-general of Macedonia, some one who has never held office under the Porte and who must be independent of the Turkish Government in the exercise of his functions, and the further appointment by the Powers of a joint, permanent administrative board with full powers to deal with any disturbance.

"Having published the foregoing facts in a civilized world and made known the causes which have driven the Macedonians to despair, the committee for the Macedonians now in arms propose to continue to fight until the object of their uprising has been attained.

"(Signed)—For the committee: Doctors Tz. cheff, Christo and Matof."

THE
ORIGINAL & GENUINE
WORCESTERSHIRE.

**Bovril
is the best
beverage ;**

because it not only stim-
ulates, but tones-up and
builds-up body and brain.
Added to gravies, hashes,
stews, &c., BOVRIL
makes them immensely
stronger, richer, and more
palatable and nourishing.

**MELLIN'S
FOOD**

For INFANTS and INVALIDS.
Purely Vegetable and Untouched by Hand.
MELLIN'S FOOD is free from Starch. When prepared
is similar to Breast Milk.

Mellin's Food Works, Peckham, London, England.

SWISS WATCH INDUSTRY. ONLY 20/-

To Every Commission, Post Office and Railway Servant, and Persons Requiring a Splendid
Watch, we offer this opportunity of their obtaining this: "Original Swiss Watch" (our
Exclusive Property). The Watch in question is made on the World Renowned
"GLASHUTTE SYSTEM" and received the Highest Award at the PARIS
EXHIBITION IN 1900. IT IS THOROUGHLY REGULATED, A PERFECT
TIME KEEPER, AND CARRIES WITH IT A THREE YEARS' WRITTEN
WARRANTY. It has Three Easy Cases: Rosette, which are
made of unbreakable Union Metal, Electrically Gold Plated on
the Latest Principle, and the finest Communion it cannot deter-
THE DIFFERENCE BETWEEN OURS AND THE USUAL
TO QUINZA WATCH. It wears like lead and is the only
watch of its kind having that advantage. To introduce this
watch to the British Public and to enable us to deliver
EITHER LARGES OR BENTS for £10, £12, £14, £16, £18, £20, £22, £24, £26, £28, £30, £32, £34, £36, £38, £40, £42, £44, £46, £48, £50, £52, £54, £56, £58, £60, £62, £64, £66, £68, £70, £72, £74, £76, NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 12TH, 1903.

BIRTH.

At 73-c Bluff, Yokohama, on Sept. 9th, the wife of C. J. WHITNEY, of a Daughter.

DEATHS.

At Kobe on Sept. 8th, at 3 p.m., PAUL LAUNAY, aged 48 years.

A Hyères (Var), France, le 6 courant, HENRI DE CUERS DE COGOLIN, âgé de 86 ans.

SUMMARY OF NEWS.

BARON TSUDA SHINZO, who had been ill for a long time, died on Sept. 2nd.

PROFESSOR K. TSUBOI, of the Imperial University, has been decorated by the Queen of the Netherlands with the Order of the Lion.

On the afternoon of Sept. 2nd, a thunderstorm raged in the district of Kasugai, near Nagoya. A house was burned by lightning and a woman was killed.

Six men, including some accountants of the Nagoya Post Office, were arrested on Sept. 5th at the restaurant, Taisen-ro, on a charge of gambling.

A CHINESE youth was arrested by the Kotobuki-cho police as he was about to escape from the shop of a watch dealer, at Matsukage-cho, where he had stolen a nickel watch.

At Wakamatsu district, Goto, a new seam of anthracite coal has been found, and a Nagasaki merchant has received official permission to work it on trial. The coal is said to be of the best

quality, and to extend over an area of 520,000 *tsubo*.

A DESPATCH reached Shimonoseki on Sept. 8th stating that owing to a gale telegraphic communication between Fusan and Yuensan had been interrupted.

A COOLIE named T. Tajima (50) who was working in the hold of the German steamer *Sambia* on Sept. 8th was killed by the fall of some rock salt which slipped from the slings.

ACCORDING to official investigations the number of suicides seems to be increasing in the Empire. In 1897, they numbered 7,685 of both sexes, and in 1901 grew to 8,582 persons.

A WOMAN named Fuji, 19 years old, living at Tani-machi, Azabu, Tokyo, committed suicide on Sept. 7th by drinking a quantity of sulphuric acid. Poverty is reported as the cause.

Two lighters collided on Okawa river at Fukagawa, Tokyo, on Sept. 6th. In the accident, the infant child of the sendo of one of the lighters was thrown off into the water and drowned.

A PEKING telegram to the *Niroku*, dated Sept. 8th, states that Viceroy Chang Chih-tung is suffering from slight indisposition. He declines visits from all excepting such as come on important business.

THE tea traders at Shidzuoka held a meeting on Sept. 3rd when they decided that the sum of *yen* 17,180 will be required for the expense of exhibiting their products at the St. Louis Exhibition.

S. HIRUMA and H. MURAYAMA, accountants of the War Department, have been sentenced to four months' imprisonment with hard labour and a fine of *yen* 20 each. The charge against them was bribery.

ACCORDING to latest official investigation, the inhabitants of Yokohama city number 313,695 and their houses 117,530. The national tax levied amounted to *yen* 336,375.97 and the city tax to *yen* 210,937.16.

MR. TSUDA, graduate of the Tokyo Law College, who had been charged with gambling at Shimonoseki, was sentenced, on Sept. 9th in the Local Court, to two months' imprisonment with hard labour and a fine of *yen* 5.

MR. S. SHIMADA and other prominent gentlemen in Tokyo will entertain Mr. E. W. Cole, the Australian visitor, to dinner at 6 p.m. on Sept. 13th at the Maple Club, Shiba Park, Tokyo. Mr. Cole will leave for home on the 17th.

THE Kobe correspondent of the *Jiji* states that the number of military officers leaving the port for China is increasing. On Sept. 10th, five members of the General Staff Office were to leave for Tientsin by the steamer *Nagato Maru*.

OWING to the heavy rains which began on Sept. 1st, all the rivers in the district of Teshio, Hokkaido, caused inundations so that an extent of the railway, and an iron bridge were damaged. On Sept. 3rd, traffic was still suspended.

MR. T. AWOKI, manager of the London branch of the Specie Bank, who has been suffering from illness for some time, has been ordered to return home. Mr. Y. Yamakawa, manager of the Kobe branch, was appointed to the vacant post.

It is stated by the *Mainichi* that the authorities have decided to carry out repairs on the Imperial Diet building at an outlay of *yen* 300,000. The work is expected to take three years, commencing

from the beginning of the coming year. An engine for the electric light will also be provided. The light has hitherto been supplied by the Tokyo Electric Company.

THE Nippon Yusen Kaisha has decided to open a service between Kobe, and Kiautschou, Port Arthur and Chinnampo (Korea). The *Ise Maru* will start the proposed line, leaving Kobe on Sept. 23rd. Each round trip is expected to take twenty days.

THE Metropolitan Police issue statistics to the end of 1902 showing that there were 273,969 dwellings in the city of Tokyo, in which 1,220,248 persons were living. Of these 637,615 were male and 583,333 female. The number of foreign residents was 15,12.

MR. S. FUKUHARA, candidate for the Hiroshima Prefectural Assembly, who has been charged with contravention of the Election Laws, was sentenced in the District Court on Sept. 8th to three months' imprisonment with hard labour and four years' suspension of civil rights.

A PASSENGER train which left Yokosuka at 8.05 p.m. on Sept. 5th for Yokohama was delayed by a break down between Ofuna and Totsuka. Another engine was despatched to Ofuna and the train arrived at Yokohama at 11 o'clock instead of 9.20, the due time.

HEAVY rains fell over Awamori prefecture from Sept. 4th, causing inundations at Furukawa. Over a hundred houses were flooded and the residents are seeking relief from the local government. The rain still continued on the 6th, when this telegram was despatched.

ACCORDING to a member of the crew of the steamer *Sumidagawa Maru*, which arrived at Shimonoseki on Sept. 9th from Yuensan, Korea, heavy storms raged at that port and at neighbouring places from the 1st to the 5th. All cargo work on the ship was stopped.

EARLY on the morning of Sept. 2nd, a passenger train collided with an empty train at the Tabata station, on the Nippon Railway. Both locomotives, nine passenger cars and ten goods cars were more or less damaged. The accident is reported to be due to the negligence of a pointsman. No one was injured.

MR. S. SAITO, former Vice-Minister for Agricultural and Commercial Affairs, and some others are promoting the establishment of an emigrant company with a capital of *yen* 200,000. Their object is to send Japanese workmen to South America. A temporary office has been established at Hiyoshi-cho near Shimbashi.

THE death is announced by drowning of Captain Diacre commanding the French protected cruiser *Redoutable*. The disaster occurred during a trip up the Mekong river in company with M. Simons, director of the Messageries Fluviales, and M. Demay, an assistant in that company. Near the Khone rapids the boat capsized, and only M. Simons and M. Demay succeeded in getting ashore.

Two parliamentary members and eleven ordinary members of the prefectural assembly of Chiba, who had been connected with the affair of bribery and fraud recently disclosed, were sentenced on Sept. 9th in the Local Court, to from one month to six months' imprisonment with hard labour, and a fine of *yen* 4 to 15, and the bribes they had received were ordered to be confiscated. One of the parliamentary members will also undergo six months' police surveillance. It is reported that they will appeal to the higher Courts and two of the accused were released on bail after the sentence.

KOREA.

Saturday, September 5.

M. Pavlov's claim does not appear to be altogether so unreasonable as the accounts recently received would tend to indicate. Nevertheless it is still difficult to interpret. The line ascribed to him by latest intelligence is that a draft agreement with regard to the land at Yong Am-pho was actually concluded, Russia and Korea being satisfied so far as the views of their representatives were concerned. This agreement subsequently underwent, at the hands of the Koreans, alterations which M. Pavlov was unwilling to accept, but which did not touch the main question, namely, that certain lands were to be leased. To that, at all events, Korea stood pledged, and M. Pavlov asserts that she was bound to substitute some form of covenant which would give effect to the gist of her promise. Such, at any rate, is the contention attributed to him by Seoul telegrams. But it must appear to thoughtful persons that, Korea being the donor in the matter, M. Pavlov is bound to accept what she gives according to her own manner of giving, and has no right whatever to dictate fashions as well as facts. If the signature of the Korean Foreign Minister and the ratification of the Sovereign be essential to the validity of the concession, some right to exercise discretion must necessarily be recognised as belonging to those authorities. Even granting that the basis of the discredited covenant had the previous approval of the Court, it does not appear to have had the endorsement of the Foreign Office, and we presume that the latter's co-operation is more or less essential. The Emperor can over-ride the Foreign Office if he chooses, but supposing that he does not choose to do so in this particular matter, then the agreement has failed to come into existence, and M. Pavlov has no manner of right to practically vitalize it. But it is evident that he may have a solid grievance. He may complain that he has been misled, since an expectation founded on the Court's compliance at the outset has been disappointed by the prudence of the Foreign Office in the sequel. He will make the most of this grievance we may be sure, and he is entitled to do so. But it must be frankly confessed that the world's sympathy can not be extended to a Russian diplomatist posing as the victim of a violated pledge.

Several Tokyo journals publish semi-official statements with regard to the Berlin telegram which, on the strength of a Peking communication to *The Times*, described the bases of the Russo-Japanese negotiations to be that this country is willing to recognise the interests established by Russia in Manchuria provided that Russia correspondingly recognise Japan's interests in Korea, especially in the matter of railways. It is not denied that direct negotiations are in progress, but it is most emphatically denied that such an outline correctly represents them. The alleged bases are said to be very far from the truth.

The Emperor of Korea may well have fled to the innermost recesses of his Palace and taken refuge in the seclusion of Lady On's apartments. It is rumoured that quite a phalanx of demands confront his Government. Russia is pressing not only for the Yong Am-pho lease, but also for the right of laying a line of telegraph from the Amur region to Wonsan via Kyong-heung. This is the line that the Russians attempted to put up last year in

defiance of the Korean Authorities, who consequently pulled down the poles, a species of destructive protest which seems to be within special range of Korean courage. France is asking for gold-mining privileges at Chhang-son. Belgium is urging that the position of principal adviser to the Throne should be given to her subject who recently entered Korea's service. Germany demands a change in the location of her mining concession. America wants a large extension of limits of the Unsan gold-digging area. And Japan is seeking a charter for the Seoul-Wiju line as well as the premier place for the adviser she has furnished. The Korean statesmen are having a busy time.

The Emperor of Korea is said to have rejected the twice-tendered resignation of the Foreign Minister, and the present expectation is that Li will resume office. But his perplexity will remain. The reason of his resignation, according to public understanding, was that having promised to sign the Yong Am-pho agreement on a certain day, he encountered on Japan's side opposition so strong that signature would have been impossible even assuming M. Pavlov's consent to the amendments proposed by Li. The promise was evaded under shelter of M. Pavlov's obduracy, but now if Li resumes his portfolio he will have to meet M. Pavlov, who will doubtless soon find some means of circumventing the objectionable amendments, if, indeed, he does not accept them rather than jeopardise the covenant. What the unhappy Li will do in that event we fail to conjecture: send in his resignation again, perhaps.

The *Kokumin* has a telegram from Seoul saying that on the 3rd instant a Cabinet Council was to be held for the purpose of discussing the questions of the Yong Am-pho lease and the opening of Wiju. The correspondent does not indicate that any change has taken place in Korea's views on these subjects.

Monday, September 7.

It is stated that the Korean Government adheres to its proposal of closing Pyong-yang in consideration of opening Wiju. The points made are that two places are already open in Pyong-yang-do, namely, Pyong-yang and Chin-nam-po, and that the addition of Wiju would raise the number to three, which is excessive. Moreover, there does not appear to be any prospect of development at Pyong-yang in the matter of foreign commerce. The Korean Foreign Minister is therefore disposed to submit to the Cabinet a scheme for opening Wiju and closing Pyong-yang, but preparatory to doing so, he has addressed to the Foreign Representatives a *note identique* seeking their opinion. To this note it is said that the German Representative has replied signifying his assent; that the Russian has made no answer, and that the British and American are not likely to object. One of the telegrams received in Tokyo with reference to the matter, indicates that the note was not sent to the Japanese Representative. That, however, is scarcely credible. Japan is the Power chiefly interested. Several hundreds of her subjects are settled in Pyong-yang, where they pursue a trade mere or less lucrative. Their sudden and compulsory removal would be a measure for which compensation must obviously be paid, and of course Korea would have to pay it. We trust that Japan will resolutely oppose any such retrogressive step. Her own history should teach her that nothing can be less trustworthy than inference drawn from

present circumstances as to the future commercial development of any place. Many of us can recall the times when most pessimist views were freely ventilated about the foreign trade of Japan; when it was pointed out that the amount of that trade, after more than 20 years of effort, did not exceed a paltry \$1 1/2 per unit of the population; when the prophets proclaimed that the bubble had burst, and when the foreign residents were recommended to resign themselves as best they could to a paltry field of enterprise. Such predictions look quite comical by the light of present facts, and it is more than probable that Korean forecasts about the future of Pyong-yang will be similarly belied by events. Japan has a solid footing there and it would be a suicidal act on her part to agree to effacement. Her policy, we venture to think, should be to hold fast by everything she possesses in Korea and to extend instead of restricting her sphere of operations. Other Powers may find it a matter of material indifference or political convenience that Pyong-yang should be closed, but it is Japan that has solid interests there and we trust she will defend them.

There are conflicting accounts about M. Pavlov's doings in the matter of the land-lease of Yong Am-pho. One story is that, foiled in his efforts to obtain the consent of the Foreign Office, the Russian Representative has succeeded in inducing the Emperor to issue private instructions that the lease should be signed. Another account alleges that the Korean Government has definitely determined not to sanction the lease, and if M. Pavlov presses for approval, he will be advised to discuss the matter with Japan. Yet another statement denies that the Korean Foreign Office is opposed to granting the lease. According to this last account the Foreign Minister, when submitting the draft agreement to the Cabinet, accompanied it with an explanation that since the timber-felling concession contained a clause engaging that Russian subjects should be permitted to lease land along the Yalu for workshops and residences, the application about Yong Am-pho could not be refused. That explanation, however, being deemed insufficient, the documents were returned to the Foreign Office with instructions that more explicit information should be supplied.

Among these accounts it is difficult to say which may be credited. The *Nichi Nichi*, of the 4th instant, and the *Hochu* are responsible for the first; the *Niroku* for the second; and the *Nichi Nichi* of the 5th inst. for the third. The only thing certain is that the signing of the lease is in abeyance and that M. Pavlov is using his best endeavours to remove the difficulty. He has again asked for an audience with the Emperor. The British Representative also is said to be active. On the 3rd instant he proceeded to the Foreign Office and renewed his application for the opening of Wiju and Yong Am-pho.

A wild story is transmitted from Peking by the correspondent of the *Kokumin Shinbun*, who says that the tale has reached *The Times'* correspondent in the Chinese capital. It is to the effect that an English ship, chartered by an American citizen, was engaged carrying arms and munitions of war to the Yalu Valley for Russian uses, when she was seized by a Japanese man-of-war. This is a fine yarn. The public is not aware that Japanese men-of-war are engaged in police duty on the Yalu.

There is a Korean in Tokyo at present who came recently to Japan for the alleged

purpose of inspecting railways, but whose real object is said by the news-mongers to be an inquiry into Japan's true intentions. In other words, this Mr. Hyon Yong-un is commissioned to find out whether Japan intends to choose war as the alternative of certain contingencies. Mr. Hyon is furnishing some food for gossip, but the sensationists have not yet gone the length of announcing the result of his delicate inquisition.

Tuesday, September 8.

Intelligence from Seoul says that Mr. Hayashi, the Japanese Representative, has intimated to the Korean Government his unqualified dissent from the proposal of closing Pyong-yang in consideration of opening Wiju. Mr. Hayashi is reported to have declared that whatever view might be taken by other Powers Japan could never agree to such an arrangement and that he must insist upon re-affirming his original proposition.

With regard to this matter, it is now reported that Germany is the only Occidental Power which has returned a favourable answer to Korea's proposal, or, indeed, any answer at all. The other Governments maintain silence and their views are consequently unknown. There is, of course, a strong suspicion that Russia favours the closing of Pyong-yang, and the suspicion derives confirmation from Germany's action, for it is now abundantly plain that wherever her own interests are not directly menaced, Germany shapes her Far-Eastern course in accordance with Russia's convenience. It would be, perhaps, a little difficult for M. Pavlow to figure as a promoter of this scheme to close Pyong-yang. Such a course could scarcely be reconciled with the terms of the Protocol of 1898, which pledges Russia not to impede Japan's commercial development in Korea, and it would certainly be a very substantial impediment to close a town where several hundreds of Japanese subjects have settled and are carrying on business. We trust that we do no injustice to M. Pavlow when we say that he presents himself to us as a Minister whose scruples weigh little against his zeal for his country's aggrandisement. But we assume that he would not wastefully antagonise Japan, as he would be doing did he openly advocate the closing of Pyong-yang. As to Germany's alleged attitude in the matter, we must await some explanation of her approval of a step so retrogressive, since, while making every allowance for her desire to placate Russia—a desire quite natural in the circumstances—we do not find in that a sufficient motive.

Japanese newspapers—the *Chiuo* and the *Niroku*—write at some length about Mr. Hyon, the Korean who is now in Tokyo and who is supposed to be seeking Japan's assistance for his country in her present difficulties. Mr. Hyon, we read, is some forty years of age. In 1883 or 1884 he graduated at the Keio Gijuku, and returning to Korea, obtained official appointment which, however, he subsequently forfeited and at the same time was sentenced to banishment in connexion with one of the historical vetoes upon the export of grain. The China-Japan war rescued him from his evil plight, and since then he has been tolerably active, his influence being always lent to the cause of progress. There is some mystery connected with his present mission. The ostensible purpose of his coming is said to be inspection of railways, but our Tokyo contemporaries allege that his real instructions are to address himself to Marquis Ito, Baron Komura and Prince Konoye for the purpose of enlist-

ing their sympathy and coöperation in supporting Korea against the pressure to which Russia is subjecting her. He has obtained interviews with Marquis Ito and Baron Komura, it is said, but Prince Konoye is too ill to meet him. The *Chiuo* undertakes to give Marquis Ito's reply verbatim:—"It is very regrettable that Korea should be involved in trouble on account of Russo-Japanese politics, but she may rest assured that Japan's sentiment towards her has not undergone any change."

Wednesday, September 9.

It is now stated that the object of Mr. Hyon Yong-an in visiting Japan is to obtain currency for the idea of converting Korea into an Eastern Belgium. If that be true, then we must assume that the Korean Government has revived the project which Mr. Cho Pyong-sik was sent to promote two years ago. Cho was a very much more important personage than Hyon, and since Korea is now attempting to achieve the same end with inferior machinery, we must infer either that she attaches proportionately less importance to the scheme or that she thinks the opportunity better. Yet it is hard to believe that any opportunity whatever exists. What Powers can be expected to join hands for such a purpose? Not Russia surely. Russia's obvious policy for several years has been to keep Korea in a condition such as would facilitate her consumption when the Great Northern Power's digestion should be prepared for the meal. In that respect Russia has been partially, but only partially, successful. Instead of encountering the opposition of various foreign interests in the peninsula she has to encounter those of Japan alone, or virtually alone, while Korea herself remains as powerless to resist absorption as she was thirty years ago. It is stated confidently by those who ought to know that Russia would have been willing to contrive the neutralization of Korea a year ago. That is very likely, but a year ago Russia's position in Manchuria was very different from what it is to-day, and a year ago she might have been willing to make some sacrifice for the sake of consolidating that position. A year ago, too, she had not established a footing in the Yalu Valley. It is scarcely conceivable that she would now give favourable consideration to any programme for the Belgianization of Korea. With Russia objecting, France's objection also must be anticipated, and Germany follows as a matter of course. Thus the Powers would be found divided into two camps, and no scheme of neutralization could be successful under such circumstances.

Thursday, September 10.

According to the *Asahi's* Seoul correspondent the British Representative has intimated, with reference to the Korean Government's proposal to close Pyong-yang, that as Japan's tradal interests are chiefly concerned in this matter, he has nothing to say if Japan has not. At the same time he explains that he is without instructions from his Government on the subject.

Referring to the opening of Wiju Mr. Jordan is said to have re-iterated his demand, and to have repeated, at the same time, the comment already made by him, namely, that as there is no anchorage at Wiju for ships of any size, a custom house can not conveniently be located there. Hence some point further down the river must be selected for the purpose, and no place seems more suitable than Yong Am-pho.

Friday, Sept. 11.

Mr. Hyon Yong-un, whose name has been in people's mouths of late on the hypothesis that his visit to Japan has some profound political import, now receives a curious character at the hands of the *Jimmin*. According to that veracious newspaper, whose columns are not always closed to the uses of black-mailers, Hyon has been trying to play a very pretty game. The Emperor of Korea, so the story runs, still retains a vivid recollection of his murdered consort, and often, musing on her terrible fate, falls into fits of melancholy which are taken advantage of by unscrupulous persons to exploit the unhappy monarch. Recently, for example, some garments were sold to His Majesty for several thousands of *yen*, on the pretence that they had been worn by the Queen and that their present holders had procured them from Japanese. Hyon's wife is a maid-of-honour in the Palace, and through her the Emperor was induced to think that if Hyon were despatched to Tokyo, his knowledge of the Japanese would enable him to procure not only the arrest of the Queen's assassins, now said to be hiding in this country, but also the deportation of other refugees obnoxious to the Seoul Authorities. The Emperor fell into the trap and despatched Hyon. But the latter's real purpose was to make money for himself, and he chose a strange though probably not novel method of doing so. Having interviewed Marquis Ito and Baron Komura, thus investing his mission with a certain air of respectability, he telegraphed to Korea that in order to achieve his purpose it would be necessary to purchase Marquis Ito, and that a sum of 150,000 *yen* would be necessary. But even the Emperor's thirst for vengeance upon the slayers of his beloved wife could not induce him to swallow such a draught of deception. He peremptorily refused Hyon's demand, and thus the latter stands exposed, with no resource except himself to join the band of refugees whose deportation he was to have contrived.

News comes from Fusan that two Japanese fishermen have been assassinated by Koreans at Kosyong in Kyongsan-do. No particulars are given.

THE POPULATION OF TOKYO.

According to statistics collected by the police at the close of last year, Tokyo has now a total population of 1,839,788 persons, living in 392,039 houses. Divided by sexes, there are 946,671 men and 893,117 women, and divided into urban and suburban sections, it appears that the urban population is 1,220,948, living in 273,969 houses and consisting of 637,615 men and 583,333 women, while the suburban is 618,840, living in 118,070 houses and consisting of 309,056 men and 309,784 women. It is curious at first sight to notice that the proportion of females in the urban districts is so considerably smaller than the proportion of males, but the reason is doubtless to be sought in the fact that the above numbers include the urban floating population which naturally consists mainly of males. Tokyo is growing enormously. Ten years ago, namely, in 1893, the official returns gave the city a total population of 1,409,869, so that its increase in a decade has been no less than 429,921. It is now as populous a city as it was in the flourishing period of Tokugawa rule, and year by year its suburbs are extending, a process which will certainly be accelerated by the laying of electric railways.

FOREIGN INSURANCE.

The *Hochi Shimbun* publishes a series of wildly abusive articles attacking the foreign life insurance companies doing business in this country. Naturally the three great American companies come in for a major part of the *Hochi's* assaults, than which nothing could be more intemperate or ill-judged. The text of the Tokyo newspaper's invective is that, in view of the lavish expenditure of these companies for the purpose of attracting custom, and in consideration of the low character of the touts they employ, the obvious inference is that when they have collected a sufficiently large number of premia, they will close their offices in Japan, and leave the unhappy policy-holders to whistle for their money or to institute legal proceedings in distant New York. We can not think that the *Hochi Shimbun's* articles will exercise any influence in educated circles, but they will certainly weigh with ignorant and unthinking people. There is just that grain of truth which renders it difficult to dismiss the whole tirade as monstrous. For undoubtedly, as Mr. Shida and Mr. Wada have both said, it is within the range of contingencies against which a Government is bound to legislate for the protection of its nationals, that a foreign insurance company with no reputation to lose and no business to sacrifice, might resort to the rascality of suddenly putting up its shutters in Japan and levitating after having collected a few hundreds of thousands of yen. But to suspect that institutions like the Equitable, the New York and the Mutual—which are specially referred to by the *Hochi*—could contemplate such insane suicide, is to declare oneself an imbecile. The interests these companies have already acquired in America and Europe enormously outweigh any interests they can ever hope to acquire in Japan, and although our worthy Tokyo contemporary may still labour under the frog-in-the-well delusion of imagining himself beyond the ken of all the world, he should be capable of understanding that the gross swindle which he gravely includes among the possible incidents of the above companies' career in Japan, would wholly destroy their credit in Europe and America, and would at one coup annihilate the vast business they have built up there by long years of strenuous effort and able financing. The impression conveyed to our mind by a perusal of the *Hochi's* articles is not one of resentment that such rascality should be attributed to American companies, but is rather one of profound astonishment that any Japanese newspaper should be found so curiously ignorant of the principles of credit as to imagine that a huge swindle publicly perpetrated in Japan would not touch the reputation of a company in Europe or America. We can not agree with the *Hochi Shimbun's* constructive belief that the audience it addresses will attach much credence to its romancing, but we do assert unequivocally that the Japanese insurance men who must be supposed to have inspired the *Hochi's* articles, have thereby proclaimed themselves undeserving of all credit, for no men willing to deal so unfairly by their foreign rivals can be for a moment suspected of a resolve to deal fairly with their own nationals. However, we should be exaggerating the importance of the *Hochi's* writing if we devoted any further space to its discussion. Our contemporary has allowed its columns to be debased to the use of the lowest class of maneuverers.

THE STREET RAILWAY QUESTION.

Saturday, September 5.

Thus far the Anti-amalgamation party have been successful in the law courts. Mr. Amenomiya, it will be remembered, instituted proceedings in the Tokyo Local Court praying that the decisions adopted by the semi-dispersed meeting should be declared void. Meanwhile he applied to the District Court for an injunction to restrain the amalgamationists from giving effect to those decisions pending the result of the suit in the Local Court. Against this application the amalgamationists entered a protest, and Mr. Amenomiya replied with a counter-protest in the sense that the protest did not emanate from a duly constituted board of directors. The Court sustained this counter-protest, and the amalgamationists then appealed from that judgment. But the appeal has been dismissed, and consequently the position now is that the injunction holds, and that the amalgamationists are reduced to a state of complete powerlessness pending the decision of the main suit, the hearing of which can not commence before the conclusion of the summer recess, namely, the 9th instant. Then will remain the processes of appeal to two higher tribunals, so that a delay of a year and a half or two years is in sight unless some compromise be effected. In the meanwhile the time within which the Company's capital has to be increased, would lapse. But evidently the business world regards all this as a farce, for the Company's shares show no sign of depreciation.

Tuesday, September 8.

The principal shareholders of the Tokyo Street Railway Company have at length decided to take a step which we wonder they did not take before, namely, to remove all their present directors, and elect in their stead a new board, which will be able to work on a clean sheet and detach itself completely from the wretched complications of the past. A meeting of shareholders held in the Imperial Hotel on the 5th instant adopted that resolution.

Thursday, September 10.

Mr. Oi Kentaro and his fellow-agitators of the *Gaitetsu Dokuritsu Domei-kai* (street railway independence union) have managed to obtain 15,000 signatures of Tokyo citizens to a petition denouncing the amalgamation of the *Shigai* and the *Densha* Companies. The petition's main point is that such amalgamation will tend to produce one of the monopolies which have already caused so much inconvenience to the public. Nothing but their own convenience and profit, says the document, have any influence with the advocates of amalgamation, but what its opponents think of is the provision of cheap travelling facilities to the citizens. If amalgamation be effected, the high fares charged by the *Densha* Company will be continued, whereas if the Street Company be left to enjoy an independent existence, it will carry folks any distance and all distances within the limits, of its circuit for a uniform fare of 3 sen.

It is exceedingly problematical whether any electric railway company in Tokyo could afford to carry passengers from one end of the city to the other for the ridiculously small fare of 3 farthings. We strongly suspect that there is a great deal of make-believe about this pretence and that neither Mr. Amenomiya nor Mr. Oi Kentaro has any faith in his own *bona fides*.

A rumour was current a few days ago that the Mitsu Bishi and the Mitsui had sold

all their shares in the *Densha* and the *Shigai* companies. The story being obviously invented in the interests of speculators on 'Change, no one paid much attention to it, but Mr. Shoda Heigoro, the Mitsu Bishi Manager, has allowed himself to be interviewed, and has denied publicly that the Mitsu Bishi possesses a single share in any one of the three electric railway enterprises of Tokyo city.

What the advocates of amalgamation intend to do is to have a general meeting called by the Inspectors on the 23rd instant. The 182nd article of the Commercial Code provides for that: it gives the Inspectors power to convene such a meeting. But we do not clearly understand what such a meeting could accomplish. Its functions are distinctly limited to appointing special examiners to inquire into the affairs of the company and the state of its property. A meeting so convened does not appear to have the same power as an extraordinary general meeting called in response to a request of shareholders representing one-tenth of the capital, namely, the power of removing the directors. On the other hand, if the shareholders make application for an extraordinary general meeting, their application has to go, in the first place, to the directors, and only in the event of the latter failing to call the meeting within two weeks, do the shareholders themselves become entitled to do so with the permission of a law court. Hence in order that the shareholders may obtain an extraordinary general meeting competent to remove the directors, recourse to a law court is necessary; and if a meeting be called by the Inspectors without such recourse, it has not the necessary competence. Things seem to be getting into a worse and worse coil.

Since the above was in type we learn that the anti-amalgamation party have summoned a general meeting of shareholders on the same day at the same place, for the purpose of removing the Inspectors themselves, by whom a general meeting has already been convened. Mr. Amenomiya and his followers are proceeding on the strength of the 159th article of the Code, which empowers the directors to call a general meeting should there be a necessity for doing so. Thus the confusion grows worse confounded, and if Mr. Oi Kentaro does not find occasion for a revival of *soshi* influence, we shall be much surprised.

THE ALLEGED POACHERS.

Mr. Yonebayashi Isaburo, who was in command of the Japanese fishing vessels recently seized by Russian cruisers in Kamchatkan waters, appears to have been released on bail in Vladivostok, pending trial, together with 27 seamen detained there on the same charge. The latest news is that these 28 men having been brought up for trial, were acquitted and received permission to return to Japan. In view of this result Mr. Uchiyama, one of the Hokkaido members of the Diet, and himself engaged in fishing enterprise, has addressed a strong memorial to the Minister of State for Foreign Affairs, asking that steps be taken to procure due compensation for the heavy loss entailed by the seizure of 11 Japanese vessels and their compulsory abandonment of an enterprise in which they were lawfully engaged. It is alleged that the vessels were sent to Kamchatka in consequence of an agreement with three Russian subjects who undertook to sell to the Japanese a certain quantity of cured fish. The ships went to take delivery

of the fish, and the agreement itself was duly endorsed by the Vladivostok Authorities, who levied the usual fee of 100 roubles. If these facts be rightly stated, it would appear that the Russian naval officers who seized the Japanese vessels laboured under some great misapprehension.

Since writing the above we read in Japanese papers that the speedy settlement of the complication is attributable to the intervention of Admiral Alexieff. The Governor-General happened to be in Vladivostok at the time when the 28 Japanese subjects were remanded for trial. His Excellency was approached by the Japanese Commercial Agent, and after hearing the facts of the case, he promised to use his exertions so as to bring about a speedy settlement, since it would be most regrettable that the relations between the two empires should be embittered by such a paltry matter. The result was the acquittal of the 28 men, and their release with a degree of celerity quite unprecedented. Japanese journals note that although Russia strictly enforces her veto against fishing by foreigners on her East-Asian coasts, she makes an exception in Japan's favour with regard to Saghalien, in consideration of the fact that the island was originally Japanese territory, and that its fisheries were inaugurated by Japanese subjects. About sixty Japanese vessels sail every year from Hokkaido to avail themselves of this favour. The particular batch of eleven ships which had the misfortune to be seized were working under agreement with Russian subjects who had engaged to make delivery of a quantity of cured fish.

BANKING.

Japanese journals state that the banks having sums of over a million yen lying idle are the following:—

	Yen.
Mitsui Bank	2,164,713
First Bank	1,400,151
Yasuda Bank	1,284,300
Fifteenth Bank	1,201,065
Third Bank	1,079,079
Hundredth Bank	1,001,926
Total	8,131,234

Another piece of banking intelligence is that a further decrease in rates of interest is to take place from the 16th of this month. Six banks have come to this decision after consultation, namely, the First, the Hundredth, the Fifteenth, the Mitsui, the Mitsubishi and the Specie Bank. The new rates will be 5 per cent. on fixed deposits, as compared with the present rate of $5\frac{1}{2}$; 7 *rin* daily on current accounts as compared with 9 *rin*, and 1 *sen* daily on special current accounts as compared with 1.2 *sen*. Thus the bank rate on fixed deposits is lower than the rate obtainable by investing in Government securities, for the five-per cent. loan bonds can be purchased at 90, which means $5\frac{1}{4}$ per cent interest.

The *Shogyo Shimpō*, commenting on this reduction of interest, expresses satisfaction that the banks have had the courage to abandon their timid policy of scrambling for deposits by offering a high rate of interest. Such a policy was eminently unsound, from the banks' point of view, since it resulted in the accumulation of idle funds, embarrassing to their holders and demoralizing to their depositors. For the very high rates hitherto given by the banks had the effect of inducing people to be content with the interest accruing from deposit accounts and to refrain

from putting their money into the numerous investments that offered on every hand. Now that the banks have ceased to hold out that temptation, people will necessarily begin to look about them, and will open their eyes to the fact that money may be better employed than in lying in a bank's strong room.

That sounds very comfortable, but how does it happen, we wonder, that if good investments are offering all round, the banks are loaded with unemployed funds. The six banks catalogued above show a total of over 8 millions, and if the list were extended to the whole country there would be a very large aggregate. We may be very sure that if good investments were available the banks would not be in this plight, and it is our opinion that the reduction of rates now announced will not have any perceptible effect in diverting capital into industrial or commercial channels. What the banks, shrink from will not be likely to attract private financiers. The truth seems to be that the war cloud paralyses everything. Could peace be assured simultaneously with the harvesting of a rice crop which promises to be considerably above the average, the dawn of a season of prosperity would probably be witnessed. At the close of last year and the beginning of this, Japanese journalists wrote in a tone of exultation about the steady accumulation of funds in the banks' strong rooms and in the Treasury's vaults. It would be regarded by a private individual as simply ruinous could he find no satisfactory investment for his money, but publicists too often forget that nations are only aggregates of individuals, and that what is bad for the unit must be bad also for the mass.

CHINA.

Monday, September 7.

The Foreign Representatives in Peking, according to a telegram in the *Jiji Shimpō*, have agreed to endorse the British Minister's view that the Chinese subjects held in custody in Shinghai on a charge of lese-majesty should not be handed over to the Chinese Authorities, but should be tried by the Mixed Court and should undergo in the foreign settlement whatever punishment that tribunal may condemn them to. This news will be welcomed by the public outside China. Up to the time of Sir Ernest Satow's arrival in Peking and of the unequivocal stand taken by the British and American Governments, supported by Japan, all the Foreign Representatives, except the Italian, appear to have been in favour of handing over the accused, nor can it be denied that the Treaty of Tientsin contains warrant for such a step. Moreover, as to the plea that the Taotai of Shanghai had made an agreement in a different sense, we fail to see that it has much validity so long as his superiors refused to endorse his action. But nothing can over-ride the fact that when the British negotiators signed the Treaty of Tientsin they did not for an instant contemplate co-operation with the Chinese Authorities to deprive political offenders of any privilege of asylum, or to place such persons within the power of criminal jurisdiction modelled on mediæval lines. It would be a shocking thing to deliver up to torture and execution Chinese subjects who have not practised any licence more extreme than that constantly practised with impunity by British subjects within the limits of Chinese territory. Had these Chinese offenders employed the bomb or the

dagger to push their political propaganda, a different view might be taken of their case, but so long as their misdeed is limited to newspaper representations, it is the duty of every civilized Power to grant them asylum against savage mutilation and barbarous execution. All lovers of liberty must thank the Governments of London, Washington and Tokyo for their action in this matter. That St. Petersburg and Berlin were found at first in a different camp is, perhaps, not wonderful. Neither of these countries can be expected to take an Anglo-Saxon view of such questions. But it is disappointing to find France in the same league, and we can not say that the arguments advanced by *l'Echo de Chine* have sufficed to justify such an attitude on the part of one of the most prominent exponents of individual liberty.

There has been some disposition to put a sensational construction upon the despatch of two Japanese officers to Nicolaesck, as reported in our last issue. But the fact appears to be that Major-General Akiyama and Major Oba are going to witness military manoeuvres by two divisions of Russian troops in the Amur region. They go, of course, by invitation, and have received every assistance from the Russian Legation in Tokyo.

Cholera has broken out in the Japanese Settlement in Tientsin. The first to be attacked is Mr. Ide, editor of *The North China Mainichi Shimbun*. It is not stated whether his case is serious, but rumour says that there are signs of the disease spreading and that precautionary measures are being adopted.

Wednesday, September 9.

It is reported from Peking—*Jiji Shimpō's* correspondence—that Russia has withdrawn her last draft proposals, consisting of seven articles, and that she will substitute another scheme. Meanwhile the world is growing accustomed to her occupation of the Three Provinces, and though another ripple of excitement may pass over the public spirit on the 8th of October when the period for the third act of evacuation expires, no very tangible result can be anticipated.

News from Tientsin is to the effect that long continued rains in Manchuria have produced heavy floods resulting in serious damage to the East-Asian Railway. The road-bed is said to have been washed away in many places, carriages have been overturned and there has been much loss of life. Probably these reports are exaggerated. The injury is said to extend to the telegraphs also. We may add that several residents of Yokohama who had arranged to proceed to England via the Siberian route, turned back at Kobe and have gone by the *Aki Maru*, which left yesterday for Seattle.

Thursday, September 10.

We have two very contradictory accounts of the state of the Russo-Japanese negotiations. One comes from the *Niroku's* Peking correspondent, who says that the Chinese Representative in St. Petersburg wires to the Foreign Office in Peking that the negotiations have made great progress, that a pacific ending is now in sight and that the terms of settlement will be proclaimed at the date fixed for the final evacuation of Manchuria, namely, the 8th of October. The other account is contained in a sub-editorial of the *Jiji Shimpō's*. It says that the negotiations have not made any progress at all; that they can not be said to be moving and that they certainly have not reached a stage indicating

any prospect of satisfactory settlement. Meanwhile, our contemporary continues, Japan's attitude remains unchanged. She is determined to maintain her policy of achieving security for a country in which she has the strongest interests, geographical, commercial and political, and she will assert that policy even though Russia persist in her present lawless course in defiance of frequently proclaimed assurances and deliberately concluded agreements.

As between these two accounts the public can have no hesitation in choosing. The truth is on the *Jiji*'s side. Without some marked change in the situation things can not be said to be in a very hopeful condition, but it will be unfortunate beyond the range of reasonable anticipation should the diplomatists of the two Powers fail to come to some agreement.

The cholera in Tientsin is bad and shows symptoms of getting worse, according to the *Jiji Shimpō*'s correspondence. Two foreigners and two Japanese have been attacked, and one of the latter has died. The disease is said to have been imported from South China, and all ships arriving off the Peiho are subjected to strict medical inspection.

A Department of Commerce has been added to the machinery of government in the Chinese capital. Its president is Prince Tsai Chen, and its chief vice-president is Wu Ting-fong. Under such direction the new office ought to be progressive.

Friday, Sept. 11.

It is stated by the Peking correspondent of the *Jiji Shimpō* that on the 6th instant M. Lessar presented to the Chinese Government a new series of demands, conditional upon the satisfaction of which is to be the evacuation of Newchwang on the 8th of Oct. He also stipulated that the period for the withdrawal of Russia's troops from Manchuria should be postponed. With regard to these new proposals the gist of them is said to be that Russia again pledges herself solemnly to restore Manchuria ultimately to China, the restoration commencing with Newchwang and Shinking, the other two provinces to be given back at a later date, in view of which restitution China is to pledge herself never to alienate any part of Manchuria or to allow any Power except Russia to erect telegraphs there. Further, China must engage that the imports into China coming by the Russian railways shall never be subjected to a tax higher than 4.7 per cent. *ad valorem*. Again, the sanitation of Newchwang is to be in Russian hands, and China is to exert her utmost endeavours for the protection of Russian banks and their agencies in all parts of Manchuria.

These proposals are reported to be found attractive by China's statesmen. The situation is indeed so desperate for them, so far as their own ability to retrieve it is concerned, that they may well grasp at the half-loaf which Russia offers them, and the prospect of getting back Newchwang and Shinking on the 8th of October comes like rain after a long drought.

The *Nichi Nichi Shimbun*'s correspondence adds some further demands to the list attributed by the *Jiji* to Russia. They are that no place in Kirin or Amur shall be opened to foreign trade; that no railway or mining concessions shall ever be granted to any nationals other than Russian; that all appointments of Chinese officials in Manchuria shall be made the subject of previous consultation with Russia; and that Russian

officers shall be employed to train Chinese troops in Manchuria.

Mr. Uchida, Japanese Representative in Peking, is said to have remonstrated strongly against the acceptance of any such terms by China.

It is evident that no definite opinion can be expressed upon all this until we have conclusive information about the nature of Russia's new proposals. Nothing may be said at present except that if they are of the kind outlined above, Powers having treaty rights in Manchuria can not possibly assent. The condition as to an import duty of 4.7 per cent. on goods carried over the railways may be another way of saying that railway carriage is to be regarded as frontier trade, but in several other respects the alleged conditions appear to be absolutely impracticable, and their discussion is consequently premature. What is unmistakably significant, however, is that the St. Petersburg Government should formulate such demands in Peking with reference to a subject which is understood to be under diplomatic negotiation between Japan and Russia. The meaning of that procedure can be read by him that runs if the conditions be rightly stated, which we greatly doubt.

It may be mentioned in this context that according to the *Asahi*'s telegrams the Foreign Representatives in Peking regard the shelving of Mr. de Witte and the appointment of Admiral Alexieff as clear indications that the war party in Russia has gained the ascendancy, and the Chinese statesmen see unequivocal menace in the attitude recently adopted by Russia. M. Lessar is supposed to be conducting his work in Peking under the direct instructions of M. Alexieff, but we should question the truth of that hypothesis.

Of course the presentation of these demands has caused no little commotion in diplomatic circles in Peking. The British and Japanese Representatives are said to be conspicuously active.

The *Jiji Shimpō* has a strong and dignified article on this intelligence. It speaks of Manchuria in very moderate terms. Japan, it says, asks nothing in Manchuria except that the treaty rights of the Powers shall not be impaired and that the district shall remain open to the trade of the world without any unfair discriminations in favour of any one nation. But no one can pretend to think that the proposals now advanced by Russia are consistent with such equal treatment. On the contrary, they deliberately ignore the rights of other States and their acceptance would create an intolerable situation. Russia has obtained certain interests in Manchuria, and Japan has not the least idea of objecting to any arrangements essential to the protection of those interests. She can not consent, however, to have the gates of Manchurian trade closed in her face. Russia must be thoroughly well aware of the limits beyond which no amicable agreement is possible, and it is not to be conceived that she will deliberately transgress those limits. Passing on to Korea the *Jiji* insists emphatically that Russia has no material interests whatsoever there, and that she must not be allowed to interfere with the legitimate development and safeguarding of Japan's universally recognised interests. Our contemporary alludes specially to the Seoul-Wiju Railway, for which a concession ought to be secured without delay.

The *Nippon* has a very vehement article attacking the Government which it accuses

of simply waiting for something to turn up, while, at the same time, quieting the country by assurances of inflexible resolve and of reliance on the whole nation as a unit.

As to the whole matter we again repeat our conviction that rumour errs flagrantly in its statement of Russia's new proposals.

THE "SAISEI-GAKKO."

Dr. Hasegawa's extraordinarily precipitate resolve to close the *Saisei-gakko* has provoked much comment. It meant that from 700 to 800 students were driven out into the cold without finishing their course or being in a position to derive any benefit from their previous studies. At first the general supposition was that Dr. Hasegawa had yielded to a fit of pique because the Educational Authorities were unwilling to elevate his school to the rank of a degree-conferring college, and for a moment there was a disposition to infer that some harsh discrimination had been officially exercised. But subsequent inquiries shewed that the hesitation of the Department of Education in this matter was more or less inevitable. The trouble about medical schools is that private means are insufficient, or have hitherto proved insufficient, to equip any one of them thoroughly with the costly apparatus required to warrant collegiate recognition. The *Saisei Gakko* could not pretend to be so equipped, and it is denied that Dr. Hasegawa took any really serious steps to obtain a college charter for it. He closed the school, according to latest reports, because he did not see his account in keeping it open. But if that be the sole reason, he must stand convicted of singularly selfish and irresponsible conduct. We incline rather to think that his views have not been fully published. As for the unfortunate students, their dilemma has been partially solved. They held a meeting on the 4th instant, which was attended also by several of the teachers of the defunct *Saisei Gakko*, and a resolution was passed that two houses should be rented and that the faculty of the school, with one exception, should undertake to carry the present students to the end of their four years' course, without any addition to their numbers.

THE SILK CROP.

According to published estimates Japan is fortunate in her silk crop this year. Things looked bad in the spring, when, owing to scarcity of mulberry leaves, the cocoons were some ten per cent. below an average yield. But the splendid weather of the summer has fully compensated, and it is expected that the autumn crop will be thirty per cent. above the average, thus fully making up for the spring deficiency. The estimate now is a total yield of 2,600,000 *koku*, which would be 30 per cent. higher than last year's figure (2,006,099 *koku*), and nearly 20 per cent. better than the average crop for the past 10 years, namely, 2,000,000 *koku*. The following figures are given for each year since 1893:—

	Koku.		Koku.
1893	1,680,894	1898	2,207,342
1894	1,800,596	1899	2,512,502
1895	2,258,073	1900	2,753,903
1896	1,836,672	1901	2,525,241
1897	2,124,238	1902	2,006,099

It will be observed that the year 1900 was altogether exceptional, and that if this year fulfil expectations, it will stand second on the decennial record.

POLITICAL NOTES.

Saturday, September 5.

Lord Cranborne was not in a very felicitous mood when he made his statement in the House of Commons about Chinese affairs. It was not to be expected that he would make any detailed reference to Manchuria. Such a perplexing problem defies lucidity of diplomatic exposition. But he might at least have helped his countrymen out of their perplexity about the Yangtse agreement with Germany. His lordship described the instrument as "one more assertion on our part of the policy which we have always desired to pursue in China, namely, the policy of the integrity of China and the policy of the open door." But where did the integrity of China come in? That is what we have never succeeded in discovering. The British Government doubtless intended that the covenant should bind its signatories to some united action, if the occasion arose, for the purpose of preserving the Chinese empire. But apparently that intention had not been made clear to Germany for she interpreted the agreement solely as an engagement that the Yangtse Valley should always be open to herself on equal terms with England. As to the notion that it bound Germany in any way to raise so much as a finger in defence of China's integrity, Berlin repudiated it with scorn. Nevertheless, and despite that radical difference of rendering, Lord Cranborne declared that the agreement "so far as it went did good and nothing but good." His lordship certainly can not be charged with pessimism. But it remains a problem what Germany imagined herself to be doing when she negotiated the document. She is much too shrewd to imagine that any bargain can be wholly one-sided; all take and no give. She must have supposed that she was pledging herself to something or other. What was it, we wonder.

The resignation is announced of Mr. Yasuhiro Hanichiro, Vice-Minister of Agriculture and Commerce. This event is said to be due to the affair of the rescinded Exchange Regulations Ordinance. Mr. Kiuchi, who preceded Mr. Yasuhiro in the same office, was directly responsible for the issue of the Ordinance, and his resignation took place some time ago. Mr. Yasuhiro is said to have shared the responsibility. It will be remembered that immediately after the promulgation of the Ordinance Mr. Kiuchi proceeded to Europe, his place being taken by Mr. Yasuhiro. The latter seems to have shared Mr. Kiuchi's views as to the Exchange question, and to have supported the Ordinance. Hence his responsibility, which he sought to have recognised two or three months ago, but as his resignation would have been inconvenient pending compilation of the Budget, he remained in office until the latter work was completed. He is succeeded in the Vice-Ministry by Mr. Wada Hikojiro, hitherto head of the Bureau of Trade and Industry, and Mr. Wada's place falls to Mr. Morita Mokichi, now head of the Sanitary Bureau in the Department of Home Affairs. Mr. Wada is well known to the representatives of foreign life insurance companies doing business in Japan.

Monday, September 7.

The *Niroku Shinbun*, quite undeterred by its previous fiascos, now gravely publishes a categorical statement of the alleged bases of negotiation between Japan and Russia with regard to Manchuria. Six articles are given,

but we shall not quote them, for it is beyond the range of all reasonable possibility that the *Niroku Shinbun* can have obtained such information, and we do not forget how grossly and egregiously it has already deceived the public by the publication of manufactured conventions. The utmost secrecy is observed in Tokyo concerning these negotiations, and that nothing of their nature has become known in Peking either may be inferred from the misleading intelligence forwarded from that city to London.

The *Kokumin Shinbun's* Peking correspondent says that Russia has applied to the Chinese Government for a lease of Monkey Island in Fuhkien, and also for a special settlement at Chang-kia-kow. It will be remembered that Japan holds China's promise not to alienate any part of Fuhkien. As for Chang-kia-kow, it lies at the point where the Great Wall crosses the frontier of Chili on the north-west of Peking, and if Russia wants a settlement there, it points to a projected railway from Mongolia to Peking. These things, however, may be mere rumours.

PROFESSORS WESTLAKE AND HOLLAND.

Mr. Takahashi, one of the Seven Professors whose manifesto attracted so much interest in Japan, has received from Professors Eastlake and Holland a statement of the views held by these two eminent international jurists on the Manchurian question. The gist of their letter is published by several Tokyo journals. We can not clearly discover whether the ideas of both Professor Westlake and Professor Holland are supposed to be included, but apparently that is the suggestion. Professor Takahashi had sought the English experts' opinions about the evacuation of Manchuria and about Lord Cranborne's speech in the House of Commons, which speech they feared, might introduce an element of coldness into the Anglo-Japanese union. As to Manchuria, the Professors reply that possibly England, Japan and America might, without any excessive effort, succeed in seizing and holding the coast line, were they so minded, but that to drive Russia back into Siberia would demand an immense exercise of military strength; strength such as even these three Powers in combination could scarcely muster, in view of the great distance of their bases from the scene of operations. It would also have to be a permanent exercise of strength, for no covenant signed by Russia could be depended on as an instrument of effectual control. The forces making for expansion would refuse to be bound by any written compact. Most certainly there would be no sufficient compensation to Japan, America and England for this great effort. Is there then nothing feasible? The two Professors answer emphatically in the affirmative. It is well within the competence, they say, of America, England and Japan, nay even of England and Japan alone, to set limits to Russian expansion; the limits, namely, that she shall not push her aggressions beyond the Great Wall on the west or beyond the Korean frontier on the east. There the line might be drawn, and England would be following a manly statesmanlike course if she officially declared to Russia "thus far shalt thou go and no farther."

That is the gist of the two Professors' views. It invites much comment.

THE FORMOSA INSURGENTS.

In the *Nippon* an interesting statement is made as to the results of Baron Kodama's policy in Formosa. The Baron commenced in 1898 his programme of combined conciliation and coercion. Receiving with open arms and with measures of practical assistance all that made voluntary submission, he proceeded with unsparing vigour against those that held out. Gradually surrenders were received, totalling 5681 rank and file and 138 leaders. The Local Government's investigations showed, however, that fully ten thousand had been originally enrolled under the insurgent banners, and consequently in November of 1901 a campaign was commenced on an extended scale. It lasted until May, 1902, by which time some three thousand of the insurgents had fallen. Yet it still appeared from accurate investigations that about 3800 or 3900 disaffected persons remained in the south. Against these a movement in overwhelming force was made in July of last year, and the terror inspired by this demonstration, to say nothing of the execution wrought by the troops, had such an effect upon the insurgents that their total extinction or conversion may be said to have followed. It appears that the habit of the Japanese has been to keep an accurate record of the names and doings of the insurgents who surrender, and to strike off the list the names of any that are seen to have devoted themselves unequivocally to honest callings. Last June the names still standing on the list totalled only 1751, and of these quite two-thirds have since then finally joined the ranks of honest citizens, while about 500 are doing work as coolies and day-labourers, only a very small fraction being still in the category of doubtful characters. Baron Kodama seems to have made a great success.

THE RICE CROP.

In our issue of the 3rd instant we quoted returns collected by the Department of Agriculture and Commerce as saying that the rice crop this year seems likely to be 12.6 per cent. over an average year and 31.6 over the crop of last year. A correspondent draws attention to a discrepancy in these figures. The crop of last year having been about 36,900,000 *koku*, a yield 31.6 greater would be 38,500,000 *koku*, approximately; and an average crop being 40,262,880 *koku*, a yield 12.6 per cent. greater would be only 45,336,083 *koku*. Evidently the two per centages can not be right. They were quoted as given in Japanese journals. Our correspondent will have perceived, from the *Shogyo Shimpō's* figures published by us on the 4th instant, that the private estimate of the crop is 47,822,170 *koku*; probably a close approximation. Since then more detailed figures have been published by the Department of Agriculture and Commerce. This last account puts the anticipated crop for the year at 47,017,211 *koku*, which, compared with last year's yield (36,928,153 *koku*), shows an increase of 27.3 per cent., and compared with an average yield (now put at 40,249,586 *koku*), shows an increase of 16.7 per cent., not 12.6 per cent. as previously stated. It has to be observed that this estimate was deduced from statistics collected up to the 26th of August, namely, a week before the *nikyaku-toka*. The weather having remained most propitious up to that date, we may expect that the next official returns

will make a still more favourable forecast. The figures for the past ten years, as published by the Department of Agriculture and Commerce, are these :—

Year.	Crop.
1893.....	37,267,418 Koku.
1894.....	41,859,047 "
1895.....	39,960,798 "
1896.....	36,240,311 "
1897.....	33,039,293 "
1898.....	47,387,666 "
1899.....	39,698,248 "
1900.....	41,466,734 "
1901.....	46,914,434 "
1902.....	36,928,153 "
1903.....	47,017,211 "
	(estimated)
Average year	40,249,586 "

The average year is obtained by taking the total yield for seven years ended in 1902, less the yield of the most plentiful year (1898) and that of the worst year (1897), and dividing the result by 5. It will be noted that the estimate for this year falls short by only a very little of the crop of 1898, and for the reason given above as to the time of making the estimate and as to the continued fine weather, it may be assumed that, in default of some violent climatic disturbances, of which there is now no sign, the harvest this year will be the most abundant since 1893—since 1887, indeed, not to go any further back. Of course it has to be remembered that there is an extension of the area under rice cultivation. But in this respect the change is not so very marked. Thus, statistics show that whereas the area devoted to rice-growing was 6,406,050 acres in 1890, it grew to 7,071,197 acres by 1900. This difference of area must be taken into account when calculating relative fertility. In the year of conspicuously large yield, namely 1898, the superficies of rice-fields measured 7,044,060 acres, and in 1901 (the latest year for which returns have been published), this figure had increased to 7,118,762 acres. On the whole, however, it seems probable that in point alike of fertility and of total quantity the year 1903 will show the best results recorded since 1887.

THE BANK OF FORMOSA.

The Bank of Formosa held its semi-annual meeting on the 3rd instant in Tokyo. The proceedings derived exceptional interest from the fact that Mr. Lin, the well-known capitalist of Formosa, was proposed and accepted as an auditor. The following accounts were read and passed :—

	Yen.
Total Profits for the half-year.....	672,339
Total Expenses	510,713
Net Profit	161,626
From last Account.....	37,543
Total	199,169
To Reserve for Meeting Losses	43,200
To Reserve for Equalizing Dividends.....	5,900
To Special Reserve	5,000
To Rewards to Officers.....	11,300
To Dividend (9 per cent. annually).....	90,000
To Carried forward	43,769

Mr. Yagiu, President of the Bank, made a speech in the course of which he said that 160 miles of railway are now open in Formosa; and that whereas foreign trade had diminished, the trade with Japan proper had increased. Last year, the imports from foreign countries totalled 5,700,000 yen, and the exports to foreign countries, 4,300,000 yen, while the corresponding figures for the domestic trade were 5,200,000 yen and 5,500,000 yen. This meant a

diminution, as compared with 1901, of 200,000 yen in the total foreign trade and an increase of 2,100,000 yen in the domestic. Rice was chiefly responsible for the increase in exports to Japan, 2 million yen being the figure under that heading. On the other hand, the sugar crop in 1902 was a failure. It showed a decline of 40 per cent. The price of silver had fluctuated greatly. In January of this year it stood at 21½d. per ounce, whereas now the quotation was 25¼d. It had been necessary to announce 7 changes of rate.

TOWN LIFE AND LIFE IN FLATS.

Sir James Cantlie, F.R.C.S., now Demonstrator of Anatomy at Charing Cross Hospital and plague officer for the London County Council, and formerly so well known in Hongkong, made, 20 years ago, the statement that the Londoner pure and simple disappears after the third generation. That statement, based on a close study of Londoners and London life, excited much attention at the time, and a good deal of scepticism. In an interview with a representative of the *Daily Chronicle* quite recently Dr. Cantlie returns to the charge. "My statement," he said, "that it is well-nigh impossible to find a third, and absolutely impossible to find a fourth, generation of pure Londoners, stands unrefuted. The race deterioration, which has been going on in some towns, has now extended to the country—at all events, to some parts of it—and we are face to face with a grave national problem. If you look into recent figures, Dr. Cantlie went on, you will see that over a third of the population of London are not London born. It comes to this, therefore, that in three generations London is completely restocked from the outside. Nature, in effect, refuses to let the absolute Londoner go beyond the third generation, holding that the wastage of city life has then unfitted him to hold his own in this struggling world." While Dr. Cantlie could speak best of London, he added that it nearly illustrated what was going on in other towns, and indeed London was more favourably placed in regard to atmospheric pollution than many other cities. "We are," said Dr. Cantlie, "becoming a 'townified' people; about 75 per cent. of us live in towns, we are now practically a manufacturing nation, for only 10,000,000 of people could extract a living from the soil. We are town-dwellers, but we do not know how to dwell in towns. We must either learn to do so, go back to the land, or be content to see ourselves—I mean, of course, the mass of people—gradually lose in fibre and physique. There was the craze for flat-building, a bad thing so far as health was concerned, for if you crowded one family above another, how were they all to get air having any freshness in it?" The removal of factories from town was an ideal, and Sir James was afraid it would never be much more.

FAIR TRADE.

That political economy is not an exact science was never more strikingly demonstrated than it has been just now by the discussion in Great Britain on the subject of fair trade. Much pressure has been exerted to push the conservative economists from their pedestal, but whenever they seem to be toppling to a fall, they recover themselves by clutching at the old doctrine that if we impoverish foreign countries

by refusing to take their goods, they, in turn, will impoverish us by refusing to take ours. Well, but surely that is exactly what they do, and do with all their might and main. Their policy is uniquely directed to supplying their own wants with their own productions to the exclusion of ours, which they seek to effect by protective duties, and to driving us out of markets foreign to themselves and to us alike, which they seek to effect by a system of bounties direct or indirect. If the men on the pedestal were right, the countries which thus seek to impoverish us by refusing to take our goods and by striving to prevent others from taking them, should have been by this time more or less impoverished themselves. Has that fate overtaken them, or are there any signs of its overtaking them?

Then comes the collateral question, suppose that, taking a leaf out of our rivals' book, we encouraged home production, would not that be so much gain? Not at all, is the answer from the pedestal. Assuming that several branches of British industrial enterprise find unwonted domestic markets for their productions at prices ten per cent., say, higher than British consumers would have to pay for the same productions imported from abroad, then are not the consumers impoverished to that extent, and is not their power of purchasing other articles correspondingly diminished? Such is the question put by the conservatives. But may not the fair-trader answer thus:—Who is impoverished? What becomes of the profits accruing to the representatives of the enterprises which would otherwise have languished or died, but which are nourished and strengthened into virility by the proposed system? Are not their representatives Englishmen, and if their customers have to pay more, do not these British producers receive more, and is not the decrease of the one's purchasing power compensated by the increase of the other's?

We are not here expressing a hard-and-fast opinion one way or the other. We are merely noting the curious conflict of ideas that necessarily rages about this great problem.

PRINCE KONOYE.

It is reported that Prince Konoye is seriously ill. He has been under treatment for some time, and the physicians are said to have now diagnosed his trouble as tuberculosis. The Emperor sent a Chamberlain to inquire for him on the 3rd instant, and Tokyo journals speak in a gloomy tone of his malady. But the Prince is in the very prime of life, and it would be premature to abandon hope of his recovery.

Japanese journals contain perplexing statements about Prince Konoye's illness. They say that it was originally supposed to be tuberculosis, but that a marked improvement had set in when the patient, neglecting medical cautions, engaged in active doings connected with the foreign-policy agitation, thus bringing on a relapse. Doubts now arose, however, about the nature of the malady. It was found that there existed a swelling in the thoracic region, and that from this source came copious expectoration of blood containing numerous bacilli. Evidently differing from any ordinary form of tuberculosis, this trouble is believed by the medical experts, of whom many have been consulted, to have had its origin in some injury suffered by the Prince on the occasion

of his carriage accident several months ago. They have given to it the name of "actinism," a kind of disease with which we confess ourselves unfamiliar.

Prince Konoye's illness is now diagnosed to be actinomycosis, not actinism as previously stated by Tokyo journals. Actinomycosis is described as a disease very prevalent in low-lying districts and characterized by the presence of a fungus which at first has the form of long slender threads, but ultimately becomes a ray fungus. This fungus has the power of living in the tissues of the animal body, gaining access through loose or carious teeth or through abrasions of the tongue or tonsils. The abdomen, especially near the vermiform appendix, is its favourite seat, but it also attacks the thorax, and is often mistaken in its early stages for sarcoma or tuberculosis. Dr. Kitasato, who has diagnosed Prince Konoye's malady, is said to be of opinion that cure is impossible without an extensive operation involving the removal of a part of the lungs.

COLONIAL IMAGINATION.

A resident of New Zealand has contributed a thoughtful article to the *Spectator* upon Imagination in the Colonies. He opens with the remark that an observer from the old world in making a tour through Australia and New Zealand must be impressed by the absence of imagination in the Colonial character. He seeks a reason for this psychological phenomenon but before giving us the result of his investigations, he paints a vivid pen-picture of the environment of the young Colonial and thus enables the reader to see eye-to-eye with him when he states his deductions. "The Colonial child moves in an eminently practical orbit. From the moment he is out of his cradle he is exploring on his own account the world of the house and verandah, and sometimes over the edge. His mother is busy with the wash-tub or the kitchen range, and leaves him half his time clinging to the skirts of happy chance. He puts everything to the test of experiment, from the flavour of a green apple to the temper of a sheep dog. He has no nurse, no nursery, and no bed-time. The night has no terrors for him, and there is no mystery in the beyond, for he has no beyond." And why is this, ask the stay-at-home folks? Well, says the *Spectator's* essayist, "imagination comes partly from restraint, physical or moral, the limitations of the nursery, the forbidden orchard, or the garden fence, or, in an earlier age, the terrors of the forest boundary and the marches of the hundred; but the Colonial child goes sturdy and bare-legged into the midst of these mysteries, and laughs at your hints of unknown danger. He tastes, touches, hears, sees, and handles what he will, and wanders where he pleases. In the land of wild game he wields a rifle of his own when he is stout enough to carry it. He sits at the same table with his elders as soon as he is breeched, and takes in everything with open ears and eyes, and there is nothing hid from his inquiring soul. He rides miles to school on his own pony, or at the worst he shares the broad back of 'Dolly,' the retired plough-horse, with one or two of his brothers and sisters. And it is only too possible that when he comes home he sits down to milk half-a-dozen cows before bedtime. In the most democratic of Colonies this form of child-labour can flourish,—the tired youngster, dragged out of bed to milk before the

sun is up, nodding to sleep on the school bench under the very eyes of the master. Thus our child is early brought face to face with the practical realities of life. He learns that the earth is a repository of wealth in various forms—gold, minerals, or diamonds—and the forest represents so much lumber which is to be converted into building material or into the gaunt desolation of white stumps and black smoking ashes, representing later on a certain acreage of grass, and so to fat cattle and a banking account. Education, from the elementary schools to the Universities, brings more facts, a chaos of information, which leaves the young brain only thankful to have struggled through the slough and to be in a fair way of getting on in a practical world." Facts, not fancies, are the flowers cultivated by the schoolmen of the Colonies, and the result of their system is now written large upon the type of men evolved in the Commonwealth and in New Zealand. It seems a pity that the flowers of the imagination, which have played such an important part in the old world, should have been so studiously left out in the Colonial training. As the writer we are quoting, remarks:—

It need hardly be said that the Colonial child has no fairies, but then there is no tradition clinging to his soil. A more exquisite setting for a fairy scene than the New Zealand bush it would be impossible to conceive, and yet its glades of glittering leaf-clouds and clear torrents and filmy ferns are cold and tenantless. Not only that, but we have almost persuaded the Maoris that their native wood-lore is a childish dream, unworthy of an age which has given them billiard saloons and horse-racing. We never assimilate the native culture of the old races. There it lies,—a thing once redolent of the soil, dried now like a herbalist's collection, and stored in dusty octavo volumes along the top shelves of the library. And we pass through the countless forest of Tane, and the island where Hinemata listened to the music of Tutanekai's "lake surrounded flute," and we think only of the price of rumpi planks and the prospects of the tourist traffic. No ogres lurk in the black caves of shadow under giant trees; no elves dance in the beds of delicate fern or swing on the trailing creepers. The Englishman, reminiscent of Robin Hood's forests, or the oaks of Herne the hunter, or the pixy-haunted moors of the West, wonders that he never feels the old thrill of childhood come back to him among the ghost-like pillars of the kahikatea swamp or the huge rata vines that clutch and strangle smaller trees like gigantic lizards. Well-meaning efforts have been made to graft the Celtic-Saxon fairy-lore on to the wild Nature of the Southern Colonies. The Australian plains, and the African karoo, and the New Zealand bush, have been supplied with elves and sprites imported fresh from Devonshire and the Black Forest. But they will not thrive like rabbits and sweet-briar. Partly the eager audience is wanting, and partly the adaptive genius. There is something of the tinsel and make-believe of the pantomime fairland. And we are too grown-up ever to have a fairy age of our own.

The relief to this sombre side of his intellectual medallion, the New Zealand essayist finds in the development of a love for horticulture which is spreading everywhere throughout the Colonies. He says:—"In the middle of makeshift houses, sham architecture, and cheap ornament which goes to form the average Colonial township, whether of mud, stone, or timber, the eye can always find relief in the setting of wonderful gardens that most of the Southern Colonies can show,—roses, geranium, bougainvillea, and plumbago, blooming into thickets of brilliant colour. Where a man can spare no time from the money scramble to bring the arts into his life, he is eager to throw off his coat for half-an-hour's work with the dahlias and chrysanthemums, or at least the cabbages. And if patience and faith and foresight do not constitute the instinct of art, at any rate they are allied to it, and the love of flowers cannot do otherwise than foster the gentler qualities of the race, and help to keep alive the spark of imagination." And so the

article ends with the expression of a characteristic note of hope.

While on this subject of the intellectual development of the British colonies under the Southern Cross we cannot refrain from noticing a book entitled "The New Nation," by Mr. Percy F. Rowland, which takes a much brighter, a far more roseate, view of the outlook for the Colonies than recent writers have indulged in. In a chapter on Australian character he points out succinctly and fairly the formative influences of the sunny, almost winterless, climate of the south. Mr. Rowland happened to be in Sydney on the first day of the Commonwealth and he saw "the frank, happy healthy, free and sober Australian as he is to-day."

And, in the centre, ten or twelve thousand boys and girls, children of the primary schools, dancing the Maypole dance, swinging clubs and dumb-bells, drilling in complex figures, thousands moving as one. Who could look into the faces of those happy, vigorous children, orderly, self-restrained, intelligent, comely in their cadet corps uniforms and pleasant cotton dresses, fearless and strong,—who could see those thousands of young firm lips and honest, fearless eyes, and not have perfect confidence in the future of the Australian national character?

These young Australians are growing up with an intense love for their native land and, perhaps, where the attachment is so passionate it is not wonderful that at times the sentiment leads them into excesses which seem passing strange to dwellers in other and older countries. Mr. Rowland notes that occasionally there are cries to be heard for separation from the Motherland, and in discussing the question says:—

"So long as Australia is subject to England, so, to some extent, England is the keeper of her conscience. So long as the Imperial tie subsists, Australia will not fear the consequences of her actions; she will look to England to help her out of any difficulties,—English money and English brains. This dependence is not good for the character of a nation; to be self-reliant means to be brave, to be cautious, to be strong; and for my part, I cannot pretend to view except with sympathy the national aspirations of the young Australian party who for this bravery, this caution, this strength, are ready to sacrifice the advantages of the Imperial connexion."

Mr. Rowland concludes his argument by saying:—

For those who believe in separation I have no message: their ideal is a noble one: let them pursue it faithfully. But those who believe in Imperialism, both in England and in the Colonies, I would most earnestly exhort, in the language of the loudest and longest voiced of our Imperialists, to 'wake up!' Passions do not last long; but while they last they may be utilised to secure permanent results. The fire dies; but the link has been forged."

THE OSAWA FRAUD.

A fraud on a large scale is interesting the Tokyo public. One Osawa, a direct importer of miscellaneous articles from America, including woven stuffs and flour, borrowed a sum variously stated at from 200,000 to 280,000 yen on the security of 200 bales of cloth which he lodged in the warehouses of the Fukugawa Godown Company. The money had been advanced by several banks, each having a lien on proportionate numbers of the bales. Some time ago action was independently taken against Osawa by a haberdasher of Rogetsu-cho, the charge being a fraud involving some six thousand yen, and this together with Osawa's failure to redeem his notes to the banks, led to an examination of the pledged bales, when it transpired that many of them contained only old newspapers and other rubbish. There is as yet no exact statement of the number of spurious bales, but evidently a big fraud has been perpetrated. It is suspected that several persons were engag-

ed in the transaction. The manager of the Godown Company has resigned; Osawa's *banto* has fled, and the packers in Yokohama are supposed to be directly guilty. Meanwhile it is claimed by the banks that the Godown Company is liable, whereas the company asserts that its receipts are for goods as packed and that it does not undertake any duty of verifying the contents. This dispute is likely to be carried to the law courts.

It is stated that the dimensions of the Osawa fraud have been understated, and that the amount involved will be found to aggregate something like 580,000 *yen*. The banks have lent 223,000 *yen*, and private individuals have claims amounting to 80,000 or 90,000, while in the Fukagawa Warehouses goods stand in Osawa's name to a nominal value of about 600,000 *yen*, a considerable part of which are believed to be fraudulent. Probably these later estimates will be found to be exaggerated. At present the chief losers are indicated as the Tokyo Warehouse Company, the Mitsui Warehouse Company and the Shibusawa Warehouse Company, whose godowns are all in the Fukagawa suburb.

Mr. Kano Jigoro, speaking in the columns of the *Niroku*, says that Mr. Osawa was a fellow-student of his in the Imperial University about the year 1880 or 1881, and that he was subsequently sent down without graduating. He is described by Mr. Kano as a speculative man, whose chief accomplishment is a fair knowledge of English, and whose career has been somewhat chequered.

MR. LYNCH ON THE DESTINY OF JAPAN.

Mr. George Lynch, who first came to Japan during the Boxer disturbances and revisited the Far East last Spring, has an important article in the *Nineteenth Century and After* which he heads "The Japanisation of China." The facts he deals with are all familiar to our readers but their significance is enhanced by the skillful way in which he marshals them. He points out that during the occupation of Peking in 1900 in the Japanese quarter "order was rapidly established, business recommenced, and in a short time the streets reassumed their normal aspect, while the other parts of the town had a very different appearance. . . . I found myself speculating as to what would be the result if Japan should seriously devote herself to influencing China towards following in her own footsteps." He declares that now "such a movement is actually in progress," and that a large number of young Chinamen have come to Japan for education, and amongst other places to the military Colleges, in the belief "that China would soon go in for having an army just like the foreign armies, that Chinamen made good soldiers if they only had good officers, and that they hope to become officers." Moreover, the volume of Chino-Japanese trade is rapidly increasing, and the Japanese are largely adding to their places of business in Peking and other large towns. Japanese goods are to be seen "all over the country," displacing the English. The new "Imperial University" in Peking is dominated by Japanese influences. The reorganisation of the Northern Army and the instruction of the soldiers "have been completely handed over to the Japanese," who are the ideal people for the work, since "they have the deep-lying feeling of distant kinship. Every man they drill is a potential ally. He is a possible help to the great dam they would

throw across Eastern Asia against the glacier-like advance of Russia." The Korean Army, declares Mr. Lynch, is really Japanese, in which observation he overstates his case; the Peking police force is organised by the Japanese; and it is probable that the Chinese Navy will be re-created under Japanese control; while it is certain that Chinese diplomacy feels more and more the directing force of the Japanese mind."

THE WEATHER.

Sept. 8.

Tokyo and Yokohama are beginning to suffer from the long continued drought of the past few weeks. The rice crop promises excellently, but the uplands are parched and garden stuff is said to be past hope in many places. This injurious state of affairs does not extend into the interior, however. Beyond a radius of a few miles refreshing showers are of frequent occurrence. Their fall can be detected from Tokyo by the play of afternoon lightnings, always tantalizing the city by their distance. In fact it is alleged that with the exception of a narrow strip along the coast from Tokyo to Yokohama, a season so favourable for the growth of every agricultural product is not within the memory of living folk.

Sept. 10.

The long spell of fine weather is now likely to be broken. Two centres of depression are announced, one in Hokkaido and one in Kiushu, and it is not probable that the central-regions will escape both visitors. The only thing to be said is that these storms which have their birth in the seas of Japan are seldom as severe as those travelling hither from lower latitudes.

Sept. 11.

A telegram to Tokyo from Shizuoka says that enormous billows, some fifty feet high, are rolling into the Atami offing, and that apprehensions of a tidal wave are entertained.

We mentioned yesterday that the main island was threatened by the attack of two centres of depression, one moving southward from Hokkaido and the other advancing northward from the south-eastern seas. It now appears that the Hokkaido storm has taken its departure into the Sea of Okotsk, but that the south-eastern depression is still moving westward and northward, and the supposition is that to its influence is due the great ocean disturbances reported along the coasts of Japan.

NOTES ON CURRENT EVENTS.

One of the chief matters of discussion in trade circles in the North-West of England for some time past has been with respect to the iron-ore of Furness, which had been showing unmistakable signs of giving out. Some millions of tons have been raised, and besides being smelted in the immediate district have been exported to all parts of the world. Some of the mines had given out, and prospects altogether were not of the brightest. This giving out of ore led to searches being made for new beds, and much satisfaction has been felt in the district at the measure of success that has met the efforts of Messrs. Kennedy Bros., who have discovered at their Roan Head Mines a bed of ore which is of the greatest importance to the life of the district. The borings show that the new find is vast in extent. A thousand feet in thickness has been proved and no end at that. By those

competent to judge it is stated that this find will prove another Park Mine, from whence millions of tons have been raised. The new find is of the highest quality. Another find of some importance has been made at Newton, just outside the borough of Barrow. This was first found in a vein nine inches wide. Following it up it increased rapidly in width. At present the ore can be quarried. These finds are most valuable, coming as they do at such a time.

The great exhibition held in Manchester in 1887 was such a phenomenal success, that there has been a very general desire expressed in that city to practically repeat it, and at last a committee has been formed to organise an international exhibition, to be opened in Manchester in 1905, and to comprise "all that is best in industries, arts, and sciences; home, colonial, and foreign." The exhibition in Glasgow two years ago resulted in a profit of £100,000, and the Manchester promoters are sanguine that they will do better than that, seeing that the crowded districts of Lancashire and Yorkshire, and the towns immediately southward, contain nearly one-fourth of the population of the United Kingdom. Though, as in the last exhibition, prominence will given to the fine arts, the display will be chiefly industrial and scientific, and will be exceedingly interesting and instructive, showing the developments and improvements in the industries of the world during the past twenty years, and particularly indicating the immense strides made in mechanical and electrical engineering, and in the cotton industry. The attractions suggested include not merely an electric fountain, and the inevitable Eiffel Tower, but motor-car trials and races on a special track, experiments with flying machines and aerial voyages, and trips, wonderful as Jules Verne's, in submarine boats. Manchester, which has about a hundred miles of electric tramway track, and daily moves an enormous mass of people, is a city admirably adapted to exhibition purposes.

The latest story of President Roosevelt's eldest daughter, whose smart sayings are quoted everywhere, has created much amusement among her friends. It has reference to the President's recent declaration about large families. At a luncheon a young daughter of a former Cabinet officer who has lived abroad told of an Italian cabman whom she had met in her travels who boasted that he had been married twenty-five years, and that his wife had borne him twenty children in that time. Without hesitation, Miss Alice Roosevelt said, "How father would love that man!"

Many discussions have taken place regarding the railway station which can claim to be the largest in the United Kingdom, and it has been generally conceded that the honour has lain with the Edinburgh Waverley Station of the North British Railway. Now, however, the Lancashire and Yorkshire Railway Company claim that, as the result of alterations which have been in progress for over four years, their Victoria Station, Manchester, will occupy that position. It will have twenty-five roads running through it, and there are at present over 1,300 passenger and goods trains passing through each day.

A telegram from Tientsin to the *Fiji Shimpo* says that Mr. Yang Shu, the newly appointed Chinese Representative at the Court of Japan, reached Tientsin from Peking on the 2nd instant and was to proceed to

his native province in a few days. The expectation is that he will arrive in Tokyo early in October.

The *Jimmin* says that some 44 Japanese war-vessels are now assembled at Saseho. The greater part of these vessels were lately cruising in northern waters, where their presence inspired the notorious rumour telegraphed to the London *Daily Mail* that the Japanese fleet was waiting off Vladivostok to engage the Russian. After the cruise the ships repaired to Saseho, where they have since been joined by some others. Saseho naturally shows a very animated scene.

The *Hochi Shimbun* says that the affair of the Manila gun-boats has been settled. The facts of the trouble have probably escaped our readers' recollection. Originally five boats were ordered from the Uraga Dock Company. But when the first two were delivered, they were found to be contrary to the specifications, and the United States naval inspectors not only raised objections to these two, but also advised that the building of the three remaining vessels, already on the stocks, should be suspended. This decision created great consternation at the Dock-yard, and exposed the directors of the latter to a storm of hostile criticism in Japan, it being justly held that nothing could be more fatal to this country's reputation and interests than such a display of bad faith by her ship-builders on the very first occasion of receiving an important order from a foreign country. In the face of this condemnation the President of the Dock Company resigned, and for a time nothing more was heard of the affair. Now, however, it is alleged that a compromise has been effected, the United States Authorities confiscating the security lodged by the Dock Company, but, on the other hand, agreeing to recoup the sums actually expended by the latter on the remaining three gunboats, of which, however, delivery will not be taken.

We read in the *Shogyo Shimpō* that history is repeating itself in the matter of *habutaye*. Japanese manufacturers have again fallen into habits of adulteration, employing dishonest means to increase the weight of the staple. The result is that the Yokohama middle-men have combined to cease all purchases. The *Shogyo* justly remarks that such practices are absolutely suicidal in the face of the fact that American manufacturers are employing all their great ability and enterprise to produce an article which shall replace imported *habutaye*.

A copy of the "Century Dictionary" in a specially constructed oak case was presented by *The Times* to the Crown Prince of Japan on the 31st of August, that being the birthday of His Imperial Highness. The Prince was graciously pleased to accept the valuable work through the hands of Chamberlain Saito. Our readers are aware that a copy of the "Encyclopedia Britannica" was placed by *The Times* in the hands of Baron Sannomiya some time ago for His Majesty the Emperor's acceptance, but we may add that the book had very beautiful binding, the Imperial Chrysanthemum and the Paulownia being stamped in gold on each volume. A pear-wood case of artistic shape and rich but quiet decoration contained the great work.

Captain Haswell, of the Nippon Yusen Kaish's steamer *Kumano Maru*, has been presented with a set of silver wine cups by

the *Kai-in Keisei-kai* of Japan (Society of the Assistance of Seamen) which is under the presidency of Prince Arisugawa. Captain Haswell, who enjoys a high reputation not only in the Company which he has served so long and so well but also with the travelling public, is considered to have deserved the special thanks of the above Society, in consideration of the active and unflagging assistance rendered by him in collecting subscriptions for the uses of the Society and generally furthering its interests.

Sir Claude MacDonald and Baron Rosen are now spoken of as political barometers. By a section of the Japanese public their movements are watched with the greatest attention. On the 4th instant Sir Claude paid a visit to the Foreign Office. His business, it is believed, was connected solely with the insurance security question, but the *Chiuo Shimbun* talks of the event in a mysterious tone. Manchuria is thus drawn into the sphere of the insurance companies, a prediction of distant fulfillment.

A telegram to the *Fiji Shimpō* from Shanghai says that Mr. Odagiri, Japanese Consul-General at that port, has made arrangements with Messrs. Farnham, Boyd & Co. to have put together at their well-known docks the two Japanese light-draft gunboats recently constructed by Messrs. Thornycroft & Company to order of the Japanese Government. These boats being intended for service chiefly in the Yangtse, it is obviously economical that they should be put together at Shanghai, since they will thus be saved the voyage from Japan to China.

The following Rear-Admirals have been promoted to the rank of Vice-Admiral in the Japanese Navy:—Kurooka Tateaki, Matsumaga Yuji, Kawara Yuichi, Kataoka Shichiro, Kanimura Hikonojo and Ijuin Goro.

A very interesting point is raised by the *Fiji Shimpō*. Referring to the growth of private universities the *Fiji* remarks that though independent in name, inquiry shows their teaching faculty to be almost entirely supplied by the Imperial University. The professors of the latter, who necessarily have some spare time over and above that absorbed in the discharge of their regular functions, are willing to lend their assistance at private institutions, and the latter are happy to be able to avail themselves of a comparatively inexpensive supply of the best pedagogic material. But the tendency of this, our contemporary thinks, is to cast the intellectual forces of the nation entirely in one mould, and to prevent the variety of development that conduce so much to progress in other countries. The *Fiji* recommends resolute efforts on the part of private institutions to prepare on their own account staffs of teachers and professors who shall be imbued with their spirit and perpetuate their traditions. Thus we come down to the familiar bed-rock of Japanese difficulties—imppecuniosity.

The same newspaper raises a powerful voice in favour of releasing the Imperial University from the control of the Education Department, and conferring on it absolute independence. The official leading strings by which it is at present bound check all growth and expression of free thought in the country's citadel of intellectual development, and pervert the University into a mere seed-plot for growing officials.

Figures are published showing the grants of land made by the Government in Hok-

kaido during 1902, and some other particulars as to the development of the northern island:—

	<i>Tsubo.</i>
Total area of lands leased.....	597,074.011
Total area of lands granted	24,710.475
Lands resumed in consequence of failure to cultivate	89,831.949
Lands successfully reclaimed and thus becoming the property of the reclaimers	177,089.904
As to this last figure, the localities in which the lands are situated stand thus:—	
	<i>Tsubo.</i>
Ishikari	36,459.946
Shiribeshi	19,714.796
Oshima	15,713.640
Iburi	25,561.676
Hitaka	10,389.257
Tokachi	42,370.861
Kushiro	4,916.045
Nemuro	504.322
Chishima	54.330
Kitani	11,222.399
Teshio	10,182.614
Total	177,089.904

As is usually the case with figures given by Japanese newspapers there is a discrepancy here: the total of the areas stated in the above eleven districts is 18 *tsubo* short of the total actually stated. However, the difference is paltry.

It is stated that most excellent results have attended the attempts made at the official tobacco-growing stations which, together with the agricultural experiment stations, there has been talk of abolishing on account of expense. The end to be accomplished was the growing of a yellow leaf (*koshoku tobacco*), which would take the place of the foreign leaf now imported in large quantities for the manufactures of the much advertised and widely celebrated "Pin Head," "Old Gold" and "Cameo" cigarettes. At two stations, Ota in Ibaraki prefecture and Hadano in Kanagawa, the first unquestionable success was made. A yellow leaf has been obtained there which, it is confidently affirmed, will drive the imported article out of the market. Equally fortunate has been the essay made at Iwata in Hyogo prefecture, where some 8,000 lbs. of excellent leaf have been grown. Two more stations have now been established in Osaka and Shizuoka prefectures. The best leaf of the old kind sells for not more than 80 *sen* a pound whereas the yellow leaf is worth a *yen*. There is some little trouble connected with the curing process, but that is a small matter, demanding only care. It will be remembered that the Japanese Authorities availed themselves of the assistance of an American expert in this matter.

In spite of all the precautions taken by the authorities the mania for committing suicide at the Kegon Cataract continues. Whenever a student proceeds alone to the neighbourhood of the Fall he is "shadowed" by a policeman, and whatever steps are possible have been taken to prevent the inns from giving separate accommodation to students. Nevertheless the number of youths affected by suicidal dementia now totals some 16, though happily not all of them succeeded in finding death in the basin of the cataract. The priests of the Futa Ara Shrine have now interfered by posting up a placard which is expected to have much influence. It says that to throw away precious life in such a manner is to defile the sacred mountain and to defile one's own name, is an act of irreverence towards the Gods, of disloyalty to the Sovereign, and of disobedience to parents. Civilized men should remember three things. It is sad and disgraceful that youths with

many years of usefulness before them should allow themselves to be distraught by some petty occurrence and should resort to a course which renders them as unsightly in death as their motive is miserable. A man's name belongs to his family, his life to his country. To cast away both without reflection is to sow the seeds of regret in a future state. That is the teaching of Japan's greatest sages.

Probably this placard will do more to cure the insanity than any efforts on the part of the civil authorities.

Reuter informed us on Monday that the "Brown cotton corner had netted 7,000,000 dollars," but as usual left the filling out of the message to the imagination of our readers. To get at the heart of the matter we turned to our American newspaper files, but even they afforded little information. The *New York Commercial* of August 17 certainly has a breezy unsubstantial paragraph dealing with the matter. It says:—"The Brown cotton-corner is taking a great deal of queer cotton to New Orleans. The staple has become so valuable that the owners of cotton gins are scraping the floors, and have made up several bales of waste cotton. Perhaps the most extraordinary bale, however, is one that arrived there from Georgia. It was of the crop of 1872, and is consequently thirty-one years old. Its owner held out for sixteen cents that year, but when the market broke and cotton went down, he swore he would never sell it for less than sixteen cents. When cotton went up to fourteen cents in New Orleans he shipped it there, to be ready for the sixteen cents he pledged himself to, with orders to his agent to sell whenever that figure was reached. The cotton has been stored in one room for thirty-one years, and is thoroughly dried out. It lost fifty pounds in the process. Experts declare the staple to be as good as ever." In a later issue our contemporary says the Brown cotton-corner was composed of some leading New Orleans speculators. There can be little doubt that their manoeuvres have proved very successful and that they sold out at the top of the market.

It is announced that the edifices which the Japanese Government will erect at the St. Louis Exhibition are to be these:—

A main building, measuring 123 *tsuba* (492 square yards) in the style of a private dwelling of the time of the Taiko, namely, the 16th century.

A sale-room, measuring 578 square yards, surrounded by a verandah, also in the style of the 16th century.

A pavilion, its roof constructed with the specimen timbers sent by the Imperial Estates Bureau to the Fifth Domestic Exhibition in Osaka; its entrance in mixed Japanese and Occidental style, and its principal room in the fashion of the Tokugawa era.

A tea-pavilion.

A two-storeyed office measuring 120 square yards and built after a mixed style of architecture.

A tea-house, measuring 142 square yards, after the fashion of the Kinkakuji of the Ashikaga era.

A Formosan edifice in ancient palatial style.

A museum of Japanese tea utensils, in ordinary Japanese style measuring 112 square yards.

A ware-house, measuring 24 square yards.

An entrance gate after the fashion of the entrance to the Daigo-ji in Yamashiro, which was constructed in the time of the Taiko.

A club room for visitors and a place (328 square yards) for various displays.

News is published in Tokyo that the Russian authorities in Siberia have apprehended a Japanese subject who claims to have been engaged by the *Yamashina Kaiji Kogyo-jo* for salvage operations in connexion with the cast-away steamer *Gaisen Maru*. We can not identify the exact locality of this occurrence, but apparently it is somewhere

in the neighbourhood of Vladimir Bay. The Japanese claim that in consequence of the arrest, which of course they declare to be unjustified, the work of salvage has had to be suspended, and a loss of 30,000 *yen* has been incurred.

There has been a flutter of aggrieved protest in the press of the United States over a statement made in an English court of law by Mr. David Bispham, the famous baritone, whose home was once in Philadelphia. Mr. Bispham stated that he now had his domicile in England, because it would be "professional suicide" to reside in the United States, that country not being "a musical centre." The *Philadelphia Record* finds consolation by looking into the future: "In spite of all present drawbacks, it is the mature opinion of musicians here and abroad that the future of music and of musicians lies in America. A professor at the Leipsic Conservatory, who spent some time here, said there was one superlative advantage in the New World—its freedom from the tyranny of tradition. There are cast-iron rules in every European centre—a belief that the principles of music and the art of instruction are exactly as promulgated long ago by certain reverend teachers. and that it is sacrilegious for any one to suggest the least departure from tradition. Teachers of originality are suppressed. No conscientious teacher can enter into his work with enthusiasm in such circumstances, and America will in time become the asylum of the world's greatest musicians."

An extraordinary instance of Customs administration in Australia is afforded by an incident which recently occurred at Thursday Island. The visiting yachtsman who was concerned (says the *Melbourne Argus*) is the Earl of Crawford, the father of Captain the Hon. R. H. Lindsay, whose marriage with Miss Mary Clarke took place in Melbourne a few weeks ago. The Earl of Crawford's steam yacht *Valhalla* put into that port, with its owner aboard, and remained there two or three days. It was not plying for public patronage or competing in any way with coastal shipping, but the customs officials nevertheless demanded that Lord Crawford should pay £2.10s. to the department as representing duty on the stores consumed on the yacht whilst she was in Commonwealth waters. That gentleman demurred, and telegraphed to the Minister of Customs on the subject. As Mr. Kingston did not favour him with a reply, he wired again and again, but without eliciting any rejoinder. The local Customs officers became insistent, and threatened to seize the vessel under the Customs Act. Lord Crawford offered to deposit the duty demanded with an agent in the town, pending the settlement of his dispute with the department, but the officials would not adopt this suggestion, so the Captain of the yacht hauled up his anchor, and at day-break next morning quietly slipped out to sea, and left the Customs Department's absurd claim unsatisfied.

By an interesting and perhaps significant coincidence the *Yomiuri Shimbun* and the *Fiji Shimpo* publish very similar articles on consecutive days on a subject which might not have been expected to attract special attention just now, namely, the study of foreign languages in Japan. Both journals take the view that the acquisition of English is carried to comparative excess in this country, for however wide may be the use of English, it is, after all, the language chiefly

of commerce, and it affords few facilities for the relations that are rapidly growing between Japan and continental Europe. The *Yomiuri* urges that greater diligence be shown in studying French and Russian, whereas the *Fiji* insists on the need of Russian alone. The latter journal does not lay down any special method for carrying out its programme, but the former advises that the Russian language should be included in the voluntary subjects of study at elementary schools. Would that help matters much, we wonder. French is already among the compulsory subjects—English, German and French are the three languages from among which one at least must be chosen. Thus although French has the advantage of being on the compulsory list, it is comparatively little studied. May we conclude that Russian, by being placed on the voluntary list, would obtain any sensible access of popularity? Our own view is that people will be guided mainly by their personal convenience in this matter.

In connection with the recent Royal visit to Ireland, Mr. E. O. Blackburne, the well-known Irish genealogist, thus traces King Edward's hereditary links with ancient Irish tribal rulers:—Eva, daughter of the King of Leinster, married Strongbow; Isobel, their first daughter, married William Marshall, hereditary Earl Marshal of England and Earl of Pembroke and Leinster, and their five sons died childless. Isobel, their second daughter, married the Earl of Gloucester, and her granddaughter Isobel was the mother of Robert Bruce. Eva, the third daughter, married Lord de Breos, and from her daughter, Eva, descended Edward IV., and through his granddaughter, Margaret, Queen of Scotland, daughter of Henry VII., the reigning dynasty claim their right to the Throne. Roderick O'Connor, the last King of Ireland, left a daughter, who allied herself to Hugo de Lacy; their son Hugh, created Earl of Ulster, left a daughter who married a De Burgo, and their daughter Ellen married Robert Bruce, so that "the present representative of the Royal Irish races of Eva and Roderick, the lineal heir of their rights, and the legitimate Sovereign of Ireland by right of birth," is his Majesty King Edward VII.

The launch of the new steamer *Nikko Maru*, built at Nagasaki by the Mitsu Bishi Co. for the Nippon Yusen Kaisha, will take place on Wednesday, Sept. 23rd. Mr. Kato, Vice-President of the Steamship Company, will take part in the doings of the day. The *Nikko Maru*, says the *Nagasaki Press*, is a vessel of 420 feet in length, 50 feet breadth, and 30 feet 6 inches depth. She has a gross tonnage of 5,600 and is to be classed 100 Al at Lloyd's. She will have accommodation for 60 first class passengers, and 24 second class, which is about the same as the *Kumano Maru*, although the new ship is 20 feet longer. We are informed that the vessel will be ready for sea about the middle of December.

The Tokyo Electric Railway Company held an extraordinary general meeting on the 8th instant, when a report was presented by the directors showing that all the Company's new shares—104,000 in number—had been successfully issued, and that the first call of 12.50 *yen* had been duly paid up.

In connexion with the undertaking of the Department of Education to compile certain text books itself, entrusting the duty of publication to booksellers selected by com-

petition, it is interesting to note the results of the tenders recently submitted by rival firms. With few exceptions the principal houses hitherto engaged in the work have failed to obtain orders. The following are the successful tenderers:—

YAMAGATA PREFECTURE.		Vols.
Ikarashi Taemon	172,400	

Thus the total is 22,189,340 volumes, which may be regarded as the number of books required yearly by the elementary schools for the study of the five subjects treated in the Mombusho's compilations. This immense figure suggests a sufficient reason for the crooked methods hitherto employed by certain publishers.

To-day we publish an article written for the *Japan Mail*, by Dr. J. N. Seymour, late of Sendai, giving his experiences of a trip to England by the Siberian route in July. Next week we hope to publish the diary of a Yokohama resident who made the same trip in November, and who has kindly placed his notes at our disposal.

THE SUCCESS OF AMERICAN MANUFACTURERS.

(COMMUNICATED.)

Some months ago a somewhat remarkable article appeared on this topic in "The Nineteenth Century and After" from the pen of Mr. John Foster Fraser. Mr. Fraser has made a thorough study of American business methods and his article is written in a most impartial spirit. He has come to the conclusion that in some respects the English manufacturer has been surpassed by his American cousins, and he is of opinion that the sooner the Britisher realizes this fact the better will it be for British industry and commerce. It is customary for British merchants to pooh-pooh American go-aheadness in some such phrases as the following, says Mr. Fraser:—"We in England don't live to work; we work to live. What is the good of being alive if you have to slave from morning to night as those Yanks do? Look at the price they are paying. They are old men before they are forty. They are all anxious and careworn. They can talk about nothing but money-making. . . . We can do without the rush the Americans think so necessary. We haven't got so many millionaires, but we've got healthy men. Old England is good enough for us." This is precisely what the Japanese are saying to day when urged to greater industrial and commercial effort. Whatever others may think, and it does seem to us there is room for difference of opinion on this point, Mr. Fraser has no sympathy with this placid contentment and this assumption of superiority. It is, he says, "a little bit of ingenious self-deception," and British manufacturers do not commercially go the pace that the Americans do, not because they do not want to, but because they

cannot. This assertion is supported by a formidable array of facts, which we now proceed to epitomize. English manufacture has declined because the men who now control the huge manufacturing concerns of Great Britain lack the energy, the grit, and the business knowledge of their ancestors. They were born into success. They are suffering from the inertia consequent on riches. They are educated, philanthropic, politically powerful, and they constitute great social magnets, but out-and-out business men they are not. The British manufacturer to-day is a second or third generation man, whereas the successful American manufacturer is a first generation man, the kind of man we had in England 50 years ago. The Americans usually start from poverty, they begin life on the proverbial shilling; the first ingredient to make a man wealthy, they say, is poverty. In order to succeed they have to use every ounce of brain they possess, but succeed they do. But their success is largely the result of racial combinations which have produced abnormal mental and physical energy, and a desire to outdo hated rivals. Here Mr. Fraser describes American life so accurately, it seems to us, that we give his exact words. "The immigrant races are mixed by marriage. So a new race—not a branch of the Anglo-Saxon at all—has sprung into existence with that alertness of brain you invariably find in the offspring of mixed peoples. They start fresh, with no local customs, with no traditions, with nothing but the feeling that they are a new nation, somewhat sneered at by the other nations, of which they have to get abreast. Not quite confident where they are exactly, the Americans make a bold shot and declare they are first. This, indeed, is the perpetual song of the newspapers. In England we constantly tell one another Great Britain is going to the devil. Americans always tell one another America is the leading nation on the face of the earth. . . . The English manufacturer has ideas about 'reserve' and 'dignity.' The American sticks all his goods in his shop-window for the world to gaze at. He is cocksure, he is buoyant; he is absolutely sure of success. So, breezily, with slap-dash rush, 'joshing'—not being accurate in his facts—he pushes ahead in a way that startles the Englishman." To sum up. (1) The American is always enthusiastic. (2) He is the son of a virile race, being endowed with remarkable adroitness of intellect. (3) The heads of firms in America are mostly men who sprang from the people, who are the makers of their own lives and know their business through and through.

Mr. Fraser next passes on to the subject of wages. The high wages which the American manufacturer has to pay have driven him to adopt special expedients for getting level with his competitors.* The expedients he chiefly relies on are protective tariffs and the use of labour-saving machinery. It is often said that the large use America makes of machinery compared to other countries shows that her people have the inventive faculty more fully developed than Europeans, but Mr. Fraser tells us that "all who have considered this matter scientifically know that the American mind is not creative: it is adaptive, appreciative of the value of invention." It was the stumbling-block of high wages standing in the way of competition with cheaply produced European goods that led to the wide adoption of labour-saving machinery. In regard to the encouragement of invention, America is far ahead of England. This English inventors know, and consequently among the list of inventors to be seen at the Patent Office at Washington you find the names of numerous men with a British domicile who have patented their inventions in the United States, because the American Patent Office is infinitely superior to our own. "Many inventions in active use in America to-day are the creations of Englishmen, which no manufacturer

* It is a mistake to think that the high wages received in America place the American workman in a better position than the British workman. Mr. Fraser says:—"Whilst the working man in America earns quite half as much again as the Briton, he has to pay 3 times as much for rent, twice as much for clothes, whilst his food, roughly speaking, comes to the same." Thanks to Protection!

in England thought well to take up. In the first state they were probably not worth taking up. But it was the American who grasped the thing, who altered, adapted and improved the invention, and made it valuable." Numbers of English inventions are in extensive use in America and are hardly known in England. The Northrop loom, which may be seen by the thousand at Fail River, but which till recently was not used at all in Lancashire—the centre of the cotton industry of the world—is a case in point. This ingenious loom was invented by a Yorkshireman. When a warp breaks it automatically stops the machine instantly, thus avoiding the weaving of defective cloth. Where this loom is not used the girl in charge of several looms has to keep a sharp lookout and stop machines when a thread breaks, and only the most experienced girls can be trusted to do this, and even they make a mess of the affair when two threads belonging to different looms break at the same time.

In America the relation between employee and workman is much closer than it is in England. Consequently the American workman has none of the English prejudice against labour-saving machinery. In America the workman often suggests alterations whereby the output may be doubled, and he is confident that suggestions will benefit him personally. If more money can be made by the adoption of his suggestion, he will get his share of the profits. There is another advantage attached to the large use made of machinery in America, it greatly lessens the number of skilled artisans required. Children can often be used in the United States in workshops where in England a trained adult would be required. The Americans cheapen labour by employing girls instead of boys. In the shoe manufactories near Boston thousands of girls are employed. The American puts his brains into machines that can be worked by a mere child and thus brings labour down to a degree of cheapness which is not to be reached in any European country by ordinary methods. The American manufacturer specializes more than the Englishman does. "He does not try to make twenty things in engineering. He makes one thing, be it bridges or locomotives, or reapers or machine tools." . . . "He specializes his work people in making separate parts. They have one little thing to do, and they do that, and nothing else, year in and year out." It is monotonous, but it is done to perfection. The British manufactured article is often a more durable article than the American. But the American tells you that he does not make things to last an eternity. That is not business. If a boot lasts a fair time, people will not murmur.

Other interesting points of comparison between the methods and notions of the two nations we must pass unnoticed, but the persistent manner in which America encourages youthful enterprise, dash and energy is worthy of our special attention. In England the man who has been in business 30 years is supposed to know far more about it than the man who has only had 3 or 4 years experience. But the American thinks that there is no such fatal obstacle to success as a business manager with fossilized ideas, and so he is in favour of heaping responsibility on young shoulders with a view to developing new types of character, new capacities, new adaptations to ever varying circumstances; and the experiment succeeds in an astonishing manner. "The American thinks that responsibility brings ballast, and with all the fire of his young manhood a youth will strive night and day to prove the confidence placed in him is well placed. . . . Time and time again, as I have gone through the workshops of the United States, I have almost been staggered at the mere boys who are managers and heads of departments; not the sons of proprietors, but young fellows who have started at the bottom, proved their grit, shown their energy and been pushed on to high positions. It is not at all unusual to find a man of twenty-four having the control of several thousand men." The tendency in America is all in the direction of paying higher wages for brains and lower wages

for mere physical labour. Hence the rush to the universities, the desire at any cost to develop the intellect, the touching spectacle of young mechanics almost starving themselves rather than forego a university education, or acting as waiters at hotels or tram-conductors during the vacation in order to attend lectures in term time.

Is the game worth the candle? What will be the effect on the race of the terrible stress and strain? Are the Americans as a nation progressing morally as rapidly as they are intellectually? Are the ideals of the typical modern American worthy of comparison with those of his ancestors? Is not far too much importance attached to mere success? Does character of an exalted type count for what it did fifty years ago? These are questions demanding earnest consideration, and on which the greatest variety of opinion has been expressed, but which cannot be discussed here.

YACHTING.

A moderate south-easterly breeze and very little sea combined to make Saturday's weather conditions highly favourable for yachting. There were but two races on the card, the only two classes that seem to have any interest left in them being the 21-raters and the "Larks."

The 21-raters started at 2 p.m. *Sunbeam* got out of the harbour first, *Chocho* next, but immediately passed by *Pele* and *Edna*. After tacking in towards the Breakwater they fetched close up to the Lightship, *Sunbeam* getting round first, with *Winsome* close on her heels, *Edna* and *Vixen* together, some thirty yards astern. All tacked at once and came inshore. On this leg *Winsome* sailed through *Sunbeam's* lee, and *Edna* and *Pele* had a close fight. But when they began tacking under the land *Sunbeam* was still in the weather position, and so the two leaders kept it going to the Widow Buoy, where *Sunbeam* in the seaway got round perhaps half a minute ahead. Running back *Winsome* kept within yards, almost feet, of her rival but could not get past and at the Lightship *Sunbeam* hauled on her sheets quite a quarter of a minute to the good. Thence to the harbour entrance it was the same kind of race, and instead of separating they chose to stick to each other. So they tacked up the harbour, and so they finished, one luffing across the line instantly after the other. *Edna* and *Pele* made an equally close contest; and it is safe to say that the race was absolutely the best of the season and perhaps the best by small yachts in Yokohama. The leading yachts were within a yard or two of each other all over the course after rounding the Lightship, and it is amusing to note that not one word passed between the crews until in the harbour tacking up to the pier they exchanged views as to the advisability of running into that structure. In the result *Sunbeam* finished a bare five seconds ahead of *Winsome* and won the first prize irrespective of her handicap of three minutes, *Winsome* being second, the latter taking one and the former two record points.

The corrected handicap times, under which the prizes were given, are as follow:—

	h.m.s.
<i>Sunbeam</i>	4.22.05
<i>Winsome</i>	4.25.10
<i>Pele</i>	4.29.20
<i>Edna</i>	4.29.10
<i>Chocho</i>	4.37.02
<i>Vixen</i>	4.41.10

The "Larks" raced out round the Lightship, a mark near the breakwater, the Mandarin Bluff mark and home, No. 11 (F. H. Abbey) winning rather easily the first prize, the handicap (No. 10) cup, and two record points. No. 10 (Drummond and Watt) occupied second place over great part of the course but was overtaken and passed by No. 4 (W. B. Mason), which therefore takes second prize and one point. Times:—

	h.m.s.
1 (Gillon)	4.10.00
4 (Mason)	3.57.30
6 (Poole)	4.05.50
9 (Kingdon)	4.06.10
10 (Drummond and Watt)	3.59.00
11 (F. H. Abbey)	3.52.45
12 (Sander)	4.04.03
14 (Eyton)	4.09.30

CRICKET.

BORN IN JAPAN V. THE REST.

It is still far too hot to play cricket comfortably, but with the Interport Week only six weeks or so away, it behoves local cricketers to begin to make some effort if the flag of the blue-and-white is to be kept in home territory this year. The match on Saturday, which was begun with a broiling sun over head, was between teams representing Born in Japan versus the Rest—and needless to say the Born in Japan eleven had matters all their own way, dismissing their 12 opponents for 79, and then knocking up 141 for the loss of three wickets. The Born in Japan bowlers were all very much on their game, and J. M. Mollison captured 6 wickets at a cost of 38 runs; H. W. Kilby took 4 for 19 runs; and P. B. Clarke 2 for 16.

The Rest made a poor showing in the sun, and their fielding even after the worst of the heat was finished was not particularly noticeable. Score:—

THE REST.

THE PLAGUE IN YOKOHAMA.

Two cases of plague appeared in Yokohama on Sept. 3rd. One of the patients is a woman 17 years old employed as a servant by a man named M. Madenokoji living at No. 3,577, Negishi. She was, after examination had proved the existence of the disease, removed to the hospital. Another case was that of the wife, 35 years old, of a fisherman named M. Kimura, living at Urashima-cho, Kanagawa. The patient died about 11 a.m. on Sept. 3rd. She had been suffering since Aug. 29th, from fever which was thought to arise from cold. A post mortem examination by the sanitary authorities, showed the illness to be plague. The usual isolation measures were carried out in both instances.

Two cases of plague appeared on Sept. 6th at Matsukage-cho, Yokohama. One is a girl named Hama, seven years old, whose parents are keepers of the bath-house, Kameno-yu. It appears that the victim was suffering from a fever which grew gradually worse and Dr. Nogata, who attended her, informed the authorities of the Sanitary Office. Drs. Fukuda and Okawa, of the Police, carried out an examination and the

fever was found to have been caused by the plague. The patient was removed to the Manji Hospital. In the evening, a younger sister, 3 years old, was found suffering from fever, and in the morning of the 7th she was removed to the same hospital. The bath house and 17 neighbouring dwellings, in which 86 persons are living, were isolated.

The patient from Negishi died early on the morning of the 6th at Manji Hospital. The corpse was cremated at Kubo-yama the following morning.

Four cases of suspected plague appeared in Yokohama on Sept. 8th. Three are children of a barber named Y. Okada, living at Matsukage-cho—a girl, 13 years old, her sister, 10 years, and their brother 8 years. The boy died the same day and the two girls were removed to the Manji Hospital. Another is a patient staying at the Juzen Hospital. He was found to have been attacked by the disease after entering the hospital. On the morning of the 9th the barber's shop and adjoining houses were segregated.

The Yokohama municipal authorities have decided to burn a house at Urashima, Kanagawa, (where a case of plague appeared which proved fatal on Aug. 30th) and also twenty-one adjoining dwellings. The authorities are now negotiating with the landlords with regard to the price of the buildings.

Another case of plague appeared on Sept. 9th at Matsukagecho, 1-chome, Yokohama, in a compound where two children of a bath-house keeper and three children of a barber have been attacked. The first victim is a workman named O. Kawai, 47 years old, employed by the Yokohama Electric Light Company. He was removed to the Manji Hospital on the evening of the same day, where he succumbed. His dwelling and 17 adjoining houses in which 63 persons are living were at once isolated.

The plague mortality in India is increasing owing to the growth of the malady in the Western and Southern districts. The whole of Upper India, including Bengal, the United Provinces, the Central Provinces and the Punjab is practically free, only fifty-five deaths being recorded in this area during the week ended the 13th August. On the other hand, Bombay Presidency, including Bombay City, in the same period had 2,909 deaths; Mysore 331, Central India 131, Madras Presidency 94, Hyderabad State 80, Berar 11 and Coorg 2.

SHIPPING CASUALTIES.

The steamer *Kohci Maru*, during a heavy fog, went ashore early on the morning of Sept. 4th off Senpo point, while on a voyage from Hakodate to Atsukishi. The hull is reported to have broken up. Further details are not given. The ship is owned by Mr. M. Kaki, a merchant in Hakodate, and was formerly called the *3rd Shinkokawa Maru*.

A steam launch of the Sumidagawa Ferry-boat Company, Tokyo, collided on Sept. 5th, with a junk on the Sumida river at a point near Ryogoku bridge, causing damage to the latter. Two passengers on the launch were severely injured and had to be removed to the Meiji Hospital.

Tokyo papers state that the British-India liner *Ujina*, which had shipped 50,000 bales of rice, left Rangoon on Aug. 15th for Japan via Manila, but stranded at a point near North Danger Island where she stayed for 12 days. During the time over 2,500 tons of cargo was jettisoned, after which the vessel floated, and has now arrived at Manila.

The Nippon Yusen Kaisha's steamer *Mutsu Maru* collided about 3.30 a.m. on Sept. 4th with the *Sakagawa Maru*, of the Yasuda Gomei Kaisha, off Furuta Kei, Awamori prefecture. The latter sustained damage but it is reported that the passengers and cargo are safe. The *Heian Maru* and *Taiyo Maru* were immediately despatched to the scene, from Awamori. The Yusen Kaisha's steamer was en route to Muroran from Awamori.

TO EUROPE BY THE TRANS-SIBERIAN RAILWAY IN JULY.

[WRITTEN FOR THE "JAPAN MAIL."]

As the journey through Siberia from Yokohama to London may be made in 20 or 21 days, at a cost everything included, of about yen 420, and with less discomfort than attends most sea voyages, this route is likely soon to become the most frequented. A description of the journey which I made in July will afford fuller information than has hitherto been generally accessible. The railway authorities had not then, and perhaps have not even now, published time-tables or tariffs, nor shown any desire to attract the general public. But at the Nagasaki office of the Chinese Eastern Railway Company some information was given verbally, and time-tables in French as well as in Russian had been published by the International Sleeping Car Company.

Having procured a passport and had it visé by the Russian consul, I left Nagasaki on July 5 in the *Mongolia* belonging to the Chinese Eastern Railway Company, one of whose steamers leaves Nagasaki every Sunday at noon to connect with the fast train from Dalny on Tuesday. The *Mongolia* is a first-rate ship, clean and comfortable, with spacious cabins, and good food. Here I made, for the first time, acquaintance with Russian cookery, and the following are the peculiarities which I then and subsequently observed. Each plateful of soup contained a large slice of meat. A great deal of cabbage was a frequent ingredient and the excess of fat was never removed from the soup, so that it would not well suit delicate stomachs and sometimes had a greasy taste. Meat as a rule was overdone. Rissoles or meat-balls soaking in fat were often served. Potatoes and vegetables were hardly ever served in separate dishes, but only along with cutlets or stews, and in small quantities. Ice-cream or some very light custard or preparation of milk thickened with starch were the chief sweet dishes. The bread and the butter were always excellent, and the coffee and tea were pretty good. On the whole the food seemed to be regarded by the passengers as satisfactory. On the ship in addition to the Russian waiters who spoke their own language only, there was a Chinese who spoke both English and French, and there was also a Japanese. The fare is forty roubles. The rouble is equal to about 98 *sen* and is divided into 100 kopecks. There was no decent second class, and passengers were booked for the sea voyage only. Except for a little rolling the first day, the sea and weather were perfect and the passengers began to make acquaintance with each other. Dalny was reached about 1 a.m. on Tuesday. As the train did not leave till 11 p.m. there was a long time to wait. The ship lay at a wharf about two miles distant from the town and railway station. After breakfast, I joined with two other fellow travellers in hiring a carriage to convey ourselves, and a cart for the luggage, to the Hotel Dalny, which is a few minutes' walk from the station. The carriages are open ones with Russian drivers and horses. *jinriki* are also procurable. At the hotel we couldn't hire any private room, and there was no reading-room or sitting-room, so we had to spend the day uncomfortably, sitting in the verandah or the dining room. There is nothing of much interest at Dalny, which is a town largely composed of brick suburban-villa-like residences. About a mile distant there is the beginning of a public park containing a few caged animals and some full-grown trees, the only ones we saw, for the surrounding country is bleak. The railway ticket-office was opened only an hour before the departure of the train, but we went early to the station to look at the cars. Our train was composed of two second-class cars, one first-class car, a dining and baggage car. A second-class car consisted of a corridor communicating with eight compartments or cabins. A compartment had a seat, forming a bed by night at each side. At the back of the seat there hung down a flap which could be raised so as to form an upper berth, so that each compartment held four persons. The length of the bed was $6\frac{1}{2}$ feet. The railway gauge was five feet. The whole arrangement is the usual European plan. A first-class car differed from a second-class one in having only one seat and therefore two beds in each compartment. The partition between two adjoining first-class compartments could be opened so that the two compartments formed one large four-berth cabin. The chief advantage—a very small one—in the first-class is that there is a larger amount of floor space than in the second. Two fellow-travellers would fill a first-class compartment and be sure of privacy, whereas four are needed to fill a second-class one. The second-class are a little plainer than, but quite as clean as, the first-class. I and a German gentleman agreed to occupy the same compartment in the second-class. During eight days we had the compartment to ourselves, and then two Russians occupied the remaining berths. We were thus better off than some of the first-class travellers who throughout the journey were in fully-occupied compartments. No baggage can be put under the seat, but there is strong netting both in the compartments and in the corridors. Even when all the berths were occupied, I found ample space for two articles, one being placed at the foot of the bed and the other in the netting. Only 36 lbs. can be carried free in the baggage-car. The charge for excess weight is K.2 67 for every 9 lbs. As the cost of 11 lbs. by post to England, including delivery at destination, is some 20 *sen* less than this, it would be more economical to make up one's clothing into 11 lb. packages and send them by post. Such things as I should need in August I delivered in May to a carrier to be sent by a ship which it was said would reach England in forty-five days, but on my arrival in England I was told the ship was not due till the end of August. My experience may serve as a warning to others. During the journey much clothing was not needed. In dry weather fine dust penetrates everywhere and soils or spoils clothing. It is therefore advisable to have something old or washable for daily wear. I found one old suit of light tweed for daily wear in the train, and a better suit to be worn when needed, were sufficient. There was only one excessively hot day, but on Lake Baikal it was so cold that overcoats were used. Towels, but not soap, were provided in the train. The pillows were large and soft and could be used in the daytime, so it was useless to bring a cushion. There was a good piano in the dining-car, and there was a bath somewhere which nobody used, the hours for use being inconvenient. There were no books, except a few Russian ones, on one section of the line, nor were any procurable until we had left Manchuria. I brought a chess board and found it of great help in passing the evenings. As for food and drink there is no necessity to bring any, but west of Irkutsk no whisky was to be had. Excellent milk, sometimes boiled, was sold by peasant women and children at many of the stations. The station buffets on the western part of the line are pretty good, but those in Manchuria were disagreeable, the places swarming with flies.

There were two chief causes of complaint on the journey. One was the difficulty of obtaining advice or information. The announcements at the stations were in Russian only, and the officials for the most part spoke neither English nor French, the languages best known to the passengers, not more than one-fourth of which were Russians. From Baikal there was a *chef de train*, or conductor, who spoke German. Whether the conductor on the other train spoke anything except Russian was not apparent. The servants and waiters spoke only Russian. Some inconvenience, but no serious difficulty, arose from this. The number of passengers was about 40, fewer in the beginning than at the end of the journey. Of these the English and Americans numbered ten and the French seven, and other nationalities were in smaller numbers, except Russians, who here and there journeyed for part of the way.

The other cause of complaint was the bad attendance in the dining-car. Of the two waiters one was constantly employed in attending persons in their cabins. Dinner was ready between one and five o'clock. For each person separate dishes were provided, and during the regular

dinner time things could be ordered *à la carte*. The result was confusion and long delays. But when the food came it was nicely served, and our time was not precious. Several articles much in demand were used up and fresh supplies were not taken in at the stations, nor were the passengers warned to provide for themselves, as they afterwards learned to do. It must be understood that these were only petty grievances, that there was always plenty to eat and drink; but that one should have to wait 30 or 40 minutes for a couple of boiled eggs, or a plate of bread and butter, or that one should be told immediately after leaving a station with a well-furnished buffet that there was no beer in the train, indicates gross mismanagement.

I shall now give some notes of our daily progress.

First day, Tuesday, July 7th.—The train departed at 11 p.m. An hour before, the hotel porter accompanied us to the station and helped us to buy our tickets. We had previously chosen our places. Tickets were sold only as far as the town of Manchuria.

Second day—After a good night's rest in a comfortable bed, we found ourselves traversing a flat country, in which a few hills were interspersed. There were few trees and no big rivers. The land was well tilled, maize, wheat or barley, beans, and poppy being the chief crops. Plenty of pigs and horses and some cattle were to be seen. The farmers' or peasants' huts stood in enclosures surrounded by mud walls. Most of the people we saw were probably Chinese settlers workmen, not aboriginal Manchus, for many Chinese farmers have migrated into Manchuria, and only Chinese from southern ports were employed in the construction of the railway. Silver-handled horsewhips and fly whisks were sold at one of the stations. At the stations and elsewhere along the line there were strong brick or stone houses for Russian soldiers. The train carried a guard of four or five Russian soldiers with fixed bayonets. In the evening our dining-car had to be left behind at a station on account of a heated axle. The midday temperature was 77° F., and at night it was about 20 degrees lower.

Third day—In the morning at one of the stations we got some bread to eat. At 11 a.m. we reached Harbin, or Kharbine, where there is a junction with the Vladivostock line. The hungry passengers flocked to the refreshment room, but found it crowded with dirty people and swarming with flies. Another dining car was attached to our train, so before long we were able to have a good dinner. The daily dinner consisted of four courses, for which one rouble was charged. It was reported that cholera was rife in Harbin, and this strengthened the resolution most of us had formed of not drinking water. Tansan was the chief non-alcoholic dinner drink. Most of the people we saw at the station were apparently Russian peasant or workmen immigrants, and were able-bodied but dull-looking and dirty. After leaving Harbin we crossed the Sungari River on a long iron bridge. The smaller rivers were crossed by wooden bridges which were rapidly being replaced by stone ones. Beyond the Sungari the land was flat and untilled, and apparently almost uninhabited. At the stations only a few soldiers were to be seen. Doves of horses were wandering about. The yellow lily and many other wild flowers common in Japan grew in abundance in the grass that covered the plain. All day skylarks were singing. The air was pleasant, the train ran smoothly, and the conditions of travel seemed to compare favourably with those of a sea voyage. Certainly the flowery plain, though affording nothing that could be called beautiful scenery was more pleasing to the eye than a waste of waters. Here and there we made long stoppages to take in water or wood, for coal was burned only for a few hours after leaving Dalny. In different parts of the line, coal, wood, and oil are used. I may here mention that at Dalny I saw two Baldwin engines, the only American ones I saw in my journey. Most of the engines were Russian, but a few were French or German. At every station most of the passengers got out and strolled about. At the bigger stations they rushed to the bookstalls to buy pictorial postal cards.

Fourth day—We left the broad plain and entered a hilly, woody country. The railroad gradually ascending ran by the side of a valley, or narrow plain bounded by hills, many scenes being not unlike what is seen about Karuizawa. In the afternoon we reached Sultnowa, a considerable Russian settlement. Thence to cross the Khingan mountains another engine was attached to the rear of the train. We ascended by a zigzag course. At the angles the train did not turn, but it was pulled alternately by the engine at each end. The ascent lasted about an hour. The scenery being more diversified was more pleasing than that of the plain. Here I first noticed some larches and pines. Throughout Siberia the birch is by far the commonest tree. No large trees of any kind were seen. In many places Flowering Sally, a pink-blossomed plant, a little like philox, which is found in Japan, was so plentiful that the pink masses were a conspicuous feature in the landscape.

Fifth day—Arrived in the town of Manchuria about 5 a.m. and spent two hours there. Had breakfast in the station buffet, where we were glad to find a Japanese waiter. But I had by this time learnt a dozen or so of Russian words, such as "bread," "butter," "tea," &c. The only way of communicating with our train waiters had been by means of the price list which was printed in French as well as Russian. We pointed with our fingers to the names in the price list. The waiter generally promptly replied "Nyett," which means "No," or "There is none," so there was nobody who didn't come to know that word. I had a hand-book of Russian and English which proved useful, despite its noticeable shortcomings. It contained no word for "hotel" or for "bath," but "ornamental clock" was given. Under food "chitterlings" was given, but "rice" omitted, and a locomotive engine was described as a natural object. It doesn't take much time to learn the Russian letters, and it is useful to do so as it enables one to read the names of the stations, and there are a few words such as "buffet" which are much the same in Russian as in English. As the town of Manchuria is near the frontier of what is still nominally Chinese territory, a Russian customs officer came on board to examine our baggage, but he generally contented himself with our declarations. He spoke English excellently. Here we had to buy tickets to enable us to proceed. Through tickets to western Europe could not be obtained, but a German gentleman who had already travelled over the line advised us to buy tickets as far as the frontier Russian town, Alexandrovo, for those going to Berlin or London.

This he said was cheaper than booking only to Moscow and there buying a fresh ticket. Some of the first-class passengers who wished to book to Moscow, having previously ascertained the fare, tendered the correct sum, but this was refused and a fare more than R.50 higher was demanded. This they paid, supposing that the fare had been raised. Afterwards when talking the matter over with others who had bought tickets to other places they believed they had been overcharged and they begged the assistance of the English-speaking customs officer. This he kindly gave with the result that the overcharge was returned and a complaint was written and signed by the aggrieved persons. Inside and outside of the station buildings there were lying numbers of men, women and children who had evidently passed the night there. Those who were awake had begun their breakfast of bread and tea. At most stations bread in huge loaves was for sale. Nobody who sees the number of Russian families immigrating into Manchuria, and the military preparations, is likely to believe in any intention of evacuation. After a stoppage of two hours the train proceeded. On entering Russian territory the prices in the dining-car were raised, but they were lowered beyond Lake Baikal. The morning had been cool and pleasant, but in the afternoon the thermometer in the cars indicated F. 65°. For several hours we traversed treeless plains and hills covered with scanty grass. About 3 o'clock we entered a hilly, wooded country and had a second engine to bring us up a short ascent through a cutting in the rocky hills. Then there

was a long descent and the Amur was crossed in the evening. It was a lovely, moonlight night. In the wooded country the houses were generally of logs, neatly made and painted buff. Some stations had little gardens, and as one progressed to the west more signs of civilization appeared.

Sixth day—We have as yet seen hardly any cultivation since crossing the Sungari River. Hills and plains, forests chiefly of birch and grassy lands alternate. Temp. 86°. A few mosquitoes in the evening.

Seventh day—An hour after daybreak we arrived at Misovaia. Cold, damp morning. The steamer which should have taken us across Lake Baikal was disabled and we were put on a small one, the deck of which was crowded with dirty people. After waiting for two hours we were transferred to a larger one which had meanwhile arrived and which took us across the lake in about four hours. Little could be seen as the clouds had settled on the shores. A cold wind was blowing. At Baikal on the western shore we landed and entered a train of the same composition as the one we had left (two second and one first-class), but the cars had fewer compartments. The railroad for some miles ran close to the Angora River, and touched Irkutsk, the largest town in Siberia.

Eighth day—Cool, pleasant weather. A few patches of corn and other crops were seen, but the general character of the country here and as far as the Urals varied little—monotonous forests of birch with some larches and pines, and grassy lands. There were very few mosquitoes, but at some places the inhabitants wore veils covering the entire head as a protection against gnats and other insects. But in the train these insects did not annoy us.

Ninth day—Outside temp. 50° F. Afternoon rain. At Krasnoyarsk the Yenesei is crossed by a bridge 912 metres long. Small articles made of stone and some jewellery were sold, but these were for sale in greater variety at other stations further westward. Several train-loads of troops bound eastward passed us.

Tenth day—Cold, wet morning. At noon crossed the Obi. Two Russians were put into our compartment, thus filling it up.

Eleventh day—Reached Omsk at 4 a.m. Crossed the Irtysh by a bridge of 676 metres.

Twelfth day—Crossed the Urals in the morning. Some pleasing views, but no grandeur about these mountains. Cutlery and stoneware sold at Zlatoust, Ufa and elsewhere. Evening temp. outside 45° F.

Thirteenth day—Many villages composed of poor-looking huts, but with churches large and conspicuous. Crossed the Volga at noon by a bridge 1415 metres long.

Fourteenth day, Monday, July 20—At Toula passengers for western Europe change trains. I had booked to Warsaw, but I was allowed to go by way of Moscow, a city I wished to visit. Reached Moscow about 2 o'clock, less than thirteen days after leaving Dalny, the distance being more than 5,300 miles. Thus we had made about 430 miles a day, the speed including stoppages being 18 miles an hour. Owing to the low rate of speed and the excellence of the springs there was but little oscillation in the cars, and the long journey was not fatiguing. Nor was it before the last two or three days that it began to seem monotonous. It may be expected that the time will be reduced. East of Lake Baikal the stoppages are excessively long and frequent and in that section the train cannot be called an express. Tunnels may in time be made through the Khingan Mountains and elsewhere. At present there are no long tunnels on the whole route, nor has there been any great engineering difficulty with the exception of the bridging of the great rivers. The greater part of the road, lying as it does through level country, must have been constructed at little cost.

Most of the passengers visited Moscow, and it well repays a visit as it differs so much from the cities of western Europe. I went to the Hotel National, a new and sumptuous establishment, where English is much spoken.

The remainder of the journey will be described briefly.

The following afternoon I left for Warsaw, to

which place I had booked from Manchuria. I had to pay extra for my sleeping berth, as my ticket did not provide one beyond Moscow, also for travelling first-class, the second being entirely occupied. I reached Warsaw in 30 hours, drove across the city to the other station, and after waiting an hour or more, left for Berlin. A gentleman at the Warsaw station perceiving that I and my companion were strangers kindly helped us to buy our tickets. We had berths to sleep in but no beds were made up. We had to change trains at the frontier, Alexandrowo, and our baggage was again subject to examination. We reached Berlin a little after 11 on the following day, the 23rd. I spent 24 hours there and then left for London via the Hook of Holland and Harwich. Arrived in London on the morning of the 25th, 20 days after leaving Nagasaki. I had delayed a day at Moscow and another at Berlin. Omitting these delays and adding 2 days for the journey from Yokohama to Nagasaki, it will be seen that a journey from Yokohama to London may be made in 20 days.

As regards expenditure, I found that after paying R.40 for the steamer ticket at Nagasaki I had R.511 left. When I reached London I had the equivalent of R.135 left. Thus I had spent R.416.

The following are some details of expenditure.

Tickets by steamer and train	R 300
Food and drink on train	40
Spent in Moscow and Berlin	28
Tips, portorage, &c.	12
Souvenirs, books, &c.	36

416

The first item on the above list, tickets, would vary according to the route chosen in Europe. The cost of first and second class tickets in Asia are—Dalny to Manchuria: R.108 and R.67.50, Manchuria to Moscow R.161.50 and R.107.50. What we paid was higher than the prices named in Nagasaki. The item, food and drink, will vary with each individual, R.40 may be regarded as below the average. The third item on the list "Spent in Moscow and Berlin" might be avoided, the fourth might be reckoned as an average, and the fifth should not be altogether omitted in a forecast of expenses as unforeseen sundries are sure to occur. Calculating on the above basis, but omitting the expenditure at Moscow and Berlin and adding something for the journey from Yokohama to Nagasaki, it may be said that the entire journey may be made for yen 420. The passport with vise costs nearly yen 5.

J. N. SEYMOUR.

THE LAW COURTS.

CLAIM AGAINST THE "TONKIN."

The manager of the Kawasaki Shipbuilding yard has filed a claim in the Kobe District Court against the French mail steamer *Tonkin*, which was recently on fire, claiming yen 170,000 for work which the shipbuilding firm rendered during the accident and after. Judge Ota proceeded to the steamer on Sept. 5th accompanied by Mr. L. Roux, agent of the Compagnie des Messageries Maritimes, and Mr. P. H. de Lucy-Fossarieu, French consul, to inspect the vessel. The judge ordered the captain, chief engineer, a quartermaster, and one other to be present at Court on the 7th when they were to be examined as witnesses.

ATTEMPTED INSURANCE FRAUD.

After preliminary examination, the Yokohama District Court committed for trial on Sept. 9th five men who attempted to obtain yen 8,000 by fraud from the Yokohama Agent of the Manufacturers Life Insurance Co. The five men are: T. Sudzuki, (30) local agent for the company, in Hadano; K. Sawa, (30) collector of the company; H. Yamaguchi, (33) pretended beneficiary under the policy; H. Enata, (37) substitute for Mr. Sudzuno who died; and S. Kambe canvasser of the company.

DEATH OF MR. PAUL LAUNAY.

We regret to announce the death of Mr. Paul Launay, which took place in Kobe on Monday. Mr. Launay left Yokohama and made a trip to Tientsin for the benefit of his health, but in returning was seized with cholera, which has now removed him. A native of Paris, Mr. Launay came to Japan about sixteen years ago, and during his residence he has made many and attached friends, whose respectful sympathy will be extended to his widow. He was a singer of some note and also composed and set to music many very pretty French songs.

DEATH OF MR. ALFRED DELF.

News was received in this city to-day (said the *Japan Gazette* of Sept. 10th) of the sudden death of Mr. Alfred McKardy Delf, who was well-known both in Yokohama and Kobe. For many years he was manager for the Kobe firm of Skipworth, Hammond & Co. and afterwards joined Mr. Arthur of this city in the famous Curios Establishment of Arthur & Bond. A short time ago, he left for home and retired from the firm, his health being understood to be then affected. About a year ago he married in England and settled down in the hotel business near the race course at Kingston-on-Thames, where his death occurred.

Mr. Delf had many friends in Japan and was always keenly interested in the sporting events of the community. He was energetic and genial, and the news of his sudden death will be much regretted, while sympathy will go out to his widow in her untimely bereavement.

We believe Mr. Delf was about 44 years of age.

CUSTOMS DECISION.

A decision was given on Sept. 3rd by the Director of the Yokohama Customs on a protest filed by Messrs Cornes & Co., No. 50, Yamashita-cho. The firm imported some worsted coating on which the appraisers imposed *sen* 9.3 per square yard in accordance with No. 55-A of the Conventional tariff between Japan and Great Britain. The importers protested, insisting that these woven goods were not worsted coating, but a serge for which another rate should be adopted. The protest was not sustained on the ground that the quality of the goods in dispute was so thick as to render it impossible to call it serge; it was worsted coating, being woven with worsted yarns both warp and woof.

On the 5th, another decision was delivered in a protest filed by Messrs. Boyes and Co., who imported similar cloth and the same rate of duty was adopted. The protest was dismissed for the same reason.

The Director of the Yokohama Customs delivered on Sept. 9th a decision on a protest filed by the executors of the estate of Mr. R. Forshaw, No. 60, Yamashita-cho. Woollen and cotton flannel were imported on which the appraisers put an *ad valorem* duty of 10 per cent. in accordance with No. 61 of the conventional tariff between Japan and Great Britain. The importer protested, contending that the goods were woollen and cotton cloth and consequently another rate (*sen* 3.9 per square yard) should be adopted. The protest was not sustained on the ground that the goods in dispute were woven with cotton yarn in warp and with wool and cotton spun yarn in woof, and that they differed greatly from stuff provided in No. 55-B of the same tariff, which stuff is specified to be one woven with woollen or worsted yarn and cotton yarn. The Minister for Finance has repeatedly given similar decisions with reference to similar goods.

The *Nichi Nichi* states that grand manoeuvres will take place on and from November 12th for three days. The 5th, 10th and 11th Divisions will partake in the movements. The Emperor will be present to review the troops and during the manoeuvres will lodge at the villa of Prince Arisugawa at Maiko, near Kobe.

LITERARY GOSSIP.

The mystery of the "M.S.S. in a Red Box," which caused some excitement in London literary circles during the early summer, has been cleared up. The author turns out to be a recluse living in Falmouth.

Mr. Joseph Hatton, in the "Cigarette Papers" of *The People*, tells an amusing story of how Mr. Barrie's early literary ambitions were frowned upon by friends. "The malignity of publishers," he says, "could not turn me back; from the day on which I first tasted blood in the garret my mind was made up; there could be no humdrum dreadful profession for me; literature was my game. It was not highly thought of by those who wished me well. I remember being asked by two maiden ladies, about the time I left the University, what was I to be, and when I replied brazenly, 'An author,' they flung up their hands, and one exclaimed reproachfully, 'An' you an M.A.!'"

The French Academy last month celebrated another interesting literary event. M. G. L. Boissier, Secretary of the Academy, has just completed his eightieth year, and it is not too much to say that literature and science in both hemispheres co-operated in celebrating the occasion. M. Boissier is certainly one of the grand old men of the time. To judge by his appearance, and still more by the enormous extent of his work, he might well pass for a man under 60. He still conducts his classes at the College de France, and besides his regular work at the French Academy and the Academy of Belles Lettres, he is a member of six different committees at the Institut de France, and is in constant correspondence with learned men the world over.

Dr. Charles W. Eliot, in his presidential address to the United States National Educational Association, defined the cultivated man as "not a weak, critical, fastidious creature, vain of a little exclusive information or of an uncommon knack in Latin verse or mathematical logic: he is to be a man of quick perceptions, broad sympathies, and wide affinities, responsive but independent, self-reliant but deferential, loving truth and candour, but also moderation and proportion, courageous but gentle, not finished, but perfecting." He then recommends four elements of culture, namely, the moral sense of character, language, or literary expression, the acquirement of knowledge, and the training of the constructive imagination. The imagination he calls the greatest of human powers, no matter in what field it works, in art, literature, science, invention, government, commerce, or religion, and its training is by far the most important part of education.

An interviewer has been tackling Mr. W. W. Jacobs on the subject of his plots. It seems that Mr. Jacobs invents them all; only in one instance did he get even part of a story from the lips of a seaman. But Mr. Jacobs knows the life he depicts, having, in his youth, haunted wharves and made the acquaintance of sailors and skippers. One sailor of Mr. Jacobs' boyish acquaintance was a great yarn spinner. He had served, or at least he said he had, on every boat you could name, from a pilot to a man-o'-war. As to spinning yarns, there was no end to them. There was nothing he had not accomplished or any fight he had not taken part in. "I remember once asking him if he ever fought pirates, when he instantly declared how he had been chased several years ago by a pirate in the China Seas, and saved his ship by slashing off the chief pirate's arm just as he was about to grab the rail of the vessel. If I could get hold of that watchman to-day I fancy I could make a fortune out of him."

Mr. B. L. Farjeon, whose death occurred late in July, was not a novelist of a high order, but he certainly possessed great fertility of imagination, and his literary output was enormous. Apart from the novels with which his name is associated, he was a prolific writer of short stories, and it is not difficult to believe his own assertion, that so great were the demands made upon him, that he kept five typewriters at work

in his house in Hampstead, and also took two away with him when he went on "holiday." He once stated that he often sat down at his desk at ten in the morning and did not rise from it until the early hours of the next morning, living the while on soup and tobacco. His death has called attention to his methods of writing, which may fairly be described as unique. When he began his story he rarely knew either what the plot was going to be or how the characters were going to group themselves. The most notable case of this was in his novel "Great Porter Square." The title occurred to him as suggestive, and he signed the contract with his editor before he had proceeded further with the book. His most successful work was probably "Griff," which had a very large sale.

The experiences of a gentleman who advertised for a lay readership, with a view to getting a title for ordination, as they are related in the *London Standard* by himself, appear almost incredible. The advertiser had announced himself as a graduate, accustomed to coaching, and possessed of experience in parochial work; and added that he "might accept hospitality" as remuneration for his services. One of the vicars who responded required a reader to "train choir, attend garden, and do handy jobs, the man to live out." This gentleman was, however, prepared to offer half-a-sovereign a week. Another applicant who offered no money, but whose letter perhaps implied "hospitality," wanted a reader to educate a very backward little girl, act as the vicar's amanuensis, and make himself "generally useful about garden and house." In a third instance, the advertiser received a suggestion that if he was married his wife might be able "to do laundry and mending." A curate-in-charge was candid enough to state that he could offer no "hospitality" beyond "a friendly pipe and a cup of cocoa when discussing work." He enclosed, however, a photograph of his baby girl, "two years old to-day, and most interesting." In yet another parish the advertiser was offered the care of "our pretty pony," in addition to the attractions of "teaching three bright little boys," training the choir, playing the organ, and making himself useful. Finally, a Durham parson, who could offer "hospitality only," kindly promised to excuse his lay reader from the dinner table in the evening.

The Hardwicke Society, so well known to all English lawyers, recently entertained at dinner M. Danet, the Bâtonnier of the French Bar. We read that to Mr. Beck, who represented the bar of the United States, belonged the oratorical honours of the evening. Among the best things in his humorous speech were:—"The United States, which taxes everything from the cradle to the winding-sheet, admits wholly free of duty the decisions of the English courts, but the Secretary of the Treasury has given binding instructions to rigorously keep out all Mr. Justice Darling's jokes. . . . It has pleased Providence in its mysterious and inscrutable wisdom to associate longevity with a judicial career. I believe that this is almost entirely due to the great amount of sleep that judges get. . . . It is said that the Court of Arcopagites had so sublime and elevated a sense of justice that they would not meet except at night, so that they could not even see the faces of the litigants and be thereby prejudiced. In England and the United States the judges accomplish the same purpose in the sunshine by simply closing their eyes." Even the judges could scarce forbear to laugh at these audacious jests. One of Mr. Beck's stories was specially appreciated by the students of the Hardwicke Society. A general in the Civil War applied at the close of the conflict for admission to the Bar of the United States. A committee of three examiners reported that he had answered correctly two-thirds of the questions put to him. A judge, astonished at the general's success, asked the chairman of the committee what the questions were. "Well," he replied, "the first was 'What is the rule in Shelley's case?' and the answer was 'writing poetry.' That was not correct. Then we asked him what was a 'contingent remainder' and a 'vested interest,' and he said he did not

know. That was correct, and we admitted him." This American general deserves to live with the young English barrister who when asked by a Chancery judge to consider the rule in Shelley's case in connection with his argument, said that the Law was no respecter of persons, and that the rule in Shelley's case was of no more account than the rule in anybody else's case.

AMERICAN MATTERS.

Captain Roswell H. Lamson, United States Navy, retired, died at Portland, Or., on August 14th, aged 65 years. He was the first naval cadet to be appointed from Oregon and was a native of Iowa.

In a circular issued by the Boston police giving a description of Willard S. Allen, absconding treasurer of the Preacher's Society Aid of the New England Methodist Conference, the amount of the embezzlement is given as \$110,000, a figure considerably in excess of former estimates.

The State of Massachusetts is about to try the experiment of utilizing convict labour for the reclamation of waste lands. The scheme embraces the reforestation of barren lands as well as the recovery of marsh and overflowed tide lands. Other States will doubtless profit by the results of the experiment.

A New Jersey farmer has refused to allow the State entomologist to kill off the mosquitoes infesting his farm unless he receives part of the money appropriated by the State Legislature for that purpose, taking the remarkable ground that the pest constitutes part of the valuable live stock on his property.

Labour troubles have been the means of postponing the opening of the New York Rapid Transit Railway from the 1st of January, 1904, to some time in April. The delay has been occasioned chiefly through strikes of artisans employed on the stations and power house, some of which have lasted for five months.

The Ministerial Association of Lancaster county, Pa., has started to improve the moral tone of the community by reviving an obsolete blue law of 1794 which prohibits working on Sunday. An unfortunate contractor has been made the first victim of the crusaders, having been arrested for violating the ancient law.

With all the ceremonial which the Roman Catholic church assumes on festal occasions, the Most Rev. John M. Farley, Archbishop of the New York archdiocese, was invested with the pallium, at the hands of the Most Rev. D. Falconio, apostolic delegate to the United States, in St. Patrick's Cathedral, New York, on August 12th.

Thomas Cooksey Ward, "The Sage of Maryland," died at his home at Charlotte Hall in August in the 111th year of his age. Mr. Ward was born on Nov. 25, 1792, and was the only man in Maryland who had lived in three centuries. For nearly 60 years he was state tobacco inspector, and retained his faculties up to the time of his death.

It is understood that the first division of American torpedo-boat destroyers, composed of the *Decatur*, *Bainbridge*, *Barry*, *Dale* and *Chauncey*, under command of Lieutenant Lloyd H. Chandler, son of a former Secretary of the United States Navy, after the manoeuvres of the summer, which concluded on the 29th August, will proceed to the Asiatic station via the Suez canal.

The United States census for 1900 finds 3,536 persons in the United States who are 100 or more years of age. Of these 72.8 per cent. are negroes, many of whom have no reliable evidence as to the date of their birth. They are but 11 per cent. of the total population. Germany with a population of nearly 35,000,000, has only 778, and England, with 32,000,000, only 146, and France, with 40,000,000, has 213.

At the United States fishery at Baird, on the

McCloud, 20,000,000 salmon eggs have been taken from the early run of fish. The largest number ever before taken at Baird was 17,000,000, in 1898. Fifty millions, it is expected, will be the total this year. Eight millions has been the average annual product since the hatchery was established at the Battle Creek fishery, on the boundary between Tehama and Shasta counties.

Between 700 and 800 of the 1900 felon convicts in Alabama are worked in coal mines, where they were formerly leased by the State to contractors, who clothed, fed and managed them. Their labour is now controlled by the State, which is compensated by being paid so much per ton for the convict-mined coal. The present system was introduced by Governor Jelks, who expects to adapt it to all the felon convicts in the State before his term ends.

Louisa Belle Culver died on August 10th in Denver of heart failure. She was a well-known artist and an exhibitor at the National Academy for many years. She was a great-grandniece of Roger Sherman, who wrote the Declaration of Independence with Thomas Jefferson. She was also a great-granddaughter of Rev. Ezra Stiles, who was president of Yale College during the Revolution, and also a great-granddaughter of Rev. Joseph Bellamy, at whose divinity school in Richfield, Conn., Henry Ward Beecher's father and Aaron Burr were educated for the ministry.

The Canadian Government has come to the relief of the binder-twine industry by authorizing the payment of a bounty on binder twine manufactured in Canada, such bounty to be equal to the amount paid as export duty in the Philippine Islands on Manila fibre produced in such islands and used in the manufacture of binder twine in Canada. Such bounty shall only be payable in respect of binder twine manufactured on or after September 1, 1902; provided, however, that the bounty shall not exceed three-eighths of 1 cent per pound on the Manila fibre so used in the manufacture of binder twine. During the year 1902 Canada imported binder twine of the value of \$1,750,859, and of this the United States supplied \$1,083,772.

Mr. J. J. Hill, President of the Great Northern Railway, is in favour of increasing the standing Army of the United States. Speaking at a dinner given in St. Paul he said—"I am not overrating the demand, when I say that it is imperative that the United States maintain the nucleus always and the organization and the officers for an army of 200,000 men. With our varied interests, with our expanding commerce and with our crowning and ever-increasing power, this strength is not more than sufficient for our uses in times of stress and danger. We must have peace, for industrial and commercial growth, and peace we will have, if we have to fight for it. Therefore, I say, 100,000 men should be always at hand to take the field, with the knowledge always that 200,000 can be at once brought forward should the need rise."

By order of the President a letter of reprimand will be sent to Lieutenant-Commander Fidelio S. Carter, United States Navy, for negligence in navigation in failing to have casts of the lead taken frequently while under way on soundings. Carter was tried by general court-martial on the Asiatic station last winter on five charges in connection with the grounding of the United States tug *Piscataqua* on December 28th last, near Subig bay, Philippine islands. The Court found him guilty on all the charges and sentenced him to dismissal from the service. After a careful review of the testimony, Acting Secretary Darling, who has spent months of study on the case, prepared a brief review of the findings for submission to the President. The acting Secretary expressed the opinion that Carter was guilty only of neglect in navigation and not guilty on the other four charges. He recommended that he be reprimanded. This recommendation the President adopted.

According to the Commercial National Bank of Chicago, interior banks report almost without exception that they are in a better position than

they were last year, and that not so much discount accommodations will be required, and probably not so much currency to move the crops. A considerable number report increase in deposits since the last statement, while banks reporting decreased deposits are scattered. In farming communities banks have been discouraging land and real estate speculation, and in some instances patrons seeking such accommodation have been informed that banks will not make advances to meet land payments. It would seem in this manner that speculation of this kind would be curtailed considerably as compared with a year ago. Almost invariably the farmer is reported to be prosperous and has money to lend. In forty-two of the large cities the banks, with but few exceptions, are strong in reserves and in good condition to finance crops.

The mosquito in America is reported to be worse this year than ever before. New Jersey is usual the chief sufferer, the marshes that abound throughout the State being an unsurpassable breeding-ground. Every preventive has been tried and all have failed. The marshes, the ponds, the sewers have been drenched in crude oil with no effect except to impart an oily flavour to the milk of the cows. In some parts the farmers are washing their cows in a mixture of carbolic acid and oil to get them to milk at all. Horses have died from the bites of the mosquito. The piazzas and verandahs are deserted; men working out of doors are protecting themselves by huge bonfires; and inside the house the burning of joss-sticks seems to be the favourite remedy. At night time New Jerseyites are anointing themselves with pennyroyal, oil of tar, and citronella oil. The lawns remain unmowed because only a man in steel armour can face the clouds of pests that rise from the grass. In fact, the only person who is at all happy is the State entomologist, who publicly congratulates himself every other day on the abundance of his material.

A Winnipeg telegram of August 11 tells another strange story of the Doukhobors. It runs:—Lashed into obedience by the heavy whips of their husbands and brothers, several hundred Doukhobor women were forced to abandon their pilgrimage in search of Jesus. While nude, the misguided women started across the prairie in the morning, singing their strange hymns, and soon a band of Doukhobor men was in pursuit. The words of entreaty uttered by the men for the women to return were met in stolid silence. Commands received scriptural quotations proving the righteousness of their march. Then, as a last resort, came the use of whips. No mercy was shown. Young and old alike felt the sting of the cutting rawhide across their bare shoulders. Unrelenting were the men, and blows fell unremittingly until the misguided women were all safe at home again. Blood flowed in streams from some of the women's backs, but as they are a strong and hardy race, no fears are entertained for their recovery. Cowed into submission, they have promised to remain at home and cease their vain efforts to locate the Redeemer on this earth.

THE COUNTY CRICKET CHAMPIONSHIP.

The following table shows the position of the English counties down to 13th August:—

	Played	Won.	Lost.	Drawn.	Points.	Relative position.
Middlesex	(12)	12	6	1	5	71.42
Yorkshire	(1)	22	13	4	5	54.91
Sussex	(2)	19	5	2	12	42.85
Notts	(3)	18	6	3	9	33.33
Worcestershire..	(9)	17	7	4	6	27.27
Lancashire	(5)	22	7	5	10	16.66
Essex	(13)	18	6	5	7	1
Kent	(7)	16	5	5	6	—
Warwickshire...	(6)	15	3	4	8	—14.28
Surrey	(4)	22	6	8	11	—14.28
Somersetshire...	(8)	15	4	6	5	—20.00
Derbyshire	(10)	14	4	7	3	—27.27
Hampshire	(15)	12	1	6	5	—71.42
Leicestershire...	(11)	16	1	7	8	—75.00
Gloucestershire..	(14)	14	0	7	7	—100.00

Figures in brackets represent position last year.

FIRES.

A godown situated at Aioi-cho, Yokohama, which contained inflammable goods was demolished on Sept. 3rd by an explosion of its contents. A woman living near was severely injured. The cause is reported to be spontaneous combustion.

An outbreak of fire occurred on Sept. 2nd at the district of Esashi, Iwate prefecture, burning down 37 buildings. Early in the morning of the 3rd, two fires broke out. One was in the district of Nishimurayama, Yamagata prefecture, and another at the village of Akenabe, Tottori prefecture, destroying 15 and 20 houses respectively.

Fire broke out early in the morning of Sept. 5th. at Asakusa, Tokyo, destroying three houses. Another fire appeared on the morning of the 4th in an unoccupied house, Iga-cho, Yotsuya district, Tokyo, burning down five houses and injuring six. Incendiarism is reported to be the cause.

NEWS OF THE WEEK.

The German flagship *Furst Bismarck* left Masampo, Korea, on Aug. 29th for Kiautschou.

The Emperor on Sept. 5th presented *yen* 1,000 to the family of Baron Tsuda, who died on the 3rd.

The steamer *Fukui Maru*, which had been chartered by the Navy, was released on Sept. 8th. She has left Ujina for Kobe.

Infantry Sergeant B. Hiraishi, who has been engaged by the Military College, Peking, left Yamagata on Sept. 7th for China.

A coolie named K. Tanaka (29), was killed on Sept. 7th by a locomotive in the compound of Sumida-gawa station, Tokyo, while engaged at work.

A thunderstorm prevailed on Sept. 3rd in the district of Hayami, Oita Prefecture. Two houses were burned down and four persons were killed by lightning.

The British warships *Glory* and *Alacrity*, and the Russian warships *Rossia*, *Gromoboi*, *Askold* and *Pokotiloff* arrived on Sept. 7th at Hakodate from Vladivostok.

A heavy thunderstorm raged on Sept. 6th over the district of Ogata, Nakano prefecture, destroying four houses and damaging five. Three persons were severely injured.

It is rumoured, says the *Yorodau*, that Admiral Baron Ito, Chief of the Naval Staff, will soon retire and Vice-Admiral Togo will probably be appointed his successor.

The standing squadron is now at Saseho. It is stated by Tokyo papers that the squadron will manoeuvre in waters which are not yet notified, commencing on Sept. 7th or 8th.

A telegram dated Sept. 5th from the Japanese Consul at New York states that transactions in raw silk are increasing and prices steady. The stock in hands of weavers is scanty.

A case of cholera was reported at the village of Ayase near Tokyo, on Sept. 7th. A case of suspected cholera appeared on the same day at Matsue. The patient has since died.

Five men were arrested on Sept. 7th in Tokyo on a charge of having cut telephone lines and sold them to an old goods dealer named S. Makijima, living at Asakusa. The latter was also arrested.

Prince Arisugawa returned to Tokyo on Sept. 7th from his villa at Hayama, and left thence by evening train for Etajima. The following day, Prince Higashi-Fushimi was to return to Tokyo from Hayama.

Count Sanada Yukitomo, who had been suffering from beri-beri, died on Sept. 6th. Previous to his death, the Emperor promoted him to the

Second Rank of the Junior Class. He was born on April 17th, 1850, and was married to a sister of Viscount Ito Sukeyori. The late noble was the territorial chief of Matsushiro, Shinano.

The Kumamoto Emigrant Company, which intends sending Japanese workmen to the Transvaal, recently despatched one of its members to investigate general conditions with regard to the mining industry in South Africa.

It is stated by the *Fiji* that four Russian warships, which have been undergoing repairs at Vladivostok, left there on Sept. 6th for Port Arthur. Other ships will shortly leave Vladivostok for the same destination.

The cruiser *Tukachiho* arrived on Sept. 6th at Mokpo, from Chemulpo. Mr. Wakamatsu, Consul at the former port, entertained the commander of the warship and his staff on the evening of the same day. The ship was to leave on the 8th for Manampo and Fusan, whence she will proceed to North China waters.

Mr. Hyon Yong-un, the Korean commissioner now in Japan, paid a visit to the Department of Foreign Affairs at 10 a.m. on Sept. 7th and had an interview with the Vice-Minister. An hour later Sir C. M. McDonald also visited the Foreign Office and saw the same official. Their conference, says Tokyo papers, lasted over an hour.

Mr. Tejima and two other officials of the Commission to the St. Louis Exhibition, are to leave Yokohama on (Sept. 8th) by the *Aki Maru* for the United States. They were entertained on the evening of the 6th at the Imperial Hotel, at a farewell dinner by Mr. Matsudaira, vice-president of the Commission, and other gentlemen numbering over 40 in all.

The two new steamers, *Shonan Maru* and *Koko Maru*, of the Hunan Steamship Company, which have been built at Shanghai, will begin service in November. The Company recently ordered from Messrs. Farnham, Boyd and Co., Limited, Shanghai, two store vessels of 630 tons each. These vessels will be used at Chang-sha and Hsingtan as substitutes for storehouses.

Mr. C. Kato, living in Fukuoka, who has been planning to reclaim waste land on Yayeyama island belonging to Okinawa prefecture, decided on Sept. 5th to remove thither 3,500 workmen. Half of them will be sent this month and the others will be forwarded in batches up to February next. The Osaka Shosen Kaisha will carry the men at half rates.

K. Inabe, a former official of the Agricultural and Commercial Department, who was charged with having received bribes from merchants patronized by the Department, was sentenced, on Sept. 5th, in the Tokyo District Court, to one month's imprisonment with hard labour and a fine of *yen* 4, and the bribe of *yen* 30 which he had received was ordered to be confiscated.

The *Asahi* states that Earl Minto, Governor-General of Canada, is expected to arrive at Yokohama on Sept. 21st by the steamer *Empress of China*, accompanied by his wife and two daughters and by Captain A. C. Bell, Aide-de-Camp. They will leave for home at the end of the following month. (Canadian papers stated some time ago that Lady Minto was coming to Japan, but did not say that the Governor-General was to accompany her).

Mr. Leigh Hunt, well-known in Korea, Japan and North China, is now, according to American news-papers, engaged in the Sudan in the development of an extensive land colonisation scheme. Mr. Hunt is reported to have had representatives in the Sudan for several years quietly making surveys and studying the possibilities of the country, and the company which he has formed for the prosecution of his plans holds a charter from the British Government and has as stockholders some of the most astute financiers of Europe.

Since the conversion of a French lady to Zoroastrianism in Bombay on the 8th February

last and her marriage to a Mr. Tata, sharp and acrimonious controversy has been raging among the Parsees, and recently culminated in a requisition of about 2,300 Parsees, headed by one of their high priests. The requisitionists asked the trustees of the Parsee Panchayet charitable funds and property to appoint an influential committee to report upon the question of the desirability or otherwise of receiving non-Zoroastrians into the Zoroastrian fold; and on the qualifications required, and restrictions to be imposed, on those who were desirous of entering into that religion. The trustees were of opinion that the appointment of the committee would be much better made in a public meeting of the community, and this has been done.

According to an investigation of the Department of Finance, printed in the *Official Gazette*, the average price of Government loan bonds during August, as recorded at the Tokyo Stock Exchange, was as follows:—

Bonds.	Yen.
Old	19.45
Pension	95.05
Naval	90.00
5 Per cent.	89.45
Redemption	90.63
War	90.63
Tokyo City	98.15
Osaka Harbour Works.....	91.73
Osaka Water Works.....	94.50
Osaka Drainage.....	94.70
Kyoto City	97.85
Kobe Water Works	90.75
Nagasaki Harbour Improvement.....	92.20

The Hongkong Hotel seems now fairly launched on the sea of prosperity. The accounts for the half-year ended June 30th read:—

The profit on working account amounted to \$132,016.17, as compared with \$116,370.94 for the corresponding period of 1902, being an increase of \$15,645.23. The profit and loss account, including the sum of \$272.09 brought forward from 31st December, 1902, shows a credit balance of \$126,659.41, which the directors propose to apportion as follows:—

To pay a dividend of 12 per cent.	\$72,000.00
To write off from value of furniture and fixtures	10,000.00
To transfer to repairs and renewals account	10,000.00
To transfer to a special reserve fund against cost of installation of the electric light	20,000.00
To write off from value of steam launch..	1,000.00
To carry forward to new account	13,659.41
	\$126,659.41

In his book called *My Colonial Service*, Sir William Des Vœux tells an anecdote as to the intimate knowledge of the British fleet displayed by a Russian Grand Duke whom he met at Hongkong. The Grand Duke, who is an Admiral, told Sir William that he knew the armament and speed of every ship in the British Navy, and could, moreover, identify through the telescope any ship in the Navy List. Wholly sceptical, Sir William asked the Admiral to what class belonged a certain mail vessel in which he had crossed to America a few years previously. The reply was prompt and accurate, and the armament and speed mentioned. The Grand-Duke said he kept a portfolio in which were posted photographs of every class and type of ship in the British Navy; and every ship in each particular class was described in full. He had the details by heart by diligent study. In the event of war, if he saw a British ship approaching his own vessel, he would soon recognise the type, and decide at once whether to run or fight, according to the armament opposed to him.

The Australian Griffiths subscribed for by members of the Nippon Race Club, arrived on the *Benaller* on Friday night and were drawn for at Messrs. Durand & Co.'s stables on Saturday afternoon. We understand that of the 24 ordered 23 arrived but two of these were pronounced unfit for racing within ten weeks, so that it was left to the option of the drawers to either take or reject them. The drawing resulted as follows:—No. 1.—Mr. Barclay; No. 2.—Mr. Barclay (rejected); No. 3.—Mr. Kashiwagi; No. 4.—Mr. Cosmopolis (dead.); No. 5.—Mr. Kawakita; No.

6.—Mr. E. C. Davis; No. 7.—Mr. M. John; No. 8.—Mr. Tegner; No. 9.—Mr. Dayet (rejected) taken by Mr. Tegner; No. 10.—Mr. Sato; No. 11.—Mr. Hiranuma; No. 12.—Mr. Suzuki; No. 13.—Mr. Wada; No. 14.—Sir Claude MacDonald; No. 15.—Mr. Schmidt-Scharff; No. 16.—Mr. Runge; No. 17.—Suzuki; No. 18.—Mr. R. Field; No. 19.—Mr. Keswick; No. 20.—Mr. Mori; No. 21.—Mr. Thompson; No. 22.—Mr. Kashiwagi; No. 23.—Mr. Hiranuma; and No. 24.—Mr. E. C. Davis.

EUROPEAN NOTES.

The estate left by Cardinal Vaughan, Archbishop of Westminster, who died in June, is valued at only £743.

King Edward has issued a public letter thanking the journalists who accompanied him and the Queen on their Irish tour, for their excellent accounts of what took place, and expressing appreciation of the tact and unostentatious way in which they carried out that difficult work. This is the first time that an English sovereign has publicly recognized press accounts of royal doings.

"My jailers confined me here and they run away." This, according to the *Daily Mail's* Rome correspondent, whom the Pope received recently, is how His Holiness expressed his embarrassment at the ceremonial life of the Vatican, his jailers being the Sacred College of Cardinals. This correspondent found His Holiness placid and kindly, but quite confused about the ceremonial to be followed.

In open water at Leicester on August 4, D. Billington, of Bacup, won the one mile swimming championship of England, and established the world's record by covering the distance in 24m. 56 2-5s. J. A. Jarvis, the noted amateur, who won the championship last year in 25m. 13 2-5s, did not defend the title, but on the 9th August he won the Swimming Championship of the World at Paris, 500 metres. Curwen, of England, was second.

A Copenhagen telegram states that the Princess Louise, eldest daughter of the Crown Prince of Denmark and wife of Prince Frederick of Schaumburg-Lippe, has had a narrow escape from drowning. She was bathing in the Sound near Charlottenlund, and ventured too far out. The wind and current being against her, she was unable to swim back to the shore. A manservant, observing her distress, entered the sea and swam out and rescued her when on the point of utter exhaustion.

Remains of a rhinoceros, presumably of the paleolithic period, have been found under the foundations of the *Daily Chronicle* buildings in Fleet Street, and our contemporary gave the general public an opportunity of seeing "the skull of an animal which once crashed through the jungle on the banks of the Thames—it may be 100,000 years ago." The remains were found in a strata of bluish muddy clay about 22ft. below the level of Fleet Street.

It is not often that family quarrels produce so witty a retort as the following, says the *Tatler*. Two related families quarrelled, but the daughter of one being about to marry, the mother of the other thought it a good opportunity to make things up, and so sent her a pretty wedding-present. The other side, however, was implacable and the present was returned. Thereupon the donor of the latter wrote to the bride-elect: "If you are foolish enough to prefer a family jar to a silver powder-box so much the worse for you, and I pity you."

This story of the German Emperor is vouched for by "M.A.P.": At dinner one night, when the Emperor was staying with Lord Lonsdale, a guest talking to another across the table quoted a little known passage from Shakespeare, and that there should be no mistake as to its source, ended with the words, "as the divine William said." There happened to be a lull in the conversation at the time, and the remark was audible to every one,

the Emperor included. Turning to his host, the Emperor said, with a puzzled expression, "Curiously, I do not remember that my sainted grandfather ever said that!"

A good deal of sensation has been caused in South Germany by the campaign now raging in the Press as to the mischievous part being taken in party politics by several princesses of the Royal House. The princesses specially mentioned are Princess Maria Theresa, wife of the son of the Regent, her husband being heir-presumptive to the throne; Princess Gesela, daughter of the Emperor of Austria, and Princess Theresa, who is a doctor in philosophy. They are accused of organising a bitter anti-Semitic campaign, for which they are said to raise large sums among the Bavarian nobility, and also of filling lucrative public offices with their protégés.

Mr. Harry Furniss tells in *Pearson's* of a curious coincidence which happened on Sir Alexander Mackenzie's Canadian tour. One night the train by which he was travelling to Winnipeg pulled up at a little side-station, and the passengers were informed that something was wrong up the line, and they had better make themselves at home in the town for at least nine hours. Sir Alexander was anything but pleased. He had a rehearsal next day, and a performance in the evening. "Nine hours in this hole of a place," said he, "away from all civilisation! How I hate its very name!—but what is its name, by the way? Bleak Junction—Frozen Falls—Waste Time Huts—Discord Ditch, no doubt. Ah, here it is." The name of the place, written in large letters, was "Mackenzie!"

The first year's business of the First Mutual Life Insurance Company (Japanese) is printed by Tokyo papers. The company was established on October 1st last year. During the period, it underwrote yen 1,110,000, and the amount paid out as losses was yen 1,000 on the death of one insured; while yen 12,500 was cancelled at the request of the insured. The number of those insured was 835, from whom premia of over yen 32,000 was collected. Of the income, yen 9,000 was deposited as a reserve and about yen 2,000 were paid out as dividends. The remainder was spent in the expenses of the firm.

The important work of exploring the Laos States bordering on Siam, of which not much is known, has just been largely added to on behalf of the French Government. The credit of this achievement belongs to M. Ajalbert, who has spent three years in those regions. Fortunately, though the population is almost excessively sparse, it is not greatly anti-foreign, and M. Ajalbert has suffered from nothing worse than hardships of travel, scant diet, and river water full of infinite possibilities in the way of cholera. M. Ajalbert has just returned to Paris, where the results of his mission are being arranged for an elaborate report.

In reply to Mr. Dillon, Lord George Hamilton said in the House of Commons on Aug. 3rd:—The negotiations shortly to commence will deal with difficulties which have arisen in the conduct of trade between India and Thibet, under the regulations drawn up and signed by British and Chinese Commissioners in 1893 to give effect to the Convention of 1890 between Great Britain and China. The negotiations will also deal with grazing and other disputes on the northern frontier of Sikkim and Thibet, which were laid down in the Convention. As to the commercial resources of Thibet, there are no papers which I can lay on the table of the House.

Lady Laking, wife of Sir Francis Laking, Physician-in-Ordinary to King Edward, was on 3rd August a sufferer in an unpleasant accident, which might have proved much more serious than, fortunately, was the case. Whilst driving in a four-wheeled cab to Balham station, the vehicle, in turning into the main road, got, owing to the press of the traffic, between two electric trams approaching each other, and before they could be stopped it was crushed by them, and a part of it reduced to splinters. Prompt

assistance was given to Lady Laking, who was taken to a local surgery, where her injuries were attended to. She was able to be removed to her residence in Pall Mall.

A southern family rented a Highland castle for the shooting season, and arrived there one evening with a large party of guests. Amid the bustle a large pet monkey broke loose and wandered over the estate. It was met by a number of ghillies, who had never seen such an animal before. They began pointing at the gibbering beast and calling "Tuguld" and "Shamus"—their elders—in tones of interrogative wonder. "Who will she be?" said Shamus. "She will not be a Grant," said Tuguld, "or she would swear at us for staring." "No; and she will not be a Campbell either. 'Ta Campbells are black, and this shentleman is of a reddish complexion.' 'I wonder will she be a M'Tavish?' mused Shamus. "I will have it now. Run up to the big House, Tuguld, and ask if any of ta English veeitors will haf peen escaping."

A disaster occurred at the Forfarshire v Perthshire cricket match at Perth, on Aug. 1st, when the grand stand collapsed, and a scene recalling the football calamity at Ibrox Park, Glasgow, eighteen months ago, took place. The stand contained about 600 people, the topmost seats being between 30 and 40 feet from the ground. Play had just been resumed after lunch when the stand collapsed with a loud crash, and in a moment men, women, and children were struggling, and crying for help. The huge crowd of spectators rushed to the scene of the accident, and immediately rescuers set to work to extricate the victims. Several doctors were witnessing the match, and at once lent aid to the injured. A great many of the occupants were injured, and 26 had to be removed for treatment to the local infirmary. No one, however, was killed.

The municipal authorities of Glasgow recently appointed a commission to inquire into the alarming increase of insanity caused by alcoholism in Scotland. The report of this commission brings to light some striking statistics. In the case of the Glasgow district asylums and the observation wards of the poorhouse, of 565 admissions during twelve months no fewer than 259, or 33 per cent, were directly traced to alcohol. In most of these cases the patients had been comparatively well to do and prosperous, so that the disease could not be ascribed to bad home conditions or poverty. The reports of the Royal Edinburgh Asylum show the same alarming growth of alcoholic insanity. Statistics for the whole of Scotland during 1902 showed 16,658 insane persons, an increase of 370 over the preceding year. The number of patients discharged as recovered during the year was 1,620. In Argyll, where the highest proportion of lunacy prevails, there are 84 lunatics per 100,000 of the population.

The deaths of two British Admirals who once saw service in China are announced in the latest mail-papers. Admiral the Hon. Fitzgerald Algernon Charles Foley, died on the 26th July at Fordingbridge, Hants. He was born in 1823, and entered the Royal Navy on May 2nd, 1837. As a midshipman he served in the *Castor* during the operations on the coast of Syria and at the bombardment of Acre in 1840, and received the Syrian and Turkish medals with clasp. His commissions as mate (sub-lieutenant), lieutenant, and commander bore date respectively April 29th, 1843, January 15th, 1846, and September 7th, 1855. During this period he saw service in China against pirates, and received the China medal. Afterward he became superintendent of Sheerness Dockyard, and as a rear-admiral superintendent of Portsmouth Dockyard from 1877 to 1882. He became vice-admiral on November 23rd, 1881, and admiral May 24th, 1887, being placed on the retired list July 7th of the same year.—Rear-admiral the Hon. Richard Hare, whose death occurred at Folkestone, was the second son of the second Earl of Listowel. Born in 1836, he entered the Royal Navy in June, 1850, served as a midshipman in the Crimea, and also saw service in the Baltic and during the China War of 1857-6.

CORRESPONDENCE.

A RECENT CONTROVERSY.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—After reading the correspondence in your columns on the subject of the ritualistic practices in the English Church at Yokohama, I wrote to a brother of mine who is a Curate at St. Michael's, Shoreditch, London, asking if he had any knowledge of the ceremonial act of breathing on the Sacred Elements. Many of your readers may be aware that at no church in the United Kingdom is so high a form of Ritual adopted as at St. Michael's; it is also a fact that not long ago, a number of the Clergy ministering there and two hundred members of the congregation went over bodily to the Church of Rome.

My brother replies as follows:—"Your letter reached me at a conference on the very subjects of which you spoke" (Ritual practices in general) "and it may afford Mr. Wilson some satisfaction to know that he was vastly enlivened what threatened to be a very dull discussion. The particular ceremonial act to which he refers, breathing on the Elements, was unfortunately quite unknown to any of us. Some bold spirit suggested that the gentleman was originating a new Japanese rite!"

I am, Sir, yours faithfully,

R.G.E.F.

Hakodate, September 1st, 1903.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—R.G.E.F.'s letter in your issue of to-day is interesting inasmuch as it shows the ignorance of the Clergy of the history of their own Church. Mr. Wilson's reference in his letter of the 29th April (published in your issue of the 1st May) establishes that breathing on the Sacred Elements has been practised at some time or other as a ceremonial act. The assertions of sundry priests that they never heard of it do not prove that it has not recently been practised in Yokohama; but, since Mr. Wilson can scarcely have seen it, the charge presumably rests on conjecture. In these circumstances, it would seem that English Churchmen may reasonably ask why Mr. Field has not seen fit to deny the accusation, and so settle the matter.

Enclosing my card.

I am, Sir, Your obedient servant,

Yokohama, 5th Sept., 1903.

AGRIPPA.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—As R.G.E.F.'s brother professes to be ignorant of any such ceremony as "breathing upon the bread or chalice," I would recommend him to read "Articles to be followed and observed according to the King's Majesty's injunctions and proceedings, (1549)" from which the following are extracts:—

1. That all parsons, vicars and curates omit in the reading of the injunctions all such as make mention of the Popish Mass, of chanceries, of candles upon the altar, or any other such like thing.
2. Item, for an uniformity, that no minister do counterfeit the Popish Mass, as to kiss the Lord's table; washing his fingers at every time in the communion; blessing his eyes with the paten, or sudary; or crossing his head with the paten; shifting of the book from one place to another; laying down and licking the chalice of the communion; holding up his fingers, hands or thumbs, joined towards his temple; breathing upon the bread or chalice; showing the sacrament openly before the distribution of the communion; ringing or sacring bells; or setting any light upon the Lord's board at any time; and finally, to use no other ceremonies than are appointed in the King's Book of Common Prayers, or kneeling, otherwise than is in the said book.
3. Item, that no man maintain purgatory, invocation of saints, the six articles, bead rolls, images, relics, lights, holy bells, holy beads, holy water, palms, ashes, candles, sepulchres paschal, creeping to the cross, hallowing of the font of the Popish manner, oil, chrism, altars, beads or any other such abuses and superstitions, contrary to the King's Majesty's proceedings.
4. Item, that within any church or chapel be not used any more than one communion upon any day, except Christmas day and Easter day.
5. Item, that none keep the abrogate holy days, other than those that have their proper and peculiar service."

Your correspondent "Agrippa" writes, "since Mr. Wilson can scarcely have seen it, (the breathing) the charge presumably rests on conjecture." I think I have already stated, in one of my previous letters on this subject, that I had not only seen it, but had my attention called to the practice by others who had seen it.

I am, Sir, Your obedient servant,

W. K. WILSON.

RAW SILK SHIPPERS.

Through the courtesy of Messrs. Vivanti Bros. we are able to publish the following list of silk shipments from July 1st to August 31st, 1903:—

Firms	America Bales.	Europe Bales.	Total.
Jardine Matheson and Co.	585	235	810

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE YACHT RACES.

"RELiance" RETAINS THE CUP.

London, Sept. 3, 10.45 p.m.

Reliance won her third race and thus retains the Cup in America.

London, September 5.

The *Reliance* won the race for the America Cup, over a course 15 miles to windward and return. She started with a slight lead, which was steadily increased, and retained the windward position. For the first leg the wind was blowing nine knots. The finish was invisible from the shore owing to fog. *Shamrock III* was about three miles behind.

London, September 8.

Sir Thomas Lipton has decided to sell all three *Shamrocks*.

THE BALKAN TROUBLE.

London, September 4.

The Porte has sent a note to the Embassies and Legations in Constantinople warning them that agitators are projecting outrages against the embassies, legations and other public buildings. The Porte says it has taken precautionary measures, and requests the heads of Missions to do likewise.

Later.

King Edward has left Vienna. It is believed that his conferences with the Emperor Francis Joseph will exercise a potent pacifying influence in the Macedonian question.

London, September 6.

It is reported at Salonika that 400 Bulgarians were killed during the fighting at Lake Rapeba, between Klissura and Kastoria. Two thousand five hundred troops are reported to be surrounding the remnants of the band. Fifteen thousand Bulgarian villagers have taken refuge in the mountains.

London, September 7.

Armed sailors from the foreign guardships are guarding several of the embassies in Constantinople. It is understood that this is due to warnings of projected outrages against the embassies.

Although in high Turkish circles at Constantinople war is opposed, there is a bellicose spirit among the military section of the Mussulman population. This has of late been strongly accentuated by the local press, which publishes highly coloured accounts of doings in Macedonia on the part of the insurgents, thus tending to increase the Mussulman excitement in the army.

London, September 8.

At a recent Bulgarian Council it was stated that it had been resolved that Bulgaria should continue to preserve the strictest neutrality. The Minister for War reported that he was strongly opposed to the declaration of war against Turkey. Bulgaria would not herself declare war but would accept a challenge without fear.

Later.

According to a consular report from Salonika, the insurrection in the villayet of Monastir has been practically suppressed by bloody ruthlessness, aiming at the extermination of all Christians rather than that of the revolutionaries. The report has produced a great impression.

Advices from Constantinople and Sofia on Sept. 7th regard war as inevitable and believe it will probably break out at the end of the month.

London, September 9.

In official quarters in Sofia it is feared that the condition of affairs is steadily growing worse. The Macedonian organizations are straining every nerve to force Bulgaria into war. Roumania is strengthening her military posts along the Bulgarian frontier.

Later.

Russia and Austria have proposed that the Powers should make joint representations at Sofia, urging that Bulgaria sever all connection with the Macedonian committees, and warning her to expect no protection should war with Turkey break out.

Germany has assented and Great Britain and Italy are willing to join, but France's assent is doubtful.

POWERS LAND MARINES AT CONSTANTINOPLE.

London, September 5.

The American Minister at Constantinople cables that some of the European Powers have landed marines at Constantinople, and that the Americans will do likewise if necessary.

THE RUSSIAN MINISTERIAL CHANGES.

It transpires that M. de Witte vacated the Ministry of Finance and was succeeded by M. Pleske. It is doubtful, however, whether de Witte's new appointment, telegraphed on the 1st inst., constitutes promotion or shelving.

KING EDWARD RETURNS HOME.

King Edward has returned to London.

THE TROUBLE AT BEIRUT.

London, September 6.

The American cruiser *Brooklyn* has arrived at Beirut.

A COTTON CORNER.

The Brown cotton corner has netted seven million dollars.

THE ST. LEGER.

Vinicius has been scratched for the St. Leger.

THE BEIRUT AFFAIR.

London, September 7.

The U.S. cruiser *San Francisco* has also proceeded to Beirut.

ANOTHER DASH FOR THE POLE.

London, September 8.

Commander Peary has been granted three years' leave to make another dash for the Pole. He starts next July.

THE ST. LEGER.

London, September 10.

The result of the St. Leger is:—

Rocksand	1
William Rufus	2
Mead	3

RUSSIAN DUTIES RAISED.

Russia has raised the duty on Ceylon and Indian teas imported over the European frontier, or by the Black Sea, from 31½ rubles per pood to 33 rubles. The duty on Chinese tea has not been raised, but fresh regulations are instituted to ascertain the origin and the place of despatch.

(RECEIVED AT THE LEGATION OF FRANCE.)

REPORTED BULGARIAN OUTRAGE.

Saigon, September 4.

It is telegraphed from Constantinople that explosions attributed to Bulgarians have destroyed the steamer *Naskata* on her way to Bargas. Twenty-nine lives were lost.

The insurrection is growing feeble in the Monastier district.

WAR RUMOURS.

Saigon, September 6.

Telegrams from Constantinople show that public feeling continues to be agitated. War is regarded there as imminent. The crews of foreign ships have been landed to aid the police in protecting the embassies against any attempts.

FIGHTING IN ALGERIA.

Saigon, September 7.

It is telegraphed from Ain-Sefra that a convoy of land transport has been attacked and a hundred camels carried off. The escorting company, apparently of the Foreign Legion, maintained a very lively defence and had its captain and its lieutenant killed. Many soldiers were killed and a number wounded.

Saigon, September 7.

The newspapers say that in the attack on the convoy near Ain-Sefra, a captain and two lieutenants and 150 men were killed and 47 wounded.

Saigon, September 9.

Further details have been received in reference to the Ain-Sefra affair. It appears that the convoy which was attacked was on its way from Ain-Sefra to El Longan. Its effective strength consisted of 120 men of the Foreign Legion with some Spahis. During eight hours they resisted the attack of several thousands of Arabs from Beni Buid, until succour arrived.

RIOT AT BEIRUT.

A riot has taken place at Beirut between Christians and Mussulmans. Numbers were killed and wounded.

(FROM THE "JUI SHIMPO.")

THE BALKAN CRISIS.

London, September 2.

Yesterday was the anniversary of the coronation of the Sultan. The leaders of the insurgents had declared a general rising in the districts of North Macedonia and Adrianople on the occasion of the celebration.

According to an official report to the Turkish Government, in the engagements which recently took place at Smirevo (?) Neveska (?) and Chuts-la (?), fifteen hundred Bulgarians were killed.

The information with regard to the assassination of the U.S. Vice-Consul at Beirut has been contradicted. The plot was not successful.

The continental papers comment on the visit of King Edward to Vienna has a most important bearing on politics with reference to Balkan affairs.

DEFENCE OF EMBASSIES.

London, September 3.

The Sultan of Turkey has addressed a warning to the embassies of the Powers at Constantinople to prepare for defence against Bulgarian instigators of the insurgents who are planning to attack them. The Ambassadors have demanded the protection of a strong police force.

THE RUSSIAN ATTITUDE.

The Paris *Gaulois* has published a lengthy editorial commenting on the policy of Russia. It states that Russia will shortly begin warlike activity with the purpose of confirming her interests already acquired and that she will certainly assume aggressive movements.

FRENCH COMMISSIONERS.

It is rumoured that the proposal to despatch commissioners from France to the province of Yunnan has been abandoned.

THE BALKAN CRISIS.

September 4.

A violent revolutionary manifesto which urges general outrages against Turkey has been issued in Macedonia.

It is believed that Austria is mobilizing in order to take a step in unison with Roumania.

KING EDWARD.

King Edward, whose visit to the continent was a great success, returned to-day.

THE YACHT RACE.

The races between *Shamrock* and *Reliance* concluded last night. The challenger, the British yacht, lost three times.

THE BALKAN CRISIS.

London, September 5.

Several Powers have landed military forces at Constantinople in order to protect their Embassies.

A man named Janko(?) commanding a volunteer force of four hundred men, who have been well trained, has advanced into Macedonia from Serbia. Communications are interrupted. Information from Macedonia is meagre.

The obscure nature of Russia's actions has caused suspicion in Vienna. A semi-official paper in Bulgaria hints that a secret alliance exists between Russia and Bulgaria.

The Turkish soldiers now in Macedonia number 400,000.

France is increasing the strength of her squadron now in the Levant.

DEATH OF COUNT FRANZ DEYM.

Count Franz Deym, Austro-Hungarian Ambassador in London, is dead.

JAPAN AND RUSSIA.

London, September 7.

The *Times* anticipates that under the stipulations of the Rosen Convention of 1898, Japan will press Russia to render an unmistakable elucidation with regard to the privilege of constructing railways in Korea, and commends Japan's movements with reference to the matter of the railway between Seoul and Wiju.

The *Globe* publishes an editorial in which it is said that the intention of Russia is, by means of peaceful negotiations, to gain time.

THE BALKAN CRISIS.

The Porte declares that the disturbances in Monastir and its vicinity have been suppressed and insists that the blame for cruel actions must be borne by both sides.

The Bulgarian Government has declared its neutrality.

(FROM THE "N.C. DAILY NEWS.")
MACEDONIA.

London, August, 26.

Bulgarians have attacked Neveska, killing two hundred out of the garrison of two hundred and forty.

They then constructed earthworks round the town. Seven (Turkish) battalions have arrived on the scene, and are now bombarding the earthworks.

London via Bombay, August 31.

An unsuccessful attempt has been made to blow up the West-bound Orient Express south of Kuleliburgas, but only the engine was derailed.

The Turks have recaptured Neveska, killing two hundred Bulgarians.

The news from the Balkans is conflicting. On the one hand, Turkish circles appear more optimistic, and express the hope that the insurrection in the vilayet of Monastir will be crushed in the course of a week. On the other hand reports from Sofia declare that the situation is more acute. The difficulties of the Bulgarian Government are increasing, as the people resent the efforts of the Government to prevent armed bands crossing the frontier. The revolt at Adrianople is so far successful that the insurgents now occupy all the points on the Black Sea coast.

THE CHAMBERLAIN CRUSADE.

London, August 29.

The Liberals have gained the seat in Argyllshire lately held by Mr. D. N. Nicol (Conservative), deceased. The Free traders are jubilant.

The *Standard* and *Morning Post* consider the election a blow to Mr. Chamberlain.

MEETING OF TWO IMPERIAL POWERS.

London, August 29.

King Edward and the Czar are to meet at Copenhagen in the middle of September as the guests of King Christian of Denmark.

DISSOLUTION OF THE CAPE PARLIAMENT.

London, September 1.

The Cape Government has decided to dissolve Parliament. This entails the issue of Governor's warrants to meet the expenditure until Parliament reassembles.

TREASON IN LONDON.

Reuter's correspondent at Aden says that it has been discovered that most of the rifle ammunition smuggled into Somaliland comes from France and England.

A London firm is implicated; it is found to have shipped three million rounds of Lee-Metford ammunition since operations began.

NEW BRITISH FIELD-MARSHAL.

London via Bombay, September 2.

At the luncheon at the British Embassy at Vienna, King Edward toasted the Emperor Francis Joseph, in the name of the British army, as "Field-Marshal in my army."

The Emperor replied that he was proud of the honour, which drew still closer his relations with the gallant British army.

THE OUTRAGE IN THE LEBANON.

London, September 2.

Five arrests have been made at Beirut in connection with the attempted assassination of the American Vice-Consul.

MACEDONIA.

The insurrection was proclaimed yesterday in various fresh districts of Macedonia, adjoining the Bulgarian frontier.

Germany and Russia have urged the Sultan to adopt more energetic measures but the Sultan persists in directing the operations in Macedonia from his palace.

The Turkish official estimates are that 1,500 Bulgarians were killed in the recent fighting at Smilevo, Neveska, and Klistura.

Prince Ferdinand of Bulgaria has stopped at Euxinograd near Varna, where he is expected to remain for some time.

The Bulgarian Premier has gone to confer with the Prince.

London, September 3.

A rising on an extensive scale is expected in northern Macedonia in a very few days, but at present the insurgents are moving cautiously.

The steamer *Vaskapin*, from Varna to Constantinople, has been blown up in the Black Sea. There were three formidable explosions, apparently on deck. The captain, officers, six of the crew, and a number of passengers were killed, the total number of those who perished being twenty-nine.

London via Bombay, September 4.

According to Turkish official reports, three Bulgarian bands were defeated with heavy loss on Tuesday.

Later.

Prince Ferdinand has presided at an important Bulgarian Cabinet Council at Euxinograd.

The result of the deliberation is anxiously awaited at Sofia.

There appears to be a momentary lull in Macedonia.

The Turks have poured in overwhelming force into Adrianople, causing the insurgents to take refuge in the mountains.

SWIMMING THE CHANNEL.

London, September 4.

Mr. Holbein has failed in his fourth attempt to swim the English Channel, owing to the current.

REVISED DRAFT OF THE PROPOSED NEW CRIMINAL CODE OF JAPAN.

TRANSLATED BY J. E. DE BECKER.

BOOK I.—GENERAL PROVISIONS.

CHAPTER I.—OF THE APPLICATION OF THE CRIMINAL CODE IN GENERAL.

Art. 1.—The law is applicable to all offences committed within the borders of the Empire irrespective of who the perpetrator may be.

The law is also applicable to offences committed on board Japanese ships without the borders of the Empire.

Art. 2.—The law is applicable to all offences contemplated in Arts. 87 to 90, 92 to 94, 97 to 104, Art. 107, Par. 1 of Art. 172, Par. 1 of Art. 173, Arts 175, 179 to 182, 188, Pars 1 and 3 of Art. 189, and Arts 191 to 193, committed without the borders of the Empire irrespective of who the perpetrator may be.

Art. 3.—The law is applicable to Japanese subjects who have committed offences contemplated in Arts 128, Par. 1 of Art. 129, Arts 132, 134, 138, 140, 183, 186, 194, 205 to 207, 209, 234 to 236, 247, 242, 255, 256, 258, 259, 262 to 264, 267, 272, 273, 275 to 280, 286, 289 and Par. 2 of Art. 292, without the borders of the Empire.

The law is also applicable to foreigners who have committed offences mentioned in the preceding paragraph against Japanese subjects without the borders of the Empire.

Art. 4.—The law is applicable to members of the public services who have committed offences contemplated in Arts 120, 224, Par. 2 of Art. 226, Arts 227 to 229, Arts 231 and 232, without the borders of the Empire.

Art. 5.—Even though the case may have been adjudicated upon in a foreign country and a final judgment rendered in respect to same, this shall be no bar to the institution of proceedings and the infliction of punishment for the same act (in Japan). If, however, the offender

has already undergone the punishment to which he was sentenced in a foreign country, or any portion thereof, the Court may remit the execution of the penalty either in whole or in part.

Art. 6.—If subsequent to the committal of an offence the punishment should be altered by (a new) law, the milder penalty (of the two laws) shall be applicable to such offence.

Art. 7.—The expression "Members of the public services" in this law includes government officials, public officials, representatives, committees and other faculties who are engaged in public affairs in accordance with laws and ordinances.

The expression "Public Offices" means places where members of the public services perform their functions.

Art. 8.—Except in such cases where special rules exist, the general provisions of this Criminal Code are also applicable to the penalties determined by other laws.

CHAPTER II.—OF PENALTIES.

Art. 9.—The principal penalties are death, penal servitude, imprisonment, fine, detention and police fine.

Deprivation of civic rights, police surveillance and confiscation are the accessory penalties.

Art. 10.—The degree of gravity of the principal penalties is in such order as mentioned in the preceding article, with the exception that perpetual imprisonment is more serious than limited penal servitude, and that limited imprisonment is more serious than limited penal servitude when the maximum of the former penalty is longer than twice that of the latter penalty.

With regard to the same class of penalties, the one which in its maximum is of either a longer term or a greater amount shall be considered as more serious. If the maximum terms or amounts of the two cases are the same, the one which is of either a longer term or a greater amount in its minimum shall be considered as more serious.

With regard to two or more than two cases of death, or with regard to penalties of the same class whose maximum and minimum terms or amounts are the same, the degree of gravity shall be determined according to the circumstances of the infractions.

Art. 11.—The penalty of death shall be executed by hanging in the interior of a prison.

A person who has been sentenced to death shall be detained in a prison until he shall be executed.

Art. 12.—Penal servitude is either perpetual or limited; limited penal servitude shall extend over a period of not less than one month and not exceeding fifteen years.

Persons condemned to penal servitude shall be detained in a convict (penal servitude) establishment and subjected to forced labour determined by the regulations.

Art. 13.—Imprisonment is either perpetual or limited; limited imprisonment shall extend over a period of not less than one month and not exceeding fifteen years.

Persons condemned to imprisonment shall be detained in a prison (imprisonment establishment).

Art. 14.—In case commutation may be made, both penal servitude and imprisonment may be lowered to a term less than one month.

Art. 15.—Fines shall be more than twenty yen, but in the case of commutation, it may be lowered to a sum less than twenty yen.

Art. 16.—Detention shall extend over a period of not less than one day and not exceeding one month, and the person detained shall be confined in a house of detention.

Art. 17.—Police fines shall be ten yen and upwards, but shall not exceed twenty yen.

Art. 18.—With regard to persons condemned to penal servitude or imprisonment for a term of less than three months, or to detention, the Court, may, according to the circumstances, cause them to pay a ransom of not less than one yen and not exceeding three hundred yen in lieu of the execution of the penalties.

Art. 19.—Persons who are unable to pay their fines in full shall be detained in prison (forced labour establishments) for a period of not less than one day and not exceeding one year.

When a person is unable to pay the whole of a police fine he shall be confined in prison (forced

labour establishment) for a period of not less than one day and not exceeding one month.

Even in a case where (several) police fines have been inflicted at the same time, the term of detention shall not exceed two months.

The Court when pronouncing a sentence inflicting either a fine or police fine shall, at the same time, render a decree fixing the term of detention in lieu of such fine or police fine should payment not be made in full.

Detention may not, unless with the consent of the condemned, be enforced within one month in respect to fines and within ten days in respect to police fines from the time at which judgment has become irrevocable.

When persons who have been sentenced to a fine or police fine have paid a portion of the same, they shall be detained for the term specified in the judgment in lieu of fine or police fine, less such number of days as may correspond to the amount of money already paid, calculated in the proportion between the entire fine or police fine and the full period of (alternative) detention.

If during imprisonment the fine be paid, the payment shall be calculated for the remaining number of days in the proportion specified in the foregoing paragraph.

A sum of money less than the amount corresponding to one day's detention may not be paid.

Art. 20.—The deprivation of Civic rights entails on the condemned:—

1. Loss of the rights of election and being elected with regard to elections specified in Laws and Ordinances.

2. Loss of position as a member of the public services.

3. Incapacity of possessing decorations, allowances, pensions, gratuities, or diplomas of rank.

4. Prohibition of wearing foreign decorations.

5. Incapacity of being enrolled on the registers of the army and navy.

Art. 21.—Deprivation of Civic rights is either perpetual or limited. Deprivation of Civic rights for a limited term extends over period of not less than one and not exceeding fifteen years.

A sentence of deprivation of civic rights pronounceable simultaneously with a sentence of death, perpetual penal servitude, or perpetual imprisonment is perpetual as a natural consequence.

A sentence of deprivation of civic rights pronounceable simultaneously with a sentence of limited penal servitude or limited imprisonment for upwards of ten years is either perpetual or limited; but if such penal servitude or imprisonment be limited to a period of less than ten years, the sentence of deprivation of civic rights pronounceable shall be less than ten years.

Persons who have been sentenced to deprivation (limited) of civic rights simultaneously with a sentence of limited penal servitude or limited imprisonment shall, as a natural consequence, be deprived of their civic rights from the day on which the judgement becomes irrevocable until the expiration of the term of penal servitude or imprisonment, or until such time as the enforcement of the sentence be remitted.

Art. 22.—Police surveillance entails on the condemned:—

1. The police authorities of the place where the crime was committed, or those of the place where the injured party resides, may forbid the person under surveillance residing or entering either the whole or any part of the district under their jurisdiction.

2. Whenever it be necessary so to do they may make at any time a domiciliary search of the residence of the person under surveillance and seize (suspicious or incriminating) objects.

Art. 23.—The term of police surveillance shall not be less than six months nor exceed two years.

Art. 24.—Persons who have been sentenced to death, perpetual penal servitude, or perpetual imprisonment on account of an offence similar in nature to that of a case where police surveillance may be pronounced in addition to limited penal servitude or limited imprisonment, and have had the execution of the penalty remitted by pardon or prescription, or had the penalty reduced to a limited period of penal servitude or imprisonment,

are to be regarded, as a matter of course, as sentenced to police surveillance for two years.

The same shall be applicable to a case where a person who has been sentenced to death or perpetual penal servitude or perpetual imprisonment with regard to combined offences, and had had the execution of the penalty remitted by pardon or prescription or had the penalty reduced to a limited period of penal servitude or imprisonment by commutation, if there be any offence among the combined offences relative to which police surveillance may be additionally pronounced.

Art. 25.—Articles the possession of which are forbidden by Laws and Ordinances shall be confiscated.

The following articles may be confiscated:—

1. Objects which have been used or which it was attempted to use in committing an offence;
2. Objects originated from or acquired by means of an offence. Articles may be confiscated only if they are not the property of persons other than the offenders.

Art. 26.—In connection with an offence punishable only by detention or police fine, confiscation may not be enforced unless in virtue of a special provision of the law. The confiscation of objects mentioned in Par. 1 of the preceding article are however excepted from this rule.

CHAPTER III.—OF THE CALCULATIONS OF TERMS.

Art. 27.—A term is calculated at the rate of 24 hours to a day and 30 days to a month, while the year is reckoned according to the almanac.

Art. 28.—The duration of penalties is reckoned from the day on which final judgment has been rendered.

The days during which the accused has not been imprisoned even after final judgment has been rendered are not reckoned for him in the duration of the penalties of penal servitude, imprisonment and detention.

The term of deprivation of (limited) civic rights and police surveillance, to which the accused has been sentenced simultaneously with a sentence of limited penal servitude or imprisonment, is calculated from the day following the day on which the period of such penal servitude or imprisonment expires, or its execution remitted.

The period of police surveillance over persons who have had the penalties of death, perpetual penal servitude, or perpetual imprisonment remitted is calculated from the day following the day on which such remission was granted; and with regard to the period of police surveillance over persons who have had their sentences reduced from death, perpetual penal servitude, or perpetual imprisonment to limited penal servitude, or limited imprisonment, the provisions of the preceding paragraph are applicable.

Art. 29.—The day on which the penalty has begun to be executed is reckoned as an entire day, whatever the number of the hours may have been. The same is applicable to the first day of the term of prescription.

Liberation is effected on the day following the last day of the duration of a penalty.

Art. 30.—The days during which the accused has been held in custody pending trial shall be included in the calculation of the duration of penalty according to the following distinctions. Should, however, such number of days be less than the equivalent of one day, or of one *yen* of the principal penalty, they shall not be taken into consideration:—

1. Seven days of custody for each day of penal servitude.
2. Four days of custody for each day of imprisonment or detention.
3. Three days of custody for each *yen* of fine or police fine, but even if the amount is less than a *yen* the same rule applies.

CHAPTER IV.—ON THE CONDITIONAL SUSPENSION AND REMISSION OF THE EXECUTION OF PENALTIES.

Art. 31.—In case the following persons have been sentenced to less than one year's imprisonment or less than six months penal servitude, the Court may, according to the circumstances of their respective cases, suspend (conditionally) the execution of the sentence during a period of time

not less than two years and not exceeding five years from the day on which judgment has become conclusive:—

1. Persons who have never been condemned to imprisonment or graver penalties;

2. Persons who while they have been punished by imprisonment or graver penalties, have not been again condemned to imprisonment or graver penalties during ten years from the day on which the execution of the former penalty was either completed or remitted.

Art. 32.—The provisions of the preceding Article shall not be applied to persons who have been sentenced to deprivation of civic rights or additional police surveillance.

Art. 33.—A sentence (conditionally) suspending execution of the penalty shall be cancelled in the following cases:—

1. In case a further offence has been committed within the term of (conditional) suspension, and the offender has been sentenced to imprisonment or graver penalty;

2. In case the offender has been sentenced to imprisonment or graver penalty relative to a certain other offence committed prior to the sentence (conditionally) suspending execution of penalty;

3. In case (with the exception of persons mentioned in Paragraph No. 2 of Art. 31) it is discovered that the offender has been sentenced to imprisonment or a graver penalty relative to some other offence committed prior to the sentence (conditionally) suspending the execution of penalty.

Art. 34.—In case the term of the (conditional) suspension of executing the penalty has elapsed without the sentence being cancelled, such suspended penalty will be remitted (in full).

Art. 35.—In the case of persons who have been sentenced to penal servitude or imprisonment, should they show signs of reformation (have an appearance of amendment), a ticket-of-leave may be granted to them by an administrative measure after the lapse of one-third of the whole term of a limited penalty, or of ten years of a perpetual penalty.

Art. 36.—Release on ticket-of-leave may be cancelled in the following cases:—

1. When persons during the term of their liberation on a ticket-of-leave, have committed a further offence and have been sentenced to fine or graver penalty;

2. When the condemned has been sentenced to a fine or graver penalty in regard to another offence committed prior to his being released on ticket-of-leave;

3. When persons who have been sentenced to a fine or graver penalty on account of other offences committed prior to their temporary liberation on ticket-of-leave are to undergo the execution of such penalty;

4. In case of any infringement of the regulations relating to the control of persons liberated on ticket-of-leave. In case a release on ticket-of-leave has been cancelled, the number of days during which the condemned has been out of prison on such ticket-of-leave shall not be reckoned (for his benefit) in calculating the term of the penalty.

Art. 37.—Persons who have been sentenced to detention, may, at any time, according to the circumstances of the case, have such sentence remitted by an administrative measure. The same rule applies to the case of persons under detention in consequence of their inability to pay fines or police fines in full.

CHAPTER V.—PRESCRIPTION.

Art. 38.—Persons who have been sentenced to death, penal servitude, imprisonment, fine, detention, police fine, or confiscation, may have the execution of such sentence remitted by virtue of prescription.

Art. 39.—Prescription is acquired by condemned persons who have evaded the execution of their penalties during the following respective terms calculated from the day on which judgment has become irrevocable:—

1. 30 years for a capital penalty;
2. 20 years for perpetual penal servitude or perpetual imprisonment;

3. 15 years for limited penal servitude or limited imprisonment of upwards of 10 years; 10 years for limited penal servitude or limited imprisonment of upwards of 3 years; 5 years for limited penal servitude or limited imprisonment of less than 3 years;

4. 3 years for fines;

5. 1 year for detention, police fine, or confiscation.

Art. 40.—Prescription is not in progress within the term during which the execution of penalty has been (conditionally) suspended or stayed in accordance with Laws and Ordinances.

Art. 41.—Prescription is interrupted by the arrest of the condemned for the purpose of enforcing the execution of the penalty.

With regard to fine, police fine, or confiscation, prescription is interrupted by an act executing the penalty.

CHAPTER VI.—OF AMNESTY, PARDON, MITIGATION, AND REHABILITATION.

Art. 42.—Amnesty (tokushu) annuls the effect of any judgment that has been rendered.

Art. 43.—Amnesty remits the execution of the penalty, and mitigation (genkei) reduces it.

Art. 44.—Rehabilitation (fuku-ken) restores civic rights for the future and implies the placing of the rehabilitated person beyond police surveillance as a natural consequence.

CHAPTER VII.—NON-CONSTITUENCY OF OFFENCES, AND LEGAL EXCUSES.

Art. 45.—Acts performed in accordance with the law, or in carrying on one's legal and proper business are not punishable.

If the act has exceeded the limits of necessity the penalty may be either lowered or remitted according to the circumstances of the case.

Art. 47.—The punishment of acts performed under the stress of acute necessity in order to save from immediate danger the life, person, liberty, or property of one's self or another, shall, according to the circumstances of the case, either be reduced or remitted in full in cases where the injury occasioned by such acts is not graver than that which it was endeavoured to avoid; but even if such injury be graver, the penalty may be lowered according to the circumstances of the case.

The rule mentioned in the preceding paragraph is not applicable to persons who have special duties appertaining to their business.

Art. 48.—There is exemption from penalty when the accused has not had the intention of committing an infraction, save in cases determined by special provisions of law.

Ignorance of the law cannot be invoked to establish absence of design, but the penalty may be lowered according to the circumstances of the case.

Art. 49.—Acts committed owing to insanity shall not be punished, but, according to the circumstances of the case, the perpetrators may be ordered to be placed under supervisory restraint. With regard to acts committed by weak-minded persons the penalty is to be reduced.

Art. 50.—Acts of deaf mutes will not be punished, or the punishment will be lowered; but in the event of punishment not being inflicted they may, according to the circumstances of the case, be ordered to be placed under reformatory discipline for a term not exceeding ten years.

Art. 51.—The acts of infants under the age of fourteen years are not punishable, but when the act constitutes an offence punishable by a fine or graver penalty and the age of the infant exceeds eight years, he may, according to the circumstances of the case, be ordered to be placed under reformatory discipline for a term not exceeding ten years.

Art. 52.—Penalties may be lowered in the case of acts committed by persons over fourteen and under twenty years of age.

Art. 53.—Persons who have been placed either under supervisory restraint or reformatory discipline may, at any time, according to the circumstances of the case, be exempted from execution by an administrative disposition.

Art. 54.—The penalty shall be lowered when the offender has denounced himself to the authorities prior to their obtaining official cognizance of the act.

The same is applicable if the offender denounces himself to the injured party in cases where the complaint of the injured party should be awaited before official action is taken.

(TO BE CONTINUED.)

TRADE OF JAPAN.

Summary of the foreign trade of Japan for August, and comparison with corresponding month of the previous year:—

	135.00 to 165.00
Madras (Dry Leaf), Medium to best	PER PICUL.
	100.00 to 140.00

EXPORTS.

RAW SILK.

The market has been quiet all the week. Operations by foreigners have been very small, while Japanese direct shippers have done their best to maintain the market by daily purchases. Quotations are nominally unchanged, but small concessions have here and there been obtainable, and probably next week may see a slightly lower range of prices all round.

MELLIN'S FOOD

For INFANTS and INVALIDS.
Purely Vegetable and Untouched by Hand.
MELLIN'S FOOD is free from Starch. When prepared
is similar to Breast Milk.

Mellin's Food Works, Peckham, London, England.

SWISS WATCH INDUSTRY. 20/-

To Every Connoisseur, Post Office and Railway Servant, and Persons Requiring a Splendid Watch, we offer this opportunity of their obtaining this: "Original Swiss Watch" - Our Exclusive Property. The Watch in question is made on the World-Approved "CLASHVILLE SYSTEM" and received the Highest Award at the PARIS EXHIBITION IN 1900. IT IS THOROUGHLY TESTED, A SPECTACULAR TIME-KEEPER, AND CARRIES WITH IT A THREE YEARS' WRITTEN WARRANTY. It has Three Half-Cross Straps, which are made of unbreakable Gold Metal, Electrically Gold Plated on the Latest Principle, and the most Complicated cannot detect THE DIFFERENCE BETWEEN OURS AND THE USUAL GUINEA WATCH. It weighs like Real Gold and is the only watch of its kind having that advantage. To introduce this watch to the British Public, and Connoisseurs we will deliver EITHER LADIES' OR GENTS' for a 1s. 10s. post free. (formerly costing 25 to 30s. on receipt of Money Order for full amount. A Leather Case is also given gratis with every Watch. Fashionable Chains, Alberts, or Necklaces of the same Metal can be had for 10s. 6s. or 12s. according to weight. Any Article bought and not approved of will be exchanged. The Date, and Name of our Firm, according to our Daily Orders and a modified Testimonial, prove the Soundness of our Advertisement. Post Office or Postal Orders should be made payable to MAISON BONHEUR, BALE (SWITZERLAND).

Bovril

gives strength and sustenance.

Used as a drink, BOVRIL stimulates, exhilarates, and "comforts." It also strengthens, sustains, and invigorates.

Used in the kitchen, BOVRIL makes more palatable and nourishing every dish to which it is added.

HOLLOWAY'S OINTMENT

IS A HOUSEHOLD NECESSITY

It cures Rheumatism, Sciatica, Stiff Joints, Glandular Swellings, Sore Throat, Quinsy, Numps, Burns, Piles, Fistulas, &c.

AND EVERY FORM OF SKIN DISEASE

Manufactured solely at 78, New Oxford St. (late 555, Oxford St.) London. Sold by all Chemists and Medicine Vendors.

At No. 131, Motomachi Sanhome, Yokohama, on the 17th instant, Mrs. YAMADA TAKEKO, mother of Mr. R. Yamada, Proprietor of the firm of R. Yamada-ya, in the 56th year of her age.

SUMMARY OF NEWS.

RINDERPEST is raging in the district of Toyora, Yamaguchi prefecture. Four cows were reported to have died on Sept. 11th.

Two cases of cholera were reported in Tokyo on Sept. 10th. The patients are women, one being 72 years old and the other 45 years.

ENSIGN H. Yokota (23) of the Formosan Guards, committed suicide by shooting himself. The cause is alleged to be monetary difficulties.

DYSENTERY is prevalent in Yamagata prefecture and, it is feared, will extend further. On Sept. 13th the cases numbered more than six hundred.

The Crown Prince, who returned on Sept. 9th from Nikko, proceeded to the Palace on the following day and had audience of the Emperor and Empress.

ACCORDING to official investigations the amount of savings in the Empire at the end of August reached yen 14,460,017 and the depositors numbered 1,189,872.

PRINCE KONOW, President of the House of Peers, who has been ill for many days past, is said

by Tokyo papers to be growing better. He was removed on Sept. 14th to the hospital of the Imperial Medical College.

A TELEGRAM from Mito states that a small tidal wave occurred at the port of Hirakata on Sept. 10th destroying a portion of sea-wall, and that some houses were flooded.

T. MIURA (26), cashier at the Utsunomiya station of the Nippon Railway, was arrested on Sept. 15th on a charge of having embezzled about yen 400 belonging to the office.

M. VASSILI VERESTCHAGIN, the famous Russian military painter, has arrived in Japan with the object of investigating painting and kindred arts. He is expected to pay a visit to Nikko.

DURING August the income of the Government Railways was yen 1,584,797. Comparing the figures with those of the same period last year, there is an increase of 152,263 this year.

THE statement that the Hamburg-America line had sold five of its oldest steamships and replaced them by new boats is confirmed. There will be no change in the capital of the company.

MAIL papers report that Mr. J. W. Jarvis's time when he won the 500 metres swimming championship of the world at Paris, was 8m. 33½ secs. The distance is about 542 yards.

A JAPANESE passenger, a young lady, who had just arrived by the *Sakura Maru* from Hakodate, was severely injured on Sept. 11th while coming ashore in a launch, by a barge which ran into the former craft.

THE Union Iron Works and Shipbuilding Company of San Francisco have presented models of the warships *Olympia* and *Oregon* to the Naval Department. Each model is reported to be worth over yen 3,000.

LATEST correspondence of the *Fiji* from Shanghai states that cholera is raging in that city, over five hundred fresh cases appearing among the Chinese every day. Many Japanese have been attacked by the disease.

ACCORDING to the passengers of the steamer *Santo Maru*, which arrived at Moji on Sept. 12th from China waters, the plague still prevails at Nanchang and there are over 200 cases. The disease, it is feared, will spread.

THE *Asahi* reports that the Crown Prince, who is now Lieutenant-Colonel in the Army and Commander in the Navy, will be promoted to Colonel and Captain respectively on the 1st Birthday, Nov. 3rd.

K. MATSUMOTO, former director of the Life Insurance Company, who was charged with the firm having embezzled yen 500 belonging to it on Sept. 10th in the District Court.

OWING to the strong wind, a junk, carrying gravel capsized off Hamakawa, near Nagasaki, on the afternoon of Sept. 13th. The crew, three in all, were rescued by a launch of the *Y. S. S. S.* Police which was fortunately in the vicinity.

THE damage to the East China Railway by flooding is so serious that the repairs will take some time. The steamer service between Nagasaki and Dalny, which connects with the Japanese mail, is expected to be suspended in consequence.

THE dead body of a female child, apparently newly born, was found on Sept. 15th in a ditch under the Gasu bridge near the Railway

Yokohama. As there were suspicions that the child had been murdered, an examination was conducted at the Harbour Police Station, the result of which had not transpired on Tuesday evening.

THE *Fiji* states that Mr. Yun Yong Ye, Korean Minister of State for War, has been ordered by the Emperor to witness the military manoeuvres in Japan which will take place in November. He is expected to arrive here in the beginning of that month.

AN official of the French Agriculture Department who has arrived in Japan to investigate industrial conditions, paid a visit to the Wakamatsu Iron Works and Moji on Sept. 12th. Thence he left for the coal mines in Chikugo province.

THE celebration festival of the 50th anniversary of the opening of the port of Hakodate took place on Sept. 13th when the governor and other high officials and prominent gentlemen were present. The citizens intend to establish a memorial of the occasion.

THE Girls' Industry School, Hitotsubashi, Tokyo, intends to exhibit at the St. Louis Exhibition its products—artificial flowers, embroidery, lace-work, etc.—representing the girls' art schools of the Empire. The Department of Education will set apart an appropriation for the enterprise.

A WHOLESALE murder was committed early on the morning of Sept. 8th at the village of Iwae, Tamura district, Fukushima prefecture. A basket-maker named Masuko (43) murdered his wife Set (35), and three children by beating them on the head with a hammer while they were sleeping. The man then fled.

ACCORDING to statistics of the Department of Finance, says the *Asahi*, the banks of the Empire at the end of August numbered 2,332, including all kinds, with a capital of yen 530,063,199. Comparing the figures with those of the previous month there is a reduction of three banks and of capital of yen 765,000.

OWING to a severe gale, the sailing vessel *Zuishi Maru*, of the Toyo Fishing Company, stranded on Sept. 8th off Togashima, near Misaki, Idzu province, while on a voyage to Yokohama from Kamchatka, which she left on Aug. 12th with a cargo of salted salmon. The ship was floated and took refuge in Kokugo near Misaki. No injury was sustained by the crew, who number twenty-six, including Capt. M. Unitsu.

THE *Cologne Gazette* states that during this year the number of German war-vessels in the Far East will be increased from 15 to 18 by the sending out of the *Sperberg* cruiser and two river gunboats, the *Tsingtau*, and another of the same type which has been presented to the German Government by the German Navy League. There will then be six German river gunboats on the China Station—one on the Peiho, two on the West river, and three on the Yang-tse.

THE *Fiji* gives statistics with regard to the export of silk handkerchiefs to the effect that during eight months ended August, 1902, 765,581 dozen worth yen 2,330,474 were exported and in the same period in 1903, 596,048 dozen were exported for yen 2,013,381. Comparing the figures, there is a reduction this year of 169,533 dozen with a value of yen 316,593. The paper remarks that in the United States linen handkerchiefs have recently taken the place of silk ones which once were most popular among the better classes.

THE PROBLEM.

Telegrams from Peking contain a good deal of information about the new proposals said to have been submitted by Mr. Lessar in substitution for the evacuation convention of April 8th, 1902. It is to be observed that the *Asahi Shinbun*, generally as expeditious as any other Tokyo journal in the collection of news, did not publish anything on the 10th instant about the details of Mr. Lessar's present demands. The public were obliged to depend chiefly upon the *Fiji Shimpō*. This omission on the *Asahi's* part is now remedied. Its correspondent, while explaining that the draft convention is not categorical, being couched in merely general terms and worded with much diplomatic skill, nevertheless states the contents seriatim, probably, for purposes of telegraphic convenience. In the first place the document provides that this new agreement shall be substituted for the evacuation convention of 1902. Then it goes on to say that the withdrawal of Russia's forces from Shingking shall be effected by the 8th of October this year; that the withdrawal from Kirin shall be six months later, and that the withdrawal from Amur shall be deferred yet another six months. In fact the dates for evacuation are all pushed forward just a year. The next provision is that for the better navigation of the Sungari River Russia shall be entitled to build wharves along the banks, and that for the better protection of such wharves against insurgent enterprises she shall be entitled to post a military force at the positions. Then the document provides that Russia shall retain her present lines of telegraph in Manchuria, and further that she shall be entitled to build others should the necessity arise. Next, for the promotion of Russo-Chinese trade, China is to pledge herself not to impose, under any pretext or any name whatsoever, any duty or tax upon Russian goods coming across the frontier by rail over and above the duties or taxes now paid on such goods. Again, all the Russian banks or bank agencies now in Manchuria shall retain their title to do business there even after the evacuation of the three provinces, and also the collection of custom dues at Newchwang and the duties of sanitation there shall continue to be undertaken by the Russians. It is finally provided that after evacuation by Russia, China shall not cede or lease any portion whatever of Manchuria to a foreign Power.

The correspondent adds that there are understood to be other demands of an important nature and he promises to telegraph them so soon as they come to his knowledge.

Our readers will perceive that from the above epitome have disappeared nearly all the really objectionable demands attributed to Mr. Lessar by earliest intelligence. We hear nothing in this amended version about all railway and mining privileges in Manchuria being reserved to Russians; nothing about a pledge that no places in Amur or Kirin shall ever be opened to foreign trade; nothing about the appointments of Chinese officials in Manchuria requiring Russian sanction, and nothing about the employment of Russian officers to drill Chinese troops. In short, the version published by the *Fiji Shimpō* on the 10th instant is now confirmed, in effect, by the *Asahi's* correspondence,

except that the *Fiji* mentioned an exact figure—4.7 per cent.—as the total of duties to be levied on overland imports whereas the *Asahi* speaks only of the permanence of present rates. Stripped of the other features attributed to the draft convention by less accurate correspondents, the document assumes a very different character. Remarkable above all is the fact that Russia offers to pledge herself definitely once again to the evacuation of Manchuria, and that she fixes for the operation dates not far distant but in the very near future; so near that, supposing the programme faithfully observed, the Russian troops, with the exception of those on the Sungari, would all have marched out of the three provinces within thirteen months from the present time. We say "all" because there is apparently no provision for the retention of railway guards. But as the posting of such guards must be considered inevitable, we presume that the omission is due to defective information on the part of the Peking correspondents. It is the custom with many publicists to withhold all confidence in Russia's promises. They decline to believe her capable of such a thing as sincerity and they talk as though the intercourse of other nations with her should be conducted on that basis of absolute distrust, forgetting that intercourse under such conditions would be wholly impossible. But we presume that the most prejudicial of these observers will not venture to attribute a deliberately faithless intention to this openly renewed offer of Russia's. She can not be suspected of recklessly piling on her own head engagements whose iterated violation would deprive her of all international respect. She proposes to bind herself once more by a solemn promise and in doing so she makes a large concession to the cause of peace. For the rest, the only special privileges she seeks are that her already established banking interests shall be permanently recognised; that she shall have a monopoly of the telegraphs; that she shall administer the customs and sanitation at Newchwang; and that the control of navigation on the Sungari shall be entrusted to her. This last condition is of much importance, but we refrain from discussing it until fuller information is obtained. As to the condition that no part of the three provinces shall ever be ceded or leased to other Powers, it would have the effect of preventing the establishment of any new foreign settlements. That, of course, could not be endorsed by the Powers, and we doubt whether it is contemplated by Russia. On the whole, then, we can not see that these new proposals are seriously calculated to increase the tension of the situation. On the contrary they seem even to suggest a pacific and conciliatory mood on Russia's part.

By the *Asahi* and the *Fiji Shimpō* the matter is editorially considered. The *Asahi* handles them severely. It asks why the promised evacuation should be postponed. The last of the Russian troops should quit Manchurian soil by the 10th of October. Were a delay of one or two months proposed it might be favourably considered, but to push the whole business into the future is beyond all reason. Then, as to the Sungari, our contemporary wants to know where a precedent can be found for the building of wharves along the banks of a Chinese river and their military guarding by a foreign Power. If China concede this privilege to the Russians on the Sungari, she can not withhold it from other Powers on other rivers, the Yangtse for example.

According to China's treaties, foreign vessels have no access to Chinese inland waters except for the purpose of travel from one open port to another. There are no open ports on the Sungari. If Harbin and Sansin were open the position would be different, but under existing circumstances there is no manner of justification for granting entry to Russian vessels. Concerning the question of overland duties, our contemporary urges that the demand now made by Russia would result in the duty-free passage of all railway-carried goods, for although a system of frontier dues now exists, it is not enforced, being virtually a dead letter. Russian banks, again, may be very convenient as instruments for circulating fiat notes, but they can not be granted any privileges not equally enjoyed by the banks of all other countries. In sum, Russia seeks by this convention to substitute an apparent commercial occupation for a military, providing, at the same time, for the posting of a strong force in the region between the Yalu and the Liao, which force could be employed at any moment to control the situation. The *Asahi* concludes by an expression of doubt as to the meaning of the alleged negotiations now in progress between Tokyo and St. Petersburg. Is it to be assumed that their first outcome is the presentation of such demands by Russia to China.

The *Fiji Shimpō* also takes an unfavourable view. It finds the new convention decidedly more objectionable than the last proposals. There is a further postponement of the date of evacuation; a very considerable postponement. There is also a pledge against the cession or leasing of any part of Manchuria; a pledge which, though it matters little to Powers not disposed to aggress, has much political significance. Then there is an immense extension of telegraphic privileges. Formerly these privileges were limited to the Mukden-Liaotung-Newchwang lines; now they are to be pushed through the whole of Manchuria. As to the matter of sanitation at Newchwang, the entrusting of such power to Russia would mean that were she so minded she could virtually close the port to foreign commerce. Commenting on the clause about duties our contemporary declares that it is in flagrant conflict with the newly concluded commercial treaties. The latter fix the maritime customs duty at 5 per cent., and commute all inland dues for 7½ per cent., making a total of 12½ per cent. for goods imported over sea. They also provide that for goods imported by land-routes the duties shall not aggregate more than 7½ per cent. But Russia now asks that her land-carried goods shall pay only 4.7 per cent. The Powers can not agree to anything of the kind. If Russia is serious in the negotiations she is now conducting with Japan, it is inexplicable that she should formulate such demands in Peking. The *Fiji* recommends its country's statesmen not to waste time in interchanges of polite expressions, but to get down at once to solid business.

The *Nichi Nichi* publishes telegrams from Peking to the effect that Mr. Uchida has warned China against accepting these new proposals, since they would amount to the absorption of Manchuria by Russia, and would open the door to all kinds of demands from other Powers. The same correspondent affirms that Mr. Lessar takes a very determined stand, declaring that if China does not agree to this draft, she shall not recover even Shingking.

MANCHURIA.

Saturday, September 12.

There is naturally a renewal of interest in this weary subject owing to the presentation of Russia's fresh demands. From Peking intelligence comes that the Chinese Government has lost any heart it once possessed, and that its acceptance of the Great Northern Power's terms may be expected in the near future. By "the Chinese Government" in this context Prince Ching alone seems to be meant. The Prince has virtual control of his country's foreign affairs. He consults with Wang Wen-shao, Ku Fung-ki and Lien Fang only, carefully excluding from his confidence the two Viceroy's Chang and Yuan. The Prince's ideas, according to the *Fiji Shimpō*'s correspondent, are based on a conviction of his country's helplessness in the face of Russia and on a persuasion that no third Power will step into the ring to defend the weak. Thus, in his opinion, there is nothing for it except to agree with the enemy quickly. Viceroy Chang is known to be in favour of adopting the policy advocated by America, England and Japan, for which reason Prince Ching shows him the cold shoulder, and would fain have him sent back to the Yangtse Valley. No one can be greatly surprised that China begins to think seriously of throwing up the sponge. It is true that a choice among various catalogues of conditions has been offered to her, but though the details of Russian demands differ, they all agree in depriving China of a measure of her sovereignty in Manchuria, and she may well be reflecting whether her wisest plan would not be to bow to the inevitable before worse things confront her.

Mr. Uchida is said to take the view that the clause in the new conditions which forbids the leasing or ceding of any portion of Manchuria, large or small, to a Foreign Power, means, and is intended to mean, that although Manchuria may be opened to foreign trade, there shall be no such thing there as a foreign settlement. It is undeniable that if the stipulation be read literally it bears that significance and would have that effect. But we find it quite impossible to believe that after Russia's virtual promise to the Washington Government and after the iterated declarations of England America and Japan that Manchuria must not be closed—we find it quite impossible to believe that in the face of all this Russia has now deliberately preferred a demand which would render the opening of the place quite illusory. This is a point requiring further elucidation.

It is alleged that once again Mr. Uchida has protested against China's accepting Russia's demands, and that Prince Ching, in reply, has assured the Japanese Representative that no definite step shall be taken without consulting Japan.

A new demand is attributed to Russia. She is said to require that the right shall be conceded to her of erecting barracks and stationing troops in the region between Tsitsihar and Blagovestchensk. Were she invested with such a right as well as with that of posting forces along the Sungari, the whole of northern Manchuria might be said to be in her military occupation. But we doubt the truth of the new story.

The provision with regard to the non-leasing and non-cession of any portion of Manchuria is now said to have the form that cession or leasing shall be possible in the case of Russian subjects. That is scarcely credible.

As to the matter of evacuation, the latest

version is that Newchwang and Shingking would be at once evacuated, Kirin four, not six, months later, and Amur after a year. It is further stated that the omission of any stipulation with regard to railway guards is intentional, Russia's purpose being to protect her property without asking any one's permission.

A telegram dated the 11th instant says that Mr. Uchida's interview with Prince Ching on the 10th lasted two hours, and that the Chinese statesman very frankly acknowledged the force of the Japanese Minister's suggestions.

It is stated that Ku Fung-ki and Lien Fang were despatched by Prince Ching to the Russian Legation after the receipt of Russia's last demands, with instructions to propose a compromise, namely, that the desired postponement of evacuation would be conceded provided that exact dates were fixed, and provided that all the other demands were withdrawn. To this proposal Mr. Lessar is represented as having returned an almost contemptuous negative.

Mr. Conger is said to have officially announced that the United States desired to substitute Antung for Tatung-kou as a place to be opened at once to foreign trade. Japan, however, adheres to Tatung-kou, and thus the two places are in demand. Antung is the point from which, as a basis, Russia carries on her Yalu-Valley enterprises. We imagine that she would object strongly to its opening just at present.

Sunday, September 13.

The *Fiji Shimpō* has a long telegram from Peking giving what profess to be the authentic details of Russia's new demands. A similar but less minute telegram appears in the *Asahi*. The conditions are a little difficult to follow so far as the evacuation question is concerned, owing to the fact that the names of places are for the most part transmitted in conformity with Japanese pronunciation. What we make out is that immediately on the conclusion of the convention Russia's troops would be withdrawn from Newchwang, Fenhwan-ting (the first fortified city on the north of the Yalu), Antung-hien and Liaoyang. Four months later, Kirin and 4 other places would be given up; and a year subsequently, that is to say 16 months after the signing of the convention, certain other regions would be evacuated. But nothing is said about the evacuation of Tehling, Wushung and Kunzuri, which are now held by the Russians, or about the regions in the immediate vicinity of the railway. The inference suggested is that at the best Russia does not offer complete evacuation, but that is not novel inasmuch as the posting of troops to guard her railways was always looked for.

As to the other conditions, they are not formulated seriatim, but for convenience the *Fiji*'s correspondent divides them into five headings:—

- 1.—No part of Manchuria shall under any pretext be ceded or leased to any nationals except Russians.
- 2.—It shall be permitted to Russia to build wharves along the Sungari and to guard them with troops; and further she may station soldiers along the main roads between Tsitsihar and Blagovestchensk so as to secure the traffic.
- 3.—All imports into Manchuria shall be subject only to the dues now levied upon commodities carried overland, and no further tax of any kind shall be imposed.
- 4.—All sanitary measures in Manchuria shall be in the hands of the Russian authorities.
- 5.—Russian banks in Manchuria shall be guarded by Chinese troops, and the expenses of the operation shall be defrayed by the banks.

The correspondent points out that whereas in the former proposals evacuation was made

conditional upon China's acceptance of all the demands presented, such is not the case with this new programme, the postponement of evacuation being an independent demand.

He further alleges that beyond doubt these demands have been made under the direction of Governor-General Alexieff, and that they constitute an indication of the great power he wields.

If this last allegation be true, it would appear that the proper *vis-a-vis* to select for purposes of negotiation is not the Cabinet in St. Petersburg but the Governor-General at Port Arthur. That suggests two reflections. One is that in this division of authority may perhaps be found a solution of the otherwise unaccountable circumstance that while the Russian Government is engaged in directly discussing the Manchurian problem with Japan, a drastic solution is proposed in Peking in the name of the Russian Government without any reference to Japan. Russia's action in the field and her statements in the diplomatic chamber are often difficult to reconcile because the actual builders of her empire are not under complete control of the statesmen at home. Possibly that is the case now. While St. Petersburg is deliberating, the Governor-General has taken the law into his own hands. The other reflection is that Russia has entrusted the Manchurian question totally and completely to M. Alexieff; that is to say to the man at the front. This last would be a more disquieting inference did not Alexieff bear the character of an eminently sagacious statesman.

It need scarcely be said that the leading Japanese paper condemns these demands in unequivocal terms, and we ourselves are bound to admit that if the details be correctly given, Russia has plainly declared her intention of disregarding her previous promises. The *Fiji* justly observes that all prospect of opening Manchuria to foreign trade would be dispelled were the above conditions fulfilled, for no settlement could be formed nor could any merchant or manufacturer obtain land to build a residence or a warehouse. If Russia has been assuring Washington in particular and the Powers in general that she has no objection to the opening of Manchuria, and if, at the same time, she has been projecting an arrangement which would render that opening altogether illusory, her conduct requires a great deal of explanation. Our contemporary further criticises the Sungari proposals as wholly incompatible with any idea of evacuation, and notes that to make provision for the security of travel in the Tsitsihar-Blagovestchensk region by posting Russian troops there, would be a step justifiable as a temporary measure during the occupation of the country by Russians, but when it is proposed as a permanent measure it becomes an instrument of occupation. The *Fiji* declares that no such convention can be suffered to come into existence, and exhorts Japanese statesmen to stand firm.

The *Nichi Nichi* has an article which lacks not only force but also timeliness. Its writer is obviously in the calmest, most *insouciant* mood. He scarcely thinks it worth while to discuss the new demands, but, merely observing that Russia's occupation of Manchuria has lost the justification of self protection which it originally possessed, he notes that by warning China not to accede to the conditions imposed by the Great Northern Power the Manchurian problem will never be solved, and that the only practical course is for the Powers interested

to combine in mapping out a solution. Had this article been published six months ago, one might have read it with more attention.

Monday, September 14.

It is telegraphed from Shanghai that the French Consul in Shanghai has received instructions in the same sense as those given by Great Britain to her Consul-General, namely, that the *Su-pao* prisoners are not to be surrendered. This is what might have been expected from France.

Tuesday, September 15.

A telegram to the *Fiji Shimpō* dated the afternoon of the 15th instant says that M. Lessar is exerting himself vigorously to obtain China's acceptance of the newly formulated conditions, and that Prince Ching is using equal diligence to obtain a postponement of reply. To M. Lessar is attributed the threat that if China refuse the demands, Russia will not withdraw her troops at all from Manchuria.

Speaking to one of his subordinates Prince Ching is said to have remarked that, on the one hand, he has received Japan's warning and, on the other, he recognises the arbitrary character of Russia's demands. But at the same time China is politically powerless to refuse. Her only hope is in Japan, and Japan's attitude does not encourage the belief that she would be found unflinching in the hour of crisis.

The correspondent further quotes a certain Foreign Representative in Peking as saying that China attended to Japanese cautions at first because she believed them to be backed by resolution to act, but that she has lost heart on observing that Japan limits herself to these cautions, takes no other resolute step, and shapes her policy purely in accordance with the attitude of others.

The *Niroku* supplements the above by saying that the United States Representative also has intimated to Prince Ching his unqualified disapproval of Russia's latest demands. America, indeed, is specially interested, for the St. Petersburg Government explicitly led Washington to believe that there would be no such thing as closing Manchuria, whereas the demand now formulated about not leasing any part of the three provinces to foreigners would effectually preclude the forming of a settlement.

Prince Ching, the *Niroku* says, has become diplomatically sick, and has asked for five days' leave, meanwhile denying himself to all visitors. He is understood to be debating the situation, a hard one for China.

As to America's substitution of Antung for Tatung-kou as an open port, the change is said to have been made at the suggestion of her naval officers, and Admiral Evans has been sent to survey the place. China must now regret that she did not immediately embrace the proposal to open Mukden and the other places indicated. Even ordinary onlookers like ourselves, could see, and did actually say, that no other hope of saving Manchuria existed. But China halted between her conservative antipathies and her political exigencies, and it looks now as though the opportunity had escaped her.

Several Tokyo journals publish a note—evidently emanating from the same source—to the effect that Russia's recent procedure has provoked much resentment in Japanese official circles. The diplomats of this country have hitherto maintained a most moderate attitude, making every allowance for Russia's peculiar situation and carefully refraining from any word or act that might complicate

the question. Yet now, while actually engaged in negotiations with the Japanese Representative in St. Petersburg, the Russian Government has suddenly ignored Japan and without consulting her in any way or giving any intimation of such a purpose, has presented in Peking a set of demands which render entirely nugatory the negotiations proceeding in St. Petersburg. That is a step such that no country in Japan's place could fail to regard it as a studied slight, and the note from which we are quoting declares that the long maintained patience of Japanese statesmen has broken down. They have instructed Mr. Uchida in Peking to protest most strongly against acceptance of Russia's demands, and have directed Mr. Kurino in St. Petersburg to seek an explanation from Russia.

Of course this statement is not to be taken as deriving any force from the number of newspapers publishing it—the *Nippon*, the *Yimin*, the *Niroku*, and the *Hochi*. It is simply a statement circulated by some news agency. On the other hand, it is a statement that may well carry weight. For our own part, the only explanation we can suggest of Russia's singular conduct is that, once again in accordance with familiar precedent, there has been a conflict between St. Petersburg's intentions and the acts of the man at the front. We do not believe that the Russian Government deliberately subjected Japan to the slight of pretending to negotiate with her in St. Petersburg and simultaneously dealing with the same question independently in Peking. The Cabinet in the Russian capital has been following one route while Governor-General Alexieff and M. Lessar have suddenly gone off on a track of their own. That, at least, is the most pacific view to take of the matter. But we are bound to say that this want of homogeneity in Russia's doings subjects her foreign relations to a very heavy strain. To onlookers on the spot it has been evident throughout that a genuine desire for peace has had very little to do with the acts of her local officials in Eastern Asia, and that if Japan be not provoked beyond endurance, it certainly will not be because Russia's circumspection has helped her to preserve patience.

Wednesday, September 16.

The *Fiji Shimpō*'s correspondent telegraphs from Peking that according to news received in that city from St. Petersburg the Russian Government has rejected the proposals submitted by Japan in connexion with the Manchurian question. We do not think that any truth attaches to this story.

From the same source we learn that considerable friction has arisen among the ranks of Chinese officialdom. Prince Ching's action in obtaining the appointment of his son, Prince Tsai Cheng, to the position of Minister of the new department—commerce—is regarded in Peking as an undue attempt to accumulate ministerial power in one family. At the same time, the Prince's method of dealing with the Manchurian question is condemned. It is declared that he does not consult his colleagues about matters of vital importance to the State, and does not even report them fully to the Throne. These dissensions within the ranks of the Government at a time when foreign complications are so pressing, cause much uneasiness in Peking, and Wong Tung-ho is said to be using his best endeavours to restore harmony.

The *Nichi Nichi* has a telegram saying that in spite of great pressure brought to bear by M. Lessar, Prince Ching, in view of Japan's

warning and of the attitude of England and America, has returned a resolute answer to the Russian demands. But this reference to America is difficult at first sight to reconcile with Reuter's telegram of the 14th instant, which represented the United States Government as having intimated its indifference to a brief postponement of the evacuation of Manchuria. However, we may take it for granted that did Russia seek a postponement only, there would be little objection on the part of any Power. It is the accompanying demands that disturb the equanimity of other states. Even China herself is understood to have told M. Lessar that if the question of postponement stood alone, she should not be obdurate. The trouble is that whereas Russia is bound by treaty to evacuate at certain dates, she not only violates the treaty, but actually formulates fresh demands as a condition for making her violation temporary only. That is reversing the natural order of things with a vengeance.

The *Shogyō Shimpō* says that the proposal for postponing evacuation is not considered by Japanese officials to be in any sense a slight to this country. There has been no interruption of direct negotiations in St. Petersburg. On the contrary, the Peking incident is likely to give an impetus to them.

It need scarcely be said that there are journals which ridicule this view of the matter, and there are also journals which laugh at Count Katsura's reply to the deputation from the *Tairo Doshi-kai*. The Prime Minister told his visitors that if they were troubled about the Manchurian question, they might well believe that the Government also was not neglecting it, and he further assured them that nothing would be done of a nature to disgrace the nation or impair the Empire's prestige. The *Hochi Shimbun*, referring to this reply, recommends its readers to adopt the vulgarly credited device for escaping bewitchment by a fox, which suggestion aptly illustrates the methods of modern journalism. The editor on his high stool would fain have the public believe that in no keeping but his own can the honour and interests of the country be secure.

The *Nichi Nichi Shimbun* is of opinion that it is a baseless fear to talk of Russia attempting to keep Manchuria closed. She can not do anything of the kind if she hopes to escape large annual drafts upon her treasury. The only way to make the region self-supporting is to throw it open to foreign enterprise and capital.

The *Nippon* recalls the fact that Japan is not working for China at all. She is working for the protection of her own interests. If she persist in confining herself to warning China, the result will be that her own right to be heard directly will be impaired. It does not vitally matter what kind of agreement China signs. There remains always to Japan the title to insist upon her own rights. But if she continue her present policy of protesting by proxy and retreating in person, she will be finally driven into a corner, and like the hard-pressed rat, will have to fight at a disadvantage. Her true place should be to say plainly in St. Petersburg what she wants and to be prepared to insist on getting it.

Thursday, September 17.

The *Fiji Shimpō*'s Peking correspondent says that, on the 14th instant, he called on Mr. Conger and asked him why no protest had been presented to China by the United States against the acceptance of Russia's new demands. Mr. Conger is reported to have replied that he had not yet received

any instructions from his Government, and that if America took action, she would probably address herself direct to St. Petersburg.

Commenting on the above and on the fact that the United States Government has of late assumed towards the Manchurian problem an attitude of comparative indifference, the correspondent speaks of a conjecture that Mr. Conger is influenced by China's promise to sign the new commercial treaty on the 8th of October, and that, relying on the promise, he is unwilling to embarrass Prince Ching in any way in the interval. Another hypothesis is that some kind of understanding has been arrived at between St. Petersburg and Washington.

As to this commentary on Mr. Conger's statement, it may probably be taken for granted that America will confine herself to insisting on the maintenance of the open door in Manchuria. She will not trouble herself seriously about the nationality of the territory's occupant so long as nothing is done to exclude her trade or to curtail the privileges, actual and prospective, secured to her by treaty. Since, then, she has Russia's assurance that there shall be no closing of the territory and no curtailing of third Powers' conventional privileges, she is, probably, resting quiet in confidence of Russia's good faith.

The same correspondent alleges that Viceroy Chang Chih-tung is sending private messages to the Legations of Japan, Great Britain and America, intimating that Prince Ching is very likely to accept Russia's last demands, and urging that the three Powers should protest as strongly as possible.

The *Niroku Shimpō* undertakes to give in detail the proposals put forward by Mr. Kurino in St. Petersburg, and further alleges that they were rejected by Russia some days ago, which fact having been communicated to Tokyo, was reported to the Emperor and has caused considerable indignation in official circles. This is only the barest outline of the *Niroku*'s story, but for reasons of which our readers need not be again reminded we refrain from devoting any more space to that energetic journal's tale.

It appears that the rumour about Japan's proposals having been rejected by the Russian Government emanated originally from the *Teikoku Tsushin-sha*, one of the chief news agencies in Tokyo. We have often commented on the peculiar method pursued by Japanese journals in collecting and publishing intelligence. They receive an item from a news agency and insert it verbatim without any reference to source. That would not matter if the agency supplied only one newspaper, but as a matter of fact it supplies five, six or perhaps more, the consequence being that the same piece of intelligence obtains wide circulation and derives authenticity from the unanimity of the journals publishing it. Their eyes only are opened who—and such persons are necessarily very rare—carefully compare the columns of the several publishing papers, and observing the identity of language, infer identity of source, by which means the tale is reduced to its true dimensions. As to the story of Russia rejecting Japan's proposals, it obtained more or less publicity in the above manner, and was subsequently woven by ingenious paragraphists into the texture of tales which to the unanalytical reader seemed very disquieting. But in official circles no news of any such rejection has been received, and thus the excitement said to have been caused by the news becomes a myth like the news itself.

Various movements of Ministers of State

are reported by the Tokyo press. Marquis Ito is represented as the recipient of sundry conferences; Count Katsura and Baron Komura have been interchanging visits; the diplomatic barometer, Sir Claude MacDonald, has been to the Foreign Office; so has Count Arco Valley; and finally all this movement of great personages is supplemented by marked activity at the Arsenal. That is the latest pabulum presented for public consumption by the sensationists.

It is stated by the *Asahi's* Peking correspondent that the new office of Commerce in the Chinese capital has been entrusted with the duties of over-seeing mines, railways, posts and telegrams. The office is expected to wield much power, and, being under the control of Prince Tsai Cheng, son of Prince Ching, its political influence will be large.

The Empress Dowager is said to have informed the Cabinet that by exercising excessive and indiscriminating severity in arresting and punishing members of the reform party, public sentiment would be shocked and alienated, for which reason it would be better to proceed with deliberation and discernment. The gracious intimation was speedily conveyed by its recipients to those chiefly concerned, namely, Wei Kwantou and Tan Fang. We do not observe that Her Majesty made any reference to the sentiment of justice or the principle of liberty of conscience. These frivolities of morality have apparently little concern for the Court in Peking. All sacrifices are made on the altar of expediency.

Among the latest news of the *Asahi Shimbun* we find a statement that French citizens are projecting a railway from Kwang-chou Bay to a place called in the telegram *Utsuriu-shin*, which appears to be intended for Lien-chou. The system of lines planned by France in Southern China starts from Haiphong, and running up the valley of the Song-kai, reaches Yunnan, thence to be continued through the Shan States to the Meikong Valley. From Hanoi, which is the first point of importance on the line as it travels westward from Haiphong, a road branches across Tonkin, *via* Bac-ninh and Langson, reaching the borders of Kwang-si, at Nam-kwang. This road—Hanoi to Nam-kwang—is the only part of the system actually in running order, and we take it that the project now attributed to the French is to continue the last-named line from Nam-kwang through Kwang-si *via* Nan-ning on the Yu-kiang, and *via* Lien-chou and Pak-hoi to Kwang-chou Bay. Such a road would draw to Pakhoi and Kwang-chou a large part of the traffic now carried down the Yu-kiang to the Si-kiang and thence to Canton.

Mr. Inagaki, Japanese Representative in Siam, has been interviewed by a member of the *Hochi's* staff on his return from travelling in China and Korea. He appears to have derived a very strong impression of Russia's determination to remain in Manchuria, which impression he bases on the enormous sums she is spending there and the extensive works she is carrying out. Port Arthur, he says, is now a splendid harbour, with 40 feet of water, capable of giving anchorage to a fleet, and the fortifications are of the most thorough character. Everywhere it to be witnessed the same lavish investment of money, the same extensive enterprises, all indicating a design of permanent residence. Dalny, however, is a dead or dying port. It seems to have no future. The scheme of making Dalny the mart and Port Arthur the barracks of Liaotung had its origin in the brain of M. de Witte,

but events have discredited his sagacity, and now that he has been promoted to a distance from the sphere of active politics, his Dalny will pass away with him. That is the view entertained by Sir Ernest Satow also, with whom Mr. Inagaki happened to be a fellow-passenger by mail. Sir Ernest thinks—according to Mr. Inagaki—that Russia will strive to substitute Newchwang for Dalny, and that an acute complication will then be created.

Mr. Inagaki, in terms of sorrow and upbraiding, contrasts this immense and fruitful activity on Russia's part in Manchuria with the leisurely and almost resultless proceedings of Japan in Korea. He does not, however, push his analysis to the bed-rock fact, want of money.

Friday, September 18.

The *Nichi Nichi Shimbun* quotes "a certain" foreign representative in Peking as having reminded Prince Ching that direct negotiations are now going on between Japan and Russia with regard to Manchuria, and as having suggested the advisability of China deferring her answer to Russia's latest demands until the result of the negotiations is known. Prince Ching is said to have professed gratitude for the suggestion, and to have replied that he himself entertained the same view.

According to a telegram to the *Kokumin* the demands now attributed to Russia do not exhaust the catalogue. There are further two demands of a most important nature, but they are kept strictly secret and the *Kokumin's* correspondent does not attempt to convey the slightest suggestion of their import. The demands, as they stand, have caused quite sufficient excitement without this additional mystery.

In the *Asahi's* correspondence we find it stated that Prince Ching, while professing a determination not to ignore the warning given by Japan, has not yet definitely refused Russia's new demands.

The new Chinese Representative at the Court of Japan, Mr. Yang Shu, was to leave Shanghai on the 17th instant, and to proceed to Canton, his native place. He will ultimately take steamer from Hong-kong for Japan.

The 17th of this month is the tenth anniversary, according to Japanese reckoning, of the day when the army under Field Marshal Marquis Yamagata crossed the Yalu and invaded China. By the *Yomiuri Shimbun* that fact is taken as the theme of an article which can scarcely fail to excite strong feelings in the minds of many Japanese. What the writer of the article nominally directs himself to showing is that a purely defensive attitude always preludes final defeat. But not in that comparatively cold thesis does the calor of his suggestions lie. His real points are that Japan was deprived of the fruit of her victories by a combination of Powers which menaced her in her moment of exhaustion and unsupported helplessness; that her people then, consenting to their rulers' suggestion, endured heavy taxes for the purpose of increasing the empire's armaments, so that now Japan has 13 Divisions of troops and 250,000 tons of war shipping, and that, finally, viewed by the light of her foreign policy, she seems as helpless as she was when the Liaotung mandate reached her. That is an old story but it has not lost its power of moving the nation.

The *Jiji Shimpō* takes the same subject for theme but treats it differently. It says that when the Japanese army crossed the

Yalu this country's biggest ship was a four-thousand-ton cruiser, whereas China had two seven-thousand-ton battle-ships. China was in appearance the stronger of the two. The issue of the war was really decided at sea and so it would be now if unhappily any occasion arose. But since 1894 the Far East has palpably become the cynosure of European attention. Comparing the naval forces of the various Powers in these waters at that time with their forces to-day these figures result:—

	Displacement in	
	1894.	1903.
British Squadron.....	41,720	138,890
Russian Squadron.....	24,175	221,074
American Squadron.....	8,560	62,508
French Squadron.....	10,064	57,867
German Squadron.....	978	34,426

All these figures are independent of torpedo craft, and making the same exclusions the Japanese navy now displaces 245,511 tons. The *Jiji* considers that this country is consequently in a position to hold its own against any single Power, and if it were called upon to face two or more Powers, Great Britain would come to its aid. Further, Japan has great geographical advantages, and thus from every point of view she would have nothing to apprehend at sea. Our contemporary carefully refrains from directly suggesting that a collision with any special Power is to be apprehended. Just when the reader expects some such apologue to the article, he finds himself reading a truism to the effect that though strong now, Japan must not rely on her strength, but must exert all her efforts to maintain, in the face of constantly changing conditions, the advantage she now possesses.

UNITED STATES LEGATIONS.

We take the following from the columns of *Peking and Tientsin Times*:—

The timber for the new American Legation at Peking has arrived by the *Stanley Dollar* which is the first of the Dollar Line Steamers to arrive here. All the ironwork and girders are being made by the Union Iron Works, San Francisco, and will follow the timber in the course of a few weeks. At the present time there are some 150 stone cutters and masons at work, besides other workmen, and the building is expected to be finished in the spring of next year. It is expected to be one of the finest buildings in Peking when completed, and one of which Mr. S. H. Nealy, the architect, may feel justly proud. Mr. Nealy has been in the Government service for some time and has had the supervision of several important buildings and fortifications in America.

It is a pity that some similar paragraph can not be published about Tokyo. The present United States Representative is making a complete change in the approaches and surroundings of the Legation at Reinan-zaka, and is having the garden re-planned at much expense, in a manner that will incalculably increase the beauty of the grounds and develop their possibilities. But the house is beyond Mr. Griscom's reach, and Washington evidently remains callous to the fact that the Stars and Stripes float over an altogether unworthy tenement in Tokyo. We should have supposed that by the crowd of American tourists who yearly enjoy the hospitality of their country's Representative in Japan and avail themselves of his official good offices, quite a volume of humiliated public sentiment would already have been created across the water with reference to this Reinan-zaka Legation. If we English in Japan feel bad about it, our cousins themselves ought to feel worse.

KOREA.

Saturday, September 12.

Telegrams from Seoul indicate the commencement of a new enterprise at Pyong-yang, but whether it is to be in Russian hands or in French we can not clearly distinguish. One account says that some fifty machines for coal mining have been imported into Chemulpo from London, and have been forwarded to the Ta-dong under charge of four Russians, from which it is naturally inferred that the projected business is in Russian hands. But another account has it that the Korean Household Department has made an agreement with a French engineer for the production of smokeless coal at Pyong-yang, the Frenchmen undertaking to do the work on condition of receiving a royalty.

Monday, September 14.

The Chinese Representative in Korea is found in line with Japan, England and America in the matter of the opening of Wiju and the closing of Pyong-yang. He approves of the former but emphatically condemns the latter.

There is confirmation of the rumour that an enterprise of smoke-less coal production at Pyong-yang is about to be undertaken under the auspices of the Korean Household Department. A hundred thousand *yen* are to be contributed from the proceeds of local taxation, and the work is to be carried on by the London Company of which the director is a Frenchman. Machinery to the value of 170,000 *yen* is said to have been ordered, and a royalty of 5,000 *yen* is to be paid to the Company for every 30,000 tons of coal produced.

The *Jiji Shinpo* renews its insistence that the Japanese Government should not hesitate for an instant to obtain the concession of the Seoul-Wiju Railway. A recent telegram from London states that the basis of this country's negotiation with Russia was a mutual recognition of railway rights in Manchuria and Korea respectively. The *Jiji* naturally asks what Russia has to do with the railways in Korea. Why should she be consulted about them in any way? She certainly has never showed a disposition to consult any other Power about her own railway enterprises in Manchuria. Our contemporary goes on to argue that having the Seoul-Fusan concession Japan is bound to obtain the Seoul-Wiju concession also, and that she should take the step irrespective of Russia or any other third party.

Is it true that this mutuality of railway-rights' recognition forms the basis of the Russo-Japanese negotiations? We are strongly disposed to think not.

It will be remembered that the Russian Representative in Seoul, having failed to obtain the Korean Government's signature to the amended convention relating to Yong Am-pho, intimated—or was reported to have intimated—his intention of regarding as effective the agreement previously concluded between the agent of the Russian Lumber Company and the Korean Superintendent of Lands and Forests. Telegrams now received in Tokyo give what purports to be the gist of the Korean Government's reply. It is that Mr. Pavlov's announcement can not be comprehended. The second clause of the agreement referred to says that the boundaries of the district to be leased shall be defined by the Korean Minister of Foreign Affairs and the Russian Representative in Seoul. No such

process of definition has taken place, and until it does take place, the agreement can not possibly be considered binding. The matter is now under consideration by the Korean Government, and pending a decision no agreement can have any force.

Speaking through the columns of the *Nichi Nichi Shinbun*, Mr. Hyon denies the story recently told of his mission by the *Jimmun*. He declares that his real business was in connexion with the Seoul-Fusan Railway. At the same time he admits that he was entrusted with the duty of transmitting a sealed document to Marquis Ito, Prince Konoye and Baron Komura, but he professes to be ignorant of the contents of the document, though he says that he goes back without settling its cardinal points. Neither does he altogether repudiate the suggestion that he had some mission connected with the refugees. These people, he says, are a "bee in the bonnet" of the Korean Government, and no Korean sent on official business to Japan could escape being entrusted with some commission relating to them.

Wednesday, September 16.

A telegram to the *Asahi* from Seoul indicates that the Russians are not allowing the situation to rest in Korea. The local officials at Yong Chong—which will be remembered as the first place where land-acquiring operations commenced—report that four Russian subjects have come to a hill at Poh Yong in that vicinity and have marked out land, transported timber and begun to erect buildings. Nothing is stated as to any lease or purchase of land by these enterprising individuals. They seem to have merely found a suitable place and proceeded to appropriate it. On being remonstrated with by the local officials, they declared that they were within the limits of the concession indicated in the agreement concluded between the representative of the Lumber Company and Mr. Cho Song-hyop, chief of the bureaux of lands and forests. This agreement, it will be remembered, is the document that has failed to obtain the endorsement of the Korean Government, and is useless without that endorsement, not only on general principles but also because its second article provides that the boundaries of the district to be leased at Yong Am-pho shall be determined by the Russian Minister and the Korean Foreign Minister, which delimitation has not yet taken place. The Koreans have undoubtedly bungled the business of Yong Am-pho and will scarcely emerge from the complication scathless, but, on the other hand, the attempts made by the Russians to give effect to an agreement which has not come into practical existence seem very arbitrary. At all events Poh Yong and Yong Am-pho are different places, and the Korean local officials appear to have been unquestionably within their rights when they protested against the acts of the four Russians. The latter, however, having declined to pay any attention to the protest, a report was made to the central Government, and there resulted a note from the Korean Foreign Minister to M. Pavlov, insisting on the lawlessness of his nationals' procedure and requiring that the trespassing Russians should be at once restrained. This note is said to have pointed out that even at Yong Am-pho there is no warrant for Russians to settle pending some definite arrangement between the two Governments, and that under no circumstances could the course pursued at Poh Yong be considered proper. The Russian Minister's reply to this

remonstrance does not appear to have yet become public property, but as M. Pavlov is said to have threatened that effect shall be given to the un-endorsed agreement without further reference to Korean officialdom, it must be assumed that he intends to arrogate to himself alone the power of delimitation which the agreement delegates to him in conjunction with the Korean Foreign Minister. Whatever may be the exact facts of this incident and of the preceding course of events, Russia is making for herself a distinctly aggressive character in northern Korea, which fact is to be regretted, in so far as it is calculated to alienate Japan's good will and thus to postpone an amicable settlement of the Far-Eastern question.

In connexion with this subject we may mention a report sent from Peking to the same journal, in the sense that the Chinese Representative in Seoul had telegraphed to the Foreign Office in Peking saying that Korea had signed the Yong Am-pho agreement and that war between Russia and Japan was imminent. This statement has been officially denied, but we refer to it here, as the story without the contradiction is likely to find its way into circulation.

Thursday, September 17.

The *Nichi Nichi* has a telegram from Seoul saying that on the 13th instant, M. Pavlov repeated his threat that unless the Korean Government speedily concludes a convention about Yong Am-pho, he will consider as finally concluded the provisional agreement between the Lumber Company and the Superintendent of Lands, and will proceed to give effect to it. Our readers are aware that this agreement does not fix the boundaries of the area to be leased, that task being left to the Korean Foreign Minister in consultation with the Russian Minister.

Friday, September 18.

The gist of the question now in dispute between M. Pavlov and the Korean Minister of Foreign Affairs is that the latter insists on the necessity of submitting the Cho Agreement to a Cabinet Council, whereas M. Pavlov maintains that the Emperor's assent having been conveyed at the time of making the Agreement, nothing now remains except to delimit the leased area. The Korean statesman denies that the Sovereign's intention was rightly conveyed by the interpreter, and appears to take the ground that the whole Agreement may be repudiated by the Seoul Government should such a course seem advisable. As this Agreement—of which the negotiators were M. Bajesco, representing the Lumber Company, and Mr. Cho Sung-hyup representing the Bureau of Lands—seems likely to prove an instrument of international importance, we reproduce the gist of it from the *Korean Review*, noting that it was signed on July 20th:—

- 1.—The said district in Yong Am-pho shall be rented to the Russian company.
- 2.—The boundaries of said district shall be defined by the Russian Minister and the Minister in charge of the Foreign Office of the Korean Government.
- 3.—The Russian company shall pay a land tax to the Korean Government.
- 4.—If the owners of tombs within this district wish to remove them the expense of removal shall be borne by the Russian company.
- 5.—If the company wish to utilize wood which Koreans have cut and are bringing down the river it must reimburse the owners with a fair and proper price.
- 6.—The Russian company shall not raise any stock within this district except what is to be used therein.
- 7.—Korean offenders within this district shall be dealt with by the Korean courts. Russian offenders shall be dealt with by Russian civil officers.

It is plain that before the delimitation provided for in the second Article is completed, the agreement can not become practically operative. On the other hand, it is also plain that M. Pavlov's endeavours to save the whole from being consigned to the waste-paper basket are perfectly natural. His diplomatic reputation, to say nothing of the imperial policy involved, is more or less at stake, and we can not wonder that he struggles against defeat, though the cause for which he fights resembles Lancelot's sentiment, honour rooted in dishonour. The first act of the Russians at Yong Am-pho was one of apparent aggression, and if they take nothing ultimately by their arbitrariness the public will not greatly pity them. M. Pavlov, however, has to ignore such considerations. His unique business, like that of all other Russians at the front, is to fight for his own hand. We may remark *en passant* that the device of eluding an inconvenient covenant by discrediting the official who concluded it, ought not to astonish a Russian.

Meanwhile the news is confirmed that the Russians are extending the limits of their land-occupation and house-building, having now commenced operations in that sense at Pho-yong. To the Korean Government's remonstrances M. Pavlov is said to have retorted that his countrymen are merely exercising the privileges secured to them by the lumber concession of 1896. The public would greatly like to see that concession. Much has been heard about it, but it has never been published, and without an accurate knowledge of its contents there is no possibility of judging what privileges it confers. Russia appeared to be acting in a most arbitrary and unwarrantable manner when she took steps to form a settlement at Yong Am-pho without in any way consulting the Korean Government. She is now taking similar steps at Pho-yong. In both cases she pleads the lumber concession of 1896 as her warrant. If the plea be correct, then evidently the whole valley of the Yalu has been virtually ceded to Russia, since her subjects are free to settle wherever they please from source to debouchure.

THE SPECIE BANK.

The Specie Bank held its semi-annual general meeting in the Bank's premises on the 10th instant, the President, Mr. Soma, being in the chair. The following accounts were read and passed:

Gross earnings for the half year including the sum brought over from previous account, namely 505,852 yen	6,625,134
Gross Expenditure, losses, &c.	4,639,889
Net Profit.....	1,985,245
To Reserve.....	150,000
To Silver Reserve	200,000
To Dividend (12 per cent.)	1,080,000
To Next Account	555,245
	1,985,245

The President, in his speech, observed that though business in general had been depressed, foreign trade for the first half of the year had showed considerable development, exports having totalled 125,910,000 yen, and imports 166,040,000 yen, while the excess of specie imported had been 15,800,000 yen. Rice had been chiefly responsible for the large imports, while on the side of exports the staples showing most expansion had been cotton yarns, copper, tea, coal and *habutaye*, above all tea.

POLITICAL NOTES.

Saturday, September 12.

The Kiushu branch of this association has just held a meeting in Fukuoka. It does not appear to have been a very largely attended affair, but the force of the recorded declarations atoned for the numerical paucity of their formulators. All the stock grievances were marshalled against Russia. She was accused of having arbitrarily contrived Japan's expulsion from Liaotung in order to make way for the appropriation of the place by herself; she was declared to be the wanton disturber of the peace of the East, and the meeting avowed its belief that if Manchuria fell into her possession, her hands would inevitably be stretched out to Korea. Therefore it was resolved that she must be vehemently urged to carry out her promise of evacuating the three provinces; that China must be induced to open Manchuria; that the peace and prosperity of the East must be preserved; that the reputation and rights of Japan must be guarded, and that the Japanese Government must be vigorously pressed to pursue these ends.

Monday, September 14.

At a meeting of the Progressists held on the 12th instant, Count Okuma delivered a speech in which he discussed the Manchurian problem. He said that if the telegrams reaching Japan were correct, Russia had practically challenged this country to fight, and Japan had now to consider whether she would sacrifice her interests and submit to political effacement on the continent of Asia, or whether she would stand out boldly and defend her rights. The Manchurian question was not an affair of to-day. It had begun when Japan was obliged to surrender Liaotung in 1895. Japan had been fortunate in obtaining such a friend as England, but it might be questioned whether English public opinion had not been more or less alienated by Japan's manner of conducting her foreign affairs. It seemed that those in charge of this department of the State's business had drifted rather than steered, though possibly they were contriving some device to save the situation without recourse to the sword. The problem was not one that concerned Japan and Russia alone. It concerned the whole world, and its solution might well occupy the attention of a council of the nations. Neither was it a problem that admitted of final solution immediately; it would continue to trouble the Powers for another century perhaps. No attention could be too keen to bring to bear on it.

It will be observed that Count Okuma refrained from suggesting any definite course.

Tuesday, September 15.

Even the circumspect *Jiji Shimpō* takes a very strong view of Russia's latest procedure. It says that the presentation of these demands in Peking while negotiations were actually going on in St. Petersburg must be interpreted as showing that Russia has very little regard for the canons of international intercourse; that she is careless of estranging Japan; that she is indifferent to preserving peace, and that she is deliberately raising waves on a calm sea. She will probably explain that Governor-General Alexieff acted without instructions, but in the face of such incidents Japan must assure herself finally of Russia's real intentions.

The *Nippon* quotes the old story of the

hero who calmly regarded all the transformations of the demon and was thus able to subdue it in the end. Russia's devices, it declares, are all familiar and antiquated. One should expect them and treat them with indifference. To be thrown by each change of method into a state of consternation is to fall ultimately into the nervous perturbed condition desired by the enemy. The brawling torrent is shallow; the still pool deep. Japan must preserve her *sang-froid*. But she has to fight. There is not, in the *Nippon's* opinion, the least room for doubt about that. Let her make up her mind and stand ready for the combat.

The *Asahi's* view is that all places accessible from the East-China railway should be at once opened to foreign trade. This does not apply simply to Mukden, Tatung, Yong Aipo, Antung and so forth. It applies to every mart where any prospect of commerce can be discerned, however remotely. There is no desire to interfere with Russia's already acquired rights. Japan wishes to respect them. But if things be left as they are Manchuria will soon be Russianized. The process is already going on rapidly at Harbin. There are ten thousand Russians living there although the place has never been opened to trade. It will be so elsewhere. On the other hand, this programme would prove not less beneficial to Russia than to others. By no other process can her railways ever become a paying property.

On the 14th instant the Committee of the *Tai-Ro Doshi-kai* presented a strongly worded memorial to Count Katsura. The document declared that the purpose of the new demands formulated by Russia in Peking is simply to defer the date of evacuation, and that the demands thus constitute an insult to all the Powers, but especially to Japan. The period for the consummation of the third step of evacuation is less than a month distant, nevertheless Russia adopts this course, and if unfortunately China accept these demands, not only will Russia have distinctly disregarded her constructive pledge to consult with Japan in the matter—a pledge involved in her consent to open direct negotiations—but China also will be displaying a hostile mood towards this country. It is therefore essential that the Japanese Government at this crisis should submit a final demand to Russia and should require a definite reply.

It may perhaps be well to explain again to our readers that the *Tai-Ro Doshi-kai* is, in effect, the successor of the National Union, and that with it are affiliated many members of the Progressist Party. The Association is not under the presidency of Prince Konoye, but it has his sympathy.

Wednesday, September 16.

The Council of the *Seiyu-kai* held a meeting on the 14th instant with the object of discussing foreign politics, but it does not appear that any definite decision was arrived at. The only thing done was to appoint a committee for the purpose of investigating the problems of foreign policy, the reconstruction of prefectures, the disbursements from the reserves, the exchanges and other matters. Neither of the principal political parties can be called very active at present, but the leaders of the *Seiyu-kai* seem to feel that they must determine their attitude towards the *Tai-Ro Doshi-kai*, which, with the support of a number of the Progressists, is beginning to occupy a prominent place in public observation.

THE RUSSO-CHINESE BANK AND ITS COMPRADORE.

Japanese journals state that the dispute between the Russo-Chinese Bank and its former compradore, Mr. Yuan, has assumed large dimensions. When the Bank severed its connexion with Mr. Yuan, the latter stood in its books a debtor to the extent of 170,000 *yen*. Legal proceedings were opened to recover this money, but before the case came up for hearing a compromise was effected, Mr. Yuan agreeing to pay fifty thousand *yen* down and to discharge the remainder of the debt by installments spread over five years. Suddenly, however,—or so at least the papers from which we quote say—the Bank, without consulting Mr. Yuan, sold a lot of land in Shanghai which they held from him as security. The price obtained was sixty thousand taels, whereas the land is said to have been worth half a million. Failing to obtain satisfaction from the Bank, Mr. Yuan employed a Japanese barrister, Mr. Shimizu, and the latter has proceeded to Shanghai, there to prefer a claim of 530,000 taels against the Bank.

Such is the story. But it is not an entirely comprehensible story. The area of the land in question is stated to be 3,000 *tsubo*, or 2½ acres, approximately. Now, we have never heard of a higher price for land in Shanghai than 16,000 taels a *mow*, or 96,000 taels an acre, at which rate Mr. Yuan's 2½ acres would be worth 240,000 taels, not 500,000. Rumour seems to have been at work with her wonted multiplier, and if she has thus manipulated one part of the story, there is no guarantee that the other parts also have not suffered similarly.

We stated above that we had never heard of a higher price for land in Shanghai than 16,000 Tls. a *mow*. Concerning this a well known resident of Shanghai, now in Yokohama, writes to us as follows:—

I think you are not very well posted on recent changes; for land has advanced very considerably in value, and although I cannot give you anything like definite quotations, I can furnish you with very close approximate values in different situations. The Russo-Chinese Bank purchased about three years ago, from Sir Alfred Dent, three *mow* and a fraction on the Bund on which the new bank is erected. The price was 60,000, or roughly, at 2s. 6d., Tls. 190,000 per *mow*, which is tenfold the highest value stated in the *Mail*. The premises then occupied by the Bank, formerly the old Comptoir d'Escompte, about 1½ *mow*, but in an inferior situation on the Bund, sold, including the building which had only the value of old materials, being obsolete, for, I believe, Tls. 185,000. Land in Nanking Road, as far as the Defence Creek, is worth anything between Tls. 25,000 and 40,000 per *mow*.

The site of the old horse bazaar, just opposite the race course, could have been purchased ten years ago, 6 *mow*, for probably Tls. 20,000. In the early part of this year I personally offered to Mr. Hogg, the owner, Tls. 180,000, which he refused, his price being Tls. 200,000. I believe he would not sell now for less than Tls. 250,000.

In other localities within the settlement land has materially advanced, and even on the Bubbling well Road property which could have been bought in 1890 for Tls. 500 per *mow*, now runs up to Tls. 5000 and 6000, to which may be added Tls. 1000 to 3000 per *mow* as the cost of raising the land to road level.

Instead of the proposed tram system reducing the price of land, as was feared, the advance chiefly has been on the proposed lines. There is so little land available within the Settlement that prices are merely a question of whether you are a buyer or a seller; and it is exceedingly improbable you will obtain the refusal of any lot for more than at the outside, three days.

It is a curious fact, and one which, long as I have studied the gold and silver question, I cannot account for, that as silver fell in price land in Shanghai increased; so that, broadly speaking, a fall of 5 per cent. in exchange had the direct effect of immediately sending up land 5 per cent. What the effect of the recent rise in silver has been, I

cannot at the moment say. One would think that local silver shares would have participated equally in exchange fluctuations; but with the exception of the H. K. & S. Bank, the shares in which have recently fallen in proportion to the rise in exchange, the rule is not applicable, chiefly, I presume, because of the serious effects of silver fluctuations on the industries represented by shares.

If Mr. Yuan's land is anywhere within the former English settlement, and consists of 15 *mow*, its value is probably not much over-estimated.

THE STREET RAILWAY QUESTION.

Monday, September 14.

A section of the shareholders of the Tokyo Street Railway Company have now applied for an extraordinary general meeting to consider the question of approving the resolution in favour of amalgamation passed by the general meeting of the 28th of July, and further, having decided the above question, to debate the advisability of remunerating the services of the Company's officers, for which purpose a committee of 5 should be appointed. Finally, these applicants suggest that a committee of ten be chosen to investigate the problem of fares.

There are thus three extraordinary general meetings on the tapis. This last project seems the most practical.

Meanwhile Mr. Fukuhara, one of the Inspectors, has resigned. He is disgusted with the whole affair. Though an advocate of amalgamation, his idea is that all the Directors and Inspectors should resign *en bloc* and leave the shareholders to elect new ones. It is suggested, however, that Mr. Fukuhara's resignation is partly prompted by an apprehension that the prominence of his connexion with this dispute might bring trouble upon the Tokyo Life Insurance Company, of which he is President. This fear is founded upon the recent experience of the Tokai Bank. The President of the latter, Mr. Yoshida, led the pro-amalgamation party, and his opponents retaliated by circulating such rumours that during 3 days ended on the 11th instant the Bank was subjected to a run aggregating 760,000 *yen*. It pulled through without falling, but Mr. Yoshida subsequently resigned, and the conjecture is that Mr. Fukuhara does not wish to expose the Insurance Company and perhaps himself to similar inconvenience, *mutatis mutandis*.

The first section of the Tokyo Street Railway—Sukiyashi to Kanda-bashi, that is to say, from opposite the Imperial Hotel to Kanda—a distance of 18 *cho* (2160 yards), is to be opened to traffic on the 15th instant. The fare charged will be 2 *sen*. At the meeting of Directors where this resolve was taken, an attempt was made to commit the Directors to a uniform fare of 3 *sen* over the whole line when completed. That would have been a virtual acceptance of the anti-amalgamation project. The meeting, however, declined to discuss the proposal on the ground that it was premature.

Wednesday, September 16.

The general meeting of the Tokyo Street Railway Company, applied for by a section of the shareholders, is to be held on the 25th instant, namely, six days subsequently to the meetings summoned by the Inspectors and the Directors respectively. Meanwhile the anti-amalgamationists have three times applied to the Police Authorities for permission to establish a uniform fare of 3 *sen*. The Police rejected the first application as not coming from properly constituted representatives of the Company. Then the applicants handed in the document to the porter at the

gate of the Police Office. It was again sent back for the same reason. Then they posted it, the result of which was that they were invited to take it back, again for the same reason. On the other hand, the amalgamationists have applied to the law courts to have the powers of Mr. Amenomiya and Mr. Tachikawa temporarily suspended. It is said also that there has been a repetition of applications and counter applications about the injunction obtained by Mr. Amenomiya. Thus the comedy continues. There is now talk of the *Kenku-kai* of the Peers acting as mediators.

Thursday, September 17.

The first electric railway within the precincts of Tokyo city proper was opened on the 15th instant, being the section of the Street Railway Company's line from Sukiya-bashi to Kanda. Everything went off most successfully. The cars were crowded, and a species of fete seemed to be held in the district.

NATURAL GAS IN ENGLAND.

In the minds of the public natural gas has always been so intimately associated with the United States that information of its existence in England, for example, comes in the nature of a revelation to many Americans. In the August number of *Cassier's Magazine*, Mr. Inverness Watts relates that natural gas was discovered in East Sussex as long ago as 1875, when, in making experiments on the temperature in a bore hole at various depths, and on lowering a light into the bore-tube, an explosion occurred. Among subsequent further discoveries, the most important one appears to have been made in 1896, at Heathfield station on the London, Brighton & South Coast Railway. The railway company desired to obtain a better quality of water for their engine tank than that afforded by the surface-spring supply. Accordingly a 6-inch bore-tube was sunk, commencing at the bottom of a sump 73 feet deep, into which the surface water had been allowed to flow. Gas appears to have been discovered a long time before its inflammable properties were tested, a strong odour of gas having been noticed for some days; but the smell was attributed to the presence of "foul air" in the bore-tube. At a depth of 312 feet from the level of the permanent way the smell and rush of the gas were so pronounced that (by way of experiment) some one applied a lighted match to it, when a body of flame sprang up, the height of which is variously stated, the maximum estimate being 16 feet. It was extinguished with great difficulty, by means of damp cloths thrown over the mouth of the tube. The gas continued to increase during the remainder of the depth bored. The boring was abandoned at a depth of 377 feet, no useful amount of water having been obtained. The wrought iron tubes were withdrawn from the bore-hole, with the exception of one length, which still remains in the ground, the tube being continued upward to near the top of the sump. A cast-iron cap has been secured on to the top of the bore-tube, with a 1/2-inch bend and stop-cock affixed thereto, and Heathfield station has been lighted throughout by gas from the boring since 1898, consuming about 1,000 cubic feet each night. More recently many other borings have been successfully made for natural gas in various parts of Sussex, and are likely to have an important influence in attracting and developing new industries.

LORD LONSDALE ON JAPAN.

It was observed by those coming in contact with Lord Lonsdale on his arrival in Japan that his opinions about this country and its people were already established, and that they were essentially unfavourable opinions. Whether the British peer had been influenced by acquaintances formed before reaching Japan, or whether—as not infrequently happens—contact with the atmosphere of a treaty port at the outset disturbed his subsequent views, it is certain that before reaching Tokyo he had become thoroughly antipathetic. For the things that he has been saying in Australia, therefore, we were prepared. It is probable, indeed, that he has been represented as saying a great deal more than he really did say. For example, he certainly can not have affirmed that in Japanese counting houses and banks the cashier is a Chinaman, and that all positions of trust are occupied by Chinese. He probably made that remark about foreign banks at the treaty ports, and the newspaper reporter got mixed in transcribing the interview. We may observe, *en passant*, that nothing could be more unjust than to infer, as is frequently done, that the use of Chinese shroffs and compradores by foreign banks in the treaty ports of Japan indicates distrust of Japanese. At the time when Chinese were employed in these capacities their employers knew even less about the Japanese than Lord Lonsdale knows. They simply made use of the machinery with which they were familiar, and their wise conservatism induced them to retain it thereafter. As for Lord Lonsdale, however, even when his utterances have been discounted with regard to reporters' blunders, there remains enough to show that he has justified the expectations of those whom he met in Japan and that his voice will be raised against this country and its people whenever an opportunity presents itself. We have been told that before leaving Japan he addressed to his friend the Emperor of Germany—by desire—a very full report of his impressions, and that it was a report of a thoroughly unfavourable nature. The Emperor of Germany has in this part of the Far East many shrewd subjects who know more about Japan and the Japanese than Lord Lonsdale could have learned without a couple of decades of study at first hand. Therefore His Majesty will assess the English nobleman's views at their just value. The general public will not be so discriminating, however, and we entertain no doubt that Lord Lonsdale's verdict will be accepted by many people. If he read the English journals published in Japan, he will be surprised, we suspect, to find how little importance is attached to his testimony and how greatly the resident journalist differs from him. The only comment we feel disposed to make, for our own part, is that we have always found anti-foreign feeling attributed to Japanese by foreigners who are themselves anti-Japanese. Probably there is a considerable leaven of anti-foreign feeling in this country. We do not think there is, but, on the other hand, we do not for an instant pretend to supply any conclusive evidence. The Japanese, as projected upon our mental vision after 36 years of observation, assume pretty much the same shape as other people do: they cast the same shadows and emit the same brightnesses, with some exceptions. Inasmuch, then, as a purely cosmopolitan spirit is not

to be found in any nation under any sky, to look for it in Japan might be an oversanguine search. What we think, nevertheless, is that Japanese have as much of the spirit as most of their Occidental acquaintances have, and that they show a great deal more of it than some of those acquaintances would evince under corresponding circumstances.

ICHIKAWA DANJURO.

The great actor Ichikawa Danjuro succumbed to a fourth attack of the malady which first declared itself in 1897, at 3 p.m. on the 13th instant. There had been some improvement on the afternoon of the 12th and the morning of the 13th, but from one o'clock on the afternoon of the latter day the symptoms developed intensity and death ensued at 3.45 p.m. Danjuro was in his 66th year. He was the ninth of his name to attain a great reputation on the stage, and he leaves no one of comparable talent to take his place. It is probably not too much to say that Danjuro was the greatest actor in the world. His versatility was extraordinary. To the eyes of foreign play-goers his performances in the role of a woman probably seemed most remarkable, but his countrymen's verdict would be that the late Kikugoro—who died only a few months ago—was even greater in such roles, and that Danjuro excelled in his representations of eminent historical characters, such as Kato Kiyomasa, Benkei, Ishikawa Goyemon and so forth. The writer of this note remembers that when many years ago, the late Hon. Lewis Wingfield, whose close connexion with the English stage is doubtless familiar to our readers, visited the Japanese theatre, he unhesitatingly pronounced Danjuro to be the most skilled exponent of the histrionic art then living, and that too although Mr. Wingfield could not follow the words of the piece—"Tera Koya"—Danjuro was playing. In Japan a man does not turn to the stage—or, at least, very seldom turns to it—after reaching years of maturity. He begins to receive training from his very childhood and it is training of the most rigorous and minute character. Danjuro, too, had the advantage of exceptional erudition. It is not too much to say that none of his contemporaries possessed the same intimate knowledge of Japan's ancient history, manners and customs. So see a play staged by him was to obtain a glimpse into Japanese life in the days of its complete seclusion from foreign influences. The loss of this remarkable actor, following so closely on the death of his rival and comrade, Kikugoro, leaves the stage much impoverished.

MR. COLE.

A number of Japanese noblemen and gentlemen entertained Mr. Cole at the Maple Club on the 15th instant, to evince their appreciation of his propaganda in opposition to the exclusive policy adopted by the labour party in Australia. Among those present were Baron Kodama, Viscount Soga, Mr. Sakatani, Mr. Taguchi Ukichi, and many newspaper editors. Mr. Cole was accompanied by Mrs. and Miss Cole. His health having been proposed by Mr. Taguchi, he spoke at some length about the condition of Australia and the impossibility of developing it without the aid of Asiatic labour. The present leaders of the anti-Asiatic movement seemed to be so bigoted in their views that rather

than employ coloured assistance they would see the whole country lying waste, but in truth nothing could be more irrational than a prejudice based on nothing more solid than a difference of complexion; a difference which was only skin deep and had its origin solely in exposure to the sun. Mr. Cole dwelt upon the fact that all the religions of the world had been propagated by Asiatic sages, and noted that whereas a wide-spread prejudice prevailed against the Jews, the victims of the prejudice followed a creed which had its birth-place in Judaea.

After dinner photographs were taken, and various forms of entertainment having been provided, the party, which numbered about 70, broke up.

PERSIAN PURITANS.

The lot of reformers in any land is never very easy-going, but in Mohammedan countries it is particularly hard, especially when it is a matter of purifying the prevailing religion of the state. Details are printed in the London papers of another wholesale massacre of the Persian Bâbis. This particular sect of reforming Mahomedans is said to teach a Puritan code of morals under which polygamy, concubinage, and the seclusion of women are abolished, and they are besides rigidly teetotal. The Bâbis are said to number a million of adherents throughout Persia, besides a multitude of followers who dare not avow their faith. They are regarded by the reigning dynasty and by the priesthood as incorrigible rebels and have unquestionably been persecuted into disaffection; but though their chief pleads a divine commission to reform the faith, he does not claim a right to supersede civil authority. In fact, the Bâbis only ask for peace and toleration, though whether they would not turn aggressors when a suitable opportunity presented, as did the Puritans of New England, is open to question. The mob knowing that the Bâbis are under the ban take frequent occasion to murder them, and when the authorities of a town are weak, as in the case of the city of Yezd, a solitary murder develops into wholesale massacre without distinction of sex. The Governor of Yezd, it seems, at first tried to protect the unhappy sectaries, but finding this dangerous, he sentenced one to be blown away from a cannon and another to have his throat cut. Then the mob took the matter in hand and for two days during the close of June they wreaked their will without let and hindrance. Then, satiated with blood, they returned to their homes.

Persecution has been the lot of the Bâbis from the time their founder, Seyd Mohammed Ali, first promulgated the doctrines which guide the sect. This was in 1843, after his return from a pilgrimage to Mecca. He speedily became engaged in controversy with the mollahs, or regular clergy, who, exasperated by the freedom of his strictures on their lives as well as their doctrines obtained an official decree forbidding him to preach in public and confining him to his house. The Bab complied in appearance, but continued to instruct his disciples in private. The new religion made rapid progress, and the endeavours of the authorities to repress it eventually produced a civil war. The Mollah Hussein Boushrevieh, one of the disciples of the Bab, who had undertaken to disseminate the new religion throughout the Persian Empire, constructed a fort, where he defeated several expeditions despatched against him, but at length fell mortally

wounded in the moment of victory, and his followers, induced to surrender by famine, were mostly put to death (1849). Bal-fouroushi, another missionary of the reformed religion, with a number of his principal adherents, perished in the city of Zendian after an obstinate defence in May, 1850. Ere this event had taken place the Persian Government had proceeded to the execution of the Bab himself, who had now been confined for some time in a fortress. He was removed to Tabriz, and all attempts to induce him to retract having failed, he was executed. His death was far from discouraging his followers, who recognised as his successor Mirzo Yahya, a youth of noble birth, who established himself at Bagdad. In 1852 an attempt of several Bâbis to assassinate the Shah led to a ferocious persecution, in which the beautiful Gurred-ul-Ayn, a most gifted woman, whose name translated means "Consolation of the Eyes," perished with many others. Since then the history of the sect has been mostly written in blood. Babism is essentially one of the innumerable schools of Sufism, directed into a more practical channel by its founder's keen perception of the evils of his times. To the Aryan Persians who have never completely accommodated themselves to the moral code of their Semitic conquerors, the ethical system of the Bâbis is peculiarly attractive, while its reversion to former ideals of the race in according perfect equality to the two sexes and in banishing the veil is in accordance with ancient Persian traditions.

THE "STANLEY DOLLAR."

This is not the name of a piece of money, but of a steamer which was recently reported to have been seized by a Japanese man-of-war in the Yalu River for the offence of engaging in the lumber trade at a non-treaty port without permission from the Korean Government. The remarkable item of news seems to have reached Tientsin on the 2nd of September, and it afforded material for a leading article in the *Peking and Tientsin Times* three days later. Our contemporary, having ascertained that the *Stanley Dollar*, though chartered by Russians, was flying the British flag, discovered a palpable parallel between this case and that of the *Kowshing*, by which "the China-Japan war was helped to be set well a-rolling." The wonder of the incident is quite in harmony with the bewildered tone of the Tientsin journal in discussing it. The nationality of a ship being determined by the flag it flies, our contemporary concludes that the *Stanley Dollar* was British though chartered by Russians, and that, consequently, "her captain will have to answer the complaint of the Korean Government before the British authorities in Korea on a charge of taking his ship to a non-treaty port and there trading." Then, as to the act of the Japanese, we are told that it has probably "been taken on account of the vessel being under charter to the Russians." But why by the Japanese? Well, perhaps "at the request of the Korean Government." But "we fancy not, as at present, in fact at no time, are the Japanese favourites at the Korean Court." "We are inclined to believe (*sic*) therefore, that the Japanese have taken this opportunity to frustrate the Russians in disposing of their lumber." But "even if they were asked by the Korean Government, that Government would have to make their complaint to the Russian Government and we all know how Russia would answer." What

then? Where are we now? Why here:—"The Lumber Company being under the auspices of the Russian Government, if not the Russian Government, itself, the Russians would not brook an insult from the Koreans by a seizure of one of their vessels and, under the circumstances, they would regard the Japanese, if they did it, Korea's allies. The Russian answer would be the pouring in of troops into Korea and which (*sic*) Japan would do likewise and then—" Happily this magnificent tangle does not extend beyond the above hypotheses. We are not asked to pursue any further the giddy topic of an act of piracy perpetrated by a Japanese man of war against a British vessel and punished by Russia pouring troops into Korea. *O sanctissima simplicitas*—fancy any newspaper crediting such things and making them the theme of leading articles!

MARCONIGRAPHS.

Travellers across the Atlantic on the larger liners are now kept in daily touch with the world of men and things by means of wireless telegraphy, and regularly at breakfast time and sometimes towards evening, appears a little news sheet giving an epitome of the more important happenings in Europe and America. Thus a resident of Yokohama learnt in mid-Atlantic of the election of Cardinal Sarto to be the new Pope of Rome, and of the progress of the Brown cotton-corner. A humorous side to this new development of ocean travelling is touched upon by the *New York Commercial*. It seems that a passenger on the steamship *Campania* in mid-ocean received a cash remittance from a passenger on the steamship *Lucania*, also going its way out of sight of land and ships on the high seas. There is something in the fact that the remitter knew his mother was on the other vessel and would probably submit to a "touch," as the American phrase has it. But the very novelty of the transaction should give hope to the cheerless wretch, homeward bound, who wants a small sum to settle accounts before he gets ashore. How lovely it will be, says our contemporary, to receive a wireless sight draft when still a couple of days out, especially if Vagrom Fate has deserted us at the card-table and left us "dead-broke." How it will relieve the dreary gloom to know that the "gleam ahead" can be worked as successfully as if papa's cheque book were actually in reach. Mr. Marconi will come to be looked upon as a blessing by a certain class of travellers if this first utilization of his invention spread into repetition. To others however, his system will not appeal in the light of a blessing. In the days before Marconi became a much-talked-of scientist a voyage at sea meant an entire cutting off of all connections with the land, a complete cessation from all the worries and annoyances inseparable from existence on *terra firma*, and many a hard-worked man of business took a trip to sea knowing that for a few days at least he was free from the turmoil of mercantile life. Now all this is changed and his nose is kept as close to the machine as ever. The recent international yacht races led to one amusing contretemps. The enterprising American newspapers made all preparation to report them that it was possible to make, and so it came about that four different systems of wireless telegraph instruments were set in motion, with the result that the messages got hopelessly mixed up and what between accidents and design those journalists relying solely on the wireless messages got badly left.

NAVAL ARMAMENTS.

Among the results of the recent journey of the French Parliamentary delegation to London, one, according to Baron d'Estournelles de Constant, is a project that a convention should be signed pledging the two nations to submit all their disputes to arbitration; a convention such as exists already between the United States of America and Great Britain. "That convention once signed," says the Baron, in his official report to M. Delcassé, "the English are anxious to come to terms with France and Russia to restrict the crushing burden of the naval expenditure of the three Powers."

It is much to be apprehended that such a desirable arrangement can not be effected. Germany would have to be a party to it, and we do not conceive that the Emperor William could be easily induced to forego the large purposes which inspire his naval programme.

The German nation, on the other hand, would certainly vote for coöperation with Russia, France and England in such a matter, and the Kaiser might find himself placed in a very difficult position were he approached jointly by the Cabinets of St. Petersburg, Paris and London with a proposal for restricted naval armaments. What Germany wants, however, is to be able to reduce her military forces, though, just at present, she is talking of increasing them by some thirty thousand men, maintained at a cost of nearly a million and a half sterling annually. We are probably still far from the day when an agreement between France, Germany and Russia for the purpose of partial disarmament will be possible or even thinkable. And indeed, even apart from the difficulty of Germany, we can not persuade ourselves to regard as in any respect feasible the scheme communicated to Baron d'Estournelles de Constant during his visit to London. England has long desired something of the kind. Mr. Goschen made public announcement of her wish four years ago, but his words awoke no sort of response on the other side of the Channel. It is true that France and England, in their present mood of happily established amity, might sign an arbitration treaty, but if Russia is to be a party to the naval reduction programme, she must also be a party to the arbitration contract, and that is something too good to be hoped.

DOGS.

The close of the hot season, especially such a hot season as we had this year, can not fail to find some one in a petulant, complaining mood, and very often this shattered state of nerves betrays the sufferer into a tirade against dogs. We dare not venture to say how frequently the correspondence columns of the local press have contained diatribes against dogs that make night hideous when the worn-out householder is wooing rest that will not come. So many of us, so very many, have been tormented by this nuisance that sympathy with the protesting correspondent is never wanting. But, after all, this is one of the ills that seem beyond the reach of remedy. The world has endured it ever since civilization began, and will continue to endure it so long as civilization lasts. It is the penalty we pay for keeping dogs, and who on earth is going to make away with his pet because it disturbs a neighbour's sleep? One correspondent signing himself "Aura" pleads the cause of the dogs. But not all dogs. His

main point is that Bluff-residents, when disturbed by dogs, should lay the blame, not on foreign-owned animals, but on pariahs that come from the hills to scavenge in the aliens' dust-bins. In a sense we believe him to be right, but only vicariously right. Certainly there are special moments of canine courtship when a wisp of mongrels peregrinate the streets, pleading their jealous affections with ear-splitting vehemence. But what generally happens, we believe, is that the well fed, well exercised and well housed animal of the foreign compound noses a vagabond scavenging in the vicinity and at once gives violent tongue. It is not the nomad animal that yelps. Any one observant of the habits of dogs must have noticed that when a stranger slinks down the street he never returns the greetings hurled at his head, but goes on his way in silence. So it is on the Bluff. One mendicant from the neighbouring village will throw fifty gentlemanlike dogs into a phrensy, and though the visitor is ultimately responsible, the real yelper is the "dog on the dry and warm bench" of whom "Aura" discourses so analytically. It is to be remarked, *en passant*, that "Aura" is very sceptical about our statement that dogs are taxed in Tokyo and that animals whose owners have not paid the tax are killed. "No one will believe that," says "Aura" with fine courtesy, because "thousands of mongrels are seen in Tokyo without collars or tags and bearing every appearance of being ownerless waifs." "Thousands of mongrels" is such an obviously guarded assertion that we accept it without hesitation. Still what we have said about the taxing of dogs in Tokyo and about the killing—or, at any rate, the capital liability—of any animal that has not paid the tax, is quite correct. We greatly doubt, however, whether the killing is systematically done, and to the extent of that doubt we are at one with "Aura."

THE PEST.

An official committee consisting of Messrs. Kubota, Noda and Kurimoto, proceeded to Yokohama on the 11th instant to make investigations into the threatened outbreak of plague. They found that in Matsukage-cho, where the first case presented itself, a dead rat had been picked up on the 11th of July, and microscopic examination had showed the pest-bacillus in the carcase. Nevertheless there was no outbreak of plague until the 8th of September, when three cases occurred. From the house where the virus had thus declared itself, the committee proceeded to examine the adjoining premises of a rice-dealer, and there, under the floor of a warehouse where 500 bags of grain were stored, they discovered the bodies of 61 rats. All but five were too much decomposed to admit of any scientific test, but in every one of these five plague bacilli were found. This incident has naturally created some alarm, not merely on Yokohama's account but also for the sake of Tokyo.

A girl (7) who had been attacked by the plague and been removed to the Manji Hospital, Yokohama, succumbed at 1 p.m. on Sept. 11th.

Two fresh cases of bubonic plague were reported in Yokohama on Sept. 13th. One is a coolie named K. Nozui, 31 years old, living at Nishi-Tobe. Another is also a coolie named T. Saito, 18 years old, living at Kotobuki-cho. The former was removed to the hospital, and the latter succumbed in the evening before he could

be removed. It is said by the police authorities that both patients were working on the 12th on board a steamer lying in the harbour.

On the Sept. 14th two fresh cases of the plague were reported in Yokohama. One is a married woman named Mine (21) wife of a locksmith named S. Uchiyama (41), living at Matsukage-cho, 1-chome. She has been suffering with fever since the 11th when she went to the village of Byobuga-ura near Negishi where her parents live. There she was found by Dr. Fukuda to have plague. At 6.30 p.m. on the 14th she was removed to the hospital. The same evening the sanitary officials proceeded to the dwelling of her husband, where they found that the man was suffering from the same disease. He was also removed to the hospital.

Matsukage-cho in Yokohama seems now to be a centre of infection for plague. Two fatal cases of suspected disease were again reported on Sept. 15th. One is a man named Z. Koyoma and another is a child two years old. They were removed to the Hospital where they are undergoing post-mortem examination.

NOTES ON CURRENT EVENTS.

Tokyo newspapers state that there is a prospect of consummating the long-discussed project of a coal trust for Kiushu. The great coal-mining firms have come into the combination, and already the three prefectures of Fukuoka, Nagasaki and Saga may be said to be pledged. The other sections of the island will doubtless follow. This idea was mooted several years ago, but whether the time was not then ripe or whether, as many people alleged, the proposed units of the trust were not all sufficiently trustworthy, the scheme did not materialize.

The prospect of being thrown out of work by electric railways in Tokyo is said to be distressing many of the *jinrikisha* men, and some two thousand of them are thinking of emigrating to Hokkaido. Is there in the northern island any demand for labour that would justify such a step? We doubt it. A traveller who returned recently from that region assures us that even in the less frequented regions of Yezo he could hire labour at the same rate as he would pay in Tokyo. That does not look as though the demand exceeded the supply. Agricultural enterprise offers, but there may be doubts about the opening for labour.

The bee-sting as a cure for rheumatism has received serious medical endorsement. Dr. Perc, of Marburg, Germany, announces that he has proved the efficacy of the treatment in 500 cases, and has cured the most obstinate and painful rheumatism. When the sufferer from rheumatism is stung, the part does not swell until the bee-poison has been frequently introduced, when the pain vanishes. Dr. Perc causes his patients to be stung at first by a few bees, and then gradually increases the number.

There is a telegram that cholera is raging with great virulence at Pehatang, near Tientsin. No less than 1,700 persons have succumbed within the past few days. Happily summer is virtually over, so that the epidemic can not be of much longer duration.

The *Fiji Shimpo* publishes a picture and a description of the *Nikko Maru* which is to be launched at the Mitsu Bishi Yard in Nagasaki on the 23rd instant, to order of the Nippon Yusen Kaisha. Our contemporary says that the vessel will be one of the very finest among the company's

passenger ships; finer than even the *Kumano Maru*. She will be capable of steaming 17 knots; her tonnage is 5600 tons; her length 420 feet and her beam 50 feet. Her accommodation for first-class passengers will be 31 cabins with two berths in each, and for second-class, 6 cabins with 4 berths in each.

The Osaka menagerie has been moved to Tokyo. There are 83 varieties of animals and birds, including two lions and two black leopards, as well as two elephants, and the whole arrived at Shimbashi on the 12th instant, whence they were at once taken to the public garden at Asakusa. It appears that Osaka found this menagerie an expense instead of source of a profit, and consequently its transfer to Tokyo at a cost of 14,000 yen was decided. Apparently the money has been disbursed by private speculators who expect to find custom for the show at Asakusa.

Mr. Stead—senior or junior, we do not know which—is said to have presented an *édition de luxe* of an English work for young people to the Imperial Princesses through Baron Sannomiya. The title of the book is not given in English by Japanese journals. It appears in translation, and we are unable to identify it, but the work is said to consist of over 80 volumes and to contain not only celebrated fairy tales but also remarkable incidents from history. No doubt the *Review of Reviews* will soon tell us all about the affair. Japanese journals say that this is the first example of a presentation of this particular kind, but the Emperor, of course, has been pleased to accept copies of various books published abroad, and we recently noticed the presentation of the *Century Dictionary* to the Crown Prince.

Mr. Griscom, being a comparatively new figure upon the stage of Far-Eastern politics, an enterprising news-collector of the *Chiuo Shimbun* represents him as having stated to somebody or other—the vagueness of the tale is quite refreshing—that Japan is a veritable simpleton, that her solemn adherence to the farce of protests and pourparlers, which Russia scarcely takes the trouble to read, is a sad spectacle of political naivete, and that if she keeps on doing as she is doing now, she will become an object of ridicule in diplomatic circles. It is quite certain, of course, that Mr. Griscom never said anything of the kind, and that the *Chiuo Shimbun* merely employs him as a stalking horse for a tilt at the Japanese Cabinet on its own account. But we trust that the falsehood will receive the rebuke it deserves.

The relief ship *Terra Nova*, which was berthed at Dundee when the last mail left England, should by this time be ready for sea. The crew will for the most part be made up of whalers and those who have had experience in ice-navigation. Her company will consist of thirty-seven hands all told. With the view of ensuring expedition, the ship will proceed southwards by the shortest route. Under her own steam she is capable of moving along at the rate of nine knots an hour, but it is intended that this speed should be accelerated and coals saved by the co-operation of certain of his Majesty's ships-of-war. The *Terra Nova*, instead of making the long sea passage round the Cape, will proceed by the Mediterranean and the Suez Canal. Arrangements are being made to ensure that after the relief ship passes Gibraltar she will be taken in tow by fast vessels of the

Royal Navy attached to the Mediterranean and East India stations. The *Terra Nova* will proceed to Hobart, in Tasmania, where she will be joined by the *Morning*, at present stationed at Lyttelton, New Zealand. The relief vessel should reach the Antarctic ice by the end of November, and should straightway proceed to relieve the *Discovery*. The appointment of Captain M'Kay to command the expedition is regarded, by those in Great Britain competent to judge, with great satisfaction.

It is evident that excitement has been caused in Kobe by the act of the Kawasaki Dock-Yard folk in demanding some seventeen thousand pounds sterling for salvage in connexion with the S.S. *Tonkin*. The procedure of the Dock people has elicited from one of the local English journals an exceedingly vehement article; an article which most assuredly would never have been penned or published had the claim been preferred by an Occidental Company. Inasmuch as a law court has been invited to decide the question, we are precluded from commenting on it further than to say that ridicule alone can be evoked by the criticism that the making of such a claim will impair Japan's reputation. If the Dock-Yard people believe that they saved the ship, that she could not have been saved without them, and that they saved her at such risk and trouble as to warrant them in demanding heavy salvage, then they have an undeniable right to ask for salvage. There is nothing either dishonourable or disgraceful in such a step. Its success or failure depends on a judicial decision which, we must assume, may be trusted equally to assert the rights of one side and to defend those of the other. No publicist has any warrant to question the *bona fides* of the Dock-yard folks, and as for the silly pretence that the Japanese nation will be discredited by the incident, it is surely time that such hysteria was silenced.

The Hawaiians, or at any rate a section of them, appear to be disposed to follow the example of their nationals on the Pacific slope and their kinsmen in Australia. The White Men's Trades Association has passed a resolution declaring that no facilities of any kind shall be granted to Japanese or Chinese subjects, and that such facilities shall be limited to persons who are already domiciled in Hawaii or who have the intention of being domiciled. Will the day ever come, we wonder, when the Oriental will tear this particular leaf out of the canon of his Occidental friends' international ethics and take it for guide in his own conduct towards them. The West has long been sneering at the East for exclusiveness, but the sneer may now be transferred to the face of the East. Apparently there is to be some discussion of these matters *in loco*, for we read in the *Asahi Shimbun's* telegrams that in response to the resolution of the White Men's Association, the sixty-five thousand Japanese subjects residing in Hawaii are forming a league to protect their own interests.

A celebration took place on the 15th instant in Tokyo in commemoration of the victory at Pyong-yang in 1895. The scene of the celebration was the Yasukuni Shrine at Shokonsha, and subsequently the principal participants repaired to the Army Club (*Kimoshia*) where the names of those that had died for their country were read aloud and various addresses were delivered. Lieutenant-General Baron Tatsumi telegraphed from Awomori:—*Tojitsu wo shuku shi awa-*

sete tojitsu aran koto wo inoru (we celebrate the day; we pray for another day like it); which message was received with loud acclaim.

Prince Konoye has entered the University Hospital. Tokyo journals state that while the surgeons were hesitating to undertake an extensive operation involving the lungs, the malady assumed a more superficial character and also changed its locality so as to be within easy reach of the knife. Good hopes are now entertained that medical treatment will be successful.

Now that the weather seems to have cleared up we are warned by the meteorological authorities to be on the watch for a change. This time it is an excessive centre of elevation in the Hokkaido region that causes alarm. An elevation in one place necessarily means a depression in another, and the levelling up process may be accompanied by disturbance.

A man of 108 years is now in Tokyo on a visit from Sendai, his native place. The *Fiji Shimpo* has had him medically examined and finds that he is as hale as an ordinary man of 70. The Imperial Household Department has made him a present of silver sake cups, for he is a great drinker, which fact will make for the interests of the sake tax.

"All the English statesmen whom we met, without distinction of party, from the Prime Minister, the Ministers for Foreign Affairs and for the Colonies and the President of the Board of Trade to the most eminent members of the Opposition, are as unanimous as we are ourselves in their desire for this new policy. It will entitle us to the esteem and gratitude of all nations for having given a practical form to the principles laid down by our ally the Emperor of Russia at the Peace Conference."

We quote these words from the letter of Baron d'Estournelles de Constant to M. Delcassé. The "new policy" to which he alludes is, of course, the policy of practical concord between France and England. By Frenchmen it is evidently believed that the genuine desire of the Tsar was expressed in his measures to convene a peace conference and in the declarations he made to the conference. We, too, have the same belief. It makes us regret all the more keenly that His Majesty's wishes do not bear practical fruit in the Far East, for most assuredly one can not say, with any semblance of truth, that Russia's action in Manchuria and Korea makes for peace, or is conscientiously intended to make for peace.

The Japan Railway Authorities announce an unexpected concession. They will henceforth—from the 21st instant—carry bicycles *gratis* on the basis of one to a traveller and on the supposition that the machine is for the traveller's use only. It must not be boxed or otherwise packed, and the Railway officials reserve discretionary power to take off the handles and pedals, and even to decline to carry the machine altogether in case of pressure of other baggage.

FIRES.

Early in the morning of Wednesday, fire broke out at Motoyoshi-cho, Asakusa, Tokyo, burning down three buildings and damaging three others. The cause is reported to be sulphuric acid which was being prepared to disinfect old cotton.

Fire occurred on Sept. 15th at the village of Kanamaki, near Niigata, destroying 15 houses.

THE BALKANS.

JUDGING from the latest telegrams received through Reuter relating to the Macedonian question, Turkey seems at last to have put her back to the wall and defied the European nations to interfere in her internal affairs. The Balkan question has been the ever-suspected infernal-machine of Europe for the past fifty years, yet a solution of the vexing questions connected with the peninsula seems as far off as ever. Primarily it is the old dispute between the Crescent and the Cross, and there are not wanting competent observers who declare that the Christians could long since have driven the Turks back into Asia Minor could they but have united forces, buried their old tribal differences, and acted square with one another. For the Turk, despite his five hundred years' residence in Europe, is still at heart a nomad, as all his fathers were, and has never taken kindly to the soil of Macedonia, Thrace and ancient Illyricum. Like the Moors in Spain he ever feels a stranger in a strange land. It would not have taken much effort then to send him back across the Dardanelles, but the rival races of the Balkans professing the Christian faith all hate each other more cordially than they detest the Turk. Each of these races—the Bulgar, the Serb, the Ruman, the Vlach, the Greek—considers itself the rightful heir of the Turkish possessions in Europe, and each is ever ready to fly at the other's throat. With such a muddle of rival hatreds to contend against, it is scarcely wonderful that the Turk has found his account in grinding one and all beneath the iron heel of a pitiless oppression. Five hundred years of such behaviour has developed vices in both the oppressor and the oppressed from which blaze forth at times an outburst of atrocities that startle and disgust the outer world, which perceives but dimly the hidden springs. The grievances of the Macedonian are very bitter. He is the most heavily taxed peasant in the world, for he has to pay taxes on what he has and taxes on what he has not; to pay for exemption from military service—a service, by-the-way, which as a Christian he is not allowed to enter; and to pay the legal exactions of the ruling power and the illegal exactions of all the various Macedonian committees who ostensibly are working for his freedom. These are some of his grievances, but it must not be forgotten that he is a past master in provoking the Turks to ill-treat him even more cruelly. Brigandage is rife throughout the unhappy land, and the worst among all the marauders are the Albanians. These wild dwellers among the hill-tops were only converted to Mohammedanism in the 17th and 18th centuries, but the present SULTAN has a very tender regard for them, and hence though they steadily refuse to pay his taxes and refuse regular service in his armies, they are permitted to devastate all the Christian lowlands whenever chance or inclination prompts them, while the SULTAN allows them a bigger voice

in the political councils of the Yildiz Kiosk than is accorded to any save the pure-bred Turk.

A perpetual source of disturbance in the Balkans is the propaganda which each of the rival nationalities carries on by means of schools, gymnasia, consularships, and churches. Up till the Greco-Turkish war, when the hollow sham of the Hellenistic pretensions came clattering to the ground, the Greeks were the predominating influence among the followers of the Orthodox Church. Now their schools are being gradually deserted, while the Servian, Bulgarian, and Ruman schools are growing in number and influence daily. These rival schools purchase scholars, so it is said, when they are young, and as they are caught by the Bulgar, the Serb, or the Ruman, so they become, on emerging into the years of manhood, Bulgars, Servians, or Rumanians, with the result that families are often divided among themselves more bitterly than the Turk is from the Christian. Another factor in this perplexing problem is the attitude of the Jews and Gypsies. These are very numerous, particularly the former, as in Salonica alone they are the predominating factor in the population. Received by the Turk with characteristic tolerance when they fled from Spain during the persecutions of FERDINAND and ISABELLA, the Jews have followed their faith unmolested, have waxed rich and made themselves useful to the Turks in many ways. They turn deaf ears to all the blandishments of the Macedonian Committees and steadily refuse to entertain the idea that the Turk should be swept off the surface of Europe back into Asia Minor. Such are the snarled tangles of the Macedonian question, and the outcome of the present disturbances seems to be that the Turk will obtain a further lease of life in the Balkan Peninsula while the Macedonians will be flayed afresh, but this time with whips of scorpions.

COUNCIL OF MISSIONS AT ARIMA.

For a number of years this body has been meeting at Karuizawa, till some had begun to think, apparently, that it was as immovably fixed there as old Asama. But as the attendance last year was small, and the interest rather languid, consent was gained to try the air of Arima. The experiment has resulted most happily; so that the enthusiastic remark was heard on all sides, "the best meeting I ever attended." In order that your readers also may share in the benefits, the Council ordered the Secretary to offer you a short report.

The sessions were opened in the Union Chapel at 10 a.m. on Tuesday, Sept. 2nd, with a sermon on Isaiah, 55:11. "My word shall not return unto me void, but it shall accomplish that which I please," by Rev. Dr. Stout of Nagasaki, the Nestor of the Council, whose long service and rich experience enabled him to give a most profitable discourse. At the afternoon session of the same day, the Annual Report was read by Mr. Peeke of Kagoshima. This report not only showed such diligence and care in preparation as to elicit a very cordial expression of thanks in the vote thereafter, but also contained so many evidences of a year of general prosperity in all departments that the hearts of all were filled with thanksgiving to the Master who has so greatly blessed our work. Not only was there

universal testimony to the approachableness of the people, but also much evidence that many have been so successfully approached as to result in their salvation. Reports coming from almost the whole country would seem to show that people are turning to, and accepting the simple gospel message as never before.

Some of the more important items of business decided were the following:—To the Standing Committee of Co-operating Christian Missions, two requests were sent: (1) That a Union Hymnal for Sunday Schools be prepared, somewhat in the same manner as the one just now so successfully completed for the various church bodies; (2) That a School for the study of the Japanese Language be established in some suitable city, for the benefit of new missionaries, and "rusty old ones," if any so classify themselves.

The Council decided to establish a theological magazine of a somewhat popular kind. For this they elected as Editor-in-Chief, Rev. E. Rothesay Miller, of Tokyo; and as Associate Editors, Rev. Drs. Wm. Imbrie, of the Meiji Gakuin, Tokyo, and Sasao of the Tohoku Gakuin, Sendai; who are expected to launch the enterprise in the near future. Also the body requested Mr. Cameron Johnson of Kobe, with an advisory committee, to begin the publication, as soon as practicable, of a "Council Bulletin" in English, for the benefit of the members of Council and their churches across the sea.

A letter conveying welcome and the cordial greetings of the Council was ordered sent to the newly arrived Minister from the U.S.A., Mr. Griscom.

Two plans concerning financial matters were before the Council. One for the help of Japanese Christian workers had been up since last year, but not proving altogether satisfactory, was at this meeting, referred to a committee, with power to perfect the plan and present it at once to the several missions. The other matter was a plan for aiding weak churches in the erection of buildings, by organizing an Association under control of Council, the members of which Association pledge themselves to contribute 2.00 yen per share, each time a call for help was issued by the directors; no more than 5 calls being allowable any one year. As any one in sympathy with the work may become a member, it is hoped that a number will avail themselves of this opportunity to help the work at a much needed point, and through a responsible channel.

Suitable resolutions were drawn up regarding the death of Rev. Dr. T. T. Alexander, and of Mrs. A. M. Drennan, both of whom gave so many of the years of their lives to the work in this land.

According to a custom of several years standing, one day was set apart for a Bible Conference. This was held on the third day, and was felt by all to have been the Great Day of the Feast. At each session two papers were presented, with discussion between each. Those of the morning were as to the Holy Spirit's guidance of missionaries, (1) in their choice of field, and (2) in their efforts to raise up a native ministry. The papers were both excellent; and as the subjects—especially the former—came very close to the heart-history of everyone present, the deepest feelings were stirred, and many touching testimonies were given. At the close of the discussion on the second paper, a vote was taken that "throughout the coming year in our prayers, we offer the definite petition for fifty new workers to be raised up from among our Japanese brethren." It is hoped that all members of Council not in attendance will take note of, and heartily join in with this petition.

The papers at the afternoon session were on the Sabbath question in its bearing on the external growth, and spiritual life of the Church. As this matter is so vitally connected with both, it was most earnestly discussed, and some valuable practical suggestions offered.

The evening session of praise and consecration was fully attended, and some who have been to the Northfield conferences, said that this day strongly reminded them of those great meetings, in its spiritual profit.

The Council adjourned on Saturday night, after four full and profitable days: but as all the

Sabbath services following were conducted by its members, there was a continuity of its spirit. At the end of the final service, as the shadowing night descended, the Sacramental service was most solemn and uplifting, and we quietly separated, feeling that we had indeed been on a mount of privilege.

The social side of the meeting was not neglected; a part of one afternoon having been given to a picnic in the park. One advantage of Arima is its great sociability. The houses are all so near to one another that people can hardly help being sociable.

The next meeting will be held in Arima, July 16th, 1904: at which time the following persons will be its officers. President; Dr. D. B. Schieder, of Sendai; Vice-President; Rev. G. P. Pierson, of Hokkaido; Sec., Rev. H. W. Myers, of Tokushima. H. W. MYERS, Sec.

NOTES FROM ST. LOUIS.

St. Louis, Mo., August 18th, 1903.

After two weeks in Chicago, I rode through the big corn field called Illinois, to this largest American municipality west of the Mississippi. Here I propose to spend ten days. St. Louis is the fourth city in the United States and one which, during the summer of 1904, will be from the point of view of cosmopolitanism, the centre of the world. I have attended four or five World's Fairs, but unless all signs fail, (as I incline to believe) the Louisiana Purchase Commemorative Exhibition will, in size and splendour, excel them all. What is especially very promising is the forward state of several of the large edifices, which now, nine months before their official opening, are finished and ready for exhibits.

I put on the spectacles of historic imagination a few days ago, and with an old resident as pilot, Hon. Frederick Lehmann, president of the trustees of the Public Library—spent some hours in the narrow and rather quiet streets of the old part of St. Louis. Another brace of hours in the rooms of the Missouri Historical Society threw floods of light on the times when the Iroquois, Spanish and French sovereignties in succession, were won and lost.

This Mound City received its popular name from a high mass of earth, natural, not artificial, easily seen from the river during the centuries from the days of birch bark canoe to iron-clad gunboat and mighty steamer. In Boston, they would have preserved this striking landmark, and made it an asset, even as the canny Yankee knows well how to do. Destitute alike of the historic imagination, and a due sense of future thrift, the St. Louis folks leveled and carted the mound away. To-day, in the Historical Society Museum, accurate pen sketches and photographs show the pre-American St. Louis. On the gently rising land, from the levee to the tower-like fort St. Louis on the hill, are seen the forty or fifty houses mostly of one storey, none of over two stories. In these dwelt the French fur-traders whose names are still preserved in those of the old streets of this new city. The ancient quarter is easily recognised by the narrowness of the streets and their air of comparative desertion. In the new city, the trolley cars can rumble and roar with plenty of room, both for arrowlike swiftness and sharp turning. Here we find in use the excellent transportation system a very long, large and heavy street car, with rear platforms of double width and depth.

Indeed it is the steam railway, not the river traffic—great as that still is—that has made the present St. Louis, of six hundred thousand people, of broad avenues, of hundreds of steel and stone sky-scrapers, of lordly dwellings, spacious parks and pretty gardens. One who is native to Philadelphia sees also that the St. Louis, born to the American possession in 1803, has been mightily influenced in architecture and street naming and imitated in various social and municipal details from the Quaker city model. Yet one finds a large proportion of New Englandery here, while the hilarious applause which following the rendition of "Way down South in Dixie" by Inner's band at Suburban Park, shows that the Southern element is not only

ancient and honourable but powerful. It is pleasant and illuminating to read, here on the soil Winston Churchill's novel, "The Crisis." It pictures vividly the days of the civil war, when Missouri and Kentucky were the decisive border states swaying the destinies of the Union.

At the Historical Society rooms, one painting swung the train of associations out to Japan, for there hung the portrait of Captain Silas Bent, U.S.A., Commodore Perry's right hand man in 1853 and 1854 at Kurihama and Yokohama. Bent had been also with Glynn at Nagasaki in 1849, and knew the waters of Dai Nippon well. It was Bent who first studied scientifically and mapped out the Kuro Shiwo, doing for the Pacific what Benjamin Franklin did for the Atlantic. Had Bent taken the Northern or Union side in 1861, he would perhaps have attained national, possibly world-wide reputation.

Should the summer of 1904 be a cool one like that of last year which was almost too cold, or this of 1903, which is delightful, then the fortune of the big fair is made. As seasons in their general character tend to run in threes—as Professor Knipping in Tokio, now meteorologist of Hamburg, Germany, told me in Kai Sei Gakko days—the probabilities of reasonably moderate temperature for the centennial celebration, reunions, congresses, and possibly the Democratic and Republican national nominating conventions, are good.

Out on the grounds, 768 acres in area, formerly the western half of Forest Park, I found an army of men at work and four or five of the vast edifices of timber and "staff" architecturally complete. The administrative officers are fortunate in having office room in abundance in the new edifices, cloisters, and colonnades of the Washington University of St. Louis. These new buildings are of stone and brick in the English Tudor style and the main tower-gate is very imposing. The various colleges of law, medicine, arts, engineering, dentistry, etc., now in their various housings in the city proper, will not be gathered in the University buildings until after the World's Fair, or early in 1904.

In the teaching staff of professors and instructors, of Washington University, we recognize the names of several who have been in the educational service of Japan. The Chancellor, or President, is Winfield Scott Chaplin, LL.D., formerly of the Imperial University in Tokyo, who was decorated by the Emperor. Returning to America, he made an excellent record at Union College and Harvard University before being chosen to his present responsible position. His little daughter, born in Japan and named Ume, a frail blossom whose petals closed at an early age, may be remembered by some of the Americans still in Tokyo.

It seems a pity that the landscape effects of so pretty a park were sacrificed, but the St. Louis men expect to pay for their whistle. Mighty steam shovels, that look like some giant's colossal fingers of steel, grab a hoghead of earth at a time, grip the mass in their closed fists and toss it away into the dirt trains. Thus acres of mounds are leveled and lake and hollow filled, new hills made and the channels for cascades and water effects laid out where desired. As Niagaras cannot be made to order, no exposition on earth can, in our day at least, hope for such unique electric light effects as those seen and enjoyed at the Pan-American Exposition in Buffalo, but at St. Louis the water, by night and day, will be of unique spectacular value.

The palaces of Machinery and Transportation will be able, each of them, to hold within their space, several of the largest English cathedrals. The permanent edifice is the Palace of Art, constructed of stone. The state of Missouri will spend a million on her edifice and exhibit, and each of the states will have a building, the "New Kentucky Home" being one of the smartest looking. The Mexicans are on hand early and their house is complete. Some things besides cactus and eagles, pulque and pepper, are raised in the land of our nearest southern neighbours, and they are going to show the world how fast they are moving.

The Louisiana Purchase Monument, to stand near the Grand Basin, will represent "Peace

calling the nations to friendly competition." In this electric age, it is proper that the housing of its inventions and apparatus should be artistic as well as ample. In both dimensions and in point of beauty the Palace of Electricity excels anything thus far attempted.

Time and space fail me to tell of the Palaces of Liberal Arts, Mines and Metallurgy, Education and Manufactures, of the Cascade Gardens, of the Government buildings, the Palaces of Varied Industries, Agriculture, Transportation and of Education, the Halls of International Congresses, and physical culture, the Temple of Fraternity, and the Hawaiian House. At present most of the structures are still on paper or in the lath and plaster stage, but enough is visible in material form to justify great hopes.

The approximate cost of the Exposition is \$40,100,000; of which Congress supplies \$5,000,000 and the people \$5,000,000. Taught by the sobering experience of other cities, the St. Louisians expect no great "boom" in real estate nor any special return on their investment. The general feeling is that it is their privilege and duty, and they intend to live up to both. According to genuine American traditions, and to the delight of those who grieve over "seven days journalism" and the vulgarization of the Christian rest-day, the big fair will not be open on Sunday.

Meanwhile, we wait for that Russian "evacuation of Manchuria," which like some of our troubles, will probably never happen. In the dearth of other more exciting actualities, the newspaper men seem certain of getting up a war between Japan and Russia. Perhaps Turkey and Bulgaria, near the other end of the long-stretched Empire of the Czar, may give the world enough to think about at present, and the peaceful absorption of Manchuria by Russia and of Korea by Japan go on. Meanwhile Mr. Hay and President Roosevelt work to keep the "open door." We shall soon see what this means. W.E.G.

HOMEWARD VIA SIBERIA IN WINTER.

[FROM THE DIARY OF MR. J. H. ROSENTHAL.]

The Siberian route to the West has great attractions for the busy man as well as for one who is tired of the other routes, for in just over three weeks from leaving Yokohama railway station he can find himself in the heart of Germany or in the midst of the soul-stirring turmoil of London city, feeling less "used-up" and more keen to handle afresh the old threads than if he had traversed the cold and too-often stormy North Pacific, rushed across America, and then been tossed and buffeted by the gales which for ever haunt the North Atlantic. My experiences along the new road, notwithstanding the absence of a through express, are all of the pleasantest and the politeness and attention I received on every hand are in refreshing contrast to the *haut en bas* manner which American trainmen, hotel-people and customs officials generally consider the only proper course of treatment for fellow men who fill not such lordly offices.

I left Yokohama on November 14th, 1902, by the 6.51 p.m. train, arriving at Tsuruga at 9 a.m. on the 15th. I might have left Yokohama a day later, I afterwards found, and could still have made connection with the Oiye Company's steamer *Kotsu Maru*; but as it was I spent a very pleasant day at the Komeschichi hotel and finally embarked towards evening, setting sail at 8.55 p.m. The *Kotsu Maru* is a new boat specially built for this service. Its four staterooms accommodate 8 first class passengers, and although the cabins are small they are comfortably fitted up, and in their internal arrangement for the safety and comfort of the passengers will bear comparison with any passenger boat belonging to large steamship lines. How long this nice condition of affairs will continue time alone will prove. Moonlight was bathing the little town in a mystic glory as we made our way out through Tsuruga Bay to the Japan Sea, and I stayed on the bridge till about 10 o'clock enjoying the delights of the evening to the full. So powerful were the rays of the moon that I could see to read on the deck

without the aid of lamp or electric light, and but for a strong head wind I could have pronounced everything about me to have reached the borders of perfection.

On board the *Katsu Maru* were travelling two ladies—a mother and daughter—, sister and niece of Admiral Alexieff; the Chevalier de Wepanart, Belgian Consul at Yokohama; Mr. de Reuss, the Netherlands Consul at Kobe; Mr. Suzon, a Vice-Consul for Siam; an English lady from China; a missionary doctor and myself. The morning of the 16th broke a little rough with a slight flurry of rain, and I found myself the only passenger sitting down to breakfast with the Captain and purser, the others all being in the throes of *mal de mer*. Apart from the flying scud, which occasionally reached the deck, the promenade after breakfast was enjoyable, the temperature not being lower than that which I had left behind at Yokohama, I should say, and an overcoat was not required. The air was of course, gloriously fresh, and a splendid tonic for my jaded nerves; nevertheless the jolts kicked up by the head wind kept all the passengers below in their bunks, and tiffin and dinner found me again all alone with the Captain and Purser. Another moonlight evening followed with a freshening breeze, but otherwise very delightful, and I turned in with every prospect of another nice day ahead. Morning broke on the 17th calm and sunny and three passengers made their appearance at breakfast. Tiffin saw the whole company at table, except the two Russian ladies, who partook of this meal on deck. And so the short trip wore on, the temperature gradually falling to 40 Fah., but our acquaintance with one another warming into closer friendship as is the way of ship-life. One thing which put us in good humour was the excellence of the cooking: it was far better than any one had anticipated. There was no *Chef de Cuisine* aboard, but the food sent to the table was plain and good. The soups and coffee were better than any I have had on any steamer crossing the Pacific, while the attendance was brisk.

The distance between Tsuruga and Vladivostok is 485 miles and is usually made in 48 hours, but the head winds for the first 30 hours of our voyage, made us take a little longer, says 52 hours. We landed at Vladivostok, the City of the Golden Hill, at about 8.30 a.m. on the 18th November. Only a quarter of an hour before this, as we lay outside the harbour, the quarantine doctor and harbour master had boarded us. The latter looked over all the passports handed him by the Purser, stamped and returned them, while the doctor just glanced at us and expressed his approval of our health in the shortest space of time possible. This celerity was a good augury, and when the Customs officials boarded the ship and the same expedition was followed my ideas of Russian red-tape underwent rapid revision. The Customs examination was really very superficial, the whole of the passengers' luggage being passed in less than 20 minutes. About a couple of packages per man were opened, nothing was removed from either trunk or bag, and politeness reigned supreme. In no country that I have visited have I received better treatment at the hands of the Customs. A Chinaman wheeled our baggage down the pier to the Hotel Chouine, where I stayed the day. Here the table was good, the rooms comfortable, well-lighted and sufficiently heated to suit the most fastidious. Vladivostok struck me as being what a Yankee would call a one-horse-town. All the business houses are in one street. The firm of Kunst and Albers occupy palatial premises and the variety, extent, and costliness of their stock struck me as something marvellous for such a town as Vladivostok. But if the stores are good the streets of Vladivostok are vile, and after a shower are almost impassable for mud and filth and a pedestrian is placed at a great disadvantage in traversing them. And yet to walk is better than to ride in the 4-wheeled public carriages. These conveyances can hold two people and are drawn by two very small horses,—horses of a breed that seems smaller than the Chinese pony, so familiar to all residents of Yokohama. But though undersized, the ponies rattle along at a great speed, but I should imagine,

after a couple of hours' drive behind them, a newcomer would wish to take his meals standing for a while, so rattle-trap are the spring-less carriages.

I spent a whole day in Vladivostok picking up all the information possible about the trip, and I need hardly say that some of the "pointers" I had tendered me surpassed all imagination for silliness and impracticability. I had to learn by experience like others had done, and was quite ready for my lesson. I left Vladivostok for the great journey across Siberia at 8.10 o'clock on the morning of November 19. The train was composed of first and second class carriages, with a dining car, but unfortunately the last named convenience did not travel with us very far, for at Grodekova, at 4.51 o'clock in the afternoon, we had to change cars, and the dining car was left behind. From this place on to Irkutsk only second class accommodation was to be had, and to add to our sorrows, our particular carriage was an old third-class promoted for the nonce to the dignity of the second-class. Needless to remark, the accommodation it afforded was of the scantiest description. Hard seats insufficiently upholstered, no bedding, no covering—nothing for which we had paid, except that hard, hard seat. The car was so arranged that two or four persons could occupy a compartment, two sleeping above and two below. It was terribly dirty too, which did not diminish our disgust. I afterwards learnt that the difference between a first class car and a second class on an ordinary train between Vladivostok and Grodekova is that in the first class, two people travel in one compartment; in the second class four people occupy the same space. It is as well to know these things, and all who follow me are advised therefore to only pay second class fare on this part of the line. Beyond Grodekova again, the second class gets worse, until at last it is about equal to the emigration cars provided in the Western states of America. I found the lavatory and toilet room all in the same room on our train: it was awfully small and very dirty and required some courage to enter. But this I must say, the cars are well-heated with a large stove at the end of the car where logs of wood are burned. The stove rather overdoes its business at times, and as no window can be opened, the only resource from temporary asphyxiation is the opening and closing of the outer door from time to time. Up to the afternoon of the 20th I did not feel the cold, though almost all the small lakes which we passed were frozen over, while little smurs of snow were to be seen here and there among the woods. I noticed that our locomotive was burning wood now and not coal. My first tiffin aboard the train was served at half past 2. It consisted of excellent soup, an indifferent steak, a delicious piece of pheasant, bread and potatoes, a quart bottle of Pabst beer, which all told cost R1.95. All through the day we were passing through pretty scenery, the woods here and there giving place to patches of cultivated land. Towards evening snow began to fall,—just about enough to well cover the ground,—and the temperature gradually fell, though it was not too cold to make standing outside the car uncomfortable, though I must confess I had on a fur cap and felt overshoes. I had done so well at tiffin that I "passed" dinner. When morning came I found we were travelling over a plain, the greater part of which is well-cultivated. At about 9 o'clock we reached Harbin, were I did justice to a good breakfast. The station here is only a temporary affair, but it was well-heated until about 11 a.m. when, the stock of wood giving out, the fires all went out too. It seems that the train by which we travelled should have brought along a wagon load of wood, but as often happens on the Siberian railway somebody forget to despatch it, and as a result, no fires at Harbin. They have a very happy-go lucky way with them, have the Russians, and many of their biggest concerns hang on to the skirts of happy chance in a truly wonderful way and yet don't manage to get wrecked. But that day at Harbin I blessed their carelessness, for the place grew colder and colder and by the time we left—5 p.m.—the cold was of a kind that could

have been felt, nay hugged. For a couple of hours in the morning I took a walk outside, being well-wrapped up save my face and nose, and they suffered accordingly, being almost frost-bitten, though the sun shone brightly. The little wind that blew was bitter in its chilliness—and yet I was told that this was warm compared to what Lake Baikal would offer us. The town of Harbin is five versts from the railway station and as there are no roads leading to it, I did not go, though I heard it is a very beautiful city, full of stirring life, and dominated, I am told, by its women-folk.

The most remarkable thing about the journey so far is that nobody connected with the railway knows anything at all about the time-table; when trains might be expected to arrive, what connections must be made, where cars have to be changed, and so forth. We found out from the station-master at Harbin that our train would start at 5 p.m., but he had not the faintest idea as to when we should arrive at Manchuria. After many futile attempts at extracting facts we gave it up and followed the Russian plan of relying strictly and solely on Providence. On the whole Providence took care of us fairly well and saved us a deal of worry.

To pass the time, I walked about Harbin station and observed that it has 23 railway tracks and more are in process of laying. When the proper station is built it will cover one of the largest areas on the Siberian route. Hundreds of Chinese workmen were hard at it while we were there. All the previous day I had noticed members of this industrious race at work along the line or else busily engaged in staring at the passing train; I noticed also that when the Chinaman travelled in Siberia he rode 3rd class.

At length it was time to leave Harbin, and we boarded a train similar to that which we left in the morning. The only lighting provided in our new train was candle-power pure and simple, two candles being stuck on either side of the car in order, I suppose, to render darkness visible. Our cars, too, were divided into 6 compartments accommodating four persons each, but they were all so short that one could not stretch out at full length on the seat. Again we found it possible to buy at the stations bread, milk, roast chicken or roast pheasant: the latter were particularly tasty and a pair could be bought for the equivalent of 50 to 80 *sen*.

Next morning, Saturday, November 22, we arrived at 9 o'clock at Tzitzihar and had a wait of 3½ hours. Again the town we found was far away from the line, 25 versts this time, thus preventing an idea of one paying a flying visit, which we should have liked, on account of the temples, etc., to be seen there. The Chinese settlement around the station was extremely filthy. The weather was cold, though not quite so intense as at Harbin, though icicles formed if tears were allowed to drop upon the cheek. I ought to mention that each train I had travelled in so far had a soldier escort of 10 men, with bayonets fixed to their guns, who change at every important station. At each station the escort gets down and walks along the train and should any unfortunate Celestial be found stealing a ride he is most unceremoniously treated by the escort. At the stations, too, it is a case of the Chinaman may come so far and no further, unless he has purchased a railway ticket.

My tiffin at Tzitzihar consisted of borsch, a Russian soup with beetroot, roast chicken, bread and potatoes, with a quart of Pabst—cost, R1.75. Half an hour after leaving Tzitzihar I noticed a high embankment with rails partly laid. This will eventually be the main trackway. Over the temporary track the train barely does 10 miles an hour and the stoppages are frequent and very long—though for what reason goodness only knows, for the country here is flat and bears signs of little cultivation. Night came upon us as we traversed this wilderness, but on waking next morning we found ourselves among the mountains, all covered with snow. We were now going along a zig-zag course to get across the hills, a zig-zag that will be done away with when the necessary tunnel has been bored. This will mean a considerable saving in the way of mileage.

At half-past 11 a.m. we pulled up at Man-

churia, a frontier town, and here our luggage was examined. Of my five parcels only one was opened and the courteous officer who conducted the examination spoke most excellent English. So much for the talk of Russian red-tape and incivility! They do their duty too, for a Russian merchant who tried to smuggle in some Japanese ladies' jackets and wrappers, etc., was caught and had to stump up R.165.50.

We were now bound for Irkutsk and the car we changed into turned out a great improvement on its predecessors. It was a proper Continental car with first and second class accommodation. The seats in the second class were comfortable, very wide, and long enough to stretch one's self upon. There were no bed coverings in either the 1st or 2nd class, but as the cars were all heated and the cushions were soft, I expected to be as comfortable as in a Pullman sleeper. I chose the second class as I had struck up an acquaintance with a Russian gentleman from Moscow who was travelling through. He spoke German and knew all about the "ways" of the road. He it was that bought all my tickets at the different stations where we had to change; checked my baggage, and—so great was our friendship—ordered my meals! But for this good Guardian Angel my trip through Siberia would not have been half so pleasant. The new second class sleeping car I found very comfortable. A wide corridor ran down one side; the compartments were large, much larger than the Pullman cars in America; while the state rooms were also longer and wider, thus allowing plenty of space for baggage. Of course there were no white sheets to make the sleeper look nice and bright at night, and the cleanliness of the car also left something to be desired; but this notwithstanding I slept well and enjoyed the comforts provided.

During the next day we passed over a flat and uninteresting country, the only thing worth noticing being a number of camels of a small size, drawing sleighs over the hard, frozen ground. The cold was not unbearable, and when we pulled up at a little station about 11 a.m., I was quite ready to indulge my legs in an half-hour's walk. Tiffin that day consisted of bouillon, beef strokanoff, a Russian dish consisting of sliced beef served with a thick brown sauce, and a bottle of beer. I had been feeling queer during the morning but the hot food put things to rights again. After tiffin we zizzagged round another range of mountains, passing through many rocky valleys, and along the sides of hills where the track was cut out of the rock only just sufficiently wide to allow the train to pass. This rock-cutting must have entailed very heavy labour and cost an enormous sum. At 3 p.m. we reached Karinskaja, a big station containing an excellent buffet which had a large supply of fruit for sale. Drawn up in the station was an express train which runs between Missovaya and Manchuria. It had 1st and 2nd class cars, a dining car, a saloon, a library, fitted up with easy chairs, a piano, etc., and was nicely finished off with curtains and electric light fittings, quite a different affair to our miserable train, with its farthing dip candles. This express only runs once a week, but those folks are fortunate who do manage to get it. The scenery next day was rather tame after the mountains, and very little of the flat plain seemed cultivated, woodlands predominating. Nearing Khilok things got better, and the station itself was most picturesquely placed. The ground here was frozen hard and a thin sprinkle of snow lay over everything. During the morning of the 27th we crossed a frozen river. The scenery along the banks was very beautiful, and the mountains in the distance, covered with snow, completed a picturesque scene. The warning I got at Vladivostok regarding the bitter cold of the Baikal region was being realised, still I suffered no inconvenience so far. At 4.45 p.m. on the 27th we reached Missovaya, on the shore of Lake Baikal, but the boat that was to convey us across did not leave, I don't know why, till 9.10 p.m. The crossing of the lake took four hours, and to my regret we crossed in the dark. Dinner was served on board, and then I turned in for an hour. To my surprise I did not find Lake

Baikal so cold as I had been led to expect, and I really had little need for woollen jaggar jacket that I had specially donned for this portion of the trip. What it may be when the Lake is frozen over I cannot say, but, late in November, Lake Baikal can be crossed in comfort by one adequately clad and in good health. By 1.10 a.m. we were safely entrained again, bound for Irkutsk, but in the usual unaccountable Russian fashion we did not start till 5.30 a.m. At Irkutsk we changed into the Train-de-Luxe and found it all that it had been cracked up to be. It consisted of a baggage wagon, with quarters for the guard, a dining car, a saloon, with piano, and four sleepers—in all six cars. Two of the sleepers were for the 1st class passengers, the other two for second class folk. I found my berth was in the last car, to which a small enclosed observation platform was attached. The lavatory as well as the rest of the car was very clean; the electric lights were supplemented by detachable reading lamps, and in fact everything was as one could wish. The Chef, a Russian, spoke excellent German, and the meals he prepared were very good. The scenery after leaving Irkutsk is picturesque, though consisting principally of forests which seemed totally devoid of animal and bird life. The temperature on the morning of November 30th was 36° (Reamur) below zero. I walked about for five minutes outside, but could not stay longer, and even in that short space, icicles had formed around my mouth. A robbery occurred on the train to-day, a Russian lady complaining of the loss of 25 roubles from her bag. It was thoughtful of the thief to select a Russian and leave the other nationalities alone! In the evening a concert was arranged in the saloon, the programme consisting principally of pianoforte selections. The scenery for the next two days was rather monotonous and the temperature very low. The road lay straight ahead without a bend or curve for mile after mile and yet for all that we had a narrow escape of being run in to by a freight train. The passage over the Urals at length brought a welcome variation in the outlook, while the track changed from the undeviating straight line to a series of continuous curves. The Urals are mostly thinly clad with trees, but here and there beautiful glimpses are to be obtained. The snow was lying all over the higher mountains but the cold was bearable, and allowed of walking outside for a little distance. We passed the great bridge over the Volga at night, and so I saw very little of the noble river and had but fleeting glimpses at the enormous iron outlines of the bridge. The bridge is, I am told, 1½ versts wide, equal to a mile say, and it took us 8 minutes to cross. We ran almost directly into a snow storm which continued with us all day. We were some way behind schedule time I found, due to the long, unnecessary waits at the stations. On this single track if a train get behind time, it throws all the others out too, for there is no such thing as "making up" between stations and so it often takes two weeks for the system to get back on to schedule time again. We pulled into Moscow 12½ hours after schedule time—and the great journey was practically done. Now on my route lay along frequented tracks and needs no detailed description.

And now what did it cost? Well, here is a brief summary from my cash-book:—

	Yen.
Fares, including sleeper, Yokohama to Berlin	210.69
Sleighs, carriages, carriers, sampan, tips, etc.	14.65
Excess baggage	34.52
Food and all other expenses, including tips to waiters	162.40
	422.26

AMERICAN MATTERS.

The tax assessors of Oyster Bay township have completed their records for the year and show a charge against President Roosevelt on \$40,000 valuation. William C. Whitney heads the list with \$250,000.

Major Samuel Reber, Signal Corps, General Staff Officer, has been detailed as secretary of the

Army War College at Washington. He is the son-in-law of Lieutenant-General Miles, retired, and formerly was his military secretary.

A movement is on foot in Maine to submit to the popular vote the question whether prohibition shall be continued in force or repealed. It is, of course, meeting with vigorous opposition on the part of the leading prohibitionists of the State.

The centenary of Chicago is to be celebrated during the week following September 26th if a fund of \$100,000 to defray the expenses can in the meantime be raised. The original site of Fort Dearborn was completed and occupied by United States soldiers on August 17, 1803.

The Grand Army of the Republic, which held its encampment in San Francisco during August this year, elected without a contest, General John C. Black of Illinois, Commander-in-chief of the order for the coming year, and Colonel C. Mason Kinne of San Francisco was chosen Senior Vice-Commander-in-chief.

The New Hampshire Legislature has taken the first step toward the saving of the forests of the White mountains by appropriating \$5,000 for a scientific survey of the entire field by the Bureau of Forestry. A report of the survey will be submitted to Congress for the purpose of influencing that body to provide for the proper preservation of the forest reservation.

Dispatches from Berlin state that a fierce duel is impending between the American steel trust and the Krupps. The campaign has been opened by the Krupps, who have already sent experts to the United States to compete for bridge building contracts. If the Krupps find themselves able to compete with the steel trust in the latter's home territory, it is certain the Germans will enter the lists everywhere.

As a result of communications which have been exchanged between Ambassador Choate and the British Foreign Office, it is expected that when Lord Lansdowne returns in the autumn, a treaty will be signed referring to arbitration the question of the ownership of the group of islands off the coast of Borneo, claimed by both Great Britain and the United States. The islands are not considered valuable and there is no danger of friction on the question of their ownership.

On August 30, the National Baseball League table for the present season stood thus:—

	Won.	Lost.	Pct.
Pittsburg	68	36	.654
New York	62	41	.602
Chicago	63	42	.600
Cincinnati	56	47	.544
Brooklyn	50	53	.485
Boston	43	57	.430
Philadelphia	33	62	.347
St. Louis	37	71	.343

The profits of the New Orleans cotton bull pool and the small bulls who followed the lead of the big fellows in the recent cotton bull campaign amounted to about \$10,500,000. Seven New Orleans men who composed the Brown clique cleared \$7,000,000, or \$1,000,000 each. The small bulls who trailed in with Brown cleared up net profits of \$3,500,000. These figures were obtained from an authoritative source. The announcement is made that the bull pool had closed out about all its holdings.

The boy recently born to Mr. and Mrs. Grover Cleveland has been christened Francis Grover Cleveland. Mr. Cleveland did not wish that the boy be named Grover, but the children—Ruth, Marion, Esther and Richard—wanted to name the baby after their mamma and papa, and their wish has been granted, the name Francis being given in honour of Mrs. Cleveland and Grover in honour of Mr. Cleveland. The other children are delighted, for they have been calling the baby Francis since he was born.

The use of electric motive power on the Manhattan elevated railroad in New York is proving very economical. During the quarter ending June 30th the operating cost was only 39.8 per

cent. of the gross earnings, against 49.03 per cent. for the corresponding quarter last year, when the motive power was part steam and part electricity, and 53.12 per cent. in the last quarter in which steam power was exclusively used. The percentage of 39.8 is said to be the lowest relative cost of operation recorded in the conduct of railroads in America.

After receiving a report from experts concerning the price of commodities in districts where the workmen of the city live, the Employers' Association of Chicago has discovered that the cost of living has increased 15 per cent during the last five years, and has decided that wages should be increased in like ratio. In many cases an increase has already been granted.

One goes abroad for news of home—the saying is so old that we are not surprised to find the following paragraph in American papers:—If Lieutenant-Commander Isamu Takeshira of the Imperial Japanese Navy, can carry out his plans Japan will have a yacht in the field to compete for the America's cup. Commander Takeshira was one of the most interested spectators on the *Erin*. He declares that he will interest influential men in his country to prepare at once for the building of a racer to enter the next international races. "We can build just as fine a boat as either America or England, and you may be sure that at the next international yacht races you will see the flag of Japan flying on the winner," he said.

The army and navy of the republic of Mexico, says the *National Magazine*, are undergoing the greatest transformation in their history. From the border of Yucatan and from the Pacific to the Gulf coast the republic will soon be a vast parade ground for troops and marines. Quietly but rapidly the Government is carrying to completion comprehensive plans which will make Mexico one of the strongest military powers for her area on the globe. Within a year or two at most President Diaz will be able to mobilize on short notice nearly 200,000 well-equipped and well-drilled soldiers. He desires to make Mexico a nation of warriors; therefore, in nearly 11,000 public schools nearly 300,000 boys are drilling daily and dreaming of glory to be won on the battlefield. Is there reason to doubt, in view of such facts as these, that the Mexico of the future will be able to make demands and enforce them, if need be?

Major Charles Henley Smith, better known as Bill Arp, the humorist who has delighted the readers of the Southern States for many years, and whose death has just been reported from Georgia, had a career teeming with thrilling incidents. He was a staff officer of General G. T. Anderson (Old Tige) for eighteen months, after which he was assigned to try treason cases. He was thus partially instrumental in convicting three brothers from Columbus for complicity with the enemy and they were incarcerated in Savannah until released by Sherman, with other prisoners, upon his entrance into the city. Major Smith then journeyed toward Lawrenceville, where his wife was stopping with her father. In crossing Yellow river he heard that the enemy were ahead of him, so, tying the records of the treason court up with a cord, he attached a heavy rock to the bundle and they sank forever from sight in the engulfing waters. He was a close friend of Jeff Davis, President of the Confederacy, and was often called upon for advice during the stirring days of the war. After the momentous struggle had been brought to a close Bill Arp led the way in a philosophic acceptance of the result and a determination to make the best of it, and his letters were tuned to the note of refreshing optimism. With a smile he uncovered shams and wrote the truth with a hand so firm and a judgment so true that he diverted the minds of the people from individual misfortunes while he urged a constructive policy upon the stricken country. He is survived by ten children.

REVISED DRAFT OF THE PROPOSED NEW CRIMINAL CODE OF JAPAN.

(CONTINUED FROM LAST ISSUE.)

CHAPTER VIII.—OF INFRACTIONS NOT CONSUMMATED.

Art. 55.—When the execution of an offence has been actually commenced, but has not been consummated, the penalty may be lowered. In case the execution of the offence has been abandoned by the person's own will, the penalty will either be reduced or remitted (in full).

Art. 56.—Cases where infractions not consummated are punishable are specified in the respective provisions for each particular offence.

CHAPTER IX.—OF CONCURRENT OFFENCES.

Art. 57.—Several infractions, in respect to which final judgment has not yet been rendered, shall be deemed concurrent offences.

Should final judgment have been rendered with regard to one infraction, then only that particular infraction, and the offence(s) committed prior to such final judgment having been rendered, shall be considered as concurrent offences.

Art. 58.—If among concurrent offences one is punishable by death, the penalties for the other offences (with the exception of deprivation of civic rights and confiscation) shall not be imposed.

If one of the offences is punishable by unlimited penal servitude, or unlimited imprisonment, in this case also the penalties for the other offences (with the exception of deprivation of civic rights, fine, police fine, and confiscation) shall not be imposed.

Art. 59.—When there are upwards of two concurrent offences punishable by limited penal servitude or imprisonment, the maximum term shall be that of the penalty for the most serious of the offences increased by one-half. The maximum term shall not exceed the total accumulative term of all the various and several inflexible penalties added together.

Art. 60.—Fines and other penalties shall be concurrently imposed, except in the case provided for in the first paragraph of Art. 58.

When two or more than two fines are imposed, the cumulative amount of such fines shall be less than the total of all the fines impossible for each offence.

Art. 61.—Even though there be no accessory penalty to the gravest of the concurrent offences, should there be some other accessory penalty to any of the offences it shall be inflicted, but without prejudice to the application of the provisions of Art. 58.

Should there be two or more than two concurrent instances of deprivation of civic rights, the longest of the terms shall be imposed; if two or more than two instances of police surveillance, only one of them shall be imposed.

Confiscation shall be imposed concurrently.

Art. 62.—When among concurrent crimes one (or more) has been adjudicated upon, and the other not yet tried, the offence not yet adjudicated upon shall be further tried and decided.

Art. 63.—When two or more than two judgments have been rendered with reference to concurrent offences, the penalties shall be concurrently imposed and executed. But, when the death penalty should be executed, other penalties (with the exception of deprivation of civic rights and confiscation) shall not be enforced. When one of the offences is punishable by unlimited penal servitude or imprisonment, other penalties (with the exception of deprivation of civic rights, fine, police fine, and confiscation) shall not be enforced. With regard to the enforcement of the penalties of limited penal servitude or imprisonment, the maximum term impossible in respect to the most serious crimes may not be augmented by more than half such maximum term.

As regards deprivation of civic rights and police surveillance the longest term shall be enforced.

Art. 64.—When a person has been dealt with in respect to concurrent offences and been pardoned with regard to one (or more) of them by reason of an amnesty, the penalty shall be specially de-

termined with reference to the other offence (or offences) not included in such amnesty.

Art. 65.—Detention or police fine shall be imposed concurrently with other penalties, except in such cases as are provided in Article 58 (?).

Two or more than two instances of detention or police fine shall be imposed concurrently.

Art. 66.—In case an individual act is applicable to several particular offences, or an act which is a means of committing an offence or a result of such offence constitutes another particular offence, the most serious of the inflexible penalties shall be imposed.

The provisions of the third paragraph of Article 61 are applicable in the cases contemplated in the preceding paragraph.

Art. 67.—In cases where several successive acts all constitute the same offence, such consecutive acts shall be dealt with as forming one offence.

CHAPTER X.—OF THE REPETITION OF OFFENCES.

Art. 68.—When a person is sentenced to penal servitude and within ten years from the day on which the execution of the penalty ceased, or was remitted, he again commits another offence punishable by penal servitude, such offence shall be considered as a "repeated offence" (*sai-han*).

The same is applicable in cases where a person is sentenced to death owing to his commission of an offence similar in nature to one which is punishable by penal servitude, and within the term specified in the preceding paragraph, calculated from the day on which the execution of the penalty was remitted, or (in case the penalty was lowered on account of commutation) the execution of penal servitude was either completed or remitted, he again commits another offence punishable by penal servitude.

When a person has been sentenced with regard to concurrent offences among which there is an infraction punishable by penal servitude, he shall be deemed as condemned to penal servitude with reference to the application of the provisions *re* "repeated offences" even though such infraction may not constitute the most serious one of the concurrent offences.

Art. 69.—The penalty for "repeated offence" shall not exceed double the maximum term of penal servitude specified in respect to each such particular penalty.

Art. 70.—When, after final judgment has been given, it is discovered that the person is one who has committed a "repeated offence," the penalty to be augmented shall be determined in accordance with the provisions of the preceding article.

The provisions of the preceding article are not applicable to a person who has either undergone execution of penal servitude or has had the punishment remitted.

Art. 71.—The provisions *re* "repeated offence" are likewise applicable even in the case of persons who have committed infractions three times or more.

CHAPTER XI.—OF CO-OPERATION OF SEVERAL PERSONS IN THE SAME OFFENCE.

Art. 72.—When two or more persons have united in the commission of an offence they shall be regarded as principals.

Art. 73.—Persons who have instigated others in the commission of an offence shall be treated as principals.

The same is applicable in the case of persons who have instigated other instigators.

Art. 74.—Persons who have assisted principal offenders shall be regarded as accomplices.

Persons who have instigated accomplices shall be treated as accomplices.

Art. 75.—As regards the punishment of accomplices, the penalties impossible upon principals shall be inflicted in a mitigated form.

Art. 76.—In the case of an offence punishable only by detention or police fine, neither instigators nor accomplices are punishable except by virtue of a special provision of the law.

Art. 77.—When persons have been participants in an act which constitutes an offence by reason of the social status of the principal offender, they shall be regarded as joint offenders, even although their relative social positions may not be identical.

When the severity of a penalty is specially

determined according to the social status or rank of the offender, the ordinary penalty shall be inflicted on the person not occupying a position similar to that of the principal.

CHAPTER XII.—OF EXTENUATING CIRCUMSTANCES.

Art. 78.—When extenuating circumstances exist in favour of an offender, the Court may consider the same and reduce the penalty accordingly.

Art. 79.—Even in cases where the (text of the) law governs and determines the raising or lowering of penalties, the Court may (go a step further and) take extenuating circumstances into consideration and reduce the penalty.

CHAPTER XII.—OF THE AGGRAVATION AND COMMUTATION OF PENALTIES.

Art. 80.—When there exists one or more legal causes for mitigating penalties, such penalties shall be lowered as follows:—

1. When the punishment of death is to be mitigated it shall be commuted to penal servitude or imprisonment either perpetual or for a period of not less than 5 years;
2. When the punishment of perpetual penal servitude or imprisonment is to be mitigated, it shall be commuted either to penal servitude or imprisonment for a period of not less than 3 years;
3. When either limited penal servitude or limited imprisonment is to be mitigated, one-half of the term of the penalty shall be reduced;
4. When the punishment of fine is to be mitigated, one-half of the amount of the fine shall be reduced;
5. When detention is to be mitigated, one-half of the maximum term of the detention shall be reduced;
6. When police fine is to be mitigated, one-half of the maximum amount of the fine shall be reduced.

Art. 81.—In the case of mitigating penalties according to the law, if there are two or more than two descriptions of penalties, the particular penalty to be inflicted shall be first determined upon and it shall then be lowered.

Art. 82.—In reducing the punishment of penal servitude, imprisonment or detention, if there remains any fraction of a day, such remainder shall be cut off.

In mitigating the punishment of fine or police fine, if there remains any fraction of one *sen*, the same rule shall be applied.

Art. 83.—When penalties should be mitigated in consideration of extenuating circumstances, they shall be lowered in accordance with the precedents mentioned in Article 80.

Art. 84.—No accessory penalties shall be increased nor mitigated.

Art. 85.—When there exist simultaneously causes in aggravation and extenuation of the penalty, these causes are to be considered in the following order:—

1. Aggravation of penalty on account of the repetition of the offence;
2. Legal mitigation;
3. Aggravation of penalty on account of concurrence of offences;
4. Extenuating circumstances.

Art. 86.—Limited penal servitude and imprisonment cannot be augmented so as to exceed a period of twenty years.

BOOK II.—OFFENCES.

CHAPTER I.—OF OFFENCES AGAINST THE PERSONS OF THE EMPEROR, AND MEMBERS OF THE IMPERIAL FAMILY.

Art. 87.—Execution or contrivance of acts of violence against the person of the Emperor, the Emperor's Grandmother, the Empress Dowager, the Empress, the Crown Prince, or the heir presumptive shall be punished with death.

Art. 88.—Acts of an insulting and disrespectful nature committed against the Emperor, the Emperor's Grandmother, the Empress Dowager, the Empress, the Crown Prince, or the heir presumptive shall be punished with penal servitude for a period not exceeding seven years.

The same law applies in the case of insulting and disrespectful acts committed against the Imperial Mausolea.

Art. 89.—Execution of acts of violence against the persons of the members of the Imperial family shall be punished with death: attempts to commit such acts shall be punished with perpetual penal servitude.

Art. 90.—Acts of an insulting and disrespectful nature committed against members of the Imperial family shall be punished with penal servitude not exceeding four years.

Art. 91.—Persons who have committed offences mentioned in this chapter may be deprived of civic rights.

Persons who have committed offences mentioned in this chapter and who are therefore punishable with limited penal servitude, may also be placed under police surveillance.

CHAPTER II.—OF OFFENCES AGAINST THE INTERNAL SAFETY OF THE STATE.

Art. 92.—Persons who have committed seditious acts of violence with the object of seizing the territories of the state, or subverting the government and laws of the Empire, shall be considered guilty of perpetrating offences against the internal safety of the state and be punished according to the following distinctions:—

1. With death or perpetual imprisonment, those who have been the ringleaders;
2. With perpetual imprisonment, or imprisonment for not less than five years, those who have participated in the conspiracy or held a command in the insurrectionary body. Persons who have been engaged in the sedition in various other official capacities shall be punished with imprisonment for a period not exceeding ten years;
3. With imprisonment for a period not exceeding five years, persons who have been mere participants in the outbreak in the capacity of ordinary followers.

In the case of offences specified in the preceding paragraphs (with the exception of those mentioned in No. 3) infractions not consummated are also punishable.

Art. 93.—Persons who have conspired to raise an insurrection and made preparations to commit violent and seditious acts, shall be punished with imprisonment for a period not exceeding ten years.

Art. 94.—Persons who have aided and assisted the commission of offences mentioned in the preceding two articles by furnishing arms and munitions of war, monies, and provisions, or by any other acts whatsoever, shall be punished with imprisonment for a period not exceeding seven years.

Art. 95.—Persons who have committed offences mentioned in this chapter may be sentenced to deprivation of civic rights.

Art. 96.—Persons who, although having committed offences mentioned in Articles 93 and 94, have voluntarily denounced themselves to the authorities before the outbreak of the insurrectionary movement shall be exempted from punishment.

CHAPTER III.—OF OFFENCES AGAINST THE EXTERNAL SAFETY OF THE STATE.

Art. 97.—Persons who have conspired with any foreign power and caused the said power to commence hostilities against the Empire, or who have joined alien enemies in fighting against the Empire, shall be punished with death.

Art. 98.—Persons who have delivered to the enemy any castle, fortress, camp, body of troops, vessels of war or other ships, or grounds and buildings devoted to military purposes, shall be punished with death.

Persons who have delivered to the enemy arms and munitions of war, or otherwise supplied objects used for military purposes, shall be punished with death or perpetual penal servitude.

Art. 99.—Persons who for the purpose of aiding the enemy, have damaged or rendered unfit for use, any castle, fortress, camp, vessels of war or other ships, arms, munitions of war, steam-cars, electric-cars, railroads, telegraph lines, or grounds and buildings devoted to military purposes, shall be punished with death or perpetual penal servitude.

Art. 100.—Persons who have delivered to the enemy arms and munitions of war not devoted to the military purposes of the Empire, or any other

objects which can be directly employed in naval or military operations, shall be punished with perpetual penal servitude, or penal servitude for a period of not less than five years.

Art. 101.—Persons who have acted as spies for the enemy, or assisted the enemy's spies, shall be punished with death, perpetual penal servitude, or penal servitude for a period of not less than seven years.

The same law is applicable to persons who have divulged military secrets to the enemy.

Art. 102.—Persons who have by the use of methods other than those mentioned in the preceding five articles, aided the enemy in military matters or injured the military interests of the Empire shall be punished with limited servitude for a period of not less than three years.

Art. 103.—The offences mentioned in the foregoing six articles are punishable even when not consummated.

Art. 104.—Persons who have made preparations and intrigued with the intention of committing the offences mentioned in Articles 97 to 102, shall be punished with penal servitude for a period not exceeding ten years.

Art. 105.—Persons who have been guilty of the offences mentioned in this chapter may be sentenced to deprivation of civic rights.

Persons who have been guilty of the offences mentioned in this chapter, and who are therefore punishable with limited penal servitude, may be placed under police surveillance.

Art. 106.—The provisions of this chapter are only applicable to aliens when offences are committed within the Japanese Empire, on board Japanese men-of-war and other ships or within a foreign territory occupied by Japan.

The provisions of the foregoing paragraph shall not interfere with persons being dealt with in accordance with the rules, customs and usages prevailing in time of war.

Art. 107.—The provisions of this chapter are also applicable to acts committed against an ally of the Empire in time of war.

CHAPTER IV.—OF OFFENCES AGAINST NATIONAL INTERCOURSE.

Art. 108.—Persons who have committed acts of violence or made threats against the Sovereign or President of a Foreign Power sojourning in the Empire, shall be punished with penal servitude for a period not exceeding ten years.

Persons who have committed acts of insult against the Sovereign or President of a Foreign Power sojourning in the Empire, are punishable with penal servitude for a period not exceeding three years, but the prosecution shall only take place on the complaint of the foreign government concerned.

Art. 109.—Persons who have committed acts of violence or made threats against an ambassador of a Foreign Power accredited to the Japanese Empire, shall be punished with penal servitude for a period not exceeding three years.

Persons who have committed acts of an insulting nature against an ambassador of a Foreign Power accredited to the Japanese Empire, shall be punished with penal servitude for a period not exceeding one year, but the prosecution shall only take place on the complaint of the injured party.

Art. 110.—Persons who have damaged, soiled, or removed the national flag or other national emblem of any Foreign Power with the object of insulting such Foreign Power, shall be punished either with penal servitude for a period not exceeding two years or a fine not exceeding two hundred *yen*; the prosecution, however, shall only take place on the complaint of the foreign government concerned.

Art. 111.—Persons who have made preparations or intrigued with the object of waging private war against a Foreign Power, shall be punished with imprisonment for a period not exceeding five years, but in case of their voluntarily denouncing themselves to the authorities the penalty will be remitted.

Art. 112.—Persons who have violated decrees relating to neutrality when foreign nations are at war shall be punished with imprisonment for a period not exceeding three years or a fine not exceeding five hundred *yen*.

CHAPTER V.—OF INTERFERENCE WITH THE EXERCISE OF PUBLIC FUNCTIONS.

Art. 113.—Persons who have committed acts of (personal) violence against, or intimidated members of the public services in the performance of their duties, shall be punished with penal servitude or imprisonment for a period not exceeding three years.

The same shall be applied to persons who have committed acts of (personal) violence against, or intimidated members of the public services with the object of causing them to take some official action or to resign their official posts.

Art. 114.—Persons who have insulted members of the public services in the performance of their duties and in their presence, or insulted them, in their official capacity (although not in their actual presence) by means of writings, pictures, and images publicly exhibited, or by public theatrical representations, songs, or public discourses, shall be punished with penal servitude or imprisonment for a period not exceeding one year or with the imposition of a fine not exceeding one hundred yen.

Persons who have insulted offices of the public services by means of writings, pictures, or images publicly exhibited, or by public theatrical representations, songs, or public discourses, shall be punished in like manner.

Art. 115.—Persons who have rendered seals or marks, indicative of attachment, affixed by members of the public services, null and void by damaging such seals or marks, or any other means, shall be punished with penal servitude for a period not exceeding two years or with the imposition of a fine not exceeding three hundred yen.

CHAPTER VI.—OF THE ESCAPE OF PRISONERS.

Art. 116.—Every prisoner, whether convicted or unconvicted, who shall have escaped, shall be punished with penal servitude for a period not exceeding one year.

Art. 117.—If persons who have been detained or imprisoned in accordance with laws or ordinances shall have escaped by means of damaging or breaking the prison or its furniture and fittings, by acts of violence, or intimidation by menace of injury, or if upwards of two prisoners secretly working in concert have escaped, the offender or offenders shall be punished with penal servitude for a period not exceeding five years.

Art. 118.—Every individual who shall have unlawfully taken away prisoners detained or imprisoned in accordance with laws and ordinances shall be punished with penal servitude not exceeding seven years.

Art. 119.—Persons who shall have supplied tools to a prisoner detained or imprisoned in accordance with laws and ordinances, with the object of enabling him to escape, or in any other way assisted his escape, shall be punished with penal servitude for a period not exceeding three years.

Persons who shall have committed acts of violence or intimidation, with the same object as mentioned in the preceding paragraph shall be punished with penal servitude for a period not exceeding seven years.

Art. 120.—Gaolers and guards who have (wittingly?) allowed prisoners detained or imprisoned in accordance with laws and ordinances to escape, shall be punished with penal servitude for a period of more than one year and not exceeding ten years.

Art. 121.—The offences mentioned in this chapter are punishable even when not consummated.

CHAPTER VII.—OF THE CONCEALMENT OF OFFENDERS AND THE SUPPRESSION AND DESTRUCTION OF PROOF OF GUILT.

Art. 122.—Persons who have harboured or concealed, or have assisted the flight of an escaped prisoner, or an offender who has committed an act rendering himself liable to be criminally punished by a penalty graver than fine, shall be punished with penal servitude for a period not exceeding three years or a fine not exceeding three hundred yen.

Art. 123.—Persons who have suppressed, destroyed, forged, or fraudulently altered (docu-

mentary) evidence relating to a case in which another party is a defendant in a criminal trial, or persons who have employed any forged or fraudulently altered evidence, shall be punished with penal servitude for a period not exceeding two years or a fine not exceeding two hundred yen.

Art. 124.—No offences mentioned in this chapter are punishable when they are committed by relatives of an accused person or an escaped prisoner for the benefit of such accused person or escaped prisoner.

CHAPTER VIII.—OF UNLAWFUL ASSEMBLY.

Art. 125.—No matter what their object may be, persons who have assembled together in large numbers, and, in order to execute their common purpose, have acted in a violent and turbulent manner or been guilty of intimidation by menace of injury, shall be dealt with as follows:—

1. Ringleaders shall be punished with penal servitude or imprisonment for a period of more than two years and not exceeding ten years.

2. Persons who have led or directed others and forwarded the aforesaid acts shall be punished with penal servitude or imprisonment for a period of more than one year and not exceeding seven years.

3. Those who have simply participated in these acts shall be punished with a fine not exceeding fifty yen.

Art. 126.—Persons who have assembled together in large numbers, with the intention of executing their common purpose by means of violence and intimidation, and have refused to disperse although required by a government or public officer so to do, shall be punished, if ringleaders, with penal servitude or imprisonment for a period not exceeding three years, and others with a fine not exceeding fifty yen.

Art. 127.—Persons who have committed any of the offences mentioned in this chapter and are consequently punishable with penal servitude or imprisonment, may also be sentenced to deprivation of civic rights.

CHAPTER IX.—OF ARSON AND ACCIDENTAL CONFLAGRATION.

Art. 128.—Whosoever shall have set fire to buildings actually used as dwelling houses, or to buildings, steam-cars, electric cars, boats, or mines actually containing persons and have destroyed them, shall be punished with death, perpetual penal servitude, or penal servitude for a period of not less than seven years.

Art. 129.—Whosoever shall have set fire to buildings not actually used as dwelling houses, or to boats or mines not actually containing persons and destroyed them, shall be punished with penal servitude for a period of not less than three years.

In case the objects mentioned in the preceding paragraph be the offender's own property, he shall be punished with penal servitude for a period not exceeding five years.

Art. 130.—Persons who shall have set fire to and destroyed objects other than those mentioned in the preceding two articles and consequently have caused a danger of a common (public) peril to arise therefrom, shall be punished with penal servitude for a period not less than one year and not exceeding ten years.

In case the objects mentioned in the preceding paragraph are the properties of the incendiary himself, the offender shall be punished with penal servitude not exceeding one year or a fine not exceeding one hundred yen.

Art. 131.—In the commission of offences mentioned in Par. 2 of Article 129, or Par. 2 of the preceding article, should the fire have spread to and burned any of the objects mentioned in Article 128, or Par. 1 of Article 129, the offender shall be punished with penal servitude not exceeding seven years.

In the commission of offences mentioned in Par. 2 of the preceding article, should the fire have spread to and burned any of the objects mentioned in Par. 1 of the preceding article, the offender shall be punished with penal servitude for a period not exceeding three years.

Art. 132.—The offences mentioned in Articles 128 and 129 shall be punished even if not actually consummated.

Art. 133.—Persons who have made prepara-

tions with the intention of committing offences mentioned in Article 128 or paragraph 1 of Article 129 shall be punished with penal servitude for a period not exceeding one year. The penalty may, however, be remitted, according to the circumstances of the case, and the offender may be placed under police surveillance.

Art. 134.—When a person has set fire to any of the objects mentioned in Par. 1 of Article 129 and Par. 1 of Article 130, and such objects happen to be under attachment, right in rem, leased or insured, he shall be punished just as if he had set fire to and burned another person's property, even although they may actually be the property of the offender himself.

Art. 135.—Persons who have, at the time of a fire, hidden, damaged, or destroyed apparatus used in extinguishing fires, or by any other means obstructed the stamping out of a conflagration, shall be punished with penal servitude for a period of more than one year and not exceeding ten years.

Art. 136.—Persons who have committed the offences mentioned in the preceding eight articles and are punishable with death or penal servitude may be sentenced to deprivation of civic rights.

Persons who have committed the offences mentioned in the preceding eight articles and are punishable with limited penal servitude may be placed under police surveillance.

Art. 137.—Persons who have by fault or negligence accidentally burnt any of the objects mentioned in Arts. 128 to 130 and Article 134 shall be punished with a fine not exceeding three hundred yen.

Art. 138.—Persons who have caused an explosion of gunpowder, steam-boilers, or of any other explosive things or substances and thereby damaged or destroyed any of the objects mentioned in Articles 128 to 130 and Article 134, shall be punished in accordance with the precedents as guilty of either arson or of causing an accidental fire.

Art. 139.—Persons who have caused gas, electricity or steam to leak out, thereby caused danger to life, person, or property, shall be sentenced to penal servitude for a period not exceeding three years, or be punished with a fine not exceeding one hundred yen.

Persons who have caused gas, electricity, or steam to leak out and thereby either killed or wounded any person, shall be punished by the graver penalty to be imposed upon comparison with crimes of killing or wounding.

(TO BE CONTINUED.)

YACHTING.

Saturday's yachting was enlivened by a new feature, promoted by the Commodore to increase the interest already taken in the "Lark" class. Hitherto the Commodore has given his cup to the 39-raters, but this year the "Larks" were decided to have superior claims. That accounted for three prizes, and from other sources these were added to until it was arranged to give a prize to every boat. Mr. Scidmore's and the other important rewards were handsome pieces of silver; the "sealed" parcels contained such articles as a waterproof coat, a pair of rubber boots, etc. It need not be said that the race was thus invested with more than its usual attractions both to competitors and onlookers, and, more over, the course was so laid out that the boats were in the full view of all, the start being between the bathing lunge and the hatoba, and the race twice round the breakwater, finishing over the starting line.

A race for 39-raters was on the programme. The wind was very light from north-east, but the only two craft that left their moorings, *Maid Marion* and *Golden Hind*, got out of the harbour eventually after having all but drifted across the starting line. *Maid* soon acquired a long lead but was unable to finish in time to make a race. *Golden Hind* continued on a cruise down the bay.

Seven 21-raters started, *Pele* getting away best, but only four were able to go round the course and have their times recorded. Of the others *Sunbeam* maintained a good place till the

beat back to Tsurumi, in the course of which she gave up. *Daisy May* and *Edna* were even less fortunate and also abandoned the race. *Pele* led most of the time and at the Lightship *Chocho* was second, with *Sunbeam* and *Winsome* close to each other astern of her. When they came on a wind and began beating back to Tsurumi, *Winsome* passed both *Chocho* and *Sunbeam*, and she also overhauled and passed *Pele* on the run into the harbour, finishing a few yards ahead. Times (actual):—

<i>Sunbeam</i>	h.m.s.
<i>Winsome</i>	5:27.20
<i>Pele</i>	5:30.05
<i>Edna</i>	—
<i>Chocho</i>	5:35.45
<i>Yugao</i>	5:48.00
<i>Daisy May</i>	—

Winsome therefore wins the first prize on handicap, *Chocho* the second, *Pele* takes third place and *Yugao* fourth.

Every "Lark" in the harbour turned out for their race, and truly they were a pretty sight as they flitted about the harbour or skipped (rather soberly, it must be confessed, because even for them the breeze was quite insufficient) over the waters of the bay in their endeavours to get round the breakwater twice. The whole fifteen went off in fine style, though one or two soon fell into trouble. No. 12 got out of the harbour first, 5 next, then 10 and 14, 8 heading and 3 bringing up the rearguard. They tacked laboriously along the breakwater and entered the harbour between the lighthouses in this order: 10, 8, 12, 13, 14. No. 10 was still first when they began the second round, 8 second, 12 third, 15 fourth, 14 fifth, with 13 close up, then 1, 5, 11, 6 and 2. During the second round there were some surprises, 8 falling out of her fine position and 1 advancing into third place. Four of the boats gave up or were unable to finish, but every craft that went round got a prize. At the finish the three leading boats, 10, 12 and 1, were only a matter of twenty to twenty-five seconds apart. The prizes were afterwards presented to the winners by Mr. Scidmore, Commodore of the Yokohama Yacht Club. It should be noted that 1, in addition to Mr. Scidmore's prize, won the handsome bronze competed for on handicap in this class. The leading prizes are won by Messrs. Drummond and Watt, R. Sander, L. Thompson, F. H. Abbey, P. Gampert, and J. J. M. Carst respectively. Times and prizes:

1.—3rd, Mr. Scidmore's Prize	h.m.s.
2.—10th, Sealed Prize	5:09.55
3.—Gave up	5:53.25
4.—Gave up	—
5.—6th, Our Boyes' Prize	5:26.25
6.—Last, Sealed Prize	6:05.50
7.—Gave up	—
8.—8th, Sealed Prize	5:29.45
9.—Gave up	—
10.—1st, Commodore's Cup	5:09.10
11.—4th, Club Prize	5:20.20
12.—2nd, Yamato Damashii Prize	5:09.35
13.—5th, "Spray" Cup	5:21.40
14.—9th, Sealed Prize	5:32.40
15.—7th, Verandah Cup	3:29.30

BASEBALL.

The game of baseball played on the cricket ground on Saturday afternoon was not productive of much fine play, some 49 runs being made in the course of the afternoon. The weather was dull, the light poor, and occasional fine wisps of rain scudded the ground, all of which things naturally did not contribute to good play. Thorn's team led at the commencement and at the 5th innings the score stood, Thorn, 14; Merriman, 5. The next two innings saw very little improvement, Thorn advancing to 21, Merriman to 12. In the eighth innings, however, came a decided change in Merriman's fortunes, his side rapping out ten runs, making the score equal with Thorn's, who made only one. In the ninth innings Merriman's team passed their opponents, the match ending, Merriman, 26; Thorn 23.

One of the closest and best played games of baseball we have seen this season came off on

Thursday afternoon between the teams of the U.S. Naval Hospital, and the U.S.S. *Annapolis*, on the grounds of the former at Honmoku. The features of the game were the "star plays" of Cassidy, Dene, and Schmitt. Dannaber, the Captain of the local team, pitched a splendid game and the result was a well earned victory for the Hospital nine. Score: U.S. Naval Hospital, 5; *Annapolis*, 4.

THE LAW COURTS.

FORTIFICATIONS REGULATIONS CASE.

In the criminal section of the Yokohama District Court the trial of A. Richter (39), Captain of the launch *Dart*, belonging to Messrs. Langfeldt & Co., took place on Sept. 16th before Judge Yasuda and Public Procurator Nakamura.

The Public Prosecutor stating the case against the accused said that he trespassed on Aug. 30th within the area of fortifications at Chiyogasaki in the launch *Dart* and stayed there for some minutes.

In examination by the Judge, the accused stated that the launch was always used to carry provisions to warships and mail steamers when they arrived in Yokohama and he was employed by Messrs. Langfeldt & Co. as captain of the launch. He knew that his firm obtained on Aug. 29th a permit from the Kencho for an excursion from Yokohama to Kannonzaki and Uraga for a day. At that time he was not on duty in the steamer as captain but a Japanese named Muna was on duty. On the 30th the steam launch left here a little before 10 a.m. for Uraga where it arrived about noon, when all the passengers, who consisted of six foreigners and four or five Japanese, took tiffin in the boat. The Manager of the firm at the same time paid a visit to a German warship which was lying there. About 3 p.m. the Manager returned and then they started for the outer part of Uraga. He did not know the name of the place where he was ordered to stop the engines and where the steamer stayed for some minutes. He did not know whether the area of water belonged to the Chiyogasaki fort. His purpose in stopping the engine was that the stock of coal was scanty and he intended to sail as there was a pleasant breeze. After having stopped for some minutes, he, however, ordered that the launch should hurry to Kurihama to pay a visit to the Perry monument. Without doing so, however, he directed it to go to Uraga. He did not know that any officer of Chiyogasaki fort made a signal to stop the launch. On arrival at Uraga, a gendarme came to the launch and asked questions, through the Japanese captain, when the accused delivered the permit to the officer. The permit was kept by the manager of the firm who had given it to the accused previous to paying a visit to the German warship so that the accused had it in his pocket when the gendarme came to the launch. The launch had not a flag hoisted.

The Public Procurator asked the Court to examine Sergeant M. Kikuchi of the Chigasaki fort as witness, on the ground that the officer discovered the launch within the area of the fort on Aug. 30th about 4 or 5 p.m. and made a signal to stop it as he was going to examine it, but it left at full speed. The officer asked by telephone the gendarmes' station at Uraga to examine the launch when it arrived at that port. The Court decided to call the witness.

The Court then rose.

E. B. JONES v. C. T. BENNEY.

The hearing of the case instituted by Mr. E. B. Jones against Mr. C. T. Benney of Messrs. Durand, Cobb & Co. No. 82, claiming yen 20, came up in the Yokohama District Court before Judge Kano on Sept. 16th.

Before the hearing began the Judge suggested that the parties settle the case out of Court and adjourned it till Sept. 23rd at 9 a.m.

It may be remembered that a carriage of the defendant collided last year with the *jinrikisha* of the plaintiff causing damage to the latter, the repairing of which cost yen 20. Defendant having refused to pay the amount, Mr. Jones filed a claim in the Yokohama Local

Court, but it was dismissed. The action was subsequently appealed to the District Court where the claim was again dismissed, after which it was carried to the higher Court in Tokyo. The Tokyo Appeal Court quashed the judgment of the Court of origin and consequently the claim has again been brought in the present Court.

JOVANSSEN v. THE CLUB HOTEL.

In the Yokohama Local Court this case, filed by Mr. A. Jovanssen against the Club Hotel, Ltd., claiming yen 90.48 with interest at the rate of 5 per cent. from June 26th, 1903, up to the execution of judgment was brought before Judge Kawamura on Sept. 16th.

Mr. Ideura appeared for plaintiff and Mr. Sawada for defendant.

Plaintiff's Counsel stated that during February, 1902, when in the service of the hotel, plaintiff over-deposited in the Hongkong and Shanghai Bank his own money in the current account of the hotel. For instance, plaintiff, as manager, collected yen 37.50 from customers and he then made up an amount of yen 50 adding of his own money yen 12.50 for the purpose of making a convenient entry in the bank pass book. Such small amounts made a total of yen 90.48 which was left unsettled when he was discharged. Counsel asked the Court for leave to examine the bill collection book and bank pass book for February, 1902, in accordance with Arts 336, 337, and 338 of the Civil Code.

Defendant's Counsel stated that the hotel had no liability for the claim brought by plaintiff. Counsel then presented chits amounting to yen 367.22 which Mr. Jovanssen incurred during his stay at the hotel, and the lawyer stated that the directors had frequently applied to plaintiff for a settlement of the same and also had declined to recognize the alleged over-deposit for which plaintiff claims. Counsel objected to plaintiff examining the business books.

The Court, however, decided that the books should be examined and the case was adjourned till October 7th.

CLAIM FOR MONEY LENT.

The hearing of the case filed by the Naniwa Bank against Baron Ozaki, ex-Councillor of the former Sanji-In and two others, claiming an amount of money lent to them by plaintiff, jointly, was to be begun in the Tokyo District Court on 17th.

CLAIM ON LIFE INSURANCE COMPANIES.

In the Tokyo District Court, the cases instituted by T. Mine against the Dai-Nippon Life Insurance Company, and by K. Masuda against the Shuwa Life Insurance Company, both claiming an amount alleged to have been insured in those companies by their predecessors, were to be commenced on Sept. 16th.

NEWS OF THE WEEK.

The engagement has been announced of Miss May Goelet to the Duke of Roxburghe.

The Sendai Chess Club resumed its regular Monday evening sessions on September 14th.

The Kyushu branch of the Osaka Life Insurance Company was on Sept. 15th suspended by the authorities.

According to a correspondent of the *Asahi*, dengue fever is now prevalent in Shanghai, few escaping its attacks.

A postman named J. Miyakawa (26) of the Central Post Office was arrested on Sept. 15th on a charge of having stolen money orders contained in letters.

The *Fiji* states that the rumour with reference to the falling through of negotiations at St. Petersburg which it published on Sept. 15th has been officially contradicted.

A dispatch from Rome to the Catholic newspaper *Germania* says the fisherman's ring belonging to the late Pope, which was supposed to have

been lost, has been found on the writing table of Leo XIII. Cardinal Oreglia examined the ring and, according to custom, broke it up.

A telegram from Mito, Ibaraki Prefecture, states that a train was derailed on the morning of Sept. 10th at Inaba station with the result that two persons were injured.

The French mail steamer *Tonkin*, which has been undergoing repairs at the Kawasaki Ship-building Yard, left Kobe at 2 p.m. on Sept. 13th for home, her repairs being completed.

The *Asahi* states that a man named Ch. Yamamoto, a former acolyte of the Russian Church in Tokyo, is being shadowed by the police as a suspected Russian spy.

The French cruiser *Bugeaud* arrived on Sept. 16th at Hakodate. She is expected to stay there for four or five days. The Italian cruiser *Vettor Pisani* arrived the same day at Tsuruga.

A Russian employee of the East China Railway Company has presented to the Emperor of Japan a book entitled the "Marine business of the East China Railway and its future prospects."

About midnight on Sept. 14th three convicts sentenced on charges of robbery escaped from the Sugamo jail, Tokyo, having broken through a part of the building. They are still at large.

On the night of Sept. 16th, a passenger and a goods train collided at Nagoya station. Details are not given excepting that two persons were injured. The cause is said to be negligence on the part of a pointsman.

The *Nichi Nichi* states that the steamer *Koun Maru* of the Mitsui Bishi Kaisha has been wrecked in the strait of Shimonoseki and sunk, showing only one mast. Details are not given by the paper.

On the night of Sept. 11th, a collision occurred at Wakamatsu station, near Fukuoka, with the result that two goods wagons were smashed, two persons were severely, and three others slightly injured.

In the first match on record of Rugby football between Australia and New Zealand, played on the 15th August on the Sydney Cricket Ground in the presence of 35,000 people, New Zealand won by 22 points to 3.

Nine ships of the Standing Squadron left Sasebo on the morning of Sept. 10th. Their destination is not reported. The *Sama* passed through the Shimonoseki strait on the same day in a western direction.

The Mexican Coal Mining Company ordered on Sept. 13th by telegram, from the Kumamoto Emigrant Company, five hundred workmen. The Japanese firm sent a hundred emigrants in 1901 to this company and they seem to have proved satisfactory.

Mr. J. Hayashi, a candidate for Hiroshima Prefectural Assembly, who was charged with contravention of the Election Law was sentenced on Sept. 12th in the District Court to 4 months' imprisonment with hard labour and 8 years' suspension of civil rights.

It is stated by the *Asahi* that a British gentleman named Shepherd, living in the Argentine Republic has presented a camera, fifty photographic pictures and an album containing views of the scenery of that country, to the Emperor through the Japanese Minister.

The German cruiser *Hertha* arrived at Tsuruga on Sept. 10th from Muroran, Hokkaido. She is expected to stay there about ten days. The French cruiser *Montcalm* arrived at Hakodate on the 9th from Vladivostok. At 4 p.m. on the following day, she left for Yokohama.

The British cruiser *Amphitrite*, on her way from Vladivostok to Port Arthur, put into Yokohama on Sunday and landed two officers for treatment at the British sick quarters. One of the patients

is suffering from an apoplectic stroke and the other's ailment is appendicitis. The ship left the same day.

According to Mr. Yamataki, Japanese Consul at Sydney, who arrived at Nagasaki on Sept. 13th by the steamer *Yamata Maru*, the Australian Commonwealth has decided to send over 200 Japanese workmen to Thursday Island. Some of them will be despatched by the next Japanese mail steamer.

A case of typhus and a case of dysentery appeared among the crew of the British steamer *Glenhurst*, which arrived here at 8 p.m. on Sept. 10th, from Antwerp via ports. The typhus patient is an European sailor and the man attacked with dysentery is a Chinese. The men are isolated on the ship.

The steamer *Saikyo Maru*, which has been detained at the Wada-misaki Quarantine station, Kobe, in consequence of the appearance of a case of suspected plague, was released on Sept. 13th on the ground that the illness was not plague but typhus. The ship had arrived from Formosa carrying 150 soldiers.

Baron Kodama, Minister of State for Home Affairs, states the *Official Gazette*, prohibited, on Sept. 14th, the sale of a book entitled "A Collection of Poems referring to Socialism" on the ground that it is injurious to public order, and copies of the book were ordered to be confiscated. It was published in Osaka.

Another case of dysentery was reported on the 10th on board the steamer *Nitto Maru*, of the Nippon Yusen Kaisha. The victim is the captain, K. Shibusawa, and he was removed to the Juzen Hospital on the morning of the following day. The sanitary authorities carried out the usual disinfection of the ship.

San Francisco papers state that Captain P. Going, of the T. K. K. steamer *America Maru*, has obtained a divorce from his wife, Mary, in the San Francisco Courts. He proved that his wife refused to come to San Francisco, where he had made his domicile, and gave evidence to prove that they had not lived together since 1901.

Marquis Ito proceeded to the palace on Sept. 16th when he had audience of the Emperor, after which the President of the Privy Council returned to his office where a meeting was held. The same day, the Ministers of State for Foreign Affairs and Finance held an interview at the office of the latter. Tokyo papers add, somewhat unnecessarily, that their conference was secret.

The new line between Sukiyabashi and Kanda-bashi of the Tokyo Street Railway which was opened to traffic on Sept. 15th is reported to have netted yen 274.30 on the first day, carrying 13,715 passengers. The income of the line between Shimbashi and Shinagawa is stated by Tokyo papers to have been yen 599.70 per day during the twenty days ended Sept. 10th.

It is stated by the Kotobuki-cho police that two officers—one a commander and the other a Lieutenant—of the French cruiser *Montcalm* which is now lying here were attacked on the night of Sept. 16th by two Japanese disguised as women while the former were taking a walk in the street of the brothels, Magane-cho. The senior officer sustained an injury on the right arm. The culprit is still at large.

K. Oishi, an official of the Department of Finance, who was charged with having received bribes from merchants patronized by the office, was sentenced on Sept. 15th in the Tokyo District Court to two months' imprisonment with hard labour and a fine of yen 8 and the bribe, yen 300, he had received was ordered to be confiscated.

Baron Yamamoto, Minister of State for the Navy, intends to establish a naval station at Miho near Shimidzu, for which purpose it is stated by the *Yorodzu* that he will claim the provision of yen 2,000,000 in the Budget of the

coming year. According to the authorities, there is no highly, suitable port for a naval station between Kobe and Yokosuka but the place mentioned was selected after investigations.

The members of the Tairo-Doshikai (Anti-Russian Party) held a friendly meeting at the Maple Club, Shiba Park, Tokyo, in the evening of Sept. 14th. The members of the same Union in Sendai will hold a meeting on Sept. 17th to deliver speeches with regard to the situation. Mr. Komuchi and a few other statesmen will be present at the meeting.

Professor Goldwin Smith received numerous congratulations upon entering his 81st year on Aug. 17. He said to one caller, "Having set out with a very weak constitution I believe I owe my attainment of old age to not having been overworked at school as a child. At the two schools at which I was, and one of which was Eton, work was very light. I cannot help fearing the children now, especially if their constitutions are not strong, are overworked at school."

The British Admiralty has decided to build three new battleships of 18,000 tons, which have been designed by Mr. Philip Watts, the director of naval construction. The most notable departure in the new ships will be in the armour plating for the sides and hull. An armour belt of 10-inch Krupp steel, tapering away to six inches, will be continued the whole length of the broadside.

It is reported that Mr. Andrew Carnegie's donation to Teddington, England, for a free library, has resulted in the purchase of a painting by Van Dyke for £1. It was decided to include a small art gallery in the library building, and a committee of local residents bought from a furniture dealer some old pictures to hang on the walls. When one of these was cleaned it proved to be an authentic Van Dyke, the subject being taken from Torquato Tasso's poem "Rinaldo."

The *Niroku* states that the Naval General Staff Office is now active. At 9 a.m. on Sept. 16th the directors of the various bureaux in the Office held a secret conference when it is said that a resolution was passed to employ temporarily two lawyers bearing the degree of hakase (doctor) as advisers on international affairs. Communication between the headquarters office and the Kure Naval Station are continuous. The paper adds that the Yokosuka Naval Arsenal is now working day and night.

The *Asahi* states that Messrs. Sale and Company, Yokohama, have purchased the steamer *Teucer*, which recently arrived here from London, for about yen 120,000. The firm will temporarily use the vessel to carry railway sleepers from Hokkaido to Korea. She left here on Sept. 10th for Muroran to ship cargo. A Japanese shipping firm, the Nishikawa Shokai, Yokohama, had been in negotiation for the ship, but it seems that they could not come to terms.

Mr. K. Kashiwabara, Superintendent of the Yotsuya Police, and Mr. T. Terasaki, Inspector of the Kyobashi Police, Tokyo, have been employed by the Chinese Government as instructor and assistant instructor respectively of the Police School at Ta-Yuen, Shantung province. They are expected to leave for their posts in the beginning of October. The salary is reported by Tokyo papers to be yen 3,400 per annum for the former and yen 1,700 for the latter, and their term of engagement is two years.

We learn that the ill-advised order causing examination of passengers' luggage at Honolulu has been abolished. This order was issued only a short time ago by the Secretary of the Treasury at Washington. It was found to cause great annoyance and as the examination called for the presence of passengers and so limited their sight-seeing possibilities in the "Paradise of the Pacific" and was really unnecessary the outcry against it was loud. The steamship lines stopping at Honolulu their splendid steamers with large lists of passengers found their arrangements, to provide that travellers should enjoy this beautiful break

in the voyage to the best advantage, being interfered with, and they promptly protested. The result was that suspension was at once ordered and now the cable announces complete abolition.

The Kawasaki Ship-building Yard, Kobe, is to redeem to-day (Sept. 18th) yen 800,000 of its debentures.

It is stated by the *Asahi* that the representatives of over 1,200 *jinrikisha* coolies in Tokyo recently paid a visit to Mr. Sonoda, Governor of Hokkaido, who is now in the capital on official business, and asked him to find work for the coolies, who are losing their occupation as the construction of the electrical tramways is gradually drawing near completion. The men explained that the coolies could not turn to any other work in the city. The Governor sympathized with the petitioners, and gave an account of the condition of Hokkaido, where many places are still uninhabited and where much work in fishing and farming is obtainable.

At a meeting on Sept. 10th of the directors of the Nippon Marine Insurance Company, it was stated that the total income for the first half of this year was yen 983,877 and the expenditure yen 761,709, leaving a net profit of yen 222,168, to which the balance of the previous account, yen 6,936, has to be added. Of the total, yen 75,000 is to be paid as a dividend at the rate of 5 per cent. (10 per cent. per annum), yen 11,500 is to be deposited as legal reserve, yen 100,000 as a special reserve, yen 22,200 is to be given as rewards to employees, and the remaining yen 20,404 is to be carried forward to the next account. The general meeting of shareholders will be held on the 19th when the provisional decision of the directors will be reviewed. It is proposed to change the name to the Nippon Marine, Transport and Fire Insurance Company and to carry on business as indicated by the altered designation.

The death from cholera at Hankow is recorded of Mr. E. T. Pym. It seems only a little while ago, says the *N.-C. Daily News*, that Mr. Pym lost his first wife, who died suddenly at Hankow, and it is only twenty-one months since he married a young and very popular Shanghai girl, Nina, daughter of the very well-known Captain of the C. M. S. *Hacon*, Mr. Fred. Wallace, and she is now left a widow with one child. Mr. Pym, who was one of the best-known and best-loved residents of Hankow, entered the Imperial Maritime Customs in 1882, and had been for some time Acting Commissioner. No one could be more respected as a Custom official than he was, and he was a warm friend and a delightful companion, well-read, genial, and of inexhaustible kind-heartedness.

The Pacific liner *Nippon Maru*, commanded by Captain W. W. Greene, went on an official Government trial on Sept. 4th, says the *Hongkong Daily Press*. At 6 a.m. the steamer left her buoy and proceeded out of the harbour through Green Island Pass to the south side of the Island, where a measured three-mile course has been specially marked out so that the steamers of the Toyo Kisen Kaisha may comply with the requirements of the Japanese Government. After making a preliminary run, the steamer started on the special full speed trials over the three mile course. The engines worked throughout the trials, which lasted five hours, with perfect smoothness, and steaming was very easy. On the six runs an average speed was attained of 17.6 knots, and the maximum speed reached 18.2 knots. This result is a little better than that attained when the steamer was built five years ago, and all interested expressed themselves as highly pleased with such an excellent performance, which entitles the Toyo Kisen Kaisha to the same Government subsidy for the next five years as that received since the steamer started on the San Francisco run in December, 1898. The Japanese Government was represented by Mr. T. Okochi and staff of assistants, while Mr. C. Shiba, Professor of Engineering, Imperial University, Tokyo, assisted by Mr. M. Hara, the Company's naval architect, was present on half of the owners.

CLAIM AGAINST THE "TONKIN."

The Kawasaki Dockyard Company have brought a claim against the M.M. Co., which reads as follows:—

For successfully rescuing S.S. *Tonkin* and her cargoes from her last disastrous distress caused by fire which broke out on board the steamer on the 6th August, 1903, viz.:—

1. To extinguish wholly the fire on board the steamer.
2. To tow her safely while on fire from her anchorage in the Kobe Harbour.
3. To ground her on the so-called Mirume beach.
4. To pump out the water flooded in the steamer after the fire had been put out.
5. To float the steamer safely from the shore by towing, and, lastly,
6. To tow safely the steamer again to Kobe.

One Hundred Seventy Thousand yen
Only..... ¥170,000.00
E. & O. E.

To this a reply of which the following is a translation was sent:—

Kobe, August 19th, 1903.
To the DIRECTOR of the Kawasaki Dockyard Co., Limited, Kobe.

DEAR SIR.—I beg to confirm my letter of yesterday by which I acknowledged the receipt of your favour of the same date, enclosing your bill for the amount of Yen One Hundred and Seventy Thousand (yen 170,000) claimed as payment for assistance rendered by you to our steamship *Tonkin*, in fighting the fire which had broken out on board, in towing the ship to Mirume—in accordance with the order given by the Kobe Harbour Master himself—in grounding her on the beach, filling her holds with sea water, and, after the fire was under control, in supplying the means of floating the steamer by pumping water out from the holds and, when afloat, towing her from Mirume to an anchorage in the harbour of Kobe.

In the reply which I had the honour of writing you, I could not help manifesting my very great surprise at the exorbitant amount of your bill, and I stated that I felt inclined to think that it was due to some mistake.

I should have been very desirous of discussing the matter with you on the same day, but your absence compelled me to postpone this exchange of views until to-day, and upon the invitation received from you this morning, informing me that you would be at your office from 10 a.m. until noon, I hastened to call upon you.

As a result of our conversation, I am now convinced that your bill was deliberately drawn up, and that the high figure to which it amounts must be solely attributed to the special point of view you take of the matter—i.e., that you consider yourselves as having alone rescued the *Tonkin* from an unavoidable loss.

I objected this morning to the pretension on your part, and the chief object of this letter is to put down in writing the arguments brought forward by me to refute your own, and which may be condensed as follows:—

1st.—The so-called rescue of the *Tonkin* is not, properly speaking, a salvage, as the steamer was moored to a buoy in the harbour, and she ran no other risks than those resulting from the fire which accidentally broke out on board during the landing of cargo. The assistance rendered by you as well as all the services of the Harbour of Kobe amounted merely to such help as is required in case of fire and as is always given in all accidents of this kind.

2nd.—Yours was not, therefore, the sole assistance rendered, inasmuch as, besides all the means of action possessed by the steamer herself, the Harbour Office, the Water Police, the Kobe Pier Co., the steamers in the neighbourhood, &c., also helped powerfully in controlling the fire.

3rd.—The beaching of the *Tonkin* was not the result of any initiation of your own, considering that it was, as much on account of the danger from the fire to the other ships in the harbour as for the safety of the steamer, ordered by the Harbour Master; and the part taken by you in this operation consisted only in towing the *Tonkin* in compliance with the orders given to beach her at Mirume, where the intention of those in command was to ground her without, nevertheless, removing the chances of floating her again, and, with that possibility in view, unrevetting some plates in the hull and filling the hold with sea water, in order to fight the fire by more effective means than those at our disposal.

4th.—The fire was not, consequently, put out by yourselves alone, as every one contributed some help in doing so, and even the City pumps, placed on lighters under my care, were sent to Mirume, where

they were also at work, while the Kobe Pier Co.'s pumps, the Harbour Office pumps, &c., remained on the spot until the fire was practically under control.

5th.—The pumping out of the water in the holds was, as a matter of fact, attempted by your pumps, but other means than those contributed by you also helped in this.

6.—The re-floating of the *Tonkin* was in reality due to the full moon high tide occurring on the evening of the 9th instant, and also to the powerful means of action furnished by the cruiser *Montcalm* and some 200 men of her crew, after a kedge anchor had been moored in the direction in which the *Tonkin* was to be hauled off, having, as soon as the flood tide allowed, and by means of wading tackle and of steel hawsers (lent from the *Montcalm*), caused the steamer to slip off from the beach, and ultimately to float, at about 5.30 p.m.

Your tug-boats, attached to the stern of the ship, would never have succeeded alone in floating the *Tonkin* and every seafaring man on board at the time of the operation could bear witness to the fact that the *Montcalm*'s kedge anchor and hawsers were alone of effective use in re-floating the vessel.

This was so much so that the assistance of the *Yezo Maru*, of the Nippon Yusen Kaisha, which had been applied for in view of re-floating operations, was considered unnecessary; that steamer—one of great power compared with that of your tugboats—was sent back to Kobe without having even received on board a single hawser from the *Tonkin*.

7th.—The steamer, having been floated by the means I have just mentioned, was ultimately towed by your boats—not, however, to the buoy where she is at present moored, but to about half a mile from the said buoy, at which spot the *Tonkin* had to anchor owing to night coming on and to the difficulty confronting a ship with her steering gear out of order in getting to the buoy.

Such is, in short, the precise account of the part taken by yourselves in the various operations necessitated by the fire which broke out on board the *Tonkin*; and in concluding this letter you may perhaps allow me to express the opinion that such assistance does not constitute the salvage of the *Tonkin* by the Kawasaki Dock-yard Company, and that, therefore, compensation claimed by you could not possibly be paid without its justice having previously been legally established by the Courts.

Moreover, I have lodged with the French Consul in this port the formal protest which, in the name of my Company, I hereby raise against your demands, and, on the other hand, I have notified these demands to my directors, leaving it with them to adopt in the premises such course as they may deem it proper to follow.

I remain, dear Sir, Yours truly,
L. ROUX,
Agent.

The examination of Captain Schmidt and other officers of the M. M. S.S. *Tonkin* in connection with the Kawasaki Dockyard Co.'s claim for salvage came on in the Kobe Ku Saibansho on Monday last, lasting from about 9 o'clock in the morning till past 8 o'clock in the evening. The *Kobe Herald* gives the gist of the testimony:—

Captain Raoul Schmidt stated that a fire broke out on board his steamer—the *Tonkin*—at 2 p.m. on the 6th August last and that all ship's pumps were set to work at once, every possible arrangement being made at the same time to control the flames.

After a short while steam launches from various quarters arrived alongside with a view to rendering help and amongst them were some belonging to the Kawasaki Dockyard Co. It was customary to help each other in cases of fire on board ship. The Harbour Master ordered the ship to be taken out of the harbour and the *Tonkin* accordingly left her buoy, the launches from the Kawasaki Dockyard Co. towing the *Tonkin*. There were no other launches about at the time. When Mirume was reached the flames burst out with renewed force and it was found necessary to sink the ship. All the pumps were then set to work to pour water into the holds. While the *Tonkin* was being towed to Mirume somebody on board one of the Kawasaki launches proposed that the ship should be scuttled. The suggestion was adopted. Half an hour afterwards, when it was found that the work of scuttling the ship was making slow progress the Captain decided to abandon the idea of scuttling the ship. The launches from the Kawasaki Works, the Harbour Board, the Kobe Pier Co., and the Kobe Water Police rendered assistance; but they were unable to extinguish the fire. All the inflammable goods were burnt. This fact may be proved by the certificate given by the Surveyors. The fire originated in No. 3 hold, where some chlorate of potash was stored. The French Consul opened an enquiry as to the cause of the fire and it is impossible to make any definite statement at the present moment. The fire originated in No. 3 hold and burnt all the wood work in the forepart of the *Tonkin*.

As for the fourth question (as to the action taken

by the Kawasaki Dockyard Co. during the fire) it is not possible for me to make any reply as there is no fact to prove that the Kawasaki Dockyard Co. did put out the fire. I am also unable to state what cargo was on board the *Tonkin*. Moreover the question has nothing to do with the Kawasaki Dockyard Co. A list of cargo was on board but there is no necessity to tell the contents to a party who came to assist in extinguishing the fire. After the fire was put out the Kawasaki Works fitted four pumps, two in the fore part of the ship and two in the after part of ship. They took twenty-four hours in fitting one pump and eighteen hours were spent in fixing another. The ship was refloated by this time, and these pumps did little work. The pumps brought to the after part of the ship were to be worked by an electric motor and they were very nice things to look at. Probably the Kawasaki men were not conversant with the handling of the pumps, for one of them broke down after being in use for half an hour. The other one was brought to the ship about two hours before the ship was refloated and there was then no occasion to call it into requisition. In other words the Kawasaki pumps rendered no service in the refloating of the *Tonkin*. The water poured into the ship was mostly pumped out by the ship's own pumps. About one-eighth or one-sixth of the whole water may have been pumped out by the Kawasaki hands. The wind blew either from the south or south-west from the 6th ult. to the 9th, but there was no fixed tidal current. Two Kawasaki launches came to pull the *Tonkin* out from Mirumie; but one pulled the ship the wrong way and the rope of another was cut. The *Tonkin* then fixed a rope to an anchor brought over from the French warship and was able to get into deep water by hauling on the line.

The refloating of the *Tonkin* took place at about 5 p.m. on the 6th. The Kawasaki tugs were not strong enough and the assistance of the *Yeyo Maru* was proposed by some officers; but eventually the refloating was accomplished without any help. The wind turned the ship in tow. The tugs towed the *Tonkin* the wrong way and the ropes were cut, the *Tonkin* finally steaming into Kobe by herself. About 150 sailors from the French cruiser boarded the *Tonkin* and brought an anchor and hawsers. Fifty or eighty sailors with about 100 coolies worked in hauling the *Tonkin* out. The crew of the *Tonkin* did not take part in the attempt to extinguish the flames. The Kawasaki men were not asked to render help; but they came to render assistance.

The 1st officer, Claude Laure, gave evidence next. His replies were identical to the foregoing.

CORRESPONDENCE.

RABIES AND DOG TAX.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—Rabies or Hydrophobia is popularly applied to a human disease, the result of the bite of a rabid dog or other animal. It occurs most frequently in the dog, by whom it is most frequently propagated. Three stages of the disease are recognised.

- 1st. Premonitory, characterised by depression and irritability,
- 2nd. Great excitement and excessive sensitiveness, causing excessively painful spasms particularly in the muscles of swallowing. Thus the effort of swallowing water, or even the sight of water, causes a painful spasm in the throat, hence the name Hydrophobia, "The dread of water."
- 3rd. A paralytic stage; the spasms are succeeded by a quiet and gradual unconsciousness, ending in death.

I pride myself upon my affection for dogs, whose devotion to man almost approaches the veneration that some of the human kind have for a deity. The usefulness and sagacity of dogs have been amply illustrated by the lives saved by the celebrated St. Bernards in the alpine regions. On the continent of Europe dogs are being trained to save life from drowning and to pursue criminals. In the polar regions they are utilised as beasts of burthen. In all these capacities the sagacity of the dog approaches the level of human intelligence. The better bred the dog, the more his intelligent capacity.

Many of us have felt the comfort and satisfaction of having at our house a well bred dog, whose fawning welcome cheers and gratifies us upon our return home after a hard day's work.

Landseer in his pictures has faithfully depicted the faithfulness, not to say the humanity of dogs.

Unfortunately, in Japan a well bred dog is rarely to be seen—such Japanese as keep dogs, permit the sluts to run riot, and as a result the country is full of mangy and worthless mongrels.

It is a surprise to foreigners in Japan that rabies has not already become rife in the country.

I venture to suggest that steps should taken to levy a Tax upon all dogs, such as in England, Australia and other European countries; untaxed dogs to

be killed. The result would not only be an increase in the revenue, but destruction of numerous worthless and dangerous curs that are a menace to the health and comfort of the inhabitants.

The Tax in England and Australia is five shillings a head, and if a similar tax were imposed here it would probably increase the revenue by two or three million yen a year.

I remain, dear Sir, Yours truly,

SAMUEL T. KNAGGS, M.D.

Kobe, September 7th, 1903.

[A tax is already imposed on dogs in some of the principal cities of Japan, and dogs whose owners have not paid the tax are killed. The tax in Tokyo amounts to 2 yen per dog.—*Ed. J.M.*]

THE RIDDLE.

"Yea, man giveth up the ghost, and where is he?"—Job xiv. 10.

With bended knee and wond'ring eye
We search and ponder long and deep;
We wonder why we live and die—
If at the end we wake or sleep.

If it shall be a silence vast,
Or dulcet sounds shall come to cheer;
If it be first or it be last;
And whether we should flout or fear.

That road beyond the End of Day—
Does it to further toiling call?
Or is it then a happy way?
Or is there any road at all?

The stars laugh at us from the sky
When Night is grave and still and wide
And we repeat our "Whence?" and "Why?"
And seek to know what they may hide.

So, we will muse and wonder on,
And childishly our doubts recite:
"Is it the coming of the Dawn,
Or but the closing of the Night?"

Comes Death one day to make us see,
To smooth the wrinkled, brooding brow?
Comes Death, to whisper soothingly:
"Poor soul, you know the Answer now."

—W. D. N., in *Chicago Tribune*.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE BEIRUT AFFAIR.

London, September 11.

The Ambassadors have strongly remonstrated with the Porte on the conditions existing at Beirut. The Vali of Damascus has arrived at Beirut with troops and stores.

CAPE PARLIAMENT.

The Cape Parliament has been dissolved.

THE KAISER AND VIENNA.

A latest telegram says that though it was originally resolved that Count von Bulow should not accompany the German Emperor on his visit to Vienna, it is now announced that he will go with the Kaiser. The change is considered significant of the increasing gravity attributed to the situation in Turkey.

THE MACEDONIAN QUESTION.

TURKISH THREATS.

BULGARIAN RESOLVES.

London, September 12.

The Turkish functionaries in Macedonia openly scoff at the idea of European intervention, declaring that if Europe intervenes with an armed force, they will immediately burn, destroy, and massacre wholesale, leaving only bare fields for the invaders.

The Macedonian organizations have issued a note holding the Powers responsible for the inevitable reprisals, by rebels, for Turkish excesses.

Later.

M. Petroff, Bulgarian Premier, has informally intimated to the Powers that, unless Turkish excesses in Macedonia are restrained, Bulgaria must depart from her attitude of strict neutrality.

A consular report from Salonica states that 300 insurgents at Kastoria, after surrendering, were massacred.

Later.

Nazim Pasha, the new Commander-in-Chief in Macedonia, was educated in Germany. He is conducting drives on the South African pattern, with great success. Lines of Bashi-bazouks are replacing the block-houses and the barbed wire.

TERRIBLE STORM IN ENGLAND.

ENORMOUS DAMAGE.

DOVER HARBOUR WORKS DESTROYED.

London, September 13.

A great storm has swept over England, the English Channel and Ireland. The telegraph lines are destroyed but the damage already known is enormous.

Dover harbour works, which were only recently completed, have been destroyed.

Great havoc has been wrought along the English coasts and in the country.

Later.

Lloyds returns report that 63 wrecks took place during the storm, and that in many cases all hands were lost.

FRANCE AND THE LEVANT.

A division of the French Mediterranean squadron has been ordered to hold itself in readiness to proceed to the Levant to protect French subjects in Macedonia.

BULGARIA MOBILIZES HER ARMY.

London, September 14.

It is reported at Sofia that the Ministry has decided to mobilize the 1st and 2nd Divisions of the Army, which will be quartered at Philippolis and Sofia respectively.

THE U.S., RUSSIA, AND MANCHURIA.

The American Government has been informed by Russia that she has been requested privately by China to postpone the evacuation of Kirin province and of Manchuria for several months after the 8th October, which is the date fixed for the general evacuation of the districts. The U.S. has replied that she is indifferent.

AN OPTIMISTIC PREMIER.

London, September 15.

M. Combes, the French Premier, speaking at Treguier, said the affairs of the Republic were flourishing both at home and abroad. The alliance with Russia was assuming a more and more pronounced character of confidence and intimacy. France's friendship with Italy was being strengthened by reciprocal marks of sincerest cordiality, and with Great Britain would now exist only a rivalry in good methods and friendly demonstrations.

UNITED STATES CONGRESS.

The proposal to hold an extra session of the American Congress has been abandoned.

THE BRITISH CABINET.

Later.

A Cabinet Council was held in London yesterday, lasting three hours. Every member was present except Lord Halsbury, the Lord Chancellor. A considerable crowd watched the arrival of the Ministers, and Mr. Joseph Chamberlain, the Colonial Secretary, was greeted with mingled cheers and hooting, the former predominating.

It is understood that Mr. Balfour submitted to the Cabinet a detailed statement showing the results hitherto reached in the fiscal enquiry.

Another meeting is to be held to-day.

THE BALKAN TROUBLE.

London, September 16.

The Bulgarian Government in a Note to

the great Powers, declares that Turkey has mobilised the whole of her Army, which cannot possibly be for the sole purpose of suppressing the revolution. Bulgaria appeals to Europe to prevent massacres and arrest Turkey's mobilization. Unless the Powers intervene in time Bulgaria will be forced to take such measures as she deems necessary.

BRITISH CABINET COUNCIL.

The British Cabinet yesterday concluded its debate upon the fiscal questions, and discussed other business at to-day's meeting.

BULGARIA, TURKEY, AND THE POWERS.

Later.

Bulgaria's Note to the Powers was dated the 13th September.

It was announced at Constantinople yesterday that the Austrian and Russian embassies made serious representations both to the Sublime Porte and at the Palace (Yildiz Kiosk) regarding the horrible excesses of the Turkish troops, especially the Albanian regiment, in the vilayets of Monastir and Adrianople.

CONTRADICTIONARY RUMOURS.

The British Cabinet sat in council for an hour and a half yesterday. Statements regarding the Cabinet's decisions are contradictory, but the general assumption is that a compromise has been arranged, averting disruption of the Government.

THE BALKAN TROUBLES.

London, September 17.

Six classes of reserves belonging to the Bulgarian divisions on the Turkish frontier are being called out. They number 20,000 men.

The *Standard's* Vienna correspondent says that there are signs that the Powers contemplate an international demonstration at Salonika.

THE FISCAL QUESTION IN GREAT BRITAIN.

PAMPHLET BY MR. BALFOUR.

Later.

Mr. Balfour has issued a lengthy pamphlet on insular free-trade. He recognises the great evils of protection.

A later telegram says that most of the newspapers censure the pamphlet as showing that Mr. Balfour is committed to retaliation against hostile tariffs. Some expect that the result will be the resignation of the Free Trade Ministers.

The attitude of Mr. Chamberlain in view of the pamphlet is discussed. It is not believed that he will resign merely because Mr. Balfour ignores the question of preferential trade, but rather that he will be content to await developments without forcing the issue.

(RECEIVED AT THE LEGATION OF FRANCE.)

THE MACEDONIA QUESTION.

Saigon, September 12.

Four vessels of war, under the command of Admiral Jauréguiberry, have been ordered to hold themselves in readiness to set out from Toulon for the Levant, to protect the French residing in Macedonia.

THE STORM.

Saigon, September 13.

There has been a violent tempest in the Channel. Injury has been done on the coasts of France and England. Several maritime disasters have taken place and there is a certain number of victims.

MACEDONIA.

Private despatches from Constantinople

and Sofia declare that excitement is growing on the Turkish side as well as on the Bulgarian. Famine is deemed inevitable in Macedonia in consequence of the ravages committed by the Turkish troops and the insurgents.

ROYAL VISIT TO PARIS.

Saigon, September 16.

The King and the Queen of Italy will arrive in Paris on the 14th of October accompanied by the Minister of Foreign Affairs. Their Majesties will leave on the 18th October.

NEW FROM PARIS.

Saigon, September 17.

The sanitary situation at Marseilles is excellent, all danger of an epidemic of pest being averted.

In consequence of the appearance of unrest among the tribes of the South Oranais, General Caze has set out for the frontier.

(FROM THE "JIJI SHIMPO.")

RUSSIA'S POLICY.

London, September 9.

The *London Times* publishes a Peking telegram with reference to the Russian promise (the promise seems to be that with regard to the evacuation of Manchuria which was reported in the *Jiji* of Sept. 10th as a telegram from Peking) and remarks that apparently Russia does not intend to concede anything absolutely and that the Russian object is to have an extension of time until the indignation of Japan is allayed. Russia wishes to maintain despotism command of the military forces in Manchuria.

BEIRUT.

An outrage by insurgents has occurred at Beirut. The governor of Damascus has proceeded to the scene to pacify the rioters. The Powers have demanded the removal of the Governor.

Two U.S. warships are lying in the port.

BALKAN TROUBLES.

Turkish soldiers have besieged two thousand insurgents on the Kakarikileze (?) frontier.

It is reported that a severe engagement has occurred on the frontier of Madva lake near Salonika.

TROOPS FOR THE FAR EAST.

London, September 11.

According to an Odessa correspondent of the *Standard*, 32,000 Russian soldiers with 64 guns have been despatched to the Amur territory since the beginning of May.

BALKAN AFFAIRS.

M. Petroff the Premier of Bulgaria, has protested against the tyrannical conduct of Turkey in language which is expected to arouse the anger of the Porte.

Revolutionary Committees in Serbia are taking strong steps, so that affairs appear to be tending to war between Bulgaria and Turkey.

THE BALKAN CRISIS.

London, September 12.

King Edward's intention to pay a visit to Roumania has been abandoned in consequence of the disturbances.

Turkish soldiers have again occupied Vacilico (?) The new Governor of Beirut has suppressed the disturbance there. The previous governor has been released from his post on the demand of the Powers, with which change the U.S. Government has expressed its satisfaction.

JAPANESE BONDS.

Five per cent. Loan Bonds have risen $\frac{1}{4}$.

THE BRITISH CABINET.

London, September 14.

To-day a meeting of the Cabinet was held to discuss important matters with regard to trade policy.

THE AUSTRIAN PRESS ON RUSSIA.

The Austrian papers condemn Russia, which is now supplying large quantities of military material to the insurgents in Macedonia, and say she intends to reduce the influence of Austria-Hungary in the Balkans and that she is actuated by faithless motives.

BALKAN AFFAIRS.

According to information from the Balkans, the conditions are generally serious. The centre of the crisis is the country around Adrianople.

The Bulgarians are urging M. Petroff, the Premier, to issue immediately orders for mobilization, but he replies that there is no pressing necessity. Two divisions in Sofia and Philippopolis seem to have already been mobilized.

SERBIAN AFFAIRS.

The new King of Serbia is now in a precarious position, and is carefully protecting himself. A plot to assassinate him has been discovered at Krugu shevatz (about 80 miles south of Belgrade).

BRITISH MILITARY MANOEUVRES.

London, September 15.

The British autumn military manoeuvres began yesterday. The area affected is 80 square miles in the southern district. The First Division under command of General Sir Evelyn Wood is attacking the Second Division under General French.

Colonel Oka, Lieut.-Colonel Utsunomiya, and Majors Furumi and Koike of the Japanese army are present witnessing the operations.

BULGARIAN AFFAIRS.

Bulgaria has despatched a note to the Powers in which she appeals to them to prevent massacres and has demanded that they cause the suspension of the mobilization of the Turkish forces. It is added that if the Powers do not interfere immediately Bulgaria will take such steps as she deems necessary.

(FROM THE "ASAHI SHIMBUN.")

LABOURERS IN SOUTH AFRICA.

London, September 10.

The Chamber of Mining in the Transvaal has declared that owing to a scarcity of labourers to the number of 115,110, dividends show a loss of £2,925,000 per annum.

GREAT BRITAIN AND PORTUGAL.

King Edward has appointed the King of Portugal an Admiral of the British Navy.

EDICT BY THE SULTAN.

London, September 11.

By means of an Imperial decree, the Sultan has given orders for the repair of the forts at Adrianople, on the Bosphorus, at Scutari and Irtihum(?) and has given sanction with regard to the settlement of the loan bonds (?).

(FROM THE "N.-C. DAILY NEWS.")

THE SITUATION IN SERBIA.

London, September 5.

It is stated that seven hundred Serbian officers have signed a petition to King Peter Karageorgevitch, praying for the punishment of the murderers of King Alexander, otherwise they will have to deal with the murderers themselves. In the meantime a number of officers have been arrested, forty-seven in Nish alone.

HIGH CRICKET SCORE.

London, September 6.

In the cricket match between Surrey and Sussex, which was drawn, Ranjitsinhji scored 204.

THE ALARM AT CONSTANTINOPLE.

London, September 7.

Armed sailors from the foreign guardships are guarding the interior of several of the Embassies at Constantinople.

It is understood that this is due to warnings that outrages on the Embassies are projected.

Although the high Turkish circles at Constantinople are decidedly opposed to war, the bellicose spirit in the military section of the Mussulman population has lately been strongly accentuated.

The local Press publishes highly coloured accounts of the doings of the Macedonian insurgents, which tend to increase the Mussulman excitement in the army.

THE CAMPAIGN IN SOMALILAND.

News from Somaliland is scanty, but steady progress is being made with the mobilisation of four camel corps, each 588 strong. With these corps it will be possible to carry several days' supply of water for a large force.

CHOLERA.

Tientsin, September 8.

Mr. Frederick Newson died here of cholera to-day. All vessels are being inspected on arrival.

It is reported that plague has broken out at Newchwang and that there were 18 deaths on Sunday.

MACEDONIA.

London, September 8.

There is a suspicious absence of news from Macedonia and Adrianople. Large bands are crossing the frontier of northern Macedonia, where an insurrectionary movement is expected to break out in the Strunia Valley before the end of the week.

THE NEXT ROYAL GUEST.

It is understood that H. J. M. the Emperor Francis Joseph of Austria will return King Edward's visit to London in the second half of November.

NEW GOVERNOR OF HONGKONG.

London via Bombay, September 9.
Major Sir Matthew Nathan, R.E., K.C.M.G., G.C.

vernor of the Gold Coast Colony, has been appointed Governor of Hongkong.

NEW GOVERNOR OF GOLD COAST.

Mr. J. P. Rodger, C.M.G., British Resident at Perak, succeeds Sir Matthew Nathan.

MACEDONIA.

London via Bombay, September 9.

It is estimated at Sofia that a hundred and fifty thousand women, children and old men are hiding in the forests and mountains of Macedonia.

It is stated that the Turks are burning the forests and killing the fugitives whenever they attempt to escape the flames.

According to Bulgarian accounts, it is believed that thirty to fifty thousand Bulgarian inhabitants of the vilayet of Monastir have been massacred by the Turks.

September 10.

The stories of massacres received from Sofia are regarded with some incredulity.

THE LEBANON

London, September 9.

It is announced at Washington that Admiral Cotton, U.S.N., reports that the riot at Beirut was due to the animosity between the Mussulmans and the native Christians, and the failure of the authorities to check the commission of crimes.

He says that the Turkish authorities have facilitated his investigations, and have promised to send a thousand more troops to Beirut.

London via Bombay, September 10.

The Ambassadors have strongly remonstrated with the Porte on the condition of things at Beirut. The Vali of Damascus has arrived at Beirut with troops.

THE ST. LEGER.

London via Bombay, September 10.

The following is the result of the St. Leger Stakes, run at Doncaster on Wednesday, the 9th instant:—
Sir J. Miller's *Rock Sand* (winner of the Derby)... 1
Mr. J. Musker's *William Rufus*..... 2
His Majesty's *Meat*..... 3

ISLANDS IN DISPUTE.

London via Bombay, September 11.

Correspondence is proceeding between Washington and London regarding the seizure by American men-of-war of certain islands in the vicinity of Sandakan, Darvel Bay, Borneo.

PREPARATIONS FOR DEFENCE IN TURKEY.

A Turkish irade orders the repairing or reconstruction of the fortifications at Adrianople, Chatakl, Erzeroum, and on the Bosphorus.

An irade has been promulgated approving the unification of the Ottoman Debt.

THE U.S. SECRETARY OF WAR.

On August 25th President Roosevelt authorized the publication of the following letters:—

Dear Mr. President: You have been good to assist to the sufficiency of the reasons for which I have wished to retire to private life as soon as practicable after the establishment of the general staff of the Army and the completion of my full four years of service as Secretary of War. While it is understood that you will probably not arrange to fill the office as you wish before the end of the year and that I am to remain in office in the meantime, it is probable that you will be ready to send a name to the Senate in November or December, and before you do so my resignation should be in your hands. I find myself on the eve of sailing for England to attend the sessions of the Alaska boundary tribunal quite unable to judge how many months I shall be kept away from this country, and I therefore now tender my resignation of the office of Secretary of War, to take effect upon the appointment and qualification of my successor. I shall carry with me unabated loyalty to your administration, confidence in the sound conservatism and patriotic unselfishness of your policy, and enduring gratitude for the kindness and consideration with which your friendship has honored me. I shall not cease to appreciate the sympathy and loyalty to President McKinley with which you took and carried on his work, and I shall always be happy to have been a part of the administration directed by your sincere and rugged adherence to right and devotion to the true interests of the country. I am, with great respect and esteem, always faithfully yours,

ELIHU ROOT.

To the President.

Oyster Bay (L. I.), August 24.

Hon. ELIHU ROOT, Secretary of War.

My Dear Mr. Root: It is hard for me, indeed, to accept your resignation and I do so not only with keen personal regret, but with a lively understanding of the gap your withdrawal will create

in public life. My sense of personal loss is very great; and yet my sense of the loss of the Nation as a whole is even greater. You have been over four years Secretary of War. I wonder if you yourself realize how much you have accomplished during that period. If you will turn to your first reports and will read therein the recommendations you made in order that the Army might be put on an effective basis, you cannot but be pleased at the way in which these recommendations have now been adopted by Congress as well as by the administration, and have become enacted into law or crystallized into custom. We never have had a public servant of the Government who has worked harder than you have worked during these four years and a half, and this not merely in point of time but above all in point of intensity, and your success has been equal to your labor. The only reward you have had, or can have, is the knowledge of successful achievement, of the performance in fullest fashion of a great public duty, the doing of which was of vital importance to the Nation's welfare.

Your duties have included more than merely the administration of the department and the reorganization of the Army on an effective basis. You have also been the head of a department which dealt with the vast and delicate problems involved in our possession of the Philippine Islands, and your success in dealing with your part of the work has been as signal as your success in dealing with the purely military problems. To very few statesmen indeed in any country is it given at one and the same time to achieve signal and striking triumphs in the administration and reform of the military branch of the Government, and in the administration of what was in effect a department of insular dependencies, where the problems were new to our people and were in themselves of great difficulty. Moreover, aside from your work in these two divisions of the Government service, I appreciate most keenly the invaluable advice and assistance you have rendered me in innumerable matters of weight not coming directly in your departmental province, but in which I sought your aid with the certainty of not being disappointed. Your position on the Alaskan Boundary Commission at the present moment is an illustration of these services.

May all good fortune attend you wherever you are. The American people wish you well and appreciate to the fullest the debt due you for all that you have done in their behalf. Faithfully yours,

THEODORE ROOSEVELT.

Total	933

Per British steamer *Scotia*, for London via ports:—Raw Silk for Europe, 100 bales; Waste Silk for Europe, 170 bales.

LATEST COMMERCIAL.

IMPORTS.

The market is rather firmer for Yarns, but there is little doing. Offers of Shirtings by native houses in Tokyo below ruling rates have weakened the market and dealers hang fire. Fancy Cottons and Woolens are quiet with no change to note.

COTTON PIECE GOODS.

	PER YARD.
White Shirting—{ 40 yds. 36 in. }	0.09 to 0.10

The volume of business is small but there is a more hopeful feeling.

	PICUL.
Java, Medium to best ...	270.00 to 320.00
Calcutta, Medium to best ...	180.00 to 290.00
Madras (Kupah), Medium to best ...	140.00 to 170.00
Madras (Dry Leaf), Medium to best ...	100.00 to 140.00

EXPORTS.

RAW SILK.

When we last wrote the market looked weak with every prospect of lower prices, but the chance was spoiled by some eager buyers, who rushed in and put the market up to the original figures. There has been a fair amount of business doing at quotations but the general feeling is that such prices are dangerous and that we ought to see a lower range of values.

QUOTATIONS.

SWISS WATCH INDUSTRY. ONLY 20/-

To Every Commissioner, Post Office and Railway Servant, and Persons Requiring a Splendid Watch, we offer this opportunity of their obtaining this: "Original Swiss Watch" (Our Exclusive Property). The Watch in question is made on the World Renowned GLASHUTTE SYSTEM and received the Highest Award at the PARIS EXHIBITION IN 1902. IT IS THOROUGHLY REFINISHED, A SLENDID TIME KEEPER, AND CARRIES WITH IT A THREE YEARS WRITTEN WARRANTY. It has Three Heavy Cases (Savonette, which are made of unbreakable Opium Metal, Electrically Gold Plated on the Inside Principle, and the finest Commissioner cannot detect THE DIFFERENCE BETWEEN OURS AND THE USUAL 10 GUINEA WATCH. It wears like Real Gold and is the only Watch of its kind having that advantage. To introduce this Watch to the British Public and Colonists we will deliver EITHER LADIES' OR GENTS' for 41/6, or post free (formerly costing £10 0s 0d), on receipt of Money Order for that Amount. A Leather Case is also given gratis with every Watch. Fashionable Chains, weights, or Necklaces of the same Metal can be had for 5s, 10s, or 15s, according to weight. Any Article bought and not approved of will be exchanged. The European Fair of our Firm, according to our daily Orders and Unsolicited Testimonials, proves the Soundness of our Advertisements. Post Office or Postal Orders should be made payable to MAISON BONHEUR, SALES (SWITZERLAND).

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 26TH, 1903.

BIRTHS.

On the 21st inst. at No. 18, Bluff, the wife of H. ARBOG of a Daughter.

At No. 90-c, Bluff, on the 19th September, the wife of HAROLD E. HAYWARD, of a Son (stillborn).

SUMMARY OF NEWS.

THE rate of freight on coal from Moji to Yokohama which has hitherto been *sen* 85 per ton is now reduced to *sen* 55.

PRINCESSES FUMI AND YASU, daughters of the Emperor will return from the detached palace at Miyazaki on Sept. 21st.

In several districts of Shizuoka prefecture, a thunder storm prevailed on Sept. 19th, destroying 33 houses and killing 5 persons.

FIVE electors for the Fukui prefectural assembly were arrested on Sept. 20th. The charge seems to be infringement of the Election Law.

RINDERPEST was found among 15 cows and oxen brought to Nagasaki on Sept. 14th from Korea. They were killed by the sanitary officials.

THE *Fiji* states that Mr. Phya Raja Nuprahbandh, Siamese Minister at Tokyo, has been

ordered to London and is expected to leave about December next for his new post.

MR. H. IRO, director of the Tamsui Post Office, Formosa, was arrested on Sept. 4th on suspicion of having embezzled *yen* 1,700 belonging to the office.

A RUSSIAN military officer who is suspected of being a spy, states the *Fiji*, arrived on Sept. 17th at Yamagata. The police authorities are watching him.

It is stated by the *Nichi Nichi* that Mr. Shiwayama, a member of the *Meikyo Shimbun*, Nagoya, was arrested on Sept. 17th on a charge of fraud.

THE Russian gun-boat *Giyak* arrived at Nagasaki on Sept. 22nd from Wusung. The same day three Russian naval officers arrived from Port Arthur.

A Tiffin party was held on the French flagship *Montcalm* at noon of Sept. 21st, in honour of Admiral Baron Ito and other high officers of the Japanese Navy.

MR. M. KANDA, public registrar, belonging to the Yamaguchi Local Court, was arrested on Sept. 18th on suspicion of having forged public documents.

MR. F. S. MAYER, whose term of imprisonment at Negishi does not expire till December, was released on ticket-of-leave on Saturday, in consequence of his good behaviour.

K. NISHIHARA, an official of the Kojima Tax Collection Office, Okayama prefecture, was arrested on Sept. 16th, on a charge of having forged two hundred shares of the Noko Bank.

DURING the period from Dec. 28th last year to Sept. 17th this year, the Tokyo Municipal authorities paid *yen* 53,326.35 for 1,066,527 rats, comprising 8,620 dead and 1,057,907 live ones.

MR. MORI, president of the Tosan Life Insurance Company, instituted in the Takamatsu District Court on Sept. 17th a petition for bankruptcy against K. Hashimoto, the previous president of the firm.

MR. T. TAKATA, president of the Shimomura Cotton Spinning Company, Okayama, and two other directors, were arrested on Sept. 18th. The judicial officials subsequently searched the office of the firm.

It is stated by the *Asahi* that two members of the Yamashina Marine Industry Office, who had been arrested by the Russian Authorities at Patrosky on suspicion of being military spies, have been released without examination.

A TELEGRAM to the *Nichi Nichi* states that members and supporters of the Tairo Doshi-kai numbering over 35,000 held a meeting on Sept. 17th at Sendai when they decided to advise the Government to take steps against Russia.

THE Osaka-Kobe Electric Railway Company decided on Sept. 16th to purchase an electric power plant and accessories from the Nichibei Trading Company for *yen* 146,000 and eight boilers from the Mitsui Bussan Kaisha for *yen* 53,000.

MR. Z. YAMAUCHI filed a petition for bankruptcy in the Osaka District Court on Sept. 17th against the Koya Railway Company. It is alleged that the defendants did not pay plaintiff interest amounting to *yen* 250 on debentures issued in 1900.

A TELEGRAM from Shimonoseki states that a

French warship saved on Sept. 18th four fishermen who were in a serious condition at a point between Iki and Tsushima islands and delivered them on the following day to the Moji Harbour police.

Two cars on the electrical tramway collided on the evening of Sept. 19th at a point near Kanasugi causing damage to both and injury to a passenger. Later another car was in collision with a jinrikisha near Shimabashi, inflicting severe injury to the passenger in the latter.

ACCORDING to the crew of the *Tategami Maru*, which arrived at Shimonoseki on Sept. 19th, from Newchwang, the plague at the latter place is still raging with the utmost fury and there are about sixty fresh cases every day. The Russian officials are endeavouring to prevent the spread of the disease.

A TELEGRAM dated Sept. 20th from the Fukuoka Quarantine Station states that a British steamer was detained at the station undergoing disinfection in consequence of having had a case of cholera among the crew while at Shanghai. The patient was a Chinese fireman.

MR. M. SUGANO, ex-Representative for Osaka, and two others were arrested on Sept. 19th on a charge of having forged foreign money. The *Fiji* states that they arrived at Tokyo on the following day under arrest. It is alleged that they counterfeited Russian coins amounting to 1,700 roubles and intended to sell them at Kobe.

ONE of the Chinese promoters of a cigarette manufactory at Peking with a capital of *yen* 100,000 recently paid a visit to Osaka and Tokyo. Tokyo papers state that the Chinaman has made a contract with Japanese tobaccoists to employ Japanese workmen and to purchase in Japan the machinery necessary to the factory. The works will shortly be started.

THE steamer *Koryo Maru*, ordered by Mr. S. Fujita, of the Osaka Shipbuilding Yard, being completed, she was launched on Sept. 19th. The vessel will be employed on the line between Osaka and Hokkaido. The ship is of 750 tons displacement, 188 feet in length, 27 feet in beam, 19 feet in depth, and has a speed of 10 knots.

THE Nippon Marine Insurance Company, Osaka, held a general meeting on Sept. 19th at the Osaka Chamber of Commerce when the business report for the period between Sept. 1st last year and Aug. 31st this year was discussed. Insurances amounted to *yen* 232,307,741, on which premia of *yen* 660,120, was paid, while losses were 321,968. A dividend was declared at the rate of 10 per cent. per annum.

S. KAZAMA, former director of the Saitama Noko Bank, who embezzled various shares worth over *yen* 10,000 while in the employment of the bank last year, and who absconded, was sentenced in the Urawa District Court to four months' imprisonment with hard labour and six months' police surveillance. He returned on Sept. 16th from Shanghai and presented an objection to the Public Procurator against the judgement. He was, however, removed to jail the following day.

ACCORDING to an official telegram from Mr. Tamusubi, Japanese Consul at Townsville, the Cabinet of Mr. Robert Philip resigned on Sept. 9th, owing to the opposition of the Labour party. Mr. Morgan, President of the Assembly organized a cabinet on the 17th. It will be remembered that on the resignation of the previous Cabinet Mr. Brown, the leader of the Labour party, was asked to form a Cabinet, but he was unable to do so.

CHINA.

Saturday, September 19.

Mr. Futakuchi, Japanese Consul at Su-chow, gives a very favourable account of the new settlement just established there by his country. The area is 100,000 *tsubo* (83 acres) and in the middle a space of $3\frac{1}{4}$ acres has been set apart for a park. Cherry trees obtained from Yoshino have been planted there, and have thriven excellently, the soil being so well suited that only 2 out of the whole number have died. The settlement is traversed by 8 streets, each having a width of 22 feet, out of which the vehicle space is 10 feet. Four canals run through the place, affording excellent transport facilities, and the streets have received Japanese names, as Asahi-machi, Yamato-machi, Sakura-machi and so on. The total sum expended in laying out the settlement has been \$35,000, but as yet there are only 42 Japanese residents, among whom 2 alone are *bona fide* tradesmen. Land can be obtained at the rate of \$160 per 30 *tsubo*, and Mr. Futakuchi is naturally very anxious to see his countrymen show more enterprise in utilizing the opportunities obtained for them by their officials.

Russia is said to have made application in Peking for permission to build a line of telegraphs from Kiaktow to Pih-hwa-fu *via* Kuleng. She proposes to station troops for the protection of the line; in other words to make military occupation of the region.

Monday, September 21.

According to the latest telegrams from Peking (*Nichi Nichi Shinbun*) the Chinese Government is disposed to give a qualified assent to Russia's new demands. Thus the proposals relating to protection of Russian banks, the non-alienation of any part of Manchuria, and the entrusting of sanitary functions to Russia would be acceded to without modification, but a limit of time would be imposed as to the operation of a differential tariff for goods imported overland; the building of wharves and the posting of troops along the Sungari would be objected to *in toto*; the garrisoning of the district between Tsitsihar and Blagovetschensk would be permitted with an added condition as to the maximum number of troops, and the postponement of general evacuation would be acceded for six months only.

This intelligence is supplemented by a statement from the *Jiji Shimpō's* correspondent. He says that the attitude of the United States towards these new proposals is one of indifference; that Sir Ernest Satow has merely made a casual allusion to the subject in the course of conversation; and that Chinese statesmen, who do not look below the surface of international politics, are thus led to suppose that Japan alone is an objecting party and that the other Powers do not regard these demands as radically injurious to China's Sovereignty. Hence there is a disposition to accept the programme as inevitable. Seeing, however, that the Japanese Representative has been so insistent in formulating remonstrances, Prince Ching and his immediate *entourage* are unwilling to take a step disagreeable to Japan, and their present impulse is to await some unequivocal evidence of the latter's final attitude before definitely answering Russia's proposals.

These two accounts are not reconcilable. One represents the Chinese Government as having virtually decided upon the course to be taken; the other represents it as in a

state of waiting. We suspect that no one is yet in a position to say exactly what China intends or does not intend to do. She has very little mind of her own in the matter.

The *Supao* affair continues to be a subject of dispute. Viceroy Wei Kwan-tou is said to have again addressed the senior consul at Shanghai, insisting that the treaties plainly provide for the rendition to Chinese justice of Chinese offenders against law and order who may be apprehended within the limits of a foreign settlement. His Excellency therefore demands, as a matter of conventional right, that the accused parties be handed over. In view of this categorical application the matter has been again referred to the Foreign Corps Diplomatique in Peking, whose opinions are much divided. The British Minister remains obdurate and the American Minister is now fortified by instructions from his Government, but some of the other Representatives are disposed to abide by the strict letter of the treaties. So long, however, as England and America remain firm there is not the least chance of the incriminated persons being surrendered. What is to become of them, however, when, at the expiration of their present term of imprisonment, they are set free? Probably they will come to Japan, which is getting to be a veritable asylum for all the restless spirits of the two neighbouring empires.

Telegrams to the *Asahi Shinbun* say that the British and American Representatives have been working hard to obtain the concession of the Chingtu-Hankow Railway, but that their efforts have not been crowned with success, for which reason Sir Ernest Satow has sought and obtained an assurance that the concession shall not be given to any third party without previous reference to England. The Viceroy of Szechuan is said to have presented to the Throne a strongly worded memorial, urging that geographical, strategical, political and economic considerations all militate against allowing this line to be built by foreigners. He recommends the organization of a great company for the construction of the road with Chinese capital. On receipt of this memorial the Crown called for a report from the Foreign Office, which recommended that the duty of collecting the necessary funds should be entrusted to the Minister of the new commercial department, and that foreign capital should be carefully excluded. "Of course," says the *Asahi's* correspondent, "it is entirely out of the question that money sufficient for such an enterprise should be obtained in China. The course recommended by the Foreign Office is merely a subterfuge to evade granting the concession to an Anglo-American syndicate." He adds that England's efforts are likely to prove fruitless.

There does not appear to be any immediate prospect of the Chinese section of the East Asian Railway being restored to working order. Very extensive repairs were rendered necessary by the recent inundations. Thus the elements themselves are working to delay evacuation. Meanwhile, so far as the overland journey is concerned, passengers have only to go to Vladivostok instead of Port Arthur. The difference is not much, and from Vladivostok the line is intact.

The *Asahi* has a telegram saying that the Russian troops at Shanhaikwan took ship on the 17th and 18th instant, and sailed for Port Arthur.

Peking is said to be much perturbed by

the situation. A grand council of State has been convened to discuss the national policy. In connexion with this news, which comes through the *Nichi Nichi's* correspondent, it is stated that the Empress-Dowager has at length become suspicious of Russia's integrity of purpose and, abandoning her habitual policy of confidence and friendship towards the great Northern Power, is now disposed to turn to England and Japan. We apprehend a very erroneous use of adjectives in this account. It is altogether inconsistent with the Empress-Dowager's shrewdness that she should repose any confidence in Russia, if by confidence is meant faith in the self-restraint of China's big neighbour. We should imagine rather that the Empress-Dowager's estimate of the situation has been based on the hopelessness of succour from any outside quarter, and on the conviction that whatever grace remains for China must be obtained by China herself. It is very much the fashion to express contempt for China's diplomacy, but experience does not furnish any type of human being who, confronted by an aggressor that can not be successfully resisted, fails to adopt a policy of conciliation and placation. That is the policy that Chinese rulers have long pursued. Among themselves they probably call it a neighbourly policy, but to the unsentimental world it is purely a policy of terror. If the Empress-Dowager has now made any discovery, we may assume it to be that she recognises the absolutely suicidal result of giving much in order to save little from the clutches of a Power which is determined to have all. Russia in the Far East is irresistible. She needs time only. No more is it within the range of her option to control the impulses that drive her onward than it is within reach of China's strength to check her. It may indeed be the case that Chinese statesmen have reached the conclusion that war between Russia and Japan is inevitable, and that some few chesnuts may be pulled out of the fire for them by their island neighbour. The *Kokumin's* Peking correspondent alleges that such is the case, and that the strength of the warning recently conveyed to Prince Ching by Mr. Uchida is partly responsible for the idea. There is no denying that, from one point of view, England and Japan, by the repeated cautions they have addressed to China, may be regarded as having assumed a certain responsibility towards her. But such considerations count for very little in the last resort. On that subject history has one instructive chapter dealing with the British Government and Denmark. China must remember that by her own absolute neglect of the resources of self-help she has forfeited all title to the assistance of others, and that if any third Power step into the breach it will not be for China's sake. England and Japan are unwilling to participate in another cyclopean banquet such as that which ended in the consumption of Kiaochow, Port Arthur, Wei-hai-wei, Kwang-chow and the Kowloon hinterland. But their reluctance is not on account of sympathy with China's distress: it is simply because they see their account in preserving the *status quo* rather than in joining a new movement of dismemberment. Whatever happens, China will be the sufferer precisely so far as she is incapable of defending herself. No one is going to fight for her sake.

Tuesday, September 22.

The *Asahi's* Peking correspondent says that Russian subjects are busily purchasing shares in the Kaiping coal mine in the name

of Belgians. We do not see that the news has any special import.

A strange item of intelligence appears in the same journal to the effect that since the 18th instant the Chinese Government has made up its mind that war between Japan and Russia is inevitable, and is accordingly conducting investigations as to the source of pecuniary supplies. Supplies for whom? That is precisely what this mysterious telegraph fails to tell.

The state of affairs in political circles in Peking is most lamentable, according to the *Niroku's* correspondence. Personal interests have come to weigh much more with high Chinese officials than the welfare of their country, bribery is rife, and for the moment the pro-Russian-anti-Japanese party is in the ascendant. Needless to say that M. Lessar and the Russo-Chinese Bank bulk largely in this analysis, which we refrain from reproducing with any exactness, the writer's inspiration being evidently derived largely from imagination. There is no precedent to guide us in conceiving what might be regarded as the natural state of a Government entangled in such perplexities and dilemmas as these surrounding Prince Ching and his colleagues at present, but surely bewilderment and confusion must be dominant.

Wednesday, September 23.

Our readers probably remember that a rumour was published some time ago representing the Governor of Sinkiang as having asked permission of Peking to borrow a sum of money from Russia without interest on condition that Russian officers should be employed to drill the local troops. A sequel to the story now arrives via the correspondent of the *Asahi Shimbun* in Peking. He says that the same Governor has again memorialized Peking, addressing himself on the second occasion to the Foreign Office. He complains that his previous memorial remains unanswered, and that in the meanwhile Russian officers have arrived and are actually engaged assembling the local levies and training them. The Governor—who has apparently borrowed the money without waiting for Peking's sanction—urges the Minister of Foreign Affairs to take steps for expediting the Throne's decision.

THE MANCHURIAN QUESTION.

Wednesday, September 23.

The Peking correspondent of the *Jiji Shimpō* sends some interesting news. He says that Prince Ching having failed to obtain from Mr. Uchida conclusive information as to the state of the negotiations between Japan and Russia, and as to the final resolve of the former Power, has adopted a temporizing attitude towards the Russian demands, which, being pressed very earnestly by M. Lessar, can not be left unanswered. The Prince has therefore replied that China has no objection to give a guarantee of non-alienation with regard to Manchurian territory, but that she wishes the guarantee to apply to land outside the open ports as well as to land inside them.

It is somewhat difficult to understand this answer, and perhaps it was meant to be difficult. Russia, according to the *Jiji*, had asked two things; first, that no part of Manchuria should be leased or ceded to any foreign subjects or citizens except Russians, and, secondly, that if new marts were opened in Manchuria, to which step Russia does not object, there should be

no formation of special settlements nor any grants of the privilege of foreign ownership of real estate. China's answer is apparently intended to elide the exception made in favour of Russian subjects and to confine the guarantee to a mere declaration that no part of Manchuria, whether inside or outside any existing or prospective settlements, shall be leased or ceded to aliens.

Concerning Russia's demands for permission to build wharves along the Sungari, to protect them with Russian troops and, further, to garrison the country between Tsitsihar and Blagovestchensk, China returns a negative answer. She rejects the Sungari proposal altogether, and she declares that the guarding of the roads between Tsitsihar and Blagovestchensk shall be done by Chinese forces.

With regard to the demand that the sanitary control of Manchuria should be placed wholly in Russian hands, the answer is said to be brief, namely, that China shall be at liberty to employ physicians of other nationalities if she please.

As to the final demand, namely, that Russian banks in Manchuria shall be guarded by Chinese troops, the banks paying expenses, China declares unreserved assent. The despatch covering this reply says that if Russia consent, a convention can be immediately concluded on the above bases. But of course Russia will not consent. She will not agree to a process which whittles down her demands to a mere guarantee that all parts of Manchuria shall remain for all time in Chinese possession. Neither is it likely that China has sufficient courage to maintain her ground. She is virtually helpless in the matter and must take with gratitude any crumbs thrown to her from her aggressor's table, unless, indeed, some benevolent third party step into the breach.

It will be observed that Prince Ching has taken no notice of the demand as to a preferential tariff for goods imported overland by the Trans-Asian Railway. Probably the omission is in the *Jiji Shimpō's* correspondent's information.

The *Kokumin Shimbun's* correspondent sends different intelligence. He says that the Chinese statesmen near the Throne, seeing plainly that in the event of a struggle between China and Japan their country can not avoid being involved in greater or less disasters, are disposed to do everything in their power with the object of averting the catastrophe of war, and to that end will endeavour to placate Japan and Russia. They consider it inevitable; therefore, that Russia's last demands should be conceded, except the demands relating to the Sungari and to the garrisoning of the Tsitsihar-Blagovestchensk region.

A curious side light is thrown upon this question by the *Nichi Nichi's* correspondent. He says that when the preliminary arrangements for constructing the Trans-Asian line were made, Count Cassini engaged that on the completion of the road Russia would hand over a sum of five millions of taels to the Chinese Court. The line being completed, China has been pressing for payment, but Russia hesitates, and shows a disposition to make the carrying out of this agreement conditional upon China's acceptance of the latest series of Manchurian demands. Thus another element of weakness is imparted to China's position.

It is alleged (*Niroku's* Tientsin news) that Viceroy Alexieff has chartered three Norwegian steamers of 3,000 tons each and 10 knots speed to ply between Port Arthur and the Yalu. That is an incredible story.

Thursday, September 24.

Yesterday, when noting the replies made by China to Russia's demands, we observed that the question of a preferential tariff for goods carried into Manchuria overland had not received apparent attention from Prince Ching and his advisers. The correspondent of the *Jiji Shimpō* now corrects this omission. He says that China suggests the postponement of such problems until the negotiation of a new commercial treaty between herself and Russia is taken in hand.

The same paper publishes a telegram from Peking dated the 23rd instant saying that Russia has rejected China's counter-proposals, and is insistently pressing for the acceptance of her first demands. Moreover, M. Lessar is alleged to have intimated that if any new marts were opened in Manchuria, Russia would take the duty of collecting the customs dues out of the hands of Sir Robert Hart, and would perform it herself. Under these circumstances Prince Ching is represented as being much embarrassed, finding himself between the Scylla of Japan and the Charybdis of Russia. He has therefore appealed to Mr. Conger, who occupies an entirely neutral position, the hope being that the influence of the United States Representative may be exerted in the cause of peace.

The above news is in part confirmed by the *Kokumin Shimbun*, which adds that one of the secret demands attributed by rumour to Russia in supplement of the published demands, is said to relate to the management of customs affairs in Manchuria. She claims that the same authority shall be vested in her people within that territory as is now vested in British subjects elsewhere.

It is further stated in the same paper that Mr. Uchida brought to the notice of Sir Ernest Satow this demand of Russia's with regard to customs control, and pointed out that it amounted to a plain assault upon rights already acquired by Great Britain. Sir Ernest took the same view, and was expected to protest in that sense.

In the telegraphic correspondence of the *Asahi Shimbun* it is alleged that Prince Ching and the other leading members of the Foreign Office are tolerably unanimous in thinking that Russia's demands may be conceded, with the exception of those relating to the Sungari and to the guarding of the road between Tsitsihar and Blagovestchensk. Viceroy Yuan and Chang, though disposed to adopt a stronger policy, find themselves unable to stem the stream and are not likely to offer any effective resistance to the above view.

This correspondent (*Asahi's*) adds that the attitude of England and America towards the Manchurian problem has of late been very indifferent. Their Representatives have not addressed a remonstrance of any kind to China with reference to Russia's latest series of demands.

Viceroy Alexieff is said to be holding a council of senior officers, naval and military, at Port Arthur, for the purpose of discussing measures with reference to the administration of the districts under his control.

The Viceroy is further reported to have issued a proclamation for the purpose of allaying Chinese apprehensions of an outbreak of war; apprehensions which have led to wholesale departures of Chinese residents from Port Arthur. In this proclamation the rumours of war are denounced as inventions of interested folks; the severe punishment of such persons is threatened in case of apprehension, and an assurance is given that the relations between Japan and Russia are close

and that the two empires are now absolutely at peace.

Friday, September 23.

It was stated in our last issue, on the strength of Peking correspondence published by the *Jiji Shimpō*, that Prince Ching in his perplexity had applied to Mr. Conger for assistance in the role of mediator. This information is now supplemented from the same source. Prince Ching is said to have sought an interview with the United States Representative, who discussed the question of Russia's new demands in much detail, and pointed out that their acceptance by China would not only seriously impair her sovereign rights, but must also expose her to requisitions of a most embarrassing character from other nations. To this exposition Prince Ching is reported to have replied that he fully appreciated the force of Mr. Conger's arguments, and that he was resolved not to accede to the demands.

Quite different is the account sent by the *Nichi Nichi Shimbun's* correspondent. He avers that the Chinese Court and its advisers, after careful consideration, came to the conclusion that war between Japan and Russia would be disastrous for China, as converting her territories into a battle field and involving issues which could not bring her anything but loss. The wisest course, therefore, seemed to be an understanding with Russia, even though it demanded some sacrifices. Of the development of this mood Russian statesmen obtained knowledge and showed their usual adroitness in utilizing the situation—of course underhand methods are hinted—the result being that a secret agreement was concluded on the lines of Russia's new demands with some slight modifications. As to the supplementary demands which M. Lessar is supposed to have submitted during the past few days, the *Nichi Nichi's* correspondent declares them to be a mere blind, conceived with the idea of creating an impression that the two Powers were not drawing together.

It will be observed that in the *Jiji's* latest correspondence nothing is stated about Mr. Conger's intervention, which Prince Ching was supposed to be about to solicit. The *Asahi's* correspondent, however, wires that when a request in that sense was preferred to the United States Representative, he rejected it at once.

From the *Kokumin Shimbun's* telegrams it would appear that the Chinese Government is endeavouring to bring about a *rapprochement* all round. Prince Ching is supposed to be using his influence with Mr. Conger; Viceroy Chang Chih-tung is seeking to soften Mr. Uchida's demeanour, and Li Lien-yang is trying to mitigate M. Lessar's obduracy. In this report we find it added that the Empress Dowager has instructed the Ministers of the Crown to observe as much secrecy as possible towards the Japanese Legation with regard to Russia's doings.

KOREA.

Saturday, September 19.

In the *Asahi* we find a professedly verbal statement of a despatch said to have been addressed by M. Pavlov to the Korean Foreign Office on the 14th instant, and of the reply returned by the latter. Summarizing the former document, we interpret M. Pavlov's position to be that, in the first place, the mere fact of delimitation being

reserved for subsequent arrangement can not possibly affect the existence of the agreement as a lease. It is true that the extent of the land to be leased still awaits determination, but that some land has been leased is beyond all query, and if the Korean Government postpones the duty of fixing the boundaries, Russian subjects can not be expected to refrain altogether from exercising the basic privilege conferred by the agreement. In the next place, the former Minister of Foreign Affairs declared that having submitted the agreement to the Emperor His Majesty approved of it so far as to entrust all subsequent steps to the Minister, who, accordingly, appointed a day for finally concluding it. Now, therefore, there is no room for any step in the nature of postponing the operation of the agreement itself or submitting it for Cabinet consideration. M. Pavlov, in a tone of undisguised menace, warns the Korean Government that its most prudent course is to conclude the agreement at once.

To this the present Korean Minister of Foreign Affairs has replied that it is an unheard-of thing to proceed to the occupation of land before its boundaries have been fixed, and that since the second article of the document clearly provides for delimitation as a preliminary to execution, the agreement can not be said to be yet in force. As to the statement attributed to the former Foreign Minister, it is now denied not only by his successor but also by the Minister himself, and there the matter rests.

Monday, September 21.

Three of the Tokyo journals say that M. Pavlov has received a telegram requiring his presence in St. Petersburg and that he will soon set out by the Siberian Railroad. Whether this means his recall, or merely that the home Government wishes to consult him, no hint is given, but whatever be the reason, his absence from Korea at this juncture could scarcely fail to make for peace. He has created in Seoul a situation of an extremely embarrassing character, for unless he refrain from following a course to which he has openly pledged himself, or unless the Korean Government abandon a position which every consideration of dignity and safety compels it to maintain, the immediate result must be the occupation by Russian subjects of Korean territory in despite of Korean official remonstrances and in defiance of treaty. That M. Pavlov alone is responsible for this unhappy conjuncture, no one will be disposed to assert. It seems quite obvious that Korea bungled matters seriously. She appointed for the purposes of negotiation with the Lumber Company an official who certainly must have been empowered to lease to Russia, pending delimitation, a certain area of land at Yong Am-pho, and she is now trying to evade the lease altogether by postponing delimitation. She is within her strict rights according to the letter of the law. Of that there can be little doubt. But she can never get over the fatal mistake of having constructively endorsed Russia's original seizure of land at Yong Am-pho, and for that mistake M. Pavlov has been employing all his ability to make her pay dear. So far as bare facts are concerned, nothing more, perhaps, can be urged against him. The question is, however, whether he does not show a great want of the sense of proportion when he so pertinaciously and vexatiously pursues a small object without regard to the serious contingencies involved. Japan, as a mere matter of self-defence, can not endorse by inaction the principle underlying M.

Pavlov's procedure; the principle that for purposes of territorial aggression in Korea nothing is needed except aggressiveness. If it be admitted that lands arbitrarily occupied by Russians within Korea's borders, must be subsequently conveyed to them by process of lease, a completely unstable situation is created, and the only recourse for Japan would be to help herself by processes analogous to those inaugurated by Russia. It is scarcely possible to conceive that St. Petersburg would approve of the creation of such conditions. It is certain that Japan would fight rather than approve of them. M. Pavlov has therefore failed, as it seems to us, to strike a just balance between his immediate aim and its possible consequences. His diplomacy includes too large an element of the man at the front, and if he be really about to take his place in the train at Vladivostok, the political horizon will look clearer.

Tuesday, September 22.

The French Representative in Seoul, according to correspondence in the *Jiji Shimpō* and the *Asahi Shimbun*, replying to the proposal of the Korean Government that Pyong-yang should be closed and Wiju opened, said that pending the receipt of instructions from his Government he was unable to say anything about the closing of Pyong-yang, but that as to the opening of Weju he had no objection. Probably the French Representative finds it difficult to develop anything but a vicarious interest in these questions, for so far as France is concerned the opening or closing of Korean ports makes very little difference.

Later intelligence altogether contradicts the story that Russian subjects had made their appearance at Pho-yong and occupied land there. It is now stated that the only visible change in the aspect of the place is the erection of a marine signal on the top of a hill.

There is a report, however, that some Russian subjects are digging for gold in the Yong-chong district.

It is farther rumoured that Russia proposes to station a company of troops at Kyong-song, which is a place in Hamgyang-do, near the Tumen River.

The retired Russian officer who was living at Kyong-heung for purposes of linguistic study, has returned to Vladivostok.

Wednesday, September 23.

The Korean refugees—*bōmeisha* as they are called—do not, as a rule, attract great attention. Their unmolested presence here is known to be a source of some anxiety and much chagrin to the Korean Government, but the men themselves lead comparatively quiet lives neither intriguing much nor much intrigued against. Occasionally, however, the public receives a startling reminiscence of their presence here in the form of news that an attempt has been projected to assassinate one or more of them. We can not pretend to recall how many of these attempts there have been in the past 20 years, but it says much for the vigilance of the Japanese police that in no one instance has any one suffered bodily harm in connexion with these schemes. Kim Ok-kyun was a special object of Korean official vindictiveness, but not until he had been inveigled to Shanghai could his appointed murderers accomplish their design. We now read in Tokyo journals of the arrest of another refugee on a charge of plotting assassination in obedience to orders from Seoul. The man's name is Yon Kyo-chong and his intended victim is U Pom-son. Concerning

the latter we have no information, but with regard to Yon it is related that he accompanied the well known chief of police, An, when the latter fled from Seoul in 1896. An returned to Korea a few years afterwards, but Yon continued to live the life of a political refugee, mingling with the Pak Yong-hyo crowd but not trusted by them. Of late he has been residing on Awaji island, where he earned a pittance by the practice of calligraphy. Orders are said to have suddenly reached him to kill U Pom-son, but while he was revolving ways and means the Japanese police arrived, and saved him from further mental perplexities on that score by lodging him in prison.

The agreement made last year by the Korean Foreign Office and a Japanese firm for the supply of machinery to manufacture what is known as the thirty-third-year pattern of rifle, has been carried out, and we read in Japanese papers that two Korean officials left Chemulpo on the 21st instant by *Tairen Maru* for Japan, where they will inspect and take delivery of the plant. Korea is already in a position to manufacture small arms, but this new machinery will give her an excellent weapon.

Thursday, September 24.

We hear again of the ex-leader of bandits Lin. Recently he was said to have become excited about some measure taken by the Russian authorities, and to have appropriated a sum of twenty thousand taels, where-with, re-assembling a body of his old followers, he retired to Antung. But now he makes his appearance at Yong Am-pho and is stated to have been recently in the employ of the Lumber Company. In Yong Am-pho he is said to be collecting free-booters for the purpose of some raid against the Lumber Company, at whose hands he considers that he has suffered ill treatment, and it is further reported that the Company has appealed to the Korean Government for protection. The only substantial fact emerging from the story is that some trouble has occurred between the Lumber Company and its Chinese employees, and that apprehensions of a disturbance are entertained. It is easy to conjecture what would happen should Korea—as is tolerably certain—show herself incompetent to deal with abnormal incidents such as are likely to arise in the Yalu Valley under existing circumstances. Russia can preserve order completely herself if she is at liberty to employ the necessary machinery, and while we do not for a moment accuse her of fomenting disturbances with the object of obtaining a mandate, we pay to her intelligence the tribute of believing that she would know how to turn any fortuitous troubles to good account.

A telegram from Antung, dated the 21st, says that a steamer of 1,500 tons, chartered by the Russians, has arrived at the mouth of the Yalu. She is laden with provisions, clothing and ammunition, which articles have been landed, partly at Yong Am-pho and partly at Antung, and she is now busily engaged taking in a cargo of timber at those places. In the same message it is stated that Antung is in a disturbed state, and that vigorous measures to restore order are being adopted by the Russians.

Friday, September 25.

The natural process of development is attending the latest phase of the Yong Am-pho affair. Lin, or some other leader of freebooters, having taken up his headquarters at Yong Am-pho, whence he threat-

ened the property of the Lumber Company, M. Pavlov applied to the Korean Government to protect his nationals. Thus far the sequence of events has already been narrated. Now comes news of the Korean Government's answer. They said that as no agreement had been concluded sanctioning the presence of Russian subjects at Yong Am-pho, they could not recognise any responsibility for the protection of the latter, since any one settling in Korea outside treaty limits must do so at his own risk. M. Pavlov's retort was obvious. He adduced the timber-felling concession as binding the Korean Government to protect Russian subjects engaged in that enterprise, and he pointed out that if such protection were withheld, it must be on the assumption that Russia would take steps to provide it herself by sending troops to the threatened district. Of course if Russia adopt any such measure the situation will be very much complicated, for assuredly Japan will not look on quietly while the initial steps are taken for a Russian military occupation of the Yalu Valley.

POLITICAL NOTES.

Monday, September 21.

The *Chino* has interviewed an imaginary or real Minister of State and records his statements. He is said to deny very emphatically that the Cabinet is inactive or undecided: the Cabinet, on the contrary, is doing everything that can be done. He also ridicules the rumour that whereas the Cabinet is weak, the *Genro* are strong: Ministers and Elder Statesmen are entirely agreed. The Government, in short, has a definite policy. It has resolved upon the steps to be taken next month when the day for evacuation comes. And there will be no error in saying that England, America and Japan are marching shoulder to shoulder in this matter. War, indeed, is another question that need not be discussed. But as to the general policy of Japan, the public will know something when the 8th of October comes.

How interesting it would be could implicit reliance be placed on revelations like the above. But it can not.

This association held a crowded meeting in Sendai on the 16th instant, and adopted a manifesto and a resolution. The manifesto declared that Russia's intercourse with Japan had been marked throughout by deception and arbitrariness. Ever since her first attempt to trespass, namely, at Tsushima, her policy had been uniform. Having contrived that Japan should evacuate Liaotung on the ground that its tenure would imperil the security of the East, she had then occupied it herself, and made it the basis for various enterprises against that peace. After the Boxer trouble, she alone among the Powers had sought to enrich herself territorially by means of their united labours. She had occupied Manchuria, and then, having publicly promised to withdraw her troops, she had broken her promise with equal publicity. In all respects she was a mischievous disturber of the tranquillity of the Orient. Therefore the meeting unanimously resolved that:—"The recent procedure of Russia amounts to an unspoken challenge to our country to fight. If the Empire condone this, it will be acting disloyally towards the peace of the Far East and will be disregarding the interests of the country and its reputation. Therefore the officials concerned should at once have recourse to the ultimate step."

Tuesday, September 22.

Messrs. Oishi Masami and Inukai Ki, the two Progressist leaders, are to leave Japan on the 23rd instant for the purpose of visiting Korea, China and Manchuria. This step, which in the eyes of Englishmen looks very natural, is variously considered by Japanese journals. Some say that the unsettled condition of the Party inspires the departure of the two leaders, inasmuch as all dissensions will stop short of actual rupture during the absence of Messrs. Oishi and Inukai. Others think that the object of the travellers is to amass material for attacking the Government in connexion with foreign politics. Our own impression of Messrs. Oishi and Inukai is that they are far too resourceful to need any journey to distant lands for purposes of collecting such material. They have never shown themselves puzzled to collect it at home in abundance when an assault upon the Government was in question.

Wednesday, September 23.

Yesterday morning the Emperor distributed the temporarily held portfolios as follows:—Mr. Hadano Keichoku, hitherto Vice-Minister of Justice, becomes Minister; Baron Kiyoura, hitherto Minister of Justice, becomes Minister of Agriculture and Commerce, which post he had been temporarily filling; Mr. Kubota Yuzuru, a member of the House of Peers, becomes Minister of Education, an appointment for which his long connexion with the Education Department had more or less prepared the public; and Mr. Oura Kanetake, hitherto Chief of Police, becomes Minister of Communications. As to who succeeds Mr. Oura at the Police Bureau there is no information yet. It is confidently affirmed that this distribution of portfolios is in consequence of the problem of administrative reform having been finally settled, and the general lines of next year's Budget fixed.

Thursday, September 24.

It appears to be pretty generally thought in journalistic circles that the new portfolio-holders are to be elated with what are commonly called *Banshoku-daijin*, that is to say, men chiefly useful for purposes of social entertainment. The *Nichi Nichi Shinbun* alone views the appointments with gravity and speaks of the new men as not unlikely to justify the important selections that have been made. It strikes us as interesting if not curious that whereas the representatives of public opinion in Japan lose no opportunity of ridiculing and even denouncing the idea that Ministerial posts must be filled from the ranks of the Meiji Statesmen, of their immediate followers, or of prominent politicians, they nevertheless find only contempt for any departure from the rule they condemn. To outsiders what has happened assumes the aspect of a natural promotion. Men of the younger generation are entrusted with the direction of business that has hitherto occupied their official attention for many years in subordinate capacities. That is the usual sequence of events in other countries, and in Japan it has the additional significance of an intimation that the Cabinet sees no need to strengthen itself by recourse to the *Genro* or their nominees. Yet it presents itself to Tokyo newspapers in the light of a species of farce, which apparently proves that Tokyo newspapers are not themselves educated up to the standard of administrative principles which they are accustomed to preach for the benefit of those in power and out of it.

A FOREIGN DIPLOMAT'S OPINION.

The *Shogyo Shimpō* publishes what professes to be an epitome of views advanced by a foreign diplomatist in Tokyo with reference to the Manchurian question. The speaker is represented as blaming the Japanese people for want of reflective power. They seem to imagine that the direct negotiations with Russia have been interrupted by the new demands preferred in Peking whereas as yet even the exact nature of these demands is unknown. They also talk of Germany intervening for the purpose of inviting a council of European Powers, which is an extravagant notion at this stage. Altogether this foreign diplomat seems to have a very poor idea of the Japanese people, whom he declares to be easily misled by trifles and quickly thrown into a state of excitement. Of course it would be fruitless to enter into any discussion with a critic so shadowy as this anonymous informant of the *Shogyo*, but we may perhaps express our own opinion *en passant*, namely, that so far from being quickly thrown into a state of excitement by trifles, the Japanese people and their rulers have shown throughout this crisis an extraordinary degree of self-possession and sangfroid. It may also be pointed out that the rumour about Germany's intervention had its origin in Europe, was telegraphed to Japan by a foreign news agency, and did not obtain one moment's credence in Japan or elicit so much as one article from a Tokyo newspaper. We are disposed to say that if this anonymous diplomat's observation of things in general be as faulty as his remarks show it to be in the case of the German intervention, paramount importance does not attach to his views. What he says at the close of his comments, however, appears to be undoubtedly true, namely, that the unsettled state of affairs in the Balkan Peninsula must impose a check upon Russia's doings in the Far East. We have never, for our own part, believed, nor do we now believe, that the Russian Government has any wish for war, or that Russia would not exhaust every expedient to preserve peace. But we do think that the acts of Russian officers and officials at the front are often very difficult to reconcile with the pacific intentions of their Government.

The *Fiji Shimpō* publishes an analysis by a Japanese statesman who argues from the extreme secrecy maintained by the Japanese Cabinet that it is taking no resolute step, but is rather confining itself to the passive note of giving warnings and formulating protests. The Japanese public learns nothing about foreign affairs except through the medium of foreign telegrams, and the inference deduced by this politician is that the Cabinet has nothing to tell. He therefore concludes that the empire's foreign policy is a failure, for if it displayed becoming activity, Japan would be the recipient instead of the issuer of warnings and protests. There can be no denying that domestic affairs also present some difficulties. The task of continuing the various public works without recourse to new taxes and of courageously cutting down administrative expenses, is one that may well try the ability of the country's financiers. But although the nation may pardon partial measures in the region of domestic matters, it will not condone a policy of make-believe in foreign affairs, and if the Cabinet continue its present course of passive drift, the Minis-

try will soon have to choose between going out of office and making war.

We wonder whether the *Fiji Shimpō* entirely endorses these views. Its own line has been of late to advise that the Government should take their courage in both hands and make a bold effort to settle the Manchurian question. Failure in that case would seem far less reprehensible in the eyes of the nation than the total compromise of the situation by timid opportunism.

THE "SEIYU-KAI" AND FOREIGN POLITICS.

Various rumours are published about the *Seiyu-kai's* attitude towards foreign politics, but the general impression conveyed by journalistic comment is that the Party will not take any special action. Recently, as reported in these columns, a committee of investigation was appointed, but it is said that this step has provoked much criticism, as indeed is not unnatural. For what is there to investigate? In the face of the very remarkable success attending the Cabinet's resolve to maintain secrecy, from what source could a committee of investigation obtain materials? The facts already known to all intelligent observers represent the sum of accessible information, and the only supplement these facts could receive at the hands of a party committee would be, perhaps, some official assurance obtained at an interview in the Foreign Office. Such an assurance would necessarily be couched in general terms, and the degree of weight carried by it would depend entirely on the mood of its recipients. Thus we come round to the fact that if the *Seiyu-kai* desire to be obstreperous they can go to work at once without awaiting the result of any investigation; and if they have no such desire, an investigation is quite superfluous.

We are inclined to think that the semblance of activity now shown by the big party is a mere reflection of the *Tai-Ro Doshikai's* doings. Associated with the latter are many members of the Progressists, and in the face of such agitation as the *Doshikai* has recently carried on, the *Seiyu-kai* can not afford to remain altogether apathetic. Yet the *Doshikai's* doings ought to be sufficiently deterrent. For when the leaders of that coterie set themselves to consider the problem accurately, they obviously found that only two alternatives offered for advocacy, namely, implicit reliance on the Cabinet which is endeavouring to find a peaceful avenue from the tangle, or an appeal to the sword. It is, in very truth, the latter that the *Tai-Ro Doshikai* has chosen. Their last resolution—the one adopted at the Sendai meeting and forwarded to the Government—ends with an expression of hope that the Authorities will at once have recourse to the *ultima ratio* (*saigo no shudan*). Nothing easily conceivable could do less credit to the intelligence and patriotism of these politicians. For they do not know, most assuredly they do not know, what are the exact factors of the problem, or what reasonable hopes offer of an amicable solution. Yet they declare for war. Compared with such recklessness the attitude of the *Seiyu-kai*, whether they sit quiet, or save their consciences by recourse to obviously abortive committees of investigation, is incomparably more respectable and public-spirited. They may be well assured that their prudent inaction will not ultimately be misconstrued by the nation.

We may mention in this context a really

picturesque romance for which the *Yomiuri Shimbun* is responsible. Marquis Ito, we are told, being virtually the Cabinet's adviser on foreign affairs, has become discontented with its half-and-half policy, and has accordingly been despatching various telegrams on his own account to Mr. Kurino in St. Petersburg. A very long message sent across the wires by the distinguished statesman some days ago, has remained without an answer, and accordingly—what? One expects to hear that an explanation of the delay was sought or that some other practical measure was taken. But, no. What ensued was that Marquis Ito went to bed, sick. There are actually folks, we presume, who find that such rancid nonsense is grateful palubum.

RUSSIA AND HER RAILWAYS.

In the course of an interesting series of articles published by the *Railway Age*, Mr. R. H. Meyer takes up the case of Russia, where 65 per cent. of the railways are owned and operated by the Government. As in the case of Germany and the other states previously reviewed, Mr. Meyer, according to an exchange, shows clearly and conclusively, how Government ownership has retarded the development of the country, through the fact that the influence of sectional interests has prevented the railways from assisting in the creation of traffic in sections where such assistance was absolutely essential to success. In Russia where the State does not own and operate the railways, it controls the rates, so that the independent railways are, as far as rates are concerned, practically on the same footing as those owned and operated by the State.

In 1888 the Russian Government issued a grain tariff which was designed to encourage the raising of grain in remote regions of the country. This was done by means of a tariff with rapidly tapering rates. For the first 240 miles the rate was 1.647 cents per short ton mile; for the next 830 miles it was 0.495 cent per ton mile, and for the following 880 miles it was 0.197 cent per ton mile, or much less than cost. Grain shipped over 1,950 miles was to be carried on the supposition of its being shipped 1,950 miles only. This tariff was the application of the American rule of charging the traffic what it would bear, and it worked most successfully in inducing the cultivation of grain in the more remote sections which would have been left in a precarious condition but for the cheapness of the freight rates the tariff provided.

The new policy, however, met with stern opposition in central Russia, which had previously enjoyed the monopoly of the important Russian domestic markets. The cheap long distance hauls gave them a competitor and, with the world-wide fall in the price of grain, precipitated a decline in land values in central Russia. The result was an appeal to the Government which it could not ignore, and it was met by establishing local zones in which a favourable rate was made, 213 miles being the limit. Then the export demand ceased and the long-distance grain intended for export flooded the central Russian markets. The appeal for relief was renewed, and the zones extended to 351 miles, while the long-distance rates were increased in order to offset the loss occasioned by the reduction of the local rate. To-day the principle of charging the traffic what it can bear is practically dead, and the grain grower in the remote districts is impoverished by the high railway rates he is compelled

to pay. The growth of the country is retarded because the power to regulate rates is in the hands of those interested in central Russia, and they utilize that power to retain their home markets for their own use.

THE TOYO KISEN KAISHA.

The shareholders of the Toyo Kisen Kaisha held their half-yearly general meeting on the 20th instant, and passed the following statement of accounts for the period January 1st to June 30th, 1903:—

	Yen.
Profits	336,988
Brought over from previous account	72,508

Distributed as follows:—

To Ordinary Reserve	20,000
To Reserve for equalizing dividends	120,000
To Dividend (12 per cent.)	195,000
To next account	74,496

These figures, it must be confessed, leave much to be desired in point of accuracy. We learn from them nothing about the gross earnings, nothing about the expenses, and nothing about the portion that subsidies represent of the profits.

Mr. Asano, President of the Company, said, in a speech presenting the accounts, that the half year under review had been very unfavourable. There had been a diminution of cargo to the extent of 5,000 tons, or 10 per cent., as compared with the corresponding period in 1902, and a diminution of 9,000 or 22 per cent., as compared with the second half of the latter year. This bad result had been mainly owing to the competition of a rival company which, by means of low freights, had captured a large part of the flour-carrying trade. The depreciation of the dollar, a weak demand for American goods in Southern China and the Straits Settlements, the rumours of a Russo-Japanese war, the floods in America—these are factors that contributed to the bad result. In the matter of passengers, however, a fair record had been attained; first-class passengers both ways, and third-class passengers from Japan had increased, but other passengers had diminished. Of course, since the companies running steamers to San Francisco had taken special pains to attract first-class travellers, this result was a matter for congratulation. The reduction in Chinese passengers to the United States was due to the exclusionist attitude of the latter, and the reduction in Japanese passengers to Hawaii was because of the action taken by the Foreign Office in Tokyo, and because of the operation of the American law of immigration. The President called special attention to the fact that the administration of the Company had succeeded in effecting economies to the aggregate extent of 80,000 yen in working expenses.

THE BRIGAND LIN.

The brigand leader Lin, who has hitherto been supposed to be in Russian employment, seems to have reverted to his old habits. He has made a destructive raid against Antung, and a mixed force of Russians and Chinese are now attempting to punish him. It will be said, of course, that this outbreak is of Russian contriving, but a theory of that kind is impossible to reconcile with the repressive measures attributed to the Russians. One thing is certain, namely, that so far as the general public knows, Manchuria in Russian occupation has been much more tranquil than it used to be when the administration was under Chinese control. In former years it

was a much disturbed place, where mountain banditti appeared to defy the authorities and where life and property found little security. The Russians adopted the device of converting the brigands into guardians of the peace, and an excellent device it proved, if we may judge from practical results.

A somewhat sensational account of Russian doings is given by the Governor of Mukden, now on a visit to Peking. The *Jiji Shimpō's* correspondent represents him as saying that the aggressive doings and self-seeking demands of the Russians are of such a character as to make it nearly impossible for the high officials in Manchuria to discharge their duties, and several resignations may be anticipated soon. Probably that is true from a Chinese point of view. The Russians must be detestable in the eyes of all patriotic Chinese just as they would be in the eyes of any Western people under similar circumstances. It is not to Chinese sources, therefore, that we should look for a just appreciation of their administrative methods. Facts are more trustworthy, and judged by facts they have been successful, which, for the rest, is what we should have expected from their Asiatic record.

OUTLAYS FROM THE RESERVES.

The following appropriations from the Second Reserve were announced in the *Official Gazette* of the 18th instant, with due sanction of the Throne:—

Expenditures on account of prevention of contagious diseases	Yen. 37,165
Expenses of destruction of noxious insects	71,198
Purchase of Consulate at Newchwang	51,383
Cost of raising and repairing the <i>Soko</i>	51,241
Cost of removing the inhabitants of Torishima in the Riukiu Group	17,352
Cost of compiling temporary text-books	14,250
Expenditures in connexion with the Camphor Monopoly	332,774
Expenses connected with preserving order at local elections	93,000
Extraordinary Investigations in China and Korea	150,000
Preservation of Kelung Harbour Works	233,725
Restorations necessitated by storms and inundations in Formosa	66,275
Construction of offices, &c., for purposes of the camphor monopoly in Formosa	57,000
Expenses incurred in connexion with the timber-felling affair in Korea	2,903

It will be observed that among these outlays is included a sum of 14,250 yen for the compilation of text books. This item, in the shape of an appropriation of some 22,000 yen, was altogether excised by the Diet last session, and the Government then announced that as the schools could not be left without text-books, the Ministry would take the responsibility of ignoring the Diet's action and providing the money independently. The amount has been reduced by about one-third, but the fact remains, and much capital will of course be made out of it by the Opposition. As to the appropriation of over three hundred thousand yen for the purposes of extending the camphor monopoly to the main island, a supplementary budget was not introduced last session in consequence of the Government's undertaking not to bring forward any further budgets subsequently to the compromise with the *Seiyū-kai*. But inasmuch as the Diet had actually passed the bill for extending the monopoly, it seems inevitable that the Cabinet should take the responsibility of providing the necessary funds. We may remark, *en passant*, that the system goes into operation from October 1st. The appropriation on account of Kelung harbour works is another point demanding notice.

Originally the Diet was asked to vote some 650,000 yen. Included in that sum were the expenses of continuing the work. The Lower House refused to grant anything, in spite of the explanations of Dr. Goto that without some outlay for purposes of maintenance at any rate, heavy loss would be incurred. The sum of 233,725 yen now appropriated out of the Reserve is believed to be solely for maintenance. It is not quite clear what is meant by "expenses in connection with the timber-felling affair in Korea," but these doubtless admit of easy explanation.

THE ELECTRIC RAILWAY QUESTION.

Saturday, September 19.

The prospect of two general meetings of the same shareholders of the same company at the same place and the same time, which is apparently what will happen on the 23rd instant, is now creating no little excitement in Tokyo. Our readers have already heard about these meetings—one summoned by the inspectors of the Street Railway Company in the interests of the amalgamation party, the other by the directors opposed to amalgamation. That the "stalwarts" of former days will be resuscitated by such an occasion seems to be regarded as inevitable and the police are making due arrangements. Meanwhile Mr. Amenomiya's section are proclaiming that from the moment when the Street Railway Company abandons its independent existence, its charter lapses *de facto*, and a new official lease of life will have to be obtained. The Tokyo City Council are said to take the same view, and, indeed, we imagined that something of the kind had been accepted from the first as inevitable. But the Council are also said to be determined that if the amalgamation scheme fail, and if the Street Railway Company remain independent, the latter shall be compelled to adhere to Mr. Amenomiya's promise of uniform 3 sen fares. It is at that point that the anti-amalgamation party must fail, we think. For is it conceivable that any electric railway could be profitably run on a uniform charge of three farthings for all distances? We find it inconceivable. If a medium figure were taken as the uniform fare the project would sound rational, but to take the minimum figure is surely extravagant. Mr. Amenomiya may be actuated solely by solicitude for the public weal. He may be a *rarissima avis* among the race of "promoters." But our own opinion is that history will have to write him down as an obstructor, witting or unwitting, of Tokyo's progress.

Monday, September 21.

The Chief of Police invited, on the 19th instant, two representatives each of the amalgamation and anti-amalgamation sections of the Tokyo Street Railway Company to attend at his office. He informed them that without entering in any way into the merits of the fundamental question, he wished to remind them that public peace and good order could not fail to be jeopardised if two bodies of contending shareholders held meetings at the same time in the same place. He was unwilling, he added, to employ police intervention in affairs of mercantile companies, but unless these meetings were separated, or unless one of them were postponed, he would be obliged to take corresponding steps. The best plan would be for both sides to come to some arrangement beforehand.

It is said that this decision has greatly pleased the anti-amalgamation section, for, in the matter of *bona fide* votes, defeat stared them in the face on the 23rd instant. No one doubts that the Chief of Police intends to be just, but certainly it does seem hard that he should feel compelled to take a step which makes for the advantage of one section. The pro-amalgamation section were the first to call a meeting on the 23rd. It was by the anti-amalgamation section that another meeting at the same time and the same place was subsequently summoned, and although the whole responsibility for violent contingencies rests thus upon the latter section's shoulders, the whole loss has to be borne by the former.

Tuesday, September 22.

The public must be growing very weary of this interminable affair, but as we have recorded its developments up to the present, we add now that the Inspectors of the Street Railway Company have addressed to the Chief of Police a memorial which sounds to us perfectly just and reasonable. The documents explain the situation briefly. At the celebrated general meeting on the 28th of July, a majority of the shareholders voted in favour of amalgamation. But a minority under Mr. Amenomiya and Mr. Tachikawa took the opposite view, and not only refused to abide by the decision of the majority, but also had recourse to various expedients productive of friction and confusion. It being evident that the due control of the Company's affairs had passed out of the hands of the Directors, the Inspectors, acting in accordance with the powers vested in them by law, convened an extraordinary general meeting for the 23rd of September, with the object of reconstituting the Board of Directors. Up to that point no apprehension of disorder presented itself. But upon issue of this notice by the Inspectors, the objecting Directors at once issued a counter-notice convening another general meeting at the same time and the same place, for the purpose of deposing the Inspectors. These Directors, then, stand in the position of defendants. It is by their act alone that the interests of public peace and good order are imperilled, and the memorialists suggest to the Chief of Police that the plain exit from the dilemma is to require these Directors to change the time and place of their meeting, instead of attempting to hold the Inspectors responsible as would be the case were both parties required to abandon their project.

From the point of view of outsiders it certainly does seem quite plain that in this particular phase of the dispute the whole fault is on the side of the anti-amalgamationists. Their action in convening an opposition meeting at the same time and the same place is an obvious attempt to create disturbance, and nothing could be more opposed to the principles of justice than that this action should be converted by the police into a plea for punishing the amalgamationists by interrupting their legitimately summoned and apparently pacific meeting. If the police interfere at all it should be to restrain the anti-amalgamationists from a course plainly perilous to good order. We do not doubt that the police themselves take that view, and that when Mr. Oura addressed himself to both sides simultaneously on the 19th instant, it was probably because he hoped to bring about a pacific settlement without recourse to the strong arm of authority. The police have no manner of right to interfere with a lawful meeting convened in a perfectly regular

manner simply because another meeting of a plainly disorderly nature is planned by another party. Those that were first in the field are entitled to claim official protection.

Wednesday, September 23.

Messrs. Amenomiya and Tachikawa, having considered the caution addressed to them by the Chief of Police, have replied that they can not see their way to postponing the general meeting summoned by them for the 23rd instant, and as the other side, who took precedence in summoning a meeting, naturally decline to be thrust out of the field, it results that the two meetings will take place simultaneously, and probably both will share the fate of being suspended by the police, unless indeed the partisans of the rival views show a degree of forbearance which we are not justified in expecting.

Thursday, September 24.

What might perhaps have been foreseen has occurred. The committee recently appointed by the Tokyo City Council to consider the question of electric railways, has recommended that the charter of the *Shigai* Company should be resumed and that the Municipality should take the enterprise into its own hands. The reason assigned is not elaborate. It has the simple form that whereas the need for better means of communication is urgently felt by the city, the disputes now going on among the shareholders of the *Shigai* Company must greatly postpone the progress of the work, and the effective remedy for the situation is that the Municipality should step in. Of course that is only the committee's view. But it is not unlikely to be adopted by the City Council, nor would the public greatly pity the *Shigai* Tetsudo promoters, who, by their unseemly squabbling, have seriously delayed an important work and, at the same time, brought ridicule on the business faculties of the Tokyo citizens. It has to be remembered that the dispute now raging is not by any means the beginning of the events that have kept Tokyo so long without electric railways. For years a charter could not be granted in consequence of rivalry among promoters. Perhaps it would be unjust to say that the present wrangle has had much effect in delaying the work of construction. But it has certainly had some effect, and with regard to its unsightly and disgraceful character there can be no second opinion.

An attempt has been made by Mr. Inouye Kakugoro and other members of the *Shoko Keizai-kai* (Commercial and Industrial Economic Society) to bring about a compromise. They proposed that each party should withdraw its proposals and legal proceedings and that all the Directors should be removed from office. In fact, their idea was to revert to the *ante-bellum* position minus the fighting Directors. It was supposed that the amalgamationists would object to these conditions, but they did not. They merely asked that a rider be added requiring Mr. Amenomiya to resign in the event of his being again elected a Director. The anti-amalgamation party were then approached. They required that another condition be inserted providing for the appointment of a committee to consider the question of 3-sen fares. A compromise now seemed certain when suddenly the anti-amalgamationists changed front and insisted that the 3-sen-fare system must be adopted as a part of the compromise. That, of course, was a method of declaring that amalgamation must be finally abandoned. Therefore Mr. Inouye and the peace-

makers, seeing the case to be hopeless, withdrew altogether.

As we go to press news reaches us that the two meetings of the Tokyo Street Railway Company ended in a complete fiasco. The pro-amalgamation Directors and some other leaders were discussing, in a separate room, what course to take, when the Inspectors, by whom the pro-amalgamation meeting had been summoned, opened the meeting prematurely in the principal chamber. A dispute at once arose, and furnished to the anti-amalgamationists precisely the opportunity they desired. Crowding in, they insisted that the meeting was illegal and a scene of the greatest confusion ensued. There was no actual recourse to violence, but in the end the police, seeing that trouble must ensue if no authority were exercised, announced the dissolution of the meeting in the interests of peace and order. A considerable time passed before the members understood that such a decree had been issued, but as over a hundred constables assisted to circulate the knowledge, the members finally dispersed quietly.

Friday, September 25.

The *Nichi Nichi Shinbun* and the *Nippon* unite in advocating the cancellation of the Street Railway Company's charter and the taking over of the work by the Tokyo Municipality. But that is more easily said than done. It would be a quaint result, however, if achieved—a veritable illustration of the snipe-and-clam dispute. Probably the threat will have the effect of rousing the combatants to a sense of their real danger. The meeting on the 29th instant will be conclusive, we imagine. At present the chief responsibility of refusing a compromise is on the shoulders of Mr. Amenomiya and his friends.

BARON ROSEN.

Baron Rosen left Nagasaki in the *Rurik* on the 23rd inst. His visit to Port Arthur at this juncture naturally evokes some comment from the Japanese press. The *Fiji* writes as though some conferences had taken place between the Baron and the Foreign Office in Tokyo, the result being this trip to Liaotung. Thus interpreted, the incident would signify that the negotiations hitherto carried on or perhaps it would be more correct to say essayed—by Mr. Kurino in St. Petersburg are to be replaced by direct negotiations with Viceroy Alexieff at Port Arthur. But we note that the *Fiji* makes this suggestion on the declared authority of hearsay only. The *Chiuo Shinbun* regards the incident in a different light. Speaking similarly on the authority of rumour, it explains that the Russian Government, persuaded of Japan's inability to find funds for fighting, had been treating her attempted negotiations with something very like contempt, and simply putting her proposals aside for consideration in the distant future. But it having become quite apparent recently that the Japanese nation is a unit in this matter and that its views can not be treated with indifference, Baron Rosen has proceeded to Port Arthur to put Viceroy Alexieff in possession of accurate information.

Other vernacular newspapers merely note the fact of the Baron's departure and conclude that it certainly has some relation to foreign affairs.

It does not appear to occur to our contemporaries that Viceroy Alexieff is on the point of holding at Port Arthur a council of

all the principal officers and officials within his command, and that he may very reasonably have desired the assistance of Baron Rosen's advice. But while making this suggestion we do not wish to minimize the importance of Baron Rosen's visit to Port Arthur, for not only his very exceptional knowledge of Far Eastern affairs in general and of Japan in particular, but also his liberal and moderate views can not fail to produce a salutary influence on the personages assembled at Port Arthur.

THE WEATHER.

The Riukiu centre of depression also seems to have innocently taken its departure, and although Tokyo and Yokohama have been visited by heavy rains during the past two days, no storm is apprehended. To-day (21st) is the last of the critical periods, the autumn *higan*, and the situation is now held to be finally safe.

There has been something of a hurricane within the past two days. The centre of the disturbance travelled along the west coast of Kiushu; then crossed the main island at Okayama prefecture; then travelled up the Sea of Japan, and suddenly trending to the east, recrossed the main island and emerged in the neighbourhood of Sendai. It was accompanied by a good deal of rain, but no special damage seems to have been done.

On the morning of the 22nd a centre of depression declared itself in the neighbourhood of Oshima, off Kagoshima, and travelling towards Kiushu, made its entrance there in the afternoon, thence proceeding northward through the main island via Shikoku and Seto. From the morning of the 23rd, deluges of rain began to fall in Yokohama and Tokyo, and the approach of the storm was presaged by the usual signs. But although from half past one to three o'clock in the afternoon the wind blew with considerable force in Tokyo, it did not nearly develop hurricane violence and subsided, before sunset, into a moderate breeze.

The storm on the 23rd entered the main island of Japan at Hamamatsu, travelling westward, at 11 a.m., and reached Kofu at 2 p.m., passing thence to the northern part of Echigo where it emerged into the sea. The barometrical reading at Hamamatsu was 726.8mm. and that at Kofu 740. Tokyo and Yokohama fortunately lay beyond the direct track of the storm but they did not escape deluges of rain. During recent times it is said that, with the exception of 1897, no such rainfall has been experienced. The quantity in that year was 34 mm. in a hour, and the quantity on the 23rd instant was 26.9mm. Accurate reports have not yet been received as to the amount of damage done, but a telegram from Kofu, published by the *Asahi*, says that the crops in that region did not suffer appreciably. In Tokyo, the Fukagawa and Honjo districts were inundated as is their invariable fate on such occasions, and at Yodo Bashi a terrible calamity occurred. A species of whirlwind burst over the place at about 11 a.m., wrecking an elementary school. Seven of the students were killed and 14 injured, among the latter being a female teacher and a male teacher. Very terrible descriptions are given of this calamity. This school was built last year, and we observe with satisfaction that its fate elicits a leading article from the *Fiji Shimpo* commenting on a topic which must often have presented itself to observers of Japanese

school edifices, namely, that they are built in a cheap, flimsy manner such as necessarily exposes them to all sorts of accidents. Several houses in the vicinity of the school were overturned, but there was no loss of life. In Sendaya-mura and Tsuno-hazu-mura also some twenty odd buildings were wrecked, and in Ochiai-mura one half of an elementary school was destroyed. The wind by which these damages were wrought seems to have been quite independent of the typhoon itself, for in the city of Tokyo the gale did not at any time develop alarming proportions. Tochigi Prefecture seems to have suffered, as did also Matsumoto in Shinshu, and it is of course inevitable that the rice crop will be found to have been more or less injured, though at the present moment few apprehensions seem to be entertained on that score.

YOKOHAMA

Heavy rain fell during Wednesday night and Thursday morning and forenoon at Yokohama. The wind blew hard from the north at the outset but eventually with a rising glass changed to south-east.

In China-town the streets were deeply flooded and both there and in the Japanese district the water over-ran the house-floors. A portion of the No. 8 tunnel on the railway near Yokosuka was damaged but repairs were speedily executed.

THE TOKAIDO RAILWAY.

Complaints are rife among travellers on the Tokaido railway regarding the dining car and sleeping car accommodation. It is said with regard to the former that the food is unappetising, badly prepared, and carelessly served, while the condition of the *menu* cards handed round at each meal is filthy in the extreme, the cards being evidently used time and again until completely worn out. The dining car is generally placed next to the engine while the sleeper is placed at the rear of the train, the consequence being that travellers on getting up from their evening meal, have to traverse the whole length of the train, passing through the different classes of cars to reach the sleeper. Now this is a journey attended by many perils on the ill-ballasted tracks of Japan's premier railroad, especially for ladies, for the through trains, though dignified by the name of expresses, are not corridor trains like those running under similar conditions in America or England. One has literally to jump or scramble from car to car, avoiding as best one can the brake-apparatus that rises high between them. Of course it may be urged that the passenger should wait till a station is reached and then walk along the platform from the dining-car to the sleeper, or *vice versa*, but when the long distances between the stopping-places on the Kobe run are taken into consideration this is out of the question. Comparisons are always to be avoided, we know, but few will disagree with us, we think, when we say that these things are managed much more efficiently and satisfactorily on the Sanyo Railway. But then the Sanyo Railway is a private company.

TOBACCO AND "SAKE."

Our readers are aware that the Government has had it in contemplation for some time to take into its own hands the business of curing tobacco, and also to devise some system which should put an end to the great leakage now undoubtedly taking place in the payment of the *sake* tax. With regard to tobacco it is to be remarked that in France, where the consumption of the leaf is

supposed to be about equal to that in Japan, a revenue of 130 million *yen* accrues from the Government monopoly, whereas in this country the revenue from the same source is only 12 millions. Such a discrepancy is too glaring to be attributable to anything but a radical defect of system, and the Government's idea is that by taking the preparation of the leaf into their own hands, they will obtain a very different result. In the matter of *sake*, the salient fact is that whereas the quantity brewed 25 years ago and paying taxes at the low rate then imposed was over five million *koku*, the quantity on which the tax is now collected amounts to only 3½ million *koku*. Now, seeing that the population has increased by over ten millions in this quarter of a century, that the production of rice has also increased, and that with growing prosperity people are better able to drink good *sake* than they used to be; and seeing also that the system of *jikayōryo*, or domestic brewing for family use, has been prohibited, it is evidently beyond reasonable explanation that such a great falling off in the production and drinking of *sake* can have taken place. The truth is that the excise methods do not work efficiently, and since the loss of revenue resulting from failure to collect taxes on 1½ millions of *koku* is 22½ million *yen*, the Authorities are naturally disposed to bestir themselves about a remedy. They therefore propose to collect the tax in future in the form of *kuadashi-zei*, which means, we presume, that the impost will be levied on *sake* after it has been brewed, tubbed and put into stock. Bills in the sense of the above two measures are said to have been drafted for presentation in the next session of the Diet, and it is even affirmed (*Kokumin Shinbun*) that the Government has included the proceeds of the new tobacco system in the revenue for the fiscal year 1904-5. Of course there will be much opposition on the part of *sake* brewers and tobacco manufacturers.

THE KOKKA.

The 159th issue of the *Kokka* is now before us. We have already noticed that the beautiful magazine recently acquired additional attractions for foreign readers, an English description being attached to each of the pictures. This latest volume is fully up to the high standard of its predecessors. It opens with a very fine chromoxylograph of the celebrated portrait of Akasagarbha preserved at the temple Daigo. As a specimen of tenth century religious painting this is probably one of the most noteworthy examples in existence. The minute detail of the drawing, the rich harmony of colour, the combined grace and massiveness of the treatment, the strength and delicacy of line, the skill of the surface modelling—all these features evince a very high grade of art. Following this noble picture are two landscapes by Soami, one of the great triumvirate of artists that helped to promote the memorable æsthetic development in Yoshimasa's time. These sketches are in Chinese style. One could easily imagine them the inspirers of Claude's aerial lustre and tenderness, though Soami's work shows something also of Turner's sense of values. A pair of folding screens by Yūshō, Kano Eitoku's illustrious pupil, follow the Soami landscapes. Yūshō excelled in splendour of glowing colour, supplementing a fine instinct of decorative composition and much strength of line. The *Kokka* does not give us the colours: it shows only the beauty of the composition

and the accuracy of the drawing. Then follow three sketches by Kano Naonobu from the collection of Count Mizoguchi. The writer in the *Kokka* says happily of these that they are "rich in suggestiveness and in the beauty of economized strokes." They are true types of that quality in Japanese art which may be compared to the sound of music in the distance. Naonobu's pictures whisper to us a dream of nature, carry to us a breath of her graces but never obtrude any strong realities. This volume of the *Kokka* concludes with reproductions of an eighth-century statue of Buddha in dried lacquer, and of the beautiful bible-box from the Enryaku Temple, with which remarkable specimen of tenth-century lacquer readers of *l'Histoire de l'Art du Japon* are already acquainted. It is not to be questioned that every one possessing the *Kokka* has access to a truly representative gallery of Japanese art.

NOTES ON CURRENT EVENTS.

In South America, where coal is wanting, the rivers which flow down the western slopes of the Andes will form a fruitful source of power, says *Cassier's Magazine*. In Argentina a beginning has already been made at Cordova. Many of the rivers from the Andes are now absorbed in the arid deserts of the western pampas, and their regulation will serve the double purpose of irrigation and power. Brazil has one grand fall, that of Paulo Alfonso, 147 miles from the sea, on the Rio San Francisco, which is navigable in the autumn. By some who have seen both this fall is regarded as a finer sight than Niagara. Africa, with its four great rivers, and notable waterfalls, has a vast amount of water power in store for the future. Notwithstanding the requirements of irrigation some water should be available for power at Assouan, on the Nile. Above the first cataract are six more and farther south are the Murchison Falls, where the Nile descends 700 feet in ten to fifteen miles. On the Zambesi there is the Victoria Fall, which will soon be accessible by rail. Its height is more than two and a half times that of Niagara. At Stanley Pool, on the Congo, Stanley estimates the discharge when the river is lowest at 1,436,850 cubic feet per second, more than four times the maximum discharge at Niagara. In southern India a beginning has been made. Electric power is supplied to the Kolar gold fields from the Cauvery Falls, distant ninety miles; and it is estimated that 60,000-horse power can be obtained from the Periyar reservoir. There are other sources available for water power in northern India, some of which have already been considered with a view to their utilization. In course of time these great waterfalls of the world will all become centres of industry and manufacture. It is in the United States, however, that most progress is being made in the electrical transmission of water power. Forty-three companies, having a total capacity of 177,300-horse power, transmit power over a line distance of 1,549 miles or an average of thirty-six miles, with a voltage which ranges from 10,000 to 60,000 volts. The maximum distance over which power is transmitted is from Colgate to San Francisco, 220 miles, with a loss of 25 per cent. Waterfalls are made use of under the most varied conditions as regards volume and fall. At Niagara the body of water is large, and the fall is between 150 and 200 feet; at Sault Ste. Marie, between Lakes Superior and Huron, the body of water is also

large, but the fall is small, namely, twenty-four feet; at Colgate the body of water is small, but the fall is 1,500 feet.

America is at last beginning to rebel against the tyranny exercised by some of the labour organizations and steps are being taken in one or two of the larger cities to form rival organizations among employers and capitalists. To what an extent trade unionism has developed is strikingly shown in the city of Chicago. Every sort of labour is being unionized in that vast industrial hive. There are associations in Chicago of flat janitors, scrubwomen, freight handlers, hodcarriers, ice-cream churners, tuck pointers, teamsters, waitresses, stable employes, suspender workers, women cracker packers, and window washers. Stablemen were organized only three months ago, yet they have a membership now of 1,400. Preliminary to the universal organization of all forms of skilled and unskilled wage-earners into unions is the campaign which is being fought in Chicago over the absolute prohibition of work to non-unionists. The unionists are hoping to make necessary the showing of a union card before an applicant shall be permitted to earn his daily bread.

A striking commentary on this movement on the part of the workers is afforded by the fact that Messrs. Rand, McNally & Co., one of the largest publishing houses in America, employing more than 1,000 persons, is preparing to move its two big plants from Chicago in order to escape labour troubles. Officials of the company declare that it is impossible to maintain a plant like theirs in Chicago and meet the demands of the labour unions.

It appears that some of the local governors have issued proclamations urging the people not to indulge in expensive rejoicings and demonstrations because of fine harvest prospects. This step is roundly condemned by the *Fiji Shimpo* which denounces it as altogether grandmotherly, and declares that, so far from being productive of evil or extravagance, such rejoicings are at once harmless and useful. They cost very little and they exercise a comforting and inspiring effect upon the farmers. Our contemporary is curiously vehement in its criticism, but we are inclined to doubt whether the Japanese rustic is quite so far beyond the need of leading strings as the *Fiji's* article suggests.

The Navy has followed the example of the Army in celebrating the victories of 1894. We reported in our last issue that the battle of Pyong-yang has been the occasion of a festival at Shokonsha and in the Military Club. This was followed on the 17th instant by similar fetes at the Naval Clubs in Tokyo, Yokosuka and Fusan, to commemorate the battle of the Yalu. There was, of course, great enthusiasm. It is to be hoped that such demonstrations will not have an untoward effect in educating a warlike mood.

On the 17th instant Dr. Sato, the eminent Tokyo surgeon, assisted by Dr. Kanatsugi, performed an extensive operation on Prince Konoye. The patient was under the influence of an anæsthetic for 25 minutes, and the result of the treatment is said to be very satisfactory, thus far.

Marquis Ito has addressed a letter of deep sympathy and appreciation to the relatives of the late Ichikawa Danjuro. The Marquis refers specially to Danjuro's merit in seeking to raise the personal character of

Japanese actors from the low position to which it had fallen. His Excellency says that he first made Danjuro's acquaintance in the year 1878, and that ever since that time he regarded him not merely as a great actor, but also as an important figure in society. If the histrionic art of his country owes much to his exertions, so also does the whole brotherhood of actors.

There are now two vacancies in the ranks of the Field Marshals. Perhaps that is not quite a correct form of expression, for we have no reason to know that any fixed establishment of Field Marshals exists in Japan. But hitherto there have been only four, namely, Prince Komatsu, Marquis Saigo, Marquis Oyama and Marquis Yamagata, and as there has not been any apparent disposition to increase the number, it, may, perhaps, be regarded as a standard. Prince Komatsu and Marquis Satgo having died, there now remain only Marquises Yamagata and Oyama, and there is talk of appointing Admiral Count Kabayama to one of the vacancies. We should think the appointment would be very popular. Count Kabayama is one of the strong men of Japan, and if in matters of politics he has always been disposed to leave the helm in the hands of Marquis Ito, that is a proof of his perspicacity rather than of his insouciance.

Ten Chinese engineering students are on their way to Japan. They embarked in the *Nagato Maru* on the 17th instant from Tientsin. It has always been the fate of Chinese subjects educated abroad to disappear subsequently among the vast mass of their conservative countrymen, leaving as little trace of themselves and their works as the dewdrop makes upon the "silent sea." But we can hardly think that such futile absorption will be the fate of the hundreds of students now receiving instruction in the schools and colleges of Japan. They must have some effect in leavening the lump, if indeed the lump will be left leisure for such leavening, which is what we greatly doubt. Most of it will probably have been swallowed before the process of leavening has advanced perceptibly.

Japanese papers announce the completion and addition to the Japanese Navy of a light-draft gunboat, the *Uji*. She is intended for special service on the Yang-tse. Hitherto no Japanese steamer has ascended beyond I-chang, but it is expected that the *Uji* will have no difficulty in making her way to Chungking, and that she will also be able to navigate the Tung-ting Lake and reach Chang-sha. She was built at Kure—"built" is the expression used, not "put together." Two other gunboats for the same purpose were ordered some time ago from Messrs. Thornycroft. One of them, the *Sumida*, underwent her trials successfully on the 23rd of July. She is 145 feet long, has a displacement of 120 tons, a draft of 2 feet and a speed of 13 knots. We presume that the *Uji* is similar. The *Sumida* is built in sections, which have been taken apart and shipped for Shanghai, there to be put together at the building yard of Messrs. Farnham and Boyd.

With regard to the deposits to be made by foreign insurance companies, in compliance with the recent governmental notification, the Minister of State for Agriculture and Commerce gave on Saturday (19th) notice to the companies concerned, through Mr. Sufu, Governor of this prefecture, that the time for depositing the bonds or security is altered to January 31st next year. It

may be remembered that the original day for making the deposit was October 31st.

It is announced that four Japanese fishermen who were clinging to an upset boat in the sea between Iki and Tsushima, were picked up by a French man-of-war on the night of the 18th instant.

The *Shogyo Shimpō* alleges that the main lines of next year's Budget have been settled by the Cabinet, and that, in sum, a saving of 16 million *yen* has been effected, which will restore the balance. Some difficulty was experienced in dealing with the Departments of War and of the Navy, but it did not prove insuperable. Broadly speaking the figures are these:—

	Millions.
Reductions effected by postponement of works involving continuing outlays in the various Departments of State.....	6
Reductions effected in the ordinary expenses of the Departments of State ...	4
Reductions in various other outlays, as census taking, enterprises in China and Korea, extension of Telephones, riverine improvements, &c., on account of which 10 millions would have been required	6

Our contemporary adds that although it had been hoped to dispense altogether with bond-issuing, no other way presents itself to obtain funds for Formosan Works and for the Iron Foundry. Three million *yen* worth of bonds will therefore have to be issued.

In connexion with the Cabinet's attempts to effect administrative reforms calculated to ease the burdens of the Treasury, Count Inouye is reported to have addressed a list of suggestions to the Premier with special reference to the War Department. The Count shows all his proverbial accuracy and acumen in dealing with the subject, but the details of his recommendations would scarcely interest any foreign reader unless he happened to be exceptionally familiar with the organization of the Japanese Army. Among many other things Count Inouye suggests that the office of inspector-general should be abolished, as its duties might be easily performed by officers borne on the strength of the Divisions, and also that the special schools for preparing lads to enter the officers' college should be done away with. We do not find in the Count's essay any advice as to the reduction of the present military establishment. To illustrate the practical nature of his counsels we may note that he urges the feeding of soldiers in Formosa on Formosan rice, instead of transporting rice specially from Japan for their use. The amounts of the various savings that would be effected were these suggestions carried out are stated in percentages of the present appropriations, so that a long calculation would be required to arrive at an ultimate figure.

A new school has been opened at Waseda within the precincts of the university which has gradually assumed such important dimensions under the auspices of its founder, Count Okuma. The new institution is called the *Jitsugyo Gakko* (business school), and its object is to compress into the smallest possible compass of time all the instruction necessary for a man of affairs, omitting superfluities of every kind. There is accommodation for a thousand scholars, and it is believed that the institution will be thoroughly successful. The opening ceremony took place on the 20th instant, when an address explaining the objects and programme of the school was delivered by Professor Amano, the Principal, and a long letter of congratulation was read from Mr.

Yano Jiro. Mr. Yano, who has no special reason to be gentle to the present educational officials, took occasion to ridicule their indiscriminating adherence to rule and measure, and to point out that although, in consequence of official obstacles, the school had been necessarily placed on a lower level than that contemplated originally by its projectors, all educational experience showed that the real needs of the country were best satisfied, and the interests of students best consulted, by following comparatively humble branches of learning. Count Okuma also made a speech urging the utility of practical education.

The *Jimnin* seems disposed to compete with the *Niroku Shimbun* in the manufacture and publication of interesting legends. It lays before its readers a series of six demands said to have been submitted jointly by Japan and England in St. Petersburg, Russia being allowed 5 days to reply. The answer also is given in detail, so that the story lacks no element of accuracy except the one fact that it is probably made out of whole cloth from first to last. Its apologue is an announcement that England has officially intimated her readiness to assist Japan with troops from India and with ships should there be any need of such things.

Mr. Adachi Tsunayuki, hitherto Director of the Bureau of Police in the Home Department, has succeeded Mr. Oura in the post of Chief of Police in Tokyo. There was a time when the position of *Keishi Chokwan* was invested with much importance in a political sense, but the fact that it has been deprived altogether of any political complexion is significant of the changes Japan is undergoing.

The appropriations for the Railway Bureau are said to have suffered a reduction of 7 millions of *yen* in the Budgetary changes effected by the Cabinet. Eight millions was the amount originally fixed, but the Bureau officials represented that unless another million were allowed, they could not continue the works now in hand so as to complete them within the 45-years period fixed by law. Their remonstrance having been endorsed they will now be able to go on with the various constructions, except those of the West-Central Line, namely, from Nagoya to Shinshu, which is one of the most arduous from an engineering point of view.

YACHTING.

INTERPORT CUP RACES.

The race for the Interport Cup between the Kobe Canoe and Dinghey Club and the Mosquito Yacht Club took place on Saturday in Yokohama Bay. Messrs. Fawcner and Gillingham arrived from Kobe by the morning train bringing the thunderstorm with them all the way, but the weather cleared before the start, and in a light breeze a beginning was made about 11 a.m. In the draw for boats Messrs. Fawcner and Gillingham drew the *Pele* to represent Kobe, leaving Messrs. Gunn and Schellenberg to take the *Edna* to sail for Yokohama. The starting gun was fired at 10'55"; and *Edna* was first across the line, 30 seconds later, the *Pele* crossing at 10.55.38. The run to the harbour entrance was close hauled, when spinners were smartly set for a reach to the light ship. The remainder of the race was interesting as will be seen from the times below. The boats alternately lost and gained on each other slightly. On account of the heavy rain over night the main sheet of the *Pele* swelled and was hard to work through the blocks causing some trouble to her sailing master. On coming into the Harbour *Edna* bungled her spinnaker and some

time was lost in setting it right, but that did not prevent her winning by some five minutes, a race that was well sailed by both boats.

After tiffin the second race was sailed, *Pele* having a new main sheet. The sailing gun was fired at 2.25. The *Edna* was first across the line closely followed by *Pele*, 21 seconds later. There was a beat to the Tsurumi Mark Boat, the wind being fresher than in the morning; *Edna* passed the harbour entrance to windward of *Pele* and led at the mark boat 11.25s.; on the reach to the Lightship *Pele* was 2.45 behind; in beating to the quarantine ship she lost a further 49 seconds. On the run from the quarantine ship to the light ship *Pele* lost 8 seconds. She managed to pick up 8 seconds to the Mandarin Bluff mark boat but lost 19 seconds to the harbour entrance, leaving her 3'58" behind after a very good race, smartness in setting spinnakers and general handling being very noticeable on the part of both boats. Times:—

	<i>Edna.</i>	<i>Pele.</i>
	h.m.s.	h.m.s.
Start	10.55.30	10.55.38
H E	11.07.03	11.09.26
L S	11.25.00	11.28.48
Q S	11.35.07	11.40.36
L S	11.46.26	11.50.26
H E	12.08.18	12.12.26
Finish	12.18.22	12.23.21

2ND RACE.

	<i>Edna.</i>	<i>Pele.</i>
	h.m.s.	h.m.s.
Start	2.25.15	2.25.36
T M B	3.06.53	3.08.18
L S	3.25.17	3.28.02
Q S	3.35.01	3.38.35
L S	3.40.51	3.44.33
M M B	3.48.56	3.52.31
H E	4.03.40	4.07.33
Finish	4.14.25	4.18.23

The cruisers of the Yokohama Yacht Club had a race on Saturday round the Lightship and the Widow Buoy and home. *Daimyo* soon took the lead and kept it all over the course, *Asagao* sticking closely to *Nina*. Following was the result:—

	h.m.s.
<i>Wanderer</i>	4.02.15
<i>Nina</i>	3.58.20
<i>Daimyo</i>	3.50.20
<i>Molly</i>	4.03.35
<i>Asagao</i>	3.54.10

Thus *Daimyo* takes first prize and two points and *Asagao* second prize and one point.

Eleven "Larks" started and made a very pretty race twice round the breakwater, which, under such conditions of weather, proves an admirable course. The usual changes in position occurred during the contest, but No. 10 had the best of it all round and won very easily by over three minutes from her nearest rival, No. 1. Times:—

Nos.	h.m.s.
1	3.42.25
2	3.53.55
4	3.51.10
6	3.54.30
8	3.58.10
9	3.51.35
10	3.39.10
11	3.42.30
12	3.51.33
13	3.46.40
15	3.51.15

Thus No. 10 takes first prize and two record points, and No. 1 takes second prize, the handicapped cup, and one point.

The 39-raters were down for a race but it did not come off.

LANDSLIP.

A landslip occurred on Sept. 23rd at Minami-Ota, Yokohama, involving a stone wall on ground belonging to an ironware dealer named Sato, with the result that six dwellings situated below the hill were destroyed. An old woman was killed and two other women were severely injured.

THE PEKING EXECUTION.

MR. KU HUNG-MING, well known to readers of this journal and to all students of Confucianism, has addressed to the *N.-C. Daily News* a letter intended to repel the vehement criticisms evoked in Occidental circles by the fate of Shên Ke-hsien, who is said to have been beaten to death by order of the Empress Dowager. We have much admiration for Mr. Ku's ability, for his wide scholarship and for his remarkably facile use of the English language. But we can not altogether compliment him on this letter. He tries to prove too much. For first he tells us that Shên was not beaten to death, having been strangled after a few blows had been delivered with a bamboo, and then he alleges that execution by the bastinado is preferable in Chinese eyes to decapitation, since the former leaves the body intact. No valid defence can be based on the double plea that the incriminated act was not committed and that if committed it would have been justifiable. We willingly and gladly accept Mr. Ku's statement that the beating was not carried beyond a formality, but when we are invited to admit the humanity of the sentence itself from any point of view, a wholly new issue is raised. Besides—and this appears to us to be the really important point—Mr. Ku does not attempt to deny that an order to kill by beating emanated from the Sovereign in Council. Owing to disobedience on the part of the officials charged with the execution, the terrible mandate was not carried out, but how does that fact extenuate the conduct of those that issued the order? Does Mr. Ku invite us to believe either that the Sovereign when issuing the order foresaw its futility, or that death under the bastinado was imperially intended to be a merciful substitute for decapitation? What we should like to learn is that the sentence of death by beating was never expected to be executed, and if Mr. Ku can assure us of that he will deserve thanks, but his defence, as it stands, does not at all improve the case for the issuer of the order.

A very curious and interesting point insisted on by Mr. Ku is that in China punishments are prompted by detestation of crime, and that, as a logical consequence, the greater the crime the severer the punishment. He endeavours, at the same time, to institute a comparison unfavourable to Europe, where, he says, the motive of criminal punishment is to safeguard the pocket of the State. We need not pause to show the flagrant discrepancy between this latter proposition and the fact that Europe spends enormous sums on its prisons, its reformatories and its judiciary, whereas in China the outlay for such things is extremely small. We prefer to ask Mr. Ku whether mercy finds any place in the criminological creed he attributes to his nation. Obviously no place whatever. Where the object is to display detestation of crime by the severity of the punishment inflicted on the criminal,

the promptings of mercy must be wholly ignored. Yet, in a book—"The Discourses and Sayings of Confucius"—published by Mr. Ku Hung-ming himself, one of the gems of ethical doctrine attributed to a disciple of the great Sage is:—"If you should discover enough evidence to convict a man, feel pity and be merciful to him; do not feel glad at your discovery"; and in a foot-note to this passage, Mr. Ku quotes Goethe's saying:—"What a long way mankind must travel before they arrive at the stage when they know how to be tender to evil-doers, considerate to law-breakers and humane even to the inhuman. Truly they were men of divine nature who first taught this and who gave up their lives in order to make the realization of this possible and to hasten the practice of it." Finally, commenting on Goethe's words, Mr. Ku himself writes:—"People now speak of 'progress.' Progress, according to Goethe, here would seem to mean that mankind should 'progress' towards being more and more human. Judged by this, China, two thousand years ago, seemed to have already made real progress in civilization." Thus, then, the principle of Chinese civilization two thousand years ago was to feel pity for a criminal and be merciful to him, whereas the essence of her civilization to-day is to show detestation of crime by inflicting terrible punishment on criminals. We can not reconcile these analyses of Chinese civilization.

THE ALLIANCE.

THE *Nippon* is of opinion that the Anglo-Japanese alliance has proved a futile affair. Very sure about that is our Tokyo contemporary, but when we read on with much interest, hoping to learn where the alliance has failed and what it ought to have accomplished, we find no information whatsoever. The *Nippon* simply "swears at large." Frankly speaking, we are accustomed to that kind of mood on the part of our chauvinistic contemporary, but we do wish that, on this occasion at least, the editor would have condescended to say what he expected from the alliance and how it has disappointed him. Does he imagine that the allies, so soon as they joined hands, should have developed a hectoring mood, thrown their gauntlets in the face of this Power or of that, and devoted themselves to a general war dance in the Far East? It would be idle to expound the achievements of the alliance to men who have made up their minds to be discontented with it. When the news of its completion first reached Japan, the *Nippon* was the one and only journal in Tokyo that discussed the fact in such a spirit as to suggest that Japan might possibly be found suffering pariously from swelled head. We speak from very vivid recollection. Among nationals neither Anglo-Saxon nor Japanese, the *Nippon's* writing at that time created apprehensions that England had made a mistake, and that

the peace of the world would suffer from the consequences. No such fear visited those that knew the *Nippon* to be the representative of a very small coterie, and not at all the mouthpiece, of the Japanese nation. Now, therefore, we derive some pleasure from the *Nippon's* disappointment, and would direct to it the attention of those that based pessimistic prophecies on the writings of the same journal in the spring of last year. We are glad to think that facts have not fulfilled the *Nippon's* original conception of the compact. The Tokyo journal further condemns Great Britain's foreign policy as invariably unskilful and unintelligent. England, it says, is great in spite of her foreign politicians. Her people make her. Their courage, their enterprise and their ceaseless push are factors of growth which even inept statesmen can not impair. That is a very gratifying appreciation, but it suggests a speculation as to the *Nippon's* idea about the *provenance* of British statesmen. Are they not, after all, the best men that England can furnish to discharge the trust reposed in them? It is really very foolish to attempt any discrimination between the qualities of British officials and those of their nation. The nation is the seed plot of the official. He rises to his position of responsibility by a process of selection which fully guarantees his competence, so far as men of British origin can be competent. The fact is that in the eyes of publicists like the conductors of the *Nippon* there is no such thing in the whole wide world as a thoroughly efficient body of foreign-office statesmen. Nor will there ever be such a thing until the critics themselves take the matter in hand.

In this context we may note a contrast. The *Nippon* insists that by shaping her course in accordance with England's stupid inactivity, Japan is forfeiting her opportunities and her prestige. The weight of the alliance, in short, is clogging her feet so that she can not move forward to signal achievements. The *Berliner Neueste Nachrichten* considers that England is endeavouring to foment warlike feeling in Japan, and is further of opinion that the recent great assemblage of Russian and German warships at Vladivostok was intended to cool that feeling. We do not pause to consider whether the extraordinary hostility shown towards England by the German press during the past few years prompts the Berlin journal to class its country as Russia's ally in an anti-Japanese demonstration. But we ask which of the two newspapers is right—the chauvinistic journal of Japan which complains that England holds this empire in over-peaceful routes, or the German journal which accuses England of inciting Japan to fight.

It is stated that, after the Russian cruiser *Dmitri Donskoi* has finished her repairs in the port of Emperor Alexander III., she will go to Kronstadt for her trials, and then probably leave for the Far East.

URAGA.

A visit to the closed port of Uraga (we believe efforts are being exerted to make it a port open to foreign trade) reveals the fact that many changes have taken place in the locality since that time when in a roaring typhoon of September two training brigs, two dozen junks of the large kind with poops high as a cathedral, and a small yacht had refuge. In those days Uraga was a port of call for ships trading between southern ports and Tokyo, and any foreign craft desirous of obtaining anchorage had in stress of weather to seek a perilous berth. Three things however in those times distinguished Uraga from the other so-called harbours on the coast: it had deep water; it had a so-called dry dock consisting of a ship-way on which ships were drawn at high water, and it had as its *mi-age* the delectable compound known as *misu-ame*. Uraga, it may as well be said, was never the stopping-place for junks that Misaki was, for in the latter port the big boats used to congregate in times of adverse winds, and the humming from the houses on the hill kept you awake at night.

In later times the uses of Uraga have been changed. The great three storied junks have ceased to frequent it; steamers rush in hastily and as hurriedly depart, and the old dock of the Tokugawa times, banked up with stones, pretty much like the Yokohama Creek, alone remains of the old epoch. In recent years, also Uraga has undergone a further metamorphosis. At the head of the harbour where formerly the training brigs swung at their moorings, a large area of ground was taken in some years ago, and there are now the works of the Uraga Dock Company.

The Uraga Dock Company was formed some four years ago, its avowed object being to take advantage of the superior depth of water and the shelter from practically all winds for the purpose of establishing a dock and shipbuilding yards, for the repair and construction of vessels. The large dock is situated as we have indicated, with its accessory machine and boiler shops in the north western corner of the harbour, and is protected from all winds, even from those that blow down the funnel at the head of the harbour. This dock is 496.77 feet in length from entrance to head, 474.72 feet on the blocks, 69.8 feet wide at entrance, top, and 58.6 at bottom, the depth of water on the blocks being at springs 26.22 feet and ordinary tides 23.67, with at low water of springs 19.8 feet.

Last year the branch works of the Ishikawajima Shipbuilding Yard were acquired. These lie near the entrance to Uraga, and though the dock there is smaller in dimensions steps are being taken to secure that the depth of water approaching it shall not be inferior to that of the other establishment. The length of the dry berth here is 471.2 feet from entrance to head, 437.5 feet on the blocks; the width of entrance 65.5 feet at top and 53.6 feet at bottom, the depth of water on the blocks being 24.5 feet at springs, 21.9 feet at ordinary tides and 18.1 feet at low water of springs. Adjoining these works are the necessary shops all equipped as in the case of the head establishments with the most modern and labour saving machinery.

Yet it may be noted that the Uraga Dock people in busy times are never able to do with less than 2,500 men, though in slack seasons this number is reduced to a thousand. Practically all these work folks live in and constitute great part of the town of Uraga.

Recently, that is to say, in June last, the company was entirely reorganised. Mr. S. Tsukahara had resigned the office of President which was assumed by Rear-Admiral Hayasaki, and Mr. T. Yamaguchi, formerly superintendent in the Yokosuka Dockyard with the rank of rear-Admiral, took charge of the engineering department. At the same time changes were effected in the directorate so that the company is now freed from the elements that to some extent impeded its prosperity in the past.

An interesting object to be seen in the head dockyard is a collection of bent and distorted plates taken from the U.S. transport *Dix*, which

abraded large parts of herself against a sunken rock of Idzu the other day. There are no less than 24 of these plates, and while their bent and buckled condition testifies to the excellent quality of the metal, the fact that the job was finished four days inside contract time speaks loudly for the efficiency of the yard. But perhaps a letter from the commanding officer of the *Dix* may be adduced:—

War Department, Office of Quarter-master,
Army Transport *Dix*.

Uraga, August 24th, 1903.

To Rear Admiral HAYASAKI, I.J.N.

President, Uraga Dock Co.

SIR.—As the U.S. army transport *Dix* is now repaired and about to continue on her voyage to Seattle, U.S.A., I cannot depart without thanking you and through you the officers and engineers of the Uraga Dock Co., for the most expeditious and excellent work done by your company. It is the unanimous opinion of the officers and engineers of this ship that the repairs are well done and have been done in remarkably short time. Accept my sincere respects and good wishes for yourself and the Dock Company.

Very Respectfully,

THEODORE STERNBERG,

Capt. and Qr. Master, U.S. Army,
Commanding U.S. Transport *Dix*.

Recent work by the company includes the building of two hopper barges for the Yokohama Harbour authorities, one of which is already launched and both of which will be delivered by Oct. 10th. Of the same class of work is the construction of ten to fifteen small dredgers for Tokyo, one of which has already been delivered and has proved to be highly satisfactory. Also there has to be included in the line of present work the casting of a propeller for the *Hikosan Maru*, which operation to-day occupies great part of the casting shed.

At present the *Ugo Maru*, belonging to the Akita Steamship Company, occupies the No. 1 dock for overhaul; the German cruiser *Hansa* is expected on her third or fourth visit; the cruiser *Hertha* will follow her, and in all probability within the present week the U.S. cruiser *Cincinnati* will be docked. Among merchant vessels the *Fujisan Maru* is expected, and it may be noted that the Mitsui Bussan Kaisha have always availed themselves of the docking facilities offered by this company.

Despite its distance from Tokyo and Yokohama, Uraga will undoubtedly continue by reason of its deep water and fine modern plant to offer unrivalled attractions for shipping. Under the care of Admiral Hayasaki, who has complete command of the company's working details, of Mr. T. Yamaguchi, the new engineer superintendent, and of Mr. W. Mayejima, who so well represents the company's interests in Yokohama, it may be predicted that a new era of prosperity has set in for this most important enterprise.

AN ANGLO-RUSSIAN UNDERSTANDING.

(FROM OUR OWN CORRESPONDENT).

Port Arthur, Sept. 2nd—15th.

The *Novi Krai* of August 31st. (Sept. 13th) translates extracts from the long debate on the question of China, Manchuria and Korea that took place in the British House of Commons about the 23rd of July last, these extracts bearing mostly on the necessity of England and Russia coming to an understanding with reference to the Far East. It also writes on the same subject a leading article of which the following is a translation:—

"A whole series of articles have been recently devoted by us to the treatment of the theoretical basis on which Russia and England might be able to reach a basis for joint action in the Far East for the benefit of the international politics of the world. The considerations which were put forward by us as the foundation of this idea of ours must, it appears to us, have been sufficiently strong to persuade readers of the *Novi Krai* that our scheme was as practicable as it was rational. In order to ascertain if there was a favourable field in England for the reception of this doctrine among the ruling classes, as well as in the Press and among the Public at

large, our regular collaborator, Mr. E. S. Levikoff, was specially dispatched some time ago to London. From the time we first launched our proposal for an Anglo-Russian *rapprochement* in the field of international politics, no small time has elapsed, in the course of which important events have taken place in several European nations, events which have necessarily tended to alter the reciprocal relations of the Powers. The most important of these events have been the undoubted *rapprochement* between our ally France and England, the appearance of symptoms signalling the break-up of the Anglo-Japanese alliance, the very successful individualizing by Germany of her action in the Near East, the impending danger to England from the American trusts and, to crown all, the revolution in the Balkan Peninsula. These circumstances prepared the field for a *rapprochement* between Russia and England, and the seed which we sowed cannot therefore be said to have perished by the road-side.

"From the extracts which we give on another page of proceedings at a recent sitting of the British Parliament readers of the *Novi Krai* may rest assured that the question of an Anglo-Russian *rapprochement*, existing only in theory as yet so far as Russia is concerned, has already entered the field of practical politics in England and is perhaps on the way towards realization.

"In Russia, we should really devote more attention to this all important matter, the importance of which was emphasized by the decree from the Imperial Throne on the 30th of July last. This decree insisted on the importance of the political question in the Far East, an importance greater than that attaching to any question in the Near East or the West.

"It would seem to us that such an emphatic announcement, coming from such a very important quarter, should have once and for all made clear to Russian official circles, the Russian Press and the Russian Public, the exact line of action they should take in this matter; but, to our extreme regret, we find that the Press of Russia proper has up to the present devoted all its attention to the news from the Balkan Peninsula and has on that account effectually cooled the interest hitherto taken by the public in the Far East. This explains the astonishing circumstance that none of the great papers of St. Petersburg paid any attention to the most important debate which took place in the British House of Commons in the beginning of July last, either by the publication of special telegrams on the question or of leading articles. For ourselves it is a consoling reflection that now that the articles in the *Novi Krai* are quoted in translations by the foreign Colonial Press, our sincere gratification, expressed in this leading article, at the recent debate in the British House of Commons may be taken notice of by the English Press so that the good seed may not be choked.

"To turn again for a moment to the substance of the debate in question we find that Sir Edward Grey said that in its action in the Far East "I am not sure that Russia pursues a settled policy." So far as regards Russia's policy in Eastern Asia we must candidly admit that this was true: Russia's policy there was not fixed and stable. Now, however, it is fixed and stable. With the establishment of the Viceroyalty of the Far Eastern possessions of Russia all our difficulties in this part of the world will be cleared up while our demands will become well defined and inflexible. In these conditions the two great Powers, Russia and England, ought easily to be able to join hands for joint action in the Far East for the defining of their respective spheres of influence on a just and equitable basis by reciprocal concessions. And the friends of both Powers will not be forgotten."

The members of the Privy Council held a meeting on Sept. 22nd to discuss matters with regard to the Monopoly Bureau. Mr. Sakatani, Vice-Minister for Finance, was present to render explanations. Marquis Ito, the President, proceeded to the Palace, after the conclusion of the discussion, where he submitted the result to the Emperor.

MONTHLY SUMMARY OF JAPANESE
CURRENT LITERATURE.

At the close of the last Summary we epitomized part of an article from the *Taiyō* on Marquis Saionji as a political leader. This subject we now continue. Marquis Saionji on his return from Europe in 1880 was a most earnest advocate of liberal principles, and in order to make them better known he, Mr. Matsuda Masahisa and a few others started the *Taiyō Jiyū Shinbun*. The Marquis has not changed his views. He still desires to see popular government thoroughly established in this country. There is no fear of his not proving sufficiently go-ahead for the men with whom he is associated in the Seiyūkai. The appointment of Marquis Itō to the Privy Council was a step of special significance. It meant that this statesman has the special confidence of the Sovereign and that the Emperor is prepared to act on his advice in future emergencies. This implies that if the Marquis recommended the Emperor to sanction the formation of a Seiyūkai Cabinet, His Majesty would certainly do so. We see then that Marquis Itō's move is likely to prove of immense advantage to the Seiyūkai; for while indirectly, through Marquis Saionji, still directing the movements of the party, he occupies a post that will enable him to put a stop to the deadly opposition which the Seiyūkai has encountered from some of the principal Imperial counsellors. Formidable Court opposition to such political changes as Marquis Itō deems desirable will no longer be possible. From other points of view Marquis Itō's withdrawal from the Seiyūkai is advantageous to the party. Being one of the elder statesmen, he was constantly consulted by politicians who had sympathy with the Seiyūkai and his freedom of action as President of the party was seriously interfered with by these outside entanglements. Marquis Saionji will labour under no such disadvantages. . . . Among the noblemen of the present day, Marquis Saionji and Prince Konoe have no equals. They are both highly educated and thoroughly well informed on political affairs. They are both almost certain to become premiers later on.* Their paths lie apart. Prince Konoe at one time showed a leaning towards political parties, but in recent years he has turned his back on them and thrown himself heart and soul into foreign affairs. Marquis Saionji has never wavered in his attachment to popular government by means of organized political parties. Prince Konoe is an unalloyed *grand seigneur*, with distinctly conservative instincts, Marquis Saionji's sympathies are all with the people. He would see them governing themselves. His principles are all of the progressive type. The government of England, France and the United States, with certain slight modifications, he would see established here. Of the two statesmen Marquis Saionji is decidedly the more hopeful. There is a pessimistic strain about many of Prince Konoe's utterances that is somewhat depressing. As regards stability and consistency, Prince Konoe certainly ranks first. He is, though younger in every way, more serious than Marquis Saionji. In consenting to act as President of the Seiyūkai Marquis Saionji has shown no little courage and, since he has exceptional talents, if his mind becomes thoroughly interested in the enterprise, he may succeed as a helmsman beyond expectations.

* * * It will be remembered that, as ill-luck would have it, when the Mombushō came down so unmercifully, and in the opinion of the majority of impartial men so inadvisedly, on the Tetsugakkan in connection with Muirhead's "Ethics" Dr. Inoue Enryō, the founder and the life and soul of that high-class school of learning, was in Europe. He is now back in Japan and has sent a letter to the *Nippon Shinbun* which, among other remarks, contains the following statements. The news of the severe action taken by the Mombushō reached me in London at the end of last year. I was thunderstruck. Directing

* This was written before thereport of the Prince's serious complaint had reached the public ear. (Writer of Summary.)

those in charge in Tōkyō to do their best to restore the school to its former status, I went off to Ireland and did not return to London till April, when I found a letter from Professor Muirhead lying on my table. In this he said that on hearing of the affair he had written to Viscount Hayashi asking whether he could do anything in the matter. Viscount Hayashi replied that it was undesirable to make an international affair of the incident, and suggested that you and I (Dr. Inoue and Professor Muirhead) confer together as to the best way of dealing with it. I at once addressed a letter to Professor Muirhead, says Dr. Inoue, proposing to visit him at his residence in Birmingham. Unfortunately he was away on a holiday trip at the time, and I did not receive an answer to my letter till I was just leaving England, when it was too late for me to go to Birmingham. I went to see Viscount Hayashi. He said that the decision of the Education Department was contrary to common sense and was more inconsiderate than anything that takes place in Russia even. . . . Now, the practice of allowing graduates of private schools to receive the status of Middle School teachers was established principally owing to my advocacy of the measure. It was a step which the Mombushō was induced to take after no less than 10 years' agitation on the part of the private schools interested. In 1890 our school sent in an application for the desired privilege. In 1894 we and the Kokugaku-in forwarded a united request for the same thing. Three years later the Waseda Seimon Gakkō added its name to ours, and, after deliberating for three years more, in 1900 the much-sought-for privilege was granted, only to be withdrawn two years later (The license of the school was cancelled last year). I have been informed that Professor Muirhead addressed a letter to the Department of Education inquiring on what grounds exception had been taken to his treatise. The Mombushō replied that what they condemned was not Professor Muirhead's ethical theories, but the want of caution in explaining them shown by the Tetsugakkan. The punishment which had been meted out to the school was light, said the Mombushō officials. Under the circumstances the Mombushō might have abolished it altogether, but they had only deprived it of its license. . . . Since last April we have been endeavouring to persuade the Department to withdraw its prohibition against the school and restore it to its former status. They have replied that to regrant a privilege which has been withdrawn would be undignified on the part of the Department, but that if we choose to send in an application for a new license, it is likely to be granted. This would benefit future graduates, but would do nothing to remove the injustice of cancelling the permits of the men who have graduated at the school during the past two years. We have therefore in the most decided manner refused to agree to this method of procedure (*Kakaru Mombu no go-sata wa tetsu tetsu o-kotowari sezarubekarazu*). There is no hope then of the Department's righting matters. Situated as we are, there is no alternative but to take steps to place the whole case before the public and to allow it to see plainly who is right and who is wrong in this affair. It would be well that some permanent memorial of this extraordinary case should be prepared, so that posterity as well as the present generation of men may pass judgment thereon.*

* * * In the 東邦協會, Tōhō Kyokai Magazine, we find the report of a speech made by Dr. Miyake Yūjirō on the Japanese residing in foreign countries; which gives the results of Dr. Miyake's personal investigations in Europe and America, and elsewhere a few years ago. The total number of Japanese living abroad is put down at 200,000. Dr. Miyake informs us that Hongkong, Singapore and Bombay are noted for the number of Japanese prostitutes who have been imported. At the latter place traders preceded the prostitutes, but at most places the prostitutes are

* Dr. Inoue seems to contemplate writing a history of the case and having it engraved in stone or metal.—(WRITER OF SUMMARY.)

the first to arrive and they are followed by labourers and by business men. When Japanese have settled in large numbers there is invariably a movement against the prostitutes set on foot by the Japanese themselves, but there have been many instances of the use of money made by prostitutes in the starting of business enterprises by respectable Japanese (*Hajime wa mina shūyō-fu ni yotte hirakarete aru rei zō agureba, sono tochi nite, shinbun nite mo dasō to seba, hajime wa shūyō-fu ni irai shite naritatsu*). Even in such cases after a while those who have used ill-gotten gains agitate against the prostitutes. In England there are 200 Japanese, who consist almost exclusively of officials, clerks in offices, or business men. In France there are only 50, who are principally officials, artists or students. In Germany there are about a hundred who are nearly all students. In Italy there are only the Legation employees. The Japanese Legation at St. Petersburg is a gay place. There are a few Japanese students and a few merchants in Russia. In Constantinople there is a large Japanese shop which supplies the Turkish Court with sundry articles. There are in Hawaii no less than 70,000 Japanese among a total population of 150,000. On the West Coast of America there are some 30,000 Japanese. Some years ago a very disreputable set of Japanese had settled in this part of America, but in recent years there has been great improvement. About half the shoemakers of San Francisco are Japanese, and Japanese washermen are doing a big business. But the biggest success of all has been secured by farmers and fruit-growers. A vine-grower called Nagazawa Kanoe has made a fortune by wine-making. He has been exporting 12,000 gallons a year to Japan and 20,000 gallons to England, while he has supplied New York with no less than 100,000 gallons *per annum*. Then there is the potato king, a man nicknamed Ushijima, who, after many failures, now controls the San Francisco potato market. His success began during the war with Spain. There are five brothers known as Dōmoto engaged in floriculture and together they command more custom than any other dealers in flowers. But they too have had their ups and downs. At one time they suffered much from boycotting, but they put a stop to this in a rather ingenious manner. There being a great demand for lilies for Easter decorations and the Dōmoto brothers having a very large stock on hand, they received numerous orders from other floriculturists. Having been previously boycotted by these would-be purchasers, they decided to retaliate by supplying lilies gratis to churches, which they did on a large scale, thus depriving numerous flower dealers of their usual profits. This brought the latter to their senses and the Dōmoto brothers had no further trouble. It is said that in the agricultural line few Japanese fail, but in trade they are surpassed by the Chinese. As one goes Eastward few Japanese farmers are met with. There are some Japanese traders in Chicago, but many more in New York, where some very big concerns involving the employment of over a thousand workmen are run by Japanese. But Japanese immigration throughout America does not keep pace with that of some European countries. Though we commenced to go to America 80 many years ago, even now there are only some 30,000 Japanese in the whole of the United States. Yet on the whole as regards work and business success we compare well with other nations.

* * * In the *Tōkei Shūshi* (Record of Statistics) we find some interesting figures bearing on Japanese industry and various inventions connected therewith. It seems that the year 1902 was unprecedented in regard to the number of patents applied for, they having reached 3,095; 871 of which were granted. The record for previous years was as follows:—1897, 1,789 applications, 293 of which were granted; in 1899, 1,915 applications, 597 of which were successful; in 1900, 1,980 applications, 586 of which were granted; in 1901, 2,372 applications, 606 of which were granted. The average number of applications for the four years was 1,986 and the average number of successful applicants was 521. Com-

paring these figures with these of 1903, we find that the increase in applications was 1,109 and in the patents granted 350. Coming to designs, last year there were 930 applications for the registration of new designs, 252 of which were granted. The table for the previous four years was as follows:—

Years.	Applications.	Registered Designs.
1898	265	52
1899	342	139
1900	397	130
1901	514	141
Four year average.....	382	115

The table for trade-marks registration is as below:—

Years.	Applications.	Registered Trade-marks.
1898	2,233	1,597
1899	2,837	1,943
1900	2,776	1,767
1901	2,608	1,418
The 4 years average.....	2,613	1,681

The figures for 1902 show an increase on the above average of 916 applications and of 202 successful applicants. From a business point of view last year was generally considered a most depressing year, but the above figures show conclusively that there was anything but stagnation in business circles. It is considered that the turn of activity to which the figures refer will be the prelude to a wide-spread revival of trade and industry. It seems that on Sept. 14th last year various supplementary classes were added to the international patents' agreement signed by the representatives of various powers in Belgium on Dec. 14th, 1900. One of these provides that an application for exclusive patent rights must be made within 12 months of the time of an invention, instead of within 7 months. There has been a perpetual increase in the number of agents engaged in negotiating for the granting of patents' rights and in giving advice to applicants.

* * *
The *Chishima Ainu* is the title of a book written by the well known ethnologist Professor Torii Ryūzō, and recently published by Yoshikawa Hanshichi. The work has been reviewed by the *Nippon*. From its pages we extract the following brief comments. Although this book does not tell us all we want to know about Chishima, from an ethnological point of view it is a very valuable work. Professor Torii says that there are only about 60 Chishima Ainu left and that before very long they will become extinct, the annual decrease averaging 6 and the increase only 2. The work is illustrated and contains a learned account of the language and customs of the Chishima Ainu.

The Yoshikawa publishing house are engaged in bringing out in a new form a number of well known ancient works. The 前賢故實 *Zenken Kojitsu* is one of these. It consists of the paintings of the famous Kikuchi Yōsai, which represent the labour of more than half of the lifetime of that ancient artist. The pictures are designed to illustrate the various costumes and customs of divers classes of Japanese in ancient times. There are over 500 portraits in the work, which show the leading characteristics of each age. There are two editions, one on Japanese paper selling at 3 yen 50 sen a copy, and one on foreign paper, covering 1,300 pages, and selling at 2 yen 50 sen a copy.

Subscriptions are asked for a gigantic work to be called the 古畫備考, *Kogwa Biko*. It is of the nature of a reference book for old painters, giving an account of their lives and of their paintings. It is a republication, with additions collected by Mr. Ōta Kin, of an old work. The original work consisted of 51 volumes. These have now been reduced to 3 foreign-style volumes and 15 Japanese style volumes. The foreign edition, covering 2,500 pages, is to be had for 5 yen, subscription price, and the Japanese edition for 6 yen 50 sen. The original work was written by Asakura Kōtei, the son of the famous Kanō Yeshin, who, it is said, spent over 40 years in collecting material for this history of painting in old Japan. It is most exhaustive, containing an account of every noted painting, a copy of the

autographic *rakkuwan*, or name and seal, of each author, together with a biographical notice of the artist. The work in its old form has hitherto cost purchasers 80 yen a copy.

* * *
According to Mombushō statistics just published there are in local Government Middle Schools 104,863 students. The First Year students number 27,783; the Second Year, 25,519; the Third Year, 21,529; the Fourth Year, 17,332; the Fifth Year, 12,700. In addition to these there are 3,490 pupils receiving instruction in connection with an extra department of schools known as *hoshū-kwa*. The graduates of Middle Schools last April amounted to 10,046.

* * *
The *Nippon Shinbun*, under the title *Fuzoku Tokei* (Statistics on Customs), publishes the following facts and opinions. Dating from May 22nd in the course of two calendar months no less than 9 youths committed suicide at the Kego waterfall and 2 others were rescued when about to destroy themselves. In other places young men were desirous of attempting the same thing. In some instances they were saved, in others they perished. The *Nippon* maintains that Fujimura's suicide was the result of a love affair. The publicity given to his case evidently did harm. There have been no less than 16 known cases of imitation of his act, and the imitators have by no means been all students—mechanics and servants have figured among the victims to this strange delusion.

The next batch of statistics given by the *Nippon Shinbun* concerns the jinrikisha traffic of Tōkyō. There are in the whole of Tōkyō 37,780 jinrikisha, 2,444 carrying two persons and 35,336 only one. The pullers are divided into 3 classes: (1) those who own vehicles; (2) those who hire them; (3) those who receive wages for drawing from the owners of jinrikisha. There are 8,194 men belonging to the first class; 28,220 belonging to the second, and 2,432 belonging to the third, making a total of 38,846, being in excess of the number of vehicles by 1,066. As regards districts, Honjo has the largest number (5,070); Asakusa follows, with 4,453; then Kanda with 3,336 and Shitaya, with 3,124. Akasaka has the smallest supply of any district, the number being only 928. The total number of ordinary stage-coaches in Tōkyō does not exceed 58.

In Asakusa since April, 1901, there has been an institution known as Muryō Shukū-bakujō, where poor people are boarded and accommodated for a night or two free of charge. This has become a centre for the homeless and the friendless, and has afforded help to over 7000 people in 2 years. But the *Nippon* says that little gratitude has been shown for the help given and that there have only been one or two cases of persons writing to thank their benefactors.

* * *
In the *Kyōiku Kōhō* we find a report of a speech made at a meeting of the Japanese Education Society by Mr. Sawayanagi Masatarō, head of the General School Business Bureau—who has just returned from Europe, entitled *Ō-Bei Shisatsu Dan* (A talk about observations in Europe and America) of which the following is the substance:—The first thing that strikes us in Western countries is the comparative wealthiness of Europeans and Americans. Wherever one looks signs of wealth meet the eye. The roads, the buildings, the harbours and waterways, even the drains have had no expense spared on them. It will be a very long time before Japan can reach such a state of perfection in things material. Coming to education, connected with what one may call common education (*Tsūzoku Kyōiku*), or the enlightening of society generally, there are numerous agencies not usually found in our midst. There are libraries innumerable, museums, public gardens and parks. It is not the circumstance that they are richer than we are which accounts for the conveniences and the forms of amusement with which Occidentals have supplied themselves. Had we the wealth we should still lack the energy required for the production of these equipments of highly civilised life. One cannot but feel that

as a people we are more idle than Occidentals, nor do we take life as seriously as they do. They all feel responsible for certain things, and they take pride in discharging efficiently the duties which the public expects them to perform. Even little countries like Switzerland and Holland are far ahead of Japan in most things and they are certainly much richer. This is mostly the result of the industry and the seriousness of the Swiss and the Dutch. . . . Taking the opinions of most Japanese who have been abroad, we find that they are under the impression that Western civilisation is only bright on the outside and that beneath the surface morals are loose and practice most corrupt. They represent modern Europe and America as very much like Imperial Rome when she had begun to decline, and so to them there appears to be no stability about this vaunted Occidental civilisation. But I am of an entirely different opinion. Nothing seems to me more certain than that the majority of Occidentals are men of principle, whose conduct is controlled by the moral codes prevailing among them. Of course in all their great cities there are many public signs of the prevalence of vice. But the practices of a comparatively small section of a large community are not to be regarded as an indication of the sentiments of the majority by any means. We do not argue that a man is morally diseased because he has a swollen hand. The social disfigurements and loose practices which meet the eye of a casual observer are not to be made the basis of sweeping charges against the morality of whole nations. The present advanced position in the world of Western peoples is largely owing to their high principles combined with great energy.

In examining their schools I was very much struck with the amount of knowledge possessed by foreign children compared with Japanese children of the same age, and I came to the conclusion that our adoption of Roman letters or *Kana* is indispensable if we are to keep abreast of other civilised countries. Moreover, we must have only one language for speaking and writing. While in Europe I came across numerous instances of Japanese officials who were perfectly astonished at the progress made by their children in German, French or English compared to that made in their own language. After 18 months' study, in one instance, a boy of 9 was able to write a simple letter in French with great ease—an acquirement that in the case of Japanese would occupy 7 or 8 years. The necessity of teaching their children Chinese characters is felt to be an intolerable burden by all advanced officials in our diplomatic service. I found Mr. Makino in Vienna, Mr. Adachi in France, and Viscount Hayashi in England all groaning under this burden. One must go abroad to find out the truth about the language question. It is by comparison that defects and clumsiness are discovered. Most of our people jog along in the old rut, because they know no better way, but the eyes of our foreign diplomats have been opened, and they are urging radical changes in our orthographic system. We shall always be handicapped in the race as long as we retain the Chinese ideographs.

In Middle Schools I was struck by the earnestness of the boys, by their respect for their teachers and by the manner in which they subjected themselves to discipline. There was none of the spirit of insubordination and argumentativeness so common in our schools.

* * *
The Committee of Inquiry into the intricacies of the Japanese language, which has been sitting for years, has now come to the conclusion that prior to any final recommendations to the Mombushō a thorough investigation of the dialects in use is necessary. Consequently a series of questions on this subject have been addressed to the Directors of Normal and Middle Schools by the various prefects, and answers will in the course of time no doubt be forthcoming. The following are some of the questions at issue. Whether in spelling in *Romaji* the following methods shall or shall not be adopted; whether, (1) *い*—shall be spelt *ie*; (2) *う*, *え*, and *お*, *ui*, *we* and *wo*; (3) whether *ga*, *gi*, *gu*, *ge*, *go* shall be made to preserve the nasal sound distinctly given in some provinces by being spelt *nga*, *ngi*, *ngu*, *nge*, *ngo*;

(4) whether *ji* shall be considered the equivalent of *や* and *ji* the equivalent of *や*; (5) whether *zu* shall represent *ず* and *du*, *y*. (6) Whether in the case of two vowels coming together the lengthened sound shall be represented by a long mark over a single vowel or whether the two vowels found in Japanese script shall be reproduced; thus whether it is best to write *a*, *sa*, *ma*, *da*, or *a-a*, *sa-a*, *ma-a*, *da-a*.

* * *

The *Jogaku Zasshi* (*Woman's Magazine*) (No. 516) contains a very pessimistic article on female education in this country. The conclusion the writer reaches is that taking the country as a whole women have received little benefit from the introduction of Western civilisation. Their home life, their knowledge of those arts that go to make a home comfortable and their whole status as mothers and wives have not perceptibly improved. The few girls who have received a semi-foreign education do not affect in the least the mass of Japanese women, even when the after-careers of these girls have been satisfactory.

In the magazine quoted above (No. 517) attention is called to the way in which improper acts are defended by attributing them to patriotic motives. According to some writers and speakers a man may do almost anything if his design is to benefit his country thereby. To say *kokka no tame ni itashita* (he did it for the benefit of the state) is considered a sufficient extenuation of almost any action. This is patriotism run wild—patriotism versus morality.

* * *

The *Nichi-Ro Keizai-kwai* (The Russo-Japanese Economic Society), whose office is at 1, Morikawachō, Hongō, Tōkyō, has just published a map called *Siberia Kōsu Dai-chizu*. The dimensions of the map are 3 ft. by 6 ft. and it sells at 2 yen 70 sen per copy. As the title implies, the chief design of the map is to supply information on the means of communication through Siberia and some parts of Eastern China, and Korea. The railroads, telegraphs, main roads, rivers, postal towns, &c. are all given. Chinese names have *kana* supplied.

* * *

A new literary organ, the 文庫 *Bunko*, in its first number has an article "on 'Novels for the Young,' in which the following sentiments are expressed. The particulars in which our fiction needs improvement are almost innumerable. No novel published gives us entire satisfaction. Suitable novels for young readers may be pronounced to be one of the greatest needs of the time. Our system of education is of a negative type. It condemns this and that. Its motto is "Do not." What is wanted is for young people to have types of character placed before them in an entertaining manner which they can learn to admire and to follow. A great many young people are forbidden by their parents to read novels. But prohibitions of this kind cannot be enforced and in many cases they only create a desire to taste the forbidden fruit. For Primary School boys there is a suitable novel called 御伽草子 *Otogi-banashi*; but for Middle School Students there is no such work as "Tom Brown's School Days" or "The Diary of an Italian School boy," and so after reading a pure-minded book like the *Otogi-banashi* they pass on to read the novelettes that appear under the title of *Ma-kaze Koi-kaze* (*The Devil's Wind and Love's Wind*) and so enter a world where they imbibe various kinds of poison. We must not, however, forget to mention a work written by Namiroku, called 五人男 *Gonin Otoko*, which has deservedly had a very large sale and for which there is still a great demand among boys. This book maintains a high standard and its perusal cannot but be inspiring and instructive. Why have we no novels that can be introduced into our schools, works of the class we find in other languages? Rohan could give us such works were he so disposed? What hinders him?

* This title is used by the *Yomiuri Shinbun* and the *Nichi-Nichi Shinbun*.—(WRITER OF SUMMARY.)

CRICKET.

The heavy rain on Saturday morning led to the abandonment of the originally arranged match—Old Interports versus The Rest—and instead, when the weather gave signs of clearing up a bit, was arranged a match between teams led by The Captain of Cricket versus The Secretary. Mr. White sent his team to bat first, but on the sodden wicket little could be done, and the side were all dismissed for 55. Six of their wickets were captured by Mann, the old Shanghaiander, for 18 runs. Mr. Stuart's eleven did better, four of their number getting into double figures, and 97 was reached ere the tenth wicket fell. The top score of the day was made by P. A. Cox, 24, and he knocked it up rapidly with the aid of two 5's and a 4, with a scattering of twos and singles. Stuart was run out just as he looked well-set, for 22. We are glad to see E. W. Kilby back on the playing-field again, for a rumour had gained currency that this good-hearted sportsman had been denied by his surgeon the pleasures of cricket for a year, in consequence of the injury received to his wrist in a recent baseball game. An Interport match without both the Kilby Brothers in it would lose a good deal of its interest for many folk. Score:—

THE LAW COURTS.

LEI CHIEN HSIAN v. J. C. HARTLAND.

The hearing of this case, instituted by a Chinese named Lei Chien Hsian against Mr. J. C. Hartland, claiming cancellation of the registry of immovable property which plaintiff is alleged to have jointly possessed with another Chinaman named Kwan Chong, who had obtained money in loan from defendant by offering the property as security, was resumed in the Yokohama District Court before Judge Kano on Sept. 18th, when plaintiff's Counsel asked the Court for leave to examine the Chinese compradore of Messrs Jardine, Matheson and Company as witness.

Mr Sawada, counsel for defendant, said he had no objection to the examination of any witness and he especially requested counsel for the plaintiff to ask the Court for the examination of witnesses. But they must be called at one time, not one by one—so that this case may be concluded as early as possible. The due time to deal with a property in hypothecation had already passed and defendant could not expect to have the case delayed any longer.

The Court decided to call the Chinese on Sept. 30th.

CLAIM FOR MONEY DEPOSITED.

The case instituted by the Naigai Fire Insurance Company against the Teikoku Bank, claiming money deposited by the insurance firm in the bank, was brought in the Tokyo District Court on Sept. 19th.

SENTENCE IN A FRAUD CASE.

The trial of Mr. Okamura (23) former employee of the Osaka branch of the Mitsui Goshi Kaisha, who has been charged with drawing over yen 30,000 from the Osaka branch of the Mitsui Bank by means of forged cheques while in the service of the firm, concluded on Sept. 19th in the Tokyo District Court. He was sentenced to six years' confinement with hard labour.

The appeal of Mr. S. Akamatsu, elected representative for Ibaraki Prefecture, and an accomplice, who were charged with having procured money by menace, was dismissed on Sept. 19th. The men are to undergo the punishment inflicted by the original Court.

FORTIFICATION REGULATIONS CASE.

The trial of Mr. A. Richter who is alleged to have infringed the Fortifications Regulations was resumed in the Yokohama District Court before Judge Yasuda and Public Prosecutor Nakamura, on Sept. 21st, when Sergeant Kikuchi of the Chiyogasaki fort was examined as a witness.

The officer stated that he remembered that on August 30th about 2.40 p.m., a steam launch came into the waters of the area belonging to the Chiyogasaki fort, the distance being about 300 metres from the point where the witness was standing at the time, and about 10 ken (66 feet) from the shore. He thought that the boat came along the sea-shore from Uraga. It stopped for about ten minutes at the most shallow point. About that time a fishing boat reached the place where the witness was standing, having passed by the steam launch. The fishermen in answer to his enquiry said that the passengers of the steam boat were four or five foreigners and a few Japanese and that they seemed to have been sounding the depth of water.

Subsequently the launch went off and witness being unable to follow it, asked the Uraga Gardenerie Office by telephone to examine the boat when it arrived there.

The accused stated that the launch could not navigate in shallow waters as its draught was about 5 feet 6 inches. Neither he nor any one of the passengers took soundings. He added that he did not know anything about the fortifications area. The launch was only for excursions under the order of the manager of Messrs. Langfeldt & Co. He asked the Court to examine Mr. J. Tornoe, manager of his firm, and a Japanese named Muma who was in charge as captain at the time of the excursion, but the Court dismissed this application.

Having summarized the statements of the accused, the witnesses and others, the Public Prosecutor asked the Court to punish the accused under the provisions of the Fortifications Regulations.

The Court decided to deliver sentence on Sept. 23rd at 1 p.m.

CLAIM FOR COMPENSATION.

The hearing of the case filed by Mr. T. Nakoshi and one other against the Director of the Railway Industry Bureau claiming compensation for land which was appropriated for the railway was to come on in the Tokyo District Court on Sept. 21st.

GROSSER & CO. v. YAZAWA SHOTEN.

In the Yokohama District Court, the hearing of this case in which yen 6,075 issued for damage by contravention of a permit business contract was resumed before Judge Kato on Sept. 22nd.

Counsel for the parties repeated their statements already presented after which the case was again adjourned till Oct. 8th because of some discrepancies in the figures stated in the petition of the plaintiff who is thus allowed an opportunity to correct them before the next hearing.

CLAIM ON PROMISSORY NOTE.

The hearing of the case brought by Capt. A. E. Bougonin against G. Kuga, claiming a sum of money on a promissory note, which had not been paid by defendant at the due time, was to be resumed on Sept. 22nd in the Tokyo District Court.

RUSSO-CHINESE BANK v. YUEN SIH SONG.

The hearing of this case instituted by the Russo-Chinese Bank against Yuen Sih Song former compradore of the bank, claiming yen 170,000 on the ground that the credited money under the guarantee of the Chinaman was not collected, and counter-claiming yen 530,000 by defendant against plaintiff on the ground that the bank had sold land in Shanghai which belonged to the Chinese compradore was to be resumed in the Tokyo District on Sept. 22nd.

J. G. DOERING v. C. KANNHAUSER.

In the Yokohama District Court, on Sept. 22nd the hearing of this case, in which plaintiff claims yen 10,244.00, was resumed before Judge Kato.

Counsel for the parties introduced new evidence after which plaintiffs' counsel asked for leave to examine Mr. Charles Thwaites as a witness and also Mr. Kannhauser as principal. The Court decided to examine the former on Oct. 6th.

J. W. HALL v. F. STANILAND.

The hearing of this case claiming commission on an auction sale and a charge for advertising was resumed in the Yokohama District Court before Judge Hasegawa on Sept. 23rd when Mr. T. Herlihy was examined as a witness.

He stated that he knew Miss Hoffmeister, as she was a sister of his wife. Miss Hoffmeister intended in the spring of 1901 to purchase the property—the ground, and buildings on the premises of No. 2, Bluff—belonging to Mr. F. Staniland. In the advertisement in the local papers it was stated that the property was to be disposed of by sale. In accordance with the advertisement, witness, on behalf of the lady, saw Mr. Hall twice or thrice. The auctioneer, under instruction of Mr. Staniland, asked for yen 40,000 for the property, but the intending buyer proposed only yen 32,500. She refused to purchase the property. Besides the advertisement, the witness had been told by Mr. H. Russell, No. 82, of the property being offered for sale. He did not know any gentleman named Campbell.

The case was again adjourned till Sept. 30th when Mr. W. Bailey, of the Royal Naval Hospital, will be examined as a witness.

NATIONAL BANK OF CHINA v. CHONG MING-CHI.

In the Yokohama District Court, the case filed by the National Bank of China, Ltd., against Chong Ming-Chi, former compradore of the bank, claiming yen 68,000 was brought before Judge Hasegawa on Sept. 23rd.

Plaintiff's Counsel stated that defendant was employed by the bank during the period from March 30th, 1892, to June, 1902, on condition that he should be held responsible for business transacted by him. During his engagement, he purchased 13 drafts amounting to \$68,000 from a Chinese merchant named Wing Cheong Tai, which documents were payable at Hongkong. The drafts were dishonoured, however, on the due dates and the Chinaman who sold them could not redeem the dishonoured drafts.

Defendant's Counsel held that the compradore had no contract for any such responsibility with the bank and that he did not guarantee the drafts in dispute.

On the motion of plaintiff's Counsel, a Japanese named T. Yoshimura, employed by Messrs. Samuel & Co. was examined as a witness.

He stated that the Chinese compradore had paid \$68,000 in silver for 13 drafts under instruction of the manager of the bank, and put on them a rubber stamp "paid" and made his signature. The witness was in the employment of the bank at the time.

The case was adjourned till Sept. 28th.

THE FORTIFICATION REGULATIONS CASE.

Mr. A. Richter, who was charged with infringement of the Fortification Regulations, was sentenced to a fine of yen 25 in the criminal section of the Yokohama District Court before Judge Nakamura on Sept. 23rd.

GIELEN v. JEWETT.

This case, brought by Mr. H. V. Gielen against Mr. J. H. Jewett for an injunction on the seizure of business books, was resumed in the Yokohama District Court before Judge Hasegawa on Sept. 23rd when Mr. Jewett was examined as a principal.

Mr. Jewett stated that he seized the business books which were kept by Mr. Gielen. In 1890 or the following year he registered his association under the name of Bavier & Company, with the power-of-attorney of Mr. Carl Bavier who is now in Switzerland. The registry was made through Dr. Loenholt in the Yokohama Local Court, but deponent did not know whether the latter employed a Japanese lawyer for the purpose. The bye-laws of the partnership association were altered in a few respects before registration but the alterations were of course consented to by the senior partner in Switzerland at the time.

On the conclusion of the examination, the case was adjourned till Oct. 7th.

LAUNCH OF THE "NIKKO MARU."

On Wednesday there was launched from the yard of the Mitsu Bishi Co., Nagasaki, a large steamer for the Nippon Yusen Kaisha's Australian Service. The christening ceremony was gracefully performed by Mrs. Kato, wife of the Vice President of the Nippon Yusen Kaisha, who named the new vessel *Nikko Maru*. It will be observed that the name of this vessel, in common with the names of the other Nippon Yusen Kaisha's steamers on the Australian line, is taken from among the titles of famous temples in Japan.

The *Nikko Maru* will be somewhat similar in general design to the well known *Kumano Maru*, but is somewhat larger and will differ considerably in the details of internal decoration.

The *Nikko Maru* is 410 feet long between perpendiculars with a moulded breadth of 50 feet and a depth of 50 feet 6 inches from keel to upper deck. The gross tonnage is about 5,600 tons. The vessel has been constructed under Lloyd's special survey, and in accordance with the Japanese Government and British Board of Trade requirements for passenger vessels and is expected to have a speed of 17 knots.

There will be accommodation amidships for 90 first class passengers while 24 second class passengers will be accommodated under the poop.

The vessel will be ventilated on the most modern system by means of forced circulating of either hot or cold air as may be desired, and will be lighted throughout by electricity. There will be a large refrigerating installation to provide for the storage of fresh provisions.

It is expected that this vessel when completed will be one of the most beautiful examples of the shipbuilder's art that have ever been in Eastern Waters. The propelling machinery consists of triple expansion engines capable of developing about 5,500 horse power, the steam for these engines being generated in two large double ended and two large single ended boilers.

After the launch the vessel was brought alongside the Mitsu Bishi wharf to receive her machinery, while the guests retired to partake of a cold collation and drink success to the *Nikko Maru*.

FIRES.

Fire broke out on Sept. 16th at the Zuiho gold mine, Formosa, belonging to the Fujitagumi, destroying 213 houses. One workman was killed. The damage is estimated at yen 30,000.

An outbreak of fire occurred on Sept. 17th in the dwelling of a farmer named T. Minekichi, living at Osato, Saitama prefecture. The house was destroyed. The farmer and his son were killed.

Early in the morning of Sept. 23rd, fire broke out at Iwatsuki, Saitama Prefecture, destroying one house. A youth was killed and two women and an infant were severely injured. The cause is reported to be a lamp which set fire to a mosquito-net.

THE SIBERIAN MAIL ROUTE.

For the information of the community, the Chairman of the Foreign Chamber of Commerce forwards the following for publication, which has just been received from the Communications Department:—

"In reply to your letter of the 16th inst., addressed to the Minister of this Department, I have the honour to inform you that we have negotiated with the Postal Administration of Russia as regards the question of utilizing the Siberian Railway for the transmission of correspondence destined for countries in Europe, and are waiting for a definite reply from St. Petersburg.

"It is, however, to be supposed that the question will be solved before long, information having been received from the International Bureau at Berne as per copy enclosed.

"I may add that correspondence destined for Russia, bearing the indication 'Via Siberia,' is being forwarded through Vladivostok, Port Arthur, or Dalny, with the consent of the Postal Administration at St. Petersburg."

[COPY.]

"Berne, le 22 Juin, 1903.

"Bureau Internationale de l'Union Postale Universelle.

"Monsieur:—

"L'Office de Russia me charge de faire connaître aux administrations de l'Union qu'il notifiera très prochainement, par mon intermédiaire, la date d'ouverture du chemin de fer transsibérien au transport des correspondances internationales, ainsi que les conditions du transit par cette voie."

(The Russian Post office authorises me to inform the administrations belonging to the Postal Union, that it will at an early date notify through me the opening of the Siberian railway route for transmission of international mails, and conditions of same.)

LITERARY GOSSIP.

The family and other papers of Mr. Whistler (says the *Athenaeum*) are to be entrusted to Mrs. Pennell for the purposes of an authorised biography. Contrary to a common impression, Mr. Whistler was a writer of abundant and racy letters besides those designed for the public eye; and otherwise Mrs. Pennell, long the friend of the artist, seems likely to be particularly fortunate in her materials. Mr. Mortimer Menpes is already briskly at work on a book about Mr. Whistler.

Professor Nathan Pulvernacher has taken the trouble of compiling the names of 41,000 school children in Berlin to see which were most in vogue. Among the boys there were 1,627 whose name was Wilhelm or Willi. Next in frequency was Paul, followed by Friedrich, Johannes, Karl, Max, Walter, Erich, Otto, Franz, George, Ernst, Richard, Curt, Alfonso, each of which was represented more than 500 times. Among the girls the ten names most in vogue were Margarethe, Gertrude, Martha, Frieda, Anna, Else, Maria, Charlotte, Hedwig, Erna.

Six years ago the late Pope Leo XIII. charged Count Soderini with the task of writing a history of his pontificate. While entire freedom of judgment was left to the Count numberless documents, hitherto wholly secret, were (says the *Times*) placed at the writer's disposal, and in addition much material was dictated by the Pope in explanation of his acts. Mr. F. Marion Crawford is acting in collaboration with Count Soderini in the preparation of the Anglo-American edition, which will be published in London and New York by Messrs. Macmillan & Co. The work will appear in all countries in 1904.

Mr. Herman Merivale, in "Bar, Stage, and Platform," tells of an amusing encounter between Doctor Vaughan, for many years head master at Harrow, and a small boy who carried off the honours of the occasion. A boy whose name was Dodd was brought before the Doctor charged with some dire scholastic offence. "What is your name?" asked the master, with due severity. "Dodd, sir," answered the trembling boy. "Dodd! do you spell it with one d or with two?" "With three, sir," stammered the boy. The Doctor put his head upon the desk, covered it with his hands a moment, and then dismissed the dangerous criminal with a warning.

One story, characteristic of the late Phil May's extreme and sometimes disquieting frankness concerning himself, has never been told. He was asked to a reception by a man whom he had known casually for some months, and this friend was not a little anxious as to the manner in which the Bohemian would appear. Mr. May arrived, wearing a flaming geranium flower in his buttonhole, and ascended the stairs fully conscious of his host's startled expression of face. After he had shaken hands with his hostess, the artist turned confidentially to his friend, and tapping first the tip of his nose with earnest significance, and then touching the blazing flower in his buttonhole, he whispered: "Toning it down, sir, toning it down."

In Sigma's entertaining reminiscences in *Blackwood's* is an amusing story regarding Dr. Blomfield, some time Bishop of London. The Bishop had married twice, and his second wife had also been previously married. Consequently there were three lots of children at Fulham. On one occasion, when an unequal battle was raging fast and furious among the miscellaneous offspring, the Bishop was disturbed in his study by the impetuous entrance of his lady. "What is it, my dear?" he inquired, with ill-concealed testiness. "Oh, Bishop," she replied in agonised accents, "quick, quick, there's not a moment to lose? Your children are siding with my children and are murdering our children." The story is old, but worth re-telling.

Not being satisfied with making fortunes as handwriting experts, some Americans now claim that they can tell the difference between typewritten sheets done by different operators. In a recent law case, where a long typewritten document was in question, it was alleged that one of the pages included had been substituted for another sheet. Although to a casual eye all the sheets seemed to be the work of one hand, experts showed that the spacing and punctuation were different, and the writing shaky. The experts were unable to trace the person who had done the bogus typewriting, but they agreed that it was a young woman, and only a beginner at type-writing; that she was nervous, not very strong, and that her education was only moderately good.

One of the publishing enterprises of the coming season is a new English translation of the great majority of the elder Dumas' fictions, many of which have never before been turned into our tongue. It will be interesting to note the reception given to the new-comers, which, however, are likely to be accepted on the strength of the impression made by their more familiar brethren. There can be few middle-aged men whose youthful imagination was not nourished on Dumas. To be sure, he had serious rivals in Gustave Aimard, G. P. R. James, Fenimore Cooper, and Captain Marryat; but he held sway over all. The fact is, he could not help entrancing the mind. He had, with Homer, and Boccaccio, and the like, the gift of storytelling.

The appointment of a new chief officer for the London Fire Brigade at first sight appears to have little to do with literature. But when one comes to think of it, the history of that now famous organisation is written in many books. Over three hundred years ago was printed what seems to have been the earliest description of a fire-engine, that being given in a curiously interesting work on practical geometry and surveying, "A treatise named *Lucarsolace*, divided into fower bookes," and issued in London in 1590 by one "Cyprian Lucar, Gentleman." "I will set before your eyes," said the ingenious writer, "a type of a squirt which hath been devised to cast much water, upon a burning house, wishing a like spirit and plenty of water to be alwaies in a readinesse where fire may do harme, for this kinde of squirt may be made to holde an hoggeshed of water, or if you will a greater quantity thereof, and may so be placed on his frame that with ease and a smal strength it shall be mounted, imbased, or turned to any one side right against any fired marke, and made to squirt out his water with great violence upon the fire that is to be

quenched." But, though well-intentioned, this engine and its like proved ineffective when any large fire had to be coped with; and for a long time afterwards, as was strikingly shown during the Great Fire of 1666, houses were accustomed to be blown up as the surest method of staying the march of the flames.

It is very doubtful indeed, remarks the *Globe*, whether we ought to read anything at all—except our favourite newspaper—when we go for our holidays. The great thing is to get away from books and a little nearer to Nature. We want to be out in the open, to take in all the ozone and the beauty of sky, wave, hill, and tree. But then there is the rainy day and the enforced stay within-doors. Well, even then, it might be argued that it is best for us to be thrown upon the local resources—to be forced to ask the hotel-keeper or the lodging-house keeper whether he or she has anything we can read. There is much to be gained by a study of the hotel and lodging-house libraries. Often they contain no books at all save guide-books and time-tables. But if they contain anything, it is in the lodging-house that one finds the most delightful exhibition of literary taste. The Works of Josephus, we regret to say, are dying out, but you may pick up a county history or a faded Byron (nothing later). And it is no hardship to be obliged to take up a Byron or a county history; one might do worse. As for reading out-of-doors, if people are so foolish as to do this, they should provide accordingly. They should take nothing from their own library. It is in the holiday season and its supposed needs that one sees the justification of the six-penny effusion in paper covers. Practically, a thing which is paper-covered is not a book at all, and its ultimate fate is of no consequence whatever.

In his "Notes and Reminiscences of a Staff Officer," Lieutenant-Colonel Basil Jackson says that one feature in the character of Bonaparte which must not be lost sight of, and which has an important bearing upon the question of his treatment at St. Helena, was his habitual disregard of truth. His moral sense was so blunted that he had no scruple in resorting to deceit, and, if necessary, to falsehood, if he could thereby accomplish an object in view. It has been said of him by a French writer, with sarcastic severity (Jules Maurel), that he was in the *Moniteur* the first journalist of the Empire, and that he kept what he won with his pen much longer than what he won with his sword. He here gave himself an unbounded licence of invention, and made events assume whatever complexion he pleased, taking care that it was such as harmonised with his projects and flattered the vanity of the French nation. It was thus that the victories of Wellington in the Peninsula were ignored; and, after terrible reverses, France was told that the English would have been crushed by Napoleon if he had thought that the proper moment for the catastrophe had arrived. At St Helena Napoleon gave full scope to this propensity. The letters which he there dictated to his obsequious followers, and which have made such an impression on the public mind are filled with glaring misstatements of facts. They may be called the bulletins of his exile, which were intended to deceive the people of Europe, as the bulletins of his battles were intended to deceive the French. Even Bertrand was ashamed of them, and more than once disowned the responsibility of their authorship, although he submitted to the humiliation of writing them, and subscribed them with his name.

SHIPPING CASUALTIES.

An addition to the already extensive list of fires in steamers in the Eastern trades is furnished by the case of the Nippon Yusen Kaisha's steamer *Kawachi Maru*, on fire at Messina, says the *Singapore Free Press*. She left Yokohama on June 13th for London, and called at the usual ports. The vessel is 6,096 tons, built in 1897, and is insured for £67,700, free of particular average except she be stranded, sunk, or burnt. As she is on fire, the underwriters are liable for the damage. The cargo cannot fail to be valuable.

This makes the fourteenth fire this year in the China and Eastern trades, some of which have caused very large losses. Indeed, underwriters are rapidly coming to regard the risks of fire as the most serious of those which they have to cover, instead, as was the case some years ago, of looking upon the fire hazard in large steamers as almost negligible.

A telegram from Shanghai has been received in Osaka to the effect that the steamer *Chikima Maru* with 1,700 tons coal from Sumie on Sept. 19th for Shanghai, collided on the 21st with a German steamer at Woosung, sustaining severe damage on the starboard side in consequence of which she filled with water. She ran on a shoal near Woosung to escape sinking. The telegram states that there is an expectation of saving both hull and cargo. The Tokyo Marine Insurance Company insured the hull for yen 80,000 and the Nippon Marine Insurance Company the cargo for yen 10,000.

A telegram from Hakodate states that the steamer *Chitose Maru* took fire on the night of Sept. 20th and was destroyed.

Details of the accident which occurred on Sept. 20th on board the steamer *Chitose Maru* while lying at Hakodate are given by the *Jiji*. It appears that at 10 o'clock at night fire broke out in a cabin and the flames extended immediately. As there were no means to subdue the fire valves were opened and the vessel was sunk. The ship was fully loaded with cargo of various kinds. The Nippon Marine Insurance Company had insured the hull for yen 22,000.

NEWS OF THE WEEK.

Paragraph in a Shanghai paper on Sept. 17th: The plague of insects last night made work almost impossible.

During the storm on Sept. 23rd a junk loaded with gravel capsized off Haineda point. Two sendoes are missing.

Five electors for the Yamanashi Prefectural Assembly were arrested on Sept. 23rd on a charge of contravening the Election Law.

The Canton-Hongkong Ice and Cold Storage Co., Ltd., has been privately floated with a capital of \$500,000 in 50,000 shares.

Two cases of cholera were reported on Sept. 22nd in Awomori prefecture. The same day a case of suspected cholera appeared in Tokyo.

Mr. K. Watanabe, a member of the House of Representatives, was adjudged a bankrupt in the Wakamatsu District Court on Sept. 23rd.

The U.S. transport *Sumner*, which had just had heavy repairs at Hongkong, ran into the dock at Mariveles on her return to Manila and did damage amounting to \$4,000.

The *Official Gazette* states that the British Minister has informed the Department of Foreign Affairs that Major C. V. Hume, R.A., the attaché of the Legation, arrived on Sept. 5th.

A coolie employed by the local branch of the Colonial Bureau, Mombetsu, Hokkaido, stole office money amounting to yen 1,000 on Sept. 18th, and is reported to have absconded.

A workman in the Tokyo Arsenal committed suicide on the night of Sept. 22nd by laying himself in front of a train near Ichigaya. Temporary insanity is reported to be the cause.

Two goods trains on the Sanyo Railway have collided at a point 3 miles distant from Asa station, causing severe damage both to locomotives and cars. One person sustained slight injuries.

Seeing a Scottish boy fall into the water at a sea-side resort, a man jumped in, brought him safely to shore, and took him to his father, who had been standing apparently anxiously awaiting them. The father looked at the son for a few moments. Then an expression of displeasure

passed over his countenance. "Whaur's his bunnet?" he demanded of the rescuer.

Herr. H. Lowental von Linan, secretary of the Austria-Hungarian Legation, entertained on Sept. 18th Mr. Makino, Minister to Vienna, and his wife, who are to leave for Austria on Sunday the 20th.

A Chinese naval officer arrived at Shimonoseki on Sept. 22nd from Shanghai en route to Kobe, where he is to inspect the Chinese gunboat that is under construction at the Kawasaki Shipbuilding Yard.

Mr. S. Oshima, Chief Public Prosecutor of the Osaka Appeal Court, and I. Matsumuro, President of the Nagasaki Appeal Court, are reported to have tendered their resignations in consequence of failing health.

Mr. S. Asano, the President of the Toyo Kisen Kaisha, has paid a visit to the Nishizawa gold mine near Nikko. The *Asahi* states that he will join Mr. Takahashi the present owner of the mine. Mr. Asano will stay for a week to inspect the mine.

Prince Kacho, who has been at the manoeuvres going on in the districts of Nagano prefecture, arrived at Shimonoseki on Sept. 23rd and left by express train for Tokyo. It is said by the *Asahi* that he had received a telegram from the Emperor to return immediately.

The petition of the Yokohama Electric Tramway Company for permission to extend the line through Isezaki-cho, (commonly called Theatre Street) in addition to the originally proposed lines has been rejected by the Governor of Kanagawa.

S. Ito, (28) a member and T. Wada, (29) publisher of the *Yokohama Shimpō* were arrested in Tokyo on Sept. 20th on a charge of having attempted to obtain yen 500 from Viscount Tozawa as black mail.

The dimensions of the new twin-screw steamer to be built by the Hongkong and Whampoa Dock Co., Ltd., for the China Navigation Co., Ltd., are: length 310 ft., beam 46 ft., and draft 14.3 feet. She will be the largest steamer by far that has yet been constructed in Hongkong.

The Specie Bank, Ltd., recently forwarded a number of tael 50 notes to its branch office at Tientsin. The *Asahi* states that the bank issued tael 5 and 10 notes in North China last year, which were accepted with confidence in mercantile circles.

A St. Petersburg wire reports that a second Russian squadron, under the command of Admiral Virenius, will shortly leave Kronstadt for the Far East, and will join at Port Arthur that which left recently under the command of Admiral Stakelberg.

The general meeting of agricultural societies in the Empire will be held on Nov. 19th for four days at the Yayoi Club, Shiba Park, Tokyo. Viscount Kano, secretary of the central society, has asked the Department Education to suggest subjects for investigation.

Two armed men broke into the dwelling of a wealthy farmer named Okuno, living at Tera-machi, Awamori, early on the morning of Sept. 23rd and killed two employees. One of the intruders, however, was killed by the farmer and the other was arrested later.

A man named H. Takauchi murdered on Sept. 20th a woman named Yone (26) living at Asakusa, Tokyo, by stabbing her to the heart with a knife and also inflicted severe injuries on her mother, who attempted to prevent the crime. The murderer afterwards disappeared. The cause is reported to be jealousy.

Countess Minto and her two daughters and suite arrived on Sept. 21st at 6 a.m. by the steamer *Empress of China* and left by the 11.43 a.m. train for Tokyo after a visit to the British Consulate. Sir C. M. MacDonald, high officials

of the Kencho and others met them at the hatoba. Tokyo papers state that Lady Minto will shortly have audience of the Empress.

The bankers in Yokohama have decided to reduce the interest rate *rin 2 (sen 3)* making *rin 7* per yen 100 per day on current account and *sen 1* on savings. The interest on fixed deposit is left unchanged at $5\frac{1}{2}$ per cent. per annum. The altered rates will come in force on Oct. 1st.

K. Machida, one of the crew of the steamer *Hongkong Maru*, who is charged with having smuggled 33 boxes of cigars at Nagasaki, was on Sept. 23rd committed for trial in the Tokyo District Court. By the Nagasaki Customs the cost of the cigars is estimated at yen 85.25, and duty would be imposed of yen 127.87.

The British battleship *Russell* (?) of 13,500 tons was expected to arrive at Nagasaki on Sept. 18th from Hongkong. The Russian Volunteer steamer *Kiev* arrived at the same port on the 17th from Vladivostok. The same day, the U.S. flagship *Kentucky* and three other warships arrived there en route to Yokohama.

A thunderstorm raged on the night of Sept. 18th at Hamamatsu and the surrounding districts. Two houses were burned down, many others damaged, three persons killed and many others more or less injured by lightning. On the following night, a similar storm prevailed over the same districts, destroying two buildings.

The German warship *Furst Bismarck* arrived at Chemulpo on Sept. 20th. The following day the British warship *Glory* arrived at Nagasaki from Masampo, and the *Alacrity* left the Japanese port for Shanghai. The U.S. transport steamer *Sheridan* arrived at Nagasaki on the same day with 1,120 soldiers from Manila bound home.

The *Asahi* states that over forty Indian employees on board the P. & O. steamer *Borneo*, which is lying at Moji, are about to strike. The master of the steamer applied on Sept. 19th, to the Harbour police for a force to pacify their excitement. According to the *Jiji*, the Moji police are endeavouring to put down the disturbance.

Several lots of local shares were put up for sale by public auction at Mr. J. W. Hall's on Friday, with the following results:—

Ten Oriental Hotel Preference shares, yen 75 each.
Ten Oriental Hotel Ordinary, yen 78 each.
Six Club Hotel Ordinary, yen 83 each.
Ten Steam Laundry Debentures, yen 21 each.
Fifty Brett & Co., withdrawn at 7.25.

A coolie named M. Saito (23), was arrested on Sept. 18th by the Kagacho police on a charge of having stolen from the compound of the Customs twelve cases containing condensed milk, a portion of which belonged to Meiji-ya and the remainder to Messrs. Helm Bros. Another man who assisted him in selling the stolen provisions was also arrested the same day, and both were removed to the Court.

On the morning of Sept. 17th Marquis Tokudaiji, Grand Chamberlain, paid a visit to Baron Komura, Minister of State for Foreign Affairs at his office. On the afternoon of the same day, Lieut.-General Baron Okazawa, Imperial Chief Aide-de Camp, paid a visit to the Premier at his official residence where the Ministers of State were holding a conference. The military officer left after a stay of about half an hour.

Mr. J. B. Rentiers, who has been Acting British Consul at Nagasaki since February last, Mrs. Rentiers, and their family; and Mr. N. C. Anderson, who for five months has been in charge of the local agency of the Hongkong and Shanghai Bank, left Nagasaki on the P.M. steamer *Siberia*. Mr. Rentiers is transferred to the Consulate at Kobe, while Mr. Anderson is bound for Yokohama.

Such little store of hatred as Phil May had was reserved for side and snobbery, says the *Free Lance*. Once he had made a sketch on the back

of a menu-card as a souvenir for the hostess, and a guest sent him across the table a written request for a duplicate, accompanied with a ten-pound note. May at once sketched a replica of the hasty effort on the back of the bank-note, and returned it with his compliments. Could anything be finer? He granted the request, and accepted the appraisal of value without lowering himself by accepting payment.

The *Official Gazette* of Sept. 21st published an Imperial Ordinance (No. 144) with regard to the Administrative Law for the Measures and Scales Law. The Law is to come in force on January 1st, 1904. It consists of 22 articles including a supplement. Article 1st provides for fixing the kinds, forms and materials of various implements. Art. 11 fixes the charges for examining the same, and Arts. 15 and 17 set the charge for license which manufacturers and sellers have to pay on application.

The Railway Industry Bureau notified on Sept. 20th the following season fares to take force on that date:—

		One month.	Three month.	Six month.	Twelve month.
	Class.	Yen.	Yen.	Yen.	Yen.
Yokohama to	2nd	10.50	25.00	40.00	57.20
Ofuna	3rd	6.00	14.70	22.90	32.70
Yokohama to	2nd	13.00	31.70	48.80	68.40
Kamakura.....	3rd	7.40	18.10	27.90	39.10
Yokohama to	2nd	18.35	44.15	66.50	85.35
Yokosuka.....	3rd	10.50	25.25	37.95	51.05

The British post office revenue for 1902-3 was £15,004,938, an increase of £539,068 over the preceding year. The expenditures were £10,818,066, an increase of £352,965, leaving a net profit of £4,186,872, an increase of £186,103. The telegraph revenue was £3,723,866, an increase of £153,820. The expenditure of the telegraph department was £4,317,371, a net deficit of £593,505. If allowance is made for the interest on the capital, £10,867,644, created for the purchase of the telegraphs, the deficit would be £892,365.

The *Jiji* states that Baron Komura, Minister of State for Foreign Affairs, had audience of the Emperor at 10 a.m. on Sept. 22nd, when the Minister explained the state of foreign affairs. The same day, after the appointment of the three new Ministers, a conference was held at the official residence of the Premier where all the Cabinet Ministers were present to discuss matters in connexion with the proposed administrative reform and the Budget to be submitted to the coming session of the Diet. The paper adds that the discussion of these matters was concluded on general lines.

With regard to the plague in Yokohama, the municipal authorities enforced a bye-law ordering the trapping of rats since January this year, throughout the city. The following statistics of the number of rats caught are interesting:—

January	5,807
February	11,910
March	14,702
April	14,261
May	21,734
June	29,246
July	28,332
August	24,299
September ending the 11th.....	8,591

These figures comprise both live and dead rats.

The most coveted of all records amongst cycling professionals of the top grade is that of the hour, and for some months there has existed considerable rivalry as to who would first cover the fifty miles in the space of sixty minutes. To T. Robl, the German, falls the honour, and at the present time he occupies the pinnacle of fame and all racing cycling is talking of him and his wonderful ride. At Hanover on August 8th, paced throughout by a motor bicycle, he covered the marvellous distance of 50 miles 262 yards in the hour. Just fancy what this means! Under 1 min. 12 secs. a mile for an hour—and achieved by a man on a conglomeration of iron and rubber. The fastest trains on British railways are but slightly more speedy, and we might add, that many are not half so fast.

REVISED DRAFT OF THE PROPOSED NEW
CRIMINAL CODE OF JAPAN.

(CONTINUED FROM LAST ISSUE.)

CHAPTER X.—OF OFFENCES RELATIVE TO
INUNDATIONS AND WATER-UTILITY.

Art. 140.—Whoever shall have caused an inundation and thus caused damage to buildings actually inhabited and used as dwelling houses, or to buildings, steam-cars, electric cars, or mines actually containing persons, shall be punished with perpetual penal servitude or limited penal servitude for a period of not less than five years. In case death is caused thereby, the offender may be punished with the capital penalty.

Art. 141.—Whoever shall have caused an inundation, and thus damaged any objects other than those mentioned in the preceding article shall be punished with penal servitude for a period exceeding one year and not exceeding ten years.

In case where the damaged objects are the offender's own property, he shall be punished with the same penalty mentioned in the preceding paragraph only when the objects are under attachment, right in rem, hypothecated, borrowed or insured.

Art. 142.—Persons who have concealed, broken or destroyed, any objects used to dam out water in time of flood, or by any other means obstructed the damming out of the waters, shall be punished with penal servitude for a period not less than one year and not exceeding ten years.

Art. 143.—Persons who have committed the offences mentioned in the preceding three articles may be additionally sentenced to deprivation of civic rights.

Persons who have committed offences mentioned in the preceding three articles and consequently are punishable with limited penal servitude may be additionally placed under police surveillance.

Art. 144.—Persons who by fault or negligence accidentally caused flooding of any of the objects mentioned in Article 140 or 141, shall be punished with a fine not exceeding three hundred yen.

Art. 145.—Whoever shall have destroyed sluices or broken embankments of a river or stream, or otherwise done anything to injure water-utility, or done anything calculated to cause an inundation, shall be punished with penal servitude for a period not exceeding three years or a fine not exceeding five hundred yen.

CHAPTER XI.—OF THE DESTRUCTION OF AND
DAMAGE TO MEANS OF COMMUNICATION.

Art. 146.—Those who shall have destroyed or damaged a public road or water-way, or obstructed the traffic thereon, shall be punished with penal servitude for a period not exceeding three years or a fine not exceeding two hundred yen.

If in the cases foreseen in the preceding article there has resulted death or wounds, comparison shall be made with the offences of "wounding and (grievous) bodily harm" and the offender shall be punished according to the seriousness of the case.

Art. 147.—They shall be punished with limited penal servitude for a period not exceeding three years who have, by damaging the track or the signals of a railway, or, by any means whatsoever, exposed steam or electric cars to danger during transit over the lines.

The penalty imposed shall also be applicable to those who have exposed ships to danger by destroying or damaging lighthouses or buoys, or by any other means.

Art. 148.—Persons who have upset or damaged steam or electric cars actually containing persons shall be punished with penal servitude for life or for a period of not less than five years.

The penalty for causing shipwreck or damage to a ship actually containing persons is the same.

Persons who have committed offences mentioned in the preceding two articles and thereby caused death, shall be punished with the capital penalty or perpetual penal servitude.

Art. 149.—The punishment of persons who have committed the offences mentioned in Article 147 and thereby overturned or injured any steam or electric cars, or wrecked or destroyed vessels,

shall be the same as that specified in the preceding article.

Art. 150.—Even when the offences mentioned in Paragraph 1 of Article 146, Article 147 and paragraphs 1 and 2 of Article 148 are not actually consummated, the attempt to commit them shall be punished.

Art. 151.—When the acts mentioned in Article 147 or paragraphs 1 and 2 of Article 148 have resulted from negligence the punishment shall be a fine not exceeding three hundred yen.

When persons who have committed the offences mentioned in the preceding paragraph are engaged in the business concerned, they shall be punished with imprisonment for a period not exceeding three years or by the imposition of a fine not exceeding five hundred yen.

CHAPTER XII.—OF THE VIOLATION OF DOMICILE,
BURGLARY AND HOUSEBREAKING.

Art. 152.—Whoever, without cause, shall have invaded an inhabited or protected house, building, or ship, and not retired when requested so to do, shall be punished with penal servitude for a period not exceeding three years or a fine not exceeding fifty yen.

Art. 153.—Persons who have, without cause, invaded the Imperial palaces or gardens attached thereto, Imperial detached palaces, or a temporary Imperial sojourning place, shall be punished with penal servitude for a period not exceeding five years.

The same holds good with regard to persons who shall have invaded an Imperial sepulchre.

Art. 154.—The offences mentioned in this chapter are punishable even if not actually consummated.

Art. 155.—Persons who have committed offences mentioned in this chapter, and consequently are punishable with penal servitude, may also be placed under police surveillance.

CHAPTER XIII.—OF THE BETRAYAL AND
REVELATION OF SECRETS.

Art. 156.—Whoever shall have unlawfully opened, secreted, damaged or destroyed any personal letters which are sealed, shall be punished with penal servitude for a period not exceeding one year or a fine not exceeding two hundred yen.

Art. 157.—In case doctors, apothecaries, druggists, midwives, barristers, advocates, and public notaries, or those who have been formerly engaged in these occupations, being possessors of secrets entrusted to them or coming to their knowledge by reason of their position or profession, have disclosed the same, they shall be punished either with penal servitude for a period not exceeding six months, or a fine not exceeding one hundred yen.

The same punishment shall be imposed on persons who were or are engaged in religious occupations when they have disclosed any secrets coming to their knowledge on account of being entrusted to them in connection with their professional work.

Art. 158.—The prosecution for offences mentioned in this chapter shall only take place on the complaint of the injured party.

CHAPTER XIV.—OF OFFENCES RELATING TO
OPIUM.

Art. 159.—Whoever shall have imported, manufactured, or sold opium or have held opium with the object of selling same, shall be punished with penal servitude for a period not exceeding seven years.

Art. 160.—Whoever shall have imported, manufactured or sold instruments or apparatus suitable for the smoking of opium or have held same with the object of selling them, shall be punished with penal servitude for a period not exceeding five years.

Art. 161.—Customs officials who shall have permitted the import of opium, or of instruments or apparatus suitable for the smoking of opium, shall be punished with penal servitude for a period exceeding two years and not exceeding ten years.

Art. 162.—Every individual who shall have smoked opium shall be punished with penal servitude for a period not exceeding three years.

Art. 163.—Every person who shall be found

possessor or depository of opium intended to be smoked, or of instruments suitable for its smoking, shall be punished with penal servitude for a period not exceeding one year.

Art. 164.—Offences mentioned in this chapter are punishable even if they are not actually consummated.

Art. 165.—Persons who have committed any of the offences mentioned in this chapter may be placed under police surveillance.

CHAPTER XV.—OF OFFENCES RELATIVE TO
DRINKING WATER.

Art. 166.—Whoever shall have polluted drinkable waters, in such a manner as to render the use of them impossible, shall be punished with penal servitude for a period not exceeding six months or a fine not exceeding fifty yen.

Art. 167.—Whoever shall have polluted drinkable water supplied to the public by means of water-works, or polluted the source of such water supply in a manner to render its use impossible, shall be punished with penal servitude for a period not exceeding five years.

Art. 168.—Whoever shall have poisoned drinkable waters, or polluted them with other substances injurious to health, shall be punished with penal servitude for a period not exceeding three years.

Art. 169.—Persons who shall have committed any of the offences mentioned in the preceding three articles, and thereby caused death or wounds shall be punished with the graver penalty upon comparison with the offences of "Wounding and (grievous) bodily harm."

Art. 170.—Whoever shall have poisoned or polluted drinkable waters supplied to the public by means of water-works, or poisoned or polluted the source of such waters with substances injurious to health, shall be punished with limited penal servitude for a period exceeding three years: if death has resulted from the aforesaid poisoning or pollution, the offender shall be punished with either death, perpetual penal servitude, or penal servitude for a period of not less than seven years.

Art. 171.—Whoever shall have damaged or obstructed water-mains, pipes, or aqueducts, by means of which supplies of drinking-water are furnished to the public, shall be punished with penal servitude for a period exceeding one year and not exceeding ten years.

CHAPTER XVI.—OF OFFENCES RELATIVE TO
COUNTERFEITING MONEY.

Art. 172.—Whoever shall have counterfeited or altered current coins or paper money of the realm, or bank-notes, with intent to utter the same, shall be punished with penal servitude for life or for a period of upwards of five years.

Whoever shall have counterfeited or altered foreign coins, paper money, or bank-notes circulating in Japan shall be punished with limited penal servitude for a period of upwards of three years.

Art. 173.—He who shall have counterfeited or altered coins, paper money or bank-notes shall be punished with the same penalty mentioned in the preceding article.

The same shall be applied to persons who have imported into Japan any counterfeited or altered coins, paper money or bank notes with intent to utter same.

Art. 174.—Whoever shall have received with intent to utter, counterfeited or altered coins, paper monies, or bank notes shall be punished with penal servitude for a period not exceeding three years.

Art. 175.—The attempt to commit the offences mentioned in the three foregoing articles is punishable under the heading of "infractions not consummated."

Art. 176.—Whoever shall have received coins, paper monies, or bank-notes and knowingly uttered the same after obtaining knowledge of the fact that they were counterfeited or altered, shall be fined in a sum not exceeding treble the nominal value of the monies so uttered; but the fine shall in no case be less than one yen.

Art. 177.—Persons who shall have prepared and provided tools, instruments, or materials, for the purpose of counterfeiting or altering coins, paper monies or bank-notes, shall be punished with penal servitude for a period not exceeding five years.

Art. 178.—Persons who have committed the offences mentioned in this chapter, and who are punishable with penal servitude, may be sentenced to deprivation of civic rights.

Those who have committed the offences mentioned in this chapter and who are punishable with limited penal servitude, may be placed under police surveillance.

CHAPTER XVII.—OF THE FORGERY OF INSTRUMENTS.

Art. 179.—Whoever shall have, with intent to utter same, fraudulently used a counterfeit of the Imperial Privy seal, a counterfeit of the Great Seal of the Empire, or a counterfeit of the Imperial Sign Manual, or shall have improperly used the Privy Seal, Great Seal, or Sign Manual and forged Imperial or other documents, shall be punished either with perpetual penal servitude or with penal servitude for a period of not less than five years.

Whoever shall have fraudulently altered an Imperial or other document to which is attached the Imperial Privy Seal, the Great Seal of the Empire, or the Imperial Sign Manual, shall be punished in the same manner (as provided in the foregoing paragraph).

Art. 180.—Whoever shall have, with intent to utter same, fraudulently used a counterfeit of the seals or signatures of the offices or members of the public services, or improperly used seals or signatures of the offices or members of the public services and thereby forged instruments, maps or drawings which are to be made by offices or members of the public services, shall be punished with penal servitude for a period of more than two years and not exceeding ten years.

The same penalty shall be imposed upon whoever shall have fraudulently altered instruments, maps or drawings to which are attached the seals or signatures of offices or of members of the public services.

Apart from the cases contemplated in the foregoing two paragraphs, whoever shall have forged instruments, maps or drawings which should be drawn up by offices or members of the public services, or shall have fraudulently altered instruments, maps or drawings which have been drawn up by offices or members of the public services, shall be punished either with penal servitude for a period not exceeding three years or a fine of not exceeding three hundred yen.

Art. 181.—Every member of the public services who, relative to his function, shall have, with intent to utter same fabricated fraudulent documents, maps or drawings or fraudulently altered documents, maps or drawings, shall be punished in accordance with the provisions of the two preceding articles, cognizance being taken as to whether the seals and signatures exist or otherwise.

Art. 182.—Whoever shall have uttered documents, maps or drawings mentioned in the three preceding articles shall be punished in the same manner as he who has forged or altered such documents, maps or drawings, or fabricated fraudulent documents, maps or drawings.

Attempts to commit the offences mentioned in the preceding paragraph are punishable under the heading of "infractions not consummated."

Art. 183.—Whoever shall have, with intent to utter the same, fraudulently used the seal or signature of another person and fabricated documents, maps or drawings relative to rights and obligations or to certificates of facts; or shall have used a counterfeited seal or a forged signature of another person and forged documents, maps or drawings relative to rights and obligations or to certificates of facts, shall be punished with penal servitude for a period not exceeding five years.

The same penalty shall be imposed upon whoever shall have fraudulently altered documents, maps or drawings relative to rights and obligations or to certificate of facts, to which is attached the seal or signature of another person.

Art. 184.—Whoever shall have, by means of practising deceit upon members of the public services, caused false entries to be made in census registers, registration books, or in the original of any notariably recorded deeds relating to rights and obligations, shall be punished with penal

servitude for a period not exceeding two years, or with a fine of not exceeding one hundred yen.

Whoever shall have, by means of practising deceit upon members of public services, caused false entries to be made in diplomas, permits, or passports, shall be punished with penal servitude for a period not exceeding six months, or a fine not exceeding fifty yen.

Attempts to commit the offences mentioned in the preceding two paragraphs are punishable under the heading of "infractions not consummated."

Art. 185.—A doctor who shall have made false statements in medical certificates or certificates of death which are to be handed in to offices of the public services shall be punished with penal servitude for a period not exceeding three years, or a fine not exceeding one hundred yen.

Art. 186.—Whoever shall have uttered documents, maps or drawings mentioned in the preceding three articles shall be punished in the same manner as he who has forged or fraudulently altered same, or caused false or fraudulent entries to be made in the same.

Attempts to commit the offences mentioned in the paragraph are punishable under the heading of "infractions not consummated."

Art. 187.—Persons who have committed offences mentioned in this chapter, and who in consequence are punishable with penal servitude, may be deprived of their civil rights.

Persons who have committed offences mentioned in this chapter, and who are consequently punishable with limited penal servitude, may be placed under police surveillance.

CHAPTER XVIII.—OF THE FORGERY OF VALUABLE SECURITIES.

Art. 188.—Whoever shall have, with intent to utter the same, forged or fraudulently altered Government bonds, Share certificates of Companies or any other instruments of valuable securities, shall be punished with penal servitude for a period of not less than two years and not exceeding ten years.

Persons who have made false or fraudulent entries in any of the instruments of valuable securities mentioned in the preceding paragraph shall be punished with the same penalty.

Art. 189.—Whoever shall have uttered any forged or fraudulently altered instruments of valuable securities, or any other instruments of valuable securities in which false or fraudulent statements have been made, shall be punished with penal servitude for a period of not less than two years and not exceeding ten years.

Persons who shall have, with intent to utter the same, imported any forged or fraudulently altered instruments of valuable securities or any other instruments of valuable securities in which false or fraudulent statements have been made shall be dealt with in the same manner.

Attempts to commit the offences mentioned in the preceding two paragraphs are punishable under the heading of "infractions not consummated."

Art. 190.—Persons who have committed offences mentioned in this chapter, may be also sentenced to deprivation of civic rights and to police surveillance.

CHAPTER XIX.—OF THE FORGERY OF SEALS.

Art. 191.—Whoever shall have, with intent to use the same, fraudulently counterfeited the Imperial Privy Seal, the Great Seal of the Empire, or the Imperial Sign Manual, shall be punished with limited penal servitude for a period of not less than three years.

Whoever shall have improperly used the Imperial Privy Seal, the Great Seal of the Empire, or the Imperial Sign Manual, or used a counterfeit of the Imperial Privy Seal, the Great Seal of the Empire, or the Imperial Sign Manual, shall be punished in the same manner (as provided in the foregoing paragraph).

Art. 192.—Whoever shall have, with intent to use the same, fraudulently counterfeited the seals or signatures of offices or members of the public services, shall be punished with penal servitude for a period not exceeding five years.

The same penalty shall be imposed upon who-

soever shall have made improper use of the seals or signatures of the offices or members of the public services, or used a counterfeit of the seals or signatures of the offices or members of the public services.

Art. 193.—Whoever shall have, with intent to use the same, fraudulently counterfeited the official mark of an office of the public services, shall be punished with penal servitude for a period not exceeding three years.

The same penalty shall be imposed upon whoever shall have made improper use of the mark of an office of the public services, or used a counterfeit of the mark of an office of public services.

Art. 194.—Whoever shall have, with intent to use the same, fraudulently counterfeited the seal or signature of another person, shall be punished with penal servitude for a period not exceeding three years.

The same penalty shall be imposed upon whoever shall have made improper use of the seal or signature of another person, or used a counterfeit of the seal or signature of another person.

Art. 195.—Attempts to commit the offences mentioned in Par. 2 of Art. 191, Par. 2 of Art. 192, Par. 2 of Art. 193, and Par. 2 of the preceding Article, are punishable under the heading of "infractions not consummated."

Art. 196.—Persons who have committed offences mentioned in this chapter, may be also sentenced to deprivation of civic rights and police surveillance.

CHAPTER XX.—OF PERJURY.

Art. 197.—Whoever shall have made a false statement after having been sworn in as a witness in accordance with the provisions of Laws and Ordinances, shall be punished with penal servitude for a period not exceeding ten years.

Art. 198.—The punishments provided in the foregoing Article may be remitted either in whole or in part if the offender shall have retracted his false declaration prior to final and conclusive judgment being rendered or a disciplinary punishment being inflicted (as the case may be) in the case which his evidence affects.

Art. 199.—The provisions of the two preceding Articles apply to experts and interpreters who shall have (knowingly?) given false evidence, or made a false interpretation while under oath.

Art. 200.—Persons who have committed offences mentioned in this chapter, may be also sentenced to deprivation of civic rights.

CHAPTER XXI.—OF FALSE ACCUSATION.

Art. 201.—Whoever shall have made a false complaint or statement with the intention of procuring the criminal or disciplinary punishment of an innocent person, shall be punished in accordance with the provisions of Articles 197 and 200.

Art. 202.—Although a person may have committed the offence mentioned in the foregoing Article, if he voluntarily denounces himself and retracts his false accusation before the judgment becomes irrevocable, or the disciplinary punishment is given (as the case may be) in the case in which his false statement has been given, the punishment may be remitted either in whole or in part.

CHAPTER XXII.—ON INDECENCY AND BIGAMY.

Art. 203.—Whoever shall have publicly committed an indecent act shall be punished by the imposition of a police fine.

Art. 204.—Whoever shall have published and distributed indecent (obscene) books, writings, pictures or other objects, or publicly exhibited or sold, or held same with the object of selling them, shall be punished with either ordinary or police fine not exceeding one hundred yen.

Art. 205.—Whoever shall have committed an indecent act with violence or threats, or taking advantage of the weakness of mind or the incapability of resistance, against a person of either sex whose age exceeds twelve years, shall be punished with penal servitude for a period of more than one year and not exceeding seven years.

The same penalty shall be imposed upon whoever shall have committed an indecent act against a child of either sex of less than twelve years of age.

Art. 206.—Whoever shall have obtained carnal

knowledge of a woman or a girl whose age exceeds 12 years by means of violence and threats, or taking advantage of mental derangement, loss of reason, or of incapacity to make resistance, shall be adjudged guilty of rape and punished with penal servitude for a period of not less than three years.

Unlawful intercourse with a female child of less than twelve years of age shall be punished in the same manner.

Art. 207.—Attempts to commit the offences mentioned in the two preceding Articles are punishable under the heading of "infractions not consummated."

Art. 208.—As regards the offences mentioned in Articles 205 and 206, the prosecution shall only take place on the complaint of the injured person.

Art. 209.—Whoever shall have occasioned death or wounds owing to the committal of offences mentioned in Articles 205 and 206, shall be punished with penal servitude for life or for upwards of five years.

Art. 210.—Whoever shall have, for the purpose of gain, urged and encouraged a virtuous woman or girl to commit fornication shall be punished with penal servitude for a period not exceeding three years or with a fine not exceeding five hundred yen.

Art. 211.—A married woman guilty of adultery, as well as her co-actor in the crime, shall be punished with penal servitude for a period not exceeding two years.

The prosecution for the offence mentioned in the preceding paragraph shall only take place on the complaint of the husband, but the complaint shall be of no effect if he has previously encouraged the aforesaid adultery.

Art. 212.—Whoever, being lawfully married, shall have contracted another legal marriage shall be punished with penal servitude for a period of not exceeding two years. The same penalty shall be imposed upon the other party to the marriage.

Art. 213.—Persons who have committed offences mentioned in Articles 205, 206, and 209, may be also sentenced to deprivation of civic rights.

Persons who have committed offences mentioned in Article 210, and who in consequence are punishable with penal servitude, may also be sentenced to deprivation of civic rights and to police surveillance.

CHAPTER XXIII.—OF GAMBLING AND LOTTERIES.

Art. 214.—Whoever shall have played, bet, or wagered, a valuable thing as a stake, with regard to a matter depending upon chance or contingency, shall be punished with penal servitude for a period not exceeding six months or an ordinary or police fine not exceeding three hundred yen. This provision does not, however, apply to a case where a mere article of momentary amusement or pleasure is wagered.

Art. 215.—Whoever shall have made a regular practice of wagering or gaming shall be punished with penal servitude for a period not exceeding three years.

Whoever shall have, for the sake of profit, opened a gaming house, or shall have formed an association of gamblers for the same purpose, shall be punished with penal servitude for a period not exceeding five years.

Art. 216.—Whoever shall have, without being duly authorized, sold lottery tickets, shall be punished with penal servitude for a period not exceeding two years, or with a fine not exceeding one thousand yen.

Whoever shall have acted as a medium or agent in selling lottery tickets shall be punished with penal servitude for a period not exceeding one year, or with a fine of five hundred yen.

Art. 217.—Whoever shall have, without being duly authorized, purchased lottery tickets, shall be punished with a police fine.

Art. 218.—Persons who have committed any of the offences mentioned in this chapter and who are consequently punishable with penal servitude may also be placed under police surveillance.

CHAPTER XXIV.—OF OFFENCES RELATING TO PLACES OF RELIGIOUS WORSHIP AND CEMETERIES.

Art. 219.—Every person who shall have openly

committed an insulting act against a shrine, temple, cemetery, or any place of religious worship, shall be punished with penal servitude for a period not exceeding six months, or with a fine not exceeding fifty yen.

The penalty shall be penal servitude for a period not exceeding one year, or a fine not exceeding one hundred yen if the offender has disturbed or interfered with the preaching, religious exercises, or a funeral.

Art. 220.—Whoever shall have been found guilty of violation of interment shall be punished with penal servitude for a period not exceeding two years.

Art. 221.—Whoever shall have mutilated, damaged, abandoned, or taken possession of the body, bones, or hair, of a deceased person, or any articles deposited in a coffin, shall be punished with penal servitude for a period not exceeding five years.

Art. 222.—Persons who shall have committed the offences mentioned in Art. 220, and thereby mutilated, damaged, abandoned, or taken possession of, the body, bones, or hair, of a deceased person, or any articles deposited in a coffin, shall be punished with penal servitude for a period not exceeding five years.

Art. 223.—Whoever shall have, without being duly authorized, exhumed and re-interred a corpse shall be punished with an ordinary or police fine not exceeding fifty yen.

The same is applicable to a case where the interment of the body of a person who has died an unnatural death has been made without obtaining official inspection.

CHAPTER XXV.—OF OFFENCES COMMITTED BY PUBLIC SERVANTS IN THE EXERCISE OF THEIR FUNCTIONS.

Art. 224.—Every member of the public services who, acting in this capacity, shall have abused his power and shall have caused a person to commit an act for which he is not responsible, or shall have unduly hindered him from exercising his right, shall be punished with penal servitude or imprisonment for a period not exceeding six months.

Art. 225.—Every magistrate, prosecuting an official, or officer of police, or person acting in such capacity, or person acting as assistant to such official, who acting in his official capacity shall have abused his power and (illegally) arrested, taken into custody, or detained an individual shall be punished with penal servitude or with imprisonment for a period not exceeding five years.

Art. 226.—Every magistrate, prosecuting an official, or officer of police, or person acting in such capacity, or person acting as assistant to such official, who shall have used towards a criminal defendant prisoner or any detained person (under any circumstance) violence or bad treatment shall be punished with penal servitude or with imprisonment for a period not exceeding three years.

In case a person acting as gaoler or guard over prisoners detained in accordance with laws and ordinances shall have used towards such prisoners violence or bad treatment he shall be dealt with in the same manner.

Art. 227.—If, on account of the offences mentioned in the two preceding Articles, there has resulted death or wounds, the penalties for "wounding and (grievous) bodily harm" shall be compared with (those provided above) and the more severe penalty shall be inflicted.

Art. 228.—Every person who is acting as gaoler or guard over prisoners detained in accordance with laws and ordinances, and who, in case of inundation, conflagration, hurricane, earthquake, or other extraordinary event (of a calamitous nature) shall have failed to take, or cause to be taken, the necessary steps to avoid disaster, and thus have caused death or wounds to the prisoners, shall be punished according to the provisions re "wounding and (grievous) bodily harm."

Art. 229.—Every member of the public services or arbitrator who shall have received or demanded bribes, or entered into an agreement to receive the same in connection with his official capacity and duties, shall be punished with penal servitude for a period not exceeding three years. Persons who have, in consequence, committed

dishonest and improper acts, or not acted properly and befittingly, shall be punished with penal servitude for a period of more than one year and not exceeding ten years.

Under the circumstances foreseen in the preceding paragraph, should it be impossible to confiscate the whole or a portion of the amount of the bribe, the amount of such shortage shall be imposed upon the offender.

Art. 230.—Whoever shall have given, offered, or agreed to give a bribe to any member of the public services or to an arbitrator shall be punished with penal servitude for a period not exceeding three years, or a fine of not exceeding three hundred yen.

Persons who have committed the offences mentioned in the preceding paragraph, but have given up themselves prior to official cognizance being taken of such offences, shall be exempted from the penalties provided. With regard to those who have confessed or acknowledged their offences prior to the judgment becoming irrevocable, the penalty may be remitted either in whole or in part.

Art. 231.—Every member of the public services or arbitrator who has in connection with his official function been guilty of a dishonestly improper act, or of not acting properly and befittingly owing to favoritism or hatred, shall be punished with penal servitude or imprisonment for a period not exceeding five years.

Art. 232.—Every member of the public services or arbitrator, who for his own advantage, or for the sake of conferring an advantage on some other person, shall have divulged the secrets of his office, shall be punished with penal servitude for a period not exceeding three years.

Art. 233.—Persons who have committed any of the offences mentioned in the four preceding Articles, and who are in consequence punishable with penal servitude, may also be sentenced to deprivation of civic rights.

CHAPTER XXVI.—HOMICIDE.

Art. 234.—Whoever shall have killed another shall be sentenced to death, perpetual penal servitude, or penal servitude for a period not exceeding five years.

Art. 235.—Whoever shall have killed his (or her) own or his wife's (or her) husband's direct ancestor (as the case may be), shall be punished with death or perpetual penal servitude.

Art. 236.—Attempts to commit the offences mentioned in the two preceding Articles shall be punished as "infractions not consummated."

Art. 237.—Persons who have made preparations with intent to kill another person, shall be punished with penal servitude for a period not exceeding one year. Provided, however, that, according to the circumstances of the case, the principal penalty may be remitted in full and the offender placed under police surveillance.

Art. 238.—He who shall have instigated and caused a person to commit suicide, or shall have killed him at his solicitation or upon his consent, shall be punished with penal servitude or imprisonment for a period not exceeding seven years.

Art. 239.—Persons who have committed any of the offences mentioned in this chapter may also be sentenced to deprivation of civic rights.

Those who have committed offences mentioned in this chapter and who are punishable with limited penal servitude may also be placed under police surveillance.

(TO BE CONTINUED.)

CORRESPONDENCE.

TOKYO TRAM FARES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The *Japan Mail* has repeatedly declared that Mr. Amenomiya's proposal of a uniform fare of three sen for the electric cars all over Tokyo is quite unfeasible, and in to-day's issue I find the following remarks: "Is it conceivable that any electric railway could be profitably run on a uniform charge of three farthings for all distances? We find it inconceivable."

I can not quite agree with you on that point. The longest distance to be traversed in Tokyo would probably be the one from Shinagawa to Ueno or Asakusa, which is about 7 miles (or even less). Now you can ride in the Berlin electric railway a distance of quite

ing to render assistance they were of little use. Captain Boon cannot say enough to express his appreciation of the work of the crew during the hour of trial.

Our contemporary adds:—The steamer is leaking badly, and her ballast tanks are filled with water. The pumps are working day and night. The extent of the damage to the *Ujina* cannot be determined until the ship is placed in drydock.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

BRITISH CABINET RESIGNATIONS.

London, September 17.

Mr. Joseph Chamberlain, Secretary of State for the Colonies; Mr. C. T. Ritchie, Chancellor of the Exchequer; and Lord George Hamilton, Secretary of State for India, have resigned.

GREAT BRITAIN AND THE TURK.

London, September 18.

The *Daily Chronicle* understands that the British Government has decided to make representations at Constantinople with a view to putting an end to the massacres in Macedonia. The representation will be supported by the dispatch of a British Squadron.

SIR THOMAS LIPTON ILL.

Sir Thomas Lipton is seriously ill in Chicago, suffering from appendicitis.

PRINCE FERDINAND.

Prince Ferdinand has returned to Sofia.

WHITTAKER WRIGHT.

Mr. Whittaker Wright has been committed for trial.

MR. CHAMBERLAIN EXPLAINS HIS POSITION.

London, September 19.

Mr. Chamberlain, writing to Mr. Balfour under date of the 9th inst., recognises that owing to the rejection on the part of the Liberal leaders of all inquiry, and their unscrupulous use of the dear loaf cry, there is at present no hope of successfully pressing the question of preferential trade with the colonies. He suggests that Mr. Balfour should limit the present policy of the Government to a reform enabling England to retaliate against those foreign countries which refuse equitable reciprocity—a reform in favour of which there is strong popular feeling. Nevertheless, he cannot himself accept the exclusion of so important a part of his political programme, and therefore resigns, believing that he can best promote the cause he has at heart outside the Cabinet.

KING ACCEPTS RESIGNATIONS.

Later.

King Edward has accepted the resignations of Mr. Chamberlain, Mr. Ritchie, and Lord George Hamilton.

There is a general impression that Mr. Austen Chamberlain, at present Postmaster-General, will succeed Mr. Ritchie as Chancellor of the Exchequer; and the Hon. St. J. Brodrick, now Secretary of State for War, Lord George Hamilton, as Secretary of State for India, while Lord Milner is regarded as a possible successor to Mr. Chamberlain in the post of Colonial Secretary, though some say Earl Selborne, now First Lord of the Admiralty, will take the post.

MACEDONIA.

Austria and Russia have issued a circular Note to the Powers expressing a determination to persist in the reform scheme for Macedonia.

GERMANY AND AUSTRIA.

London, September 20.

Count von Bülow conferred with Count

Goluchowski at Vienna for an hour and a half.

BRITISH POLITICS.

The newspapers publish a rumour to the effect that the Government is considering the question of offering the Foreign (?) Office to Lord Curzon or to Lord Milner. The report gains considerable credence. There is a consensus of opinion that Mr. Austen Chamberlain will succeed Mr. C. T. Ritchie as Chancellor of the Exchequer.

THE BALKANS.

Later.

A more hopeful feeling is manifesting itself at Sofia. The urgent representations of the Powers have exercised considerable influence.

Mr. Delcassé has announced at a Cabinet meeting that Russia and Austria will not intervene in Macedonia except for the purpose of expediting the execution of their reforms, in which the other Powers support them.

MORE RESIGNATIONS.

London, September 21.

Lord Balfour of Burleigh, Secretary for Scotland, and the Hon. Arthur Elliott have resigned.

FRENCH SHIPS FOR THE LEVANT.

Two French cruisers have sailed for the Levant.

AUSTRO-HUNGARIAN AFFAIRS.

The order of the Emperor of Austria, issued on the 19th instant, refusing to permit any change in the army, was due to the Hungarian insistence upon the introduction of the Hungarian emblems (?) in the words of command of the army. It has created a serious situation, for though received with rejoicing in Austria it has united the Moderates with the extreme Kossuth Party in Hungary, where it is considered a direct challenge from the Crown to the nation.

THE BALKAN AFFAIR.

London, September 22.

Bulgaria has completed arrangements for concentrating 200,000 men on the frontier within a week.

Two Italian warships fully equipped left on the 20th September for Aprilani.

The Porte on the 21st directed the attention of Serbia to the formation there of insurgent bands for Macedonia. Serbia replied that hitherto she has done her utmost, but unless the persecution of the Christians is suspended popular indignation will break out.

BRITISH CABINET CRISIS.

London, September 23.

Mr. A. J. Balfour, the Prime Minister, is still at Balmoral. A feeling prevails that the prolonged negotiations indicate that the Cabinet changes will be more far-reaching than was at first anticipated.

GENERAL HUNTER ON THE LADY-SMITH NAVAL CONTINGENT.

Rear-Admiral the Hon. Hedworth Lambton has written to the British Admiralty demanding an unreserved apology from Lieut.-General Archibald Hunter for a sweeping criticism of the shooting of the naval guns at Ladysmith in the course of evidence given before the War Commission, where General Hunter said school-girls would have made better practice than the Naval Contingent.

THE BALKAN CRISIS.

London, September 24.

It is stated at Sofia that the Porte recently expressed its readiness to consider proposals for a direct understanding, upon which

Bulgaria proposed conditions, the most important being the appointment of a mixed commission, the majority of which to be Bulgarians, to supervise the reforms. The conditions were accepted in principle though nothing definite was decided.

Later.

Yesterday's Constantinople telegrams differ entirely from the Sofia dispatch. The state of tension is greater than ever. Protracted councils have ended in the ordering of thirty-two battalions from Monastir to Adrianople.

(RECEIVED AT THE LEGATION OF FRANCE.)

MACEDONIA.

Saigon, September 18.

A telegram from Sofia announces terrible massacres imputed to Turkish troops.

A telegram from Constantinople states that 4,000 Bulgarians and Macedonians are preparing to cross the frontier at Kusteuje.

THE KAISER AT VIENNA.

Saigon, September 19.

The Emperor William has arrived in Vienna. The two Emperors are going to discuss the Eastern Question.

FRENCH CRUISERS.

Saigon, September 21.

The armoured cruiser *Latouche-Tréville* and the second class cruiser *Du Chayla* have proceeded to the Levant, in consequence of the Macedonian affair.

THE TWO EMPERORS.

Saigon, September 22.

Emperor William has left Vienna. It is assured that the two Emperors agreed upon the necessity of leaving Turkey free to suppress the insurrection.

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

MURDER IN CHINNANPO.

Masampo, September 5.

A Japanese subject and his wife, residing at Cham-po in the Chinnan district, were inveigled from their house by Korean burglars and murdered, their heads being beaten out of all shape. The Japanese police are taking steps to have the murderers arrested.

THE PEST AT NEWCHWANG.

Newchwang, September 19.

The number of persons attacked by pest since the outbreak of the epidemic has been 202, of whom 166 perished. There have been some cases in the foreign settlement also. All were Chinese subjects. There are symptoms of the disease spreading to the districts adjacent to the city.

(FROM THE "JUJI SHIMPO.")

BRITISH FINANCIAL POLICY.

Mr. Balfour, Premier, has issued a pamphlet which contains his opinions in which he agrees with the protectionists. It is supposed to be the principle of the statement which he will give on October 1st at Sheffield.

In the belief that a change of financial policy is necessary the Premier concurs with Mr. Chamberlain. The Duke of Devonshire is still silent.

THE AMERICAN COTTON CROP.

Owing to unfavourable weather, the cotton crop in the state of Georgia has sustained severe damage.

BALKAN AFFAIRS.

Twenty-thousand reserves on the Bulgarian frontier have been mobilized.

Salonika is generally in sympathy with the insurgents. The disturbed territory is divided into eight divisions. Each division is under the command of Bulgarian officers, and General Tzontzeff (?) commands the whole.

Russia has also issued an order to mobilize eighty thousand troops at Odessa and Tiraspol. Prince Ferdinand of Bulgaria is expected to return to Sofia to-day.

DISRUPTION OF THE BRITISH CABINET.

London, September 18.
Great excitement prevails in British political circles. Mr. Chamberlain, Secretary of State for the Colonies, resigned last night, believing that the nation has made no preparation to extend to the colonies reciprocal treatment, having been misled by the cry that such a policy would lead to higher prices of commodities. Mr. Balfour the Premier, has entirely scouted the idea of a protection policy, though partly concurring with Mr. Chamberlain in his contentions. With regard to the establishment of a protective policy, the intention of Mr. Chamberlain is to educate the electors on the question. On the other hand, Mr. Balfour intends to commit the question of retaliatory tariffs to the various colonies of the Empire, with which policy a large portion of the public will probably sympathize.

Mr. C. T. Ritchie, Chancellor of the Exchequer, and Lord G. Hamilton, Secretary of State for Indian Affairs, have also resigned, being opposed to the policy of the Premier.

A SUCCESSFUL JOURNEY.

Mr. Spencer, the well-known aeronaut, crossed London successfully last evening in his balloon.

THE VISIT OF THE KAISER.

London, September 19.
The Kaiser has paid a visit to Vienna, where the Emperor of Austria cordially welcomed him at the railway station.

MR. CHAMBERLAIN'S RESIGNATION.

The services of Mr. Chamberlain, Secretary of State for the Colonies, are very heartily appreciated by the papers in the colonies and in foreign countries.

THE BALKAN CRISIS.

The mobilization of the Bulgarian troops is now going on.

Austria and Russia have again declared their decision with reference to the enforcement of their proposed Macedonian reforms. Great Britain, France and Italy are also devising Macedonian reforms.

In the engagement which occurred in Okrida district, three hundred Bulgarians were killed.

THE BRITISH CABINET.

London, September 21.
Other resignations have occurred in the British Cabinet, the Financial Secretary of the Treasury, and the Secretary for Scotland.

The reorganization of the Cabinet is now going on.

BALKAN AFFAIRS.

With regard to Bulgarian mobilization, the Berlin *Norddeutsche Allgemeine Zeitung* publishes an editorial reflecting official views, which refers in friendly terms to Turkey.

The insurgents are now invading Melnik. Since last Thursday, fighting has been continuous at Creschuna (?) district.

(FROM THE "ASAHI SHIMBUN.")

THE TURKISH CRISIS.

London, September 17.
General commotion has occurred at Bock(?) and in other districts.

Troops fired on the Armenians and many were killed.

Political assassinations recently committed are attributed to the Armenian Committee. Some members of the committee went about the business openly and the onlookers are said not to have interfered.

London, September 18.

Austria has presented a warning to Bulgaria saying that if the latter is unable to restrain the Macedonian intruders, Russia and Austria will allow Turkey the right to defend herself.

(FROM THE "JAPAN GAZETTE.")

THE HUNGARIAN CRISIS.

Berlin, September 23.
The excitement caused in Hungary by Emperor Francis Joseph's military manifesto has subsided. A compromise is expected.

GERMAN AND AUSTRIAN EMPERORS IN ACCORD.

The Kaiser was heartily welcomed at Vienna. The interview between the two Emperors proved the perfect harmony of their views in regard to all pending questions.

THE BALKAN SITUATION.

The vigorous warnings given by Austria and Russia have had a pacifying effect on Bulgaria. The bellicosity of the Bulgarian Government has decreased.

RUSSIA IN THE FAR EAST.

Russia intends to establish new Russian newspapers at Port Arthur and Shanghai.

THE CZAR'S VISIT TO AUSTRIA.

Berlin, September 24.
The Czar will arrive at Vienna next Wednesday.

THE HUNGARIAN CRISIS.

Emperor Francis Joseph has sent an autograph letter to the Hungarian Premier, Baron Khuen Hedervary. The Emperor writes that he is much concerned in regard to the deplorable state of things which is at present hampering the machinery of state business. It is his earnest wish to introduce reforms in the army as far as possible, but the consolidation of Austria and Hungary must be maintained at all cost, as of the first importance. He hopes for a favourable solution of the difficulty.

A Recruiting Bill has been presented to the Austro-Hungarian Reichsrath.

GERMAN SOCIALISTS AND THE GOVERNMENT.

August Bebel, leader of the Socialist party, has declared, at a party meeting, that the financial position of the German Empire is unsound, and that payments to army contractors for Government supplies are in arrears. The semi-official paper, the *Norddeutsche Allgemeine*, contradicts these statements as absolutely unfounded.

King Victor Emanuel of Italy has presented his portrait in life size to the German Chancellor, Count von Buelow.

A NEW GERMAN CRUISER.

The new cruiser, which was launched at the Vulcan Docks at Stettin, has been christened *Berlin*. The Emperor sent a congratulatory telegram to Mr. Martin Kirschmann, Mayor of the city of Berlin.

(FROM THE "N.-C. DAILY NEWS.")

A BULGARIAN PROTEST.

London, September 16.
Bulgaria has addressed a Note to the Porte refuting the accusations of the latter that the insurrection is the work of Bulgarian bands, and declaring that the movement is due to the Ottoman régime and the persecution practised by the Turks.

The present situation, the Note adds, will possibly end in a catastrophe disastrous to both countries.

The Bulgarian Note to the Powers is dated the 13th of September.

MR. BALFOUR'S CONVICTIONS.

Mr. Balfour has issued a pamphlet on Insular Free Trade, in which he says that the fiscal reformers fifty years ago failed to see that the world would reject free trade.

He admits the increase of British trade, but denies that its growth has been proportionate to the growth of our wealth and population.

He recognises the great evils of protection. We are bound to seek some mitigation thereof, and the only way is by negotiation.

Instead of appealing to theories which foreign nations disbelieve, we must use fiscal inducements which they thoroughly understand.

Our first and most essential object should be to rid ourselves of the bonds wherein we have gratuitously entangled ourselves.

The precise manner of using our regained liberty is a secondary issue.

A SKIRMISH WITH THE ARABS.

London, September 17.
A skirmish has taken place between a party of the Hampshire regiment and the Arabs in the Aden hinterland.

One of the Hampshires was killed and four wounded. The Arabs lost seven killed and fourteen wounded.

UNREST IN ARMENIA.

There have been serious riots at Baku, Kars, Tiflis, and Elizabethopol.

The troops have fired on the crowds of Armenians, killing many.

A number of political assassinations that have taken place recently are attributed to Armenian committees. Some of them have been perpetrated openly, the witnesses not daring to interfere.

THE REVOLT OF HUNGARY.

London, September 18.
The Emperor Francis Joseph, who recently visited Budapest in the endeavour to solve the paralysing political crisis due to the Hungarians insisting on the introduction of Hungarian emblems and words of command into the army, has issued an Army Order emphatically refusing to permit any change in the army of the empire-kingdom.

THE DISCORD IN MACEDONIA.

Austria has notified Bulgaria that if she is powerless to prevent the passage of hostile bands into Macedonia, Austria and Russia will charge Turkey to exercise her rights of defending her territory and maintaining internal order.

EXPORTS.

RAW SILK.

The week has been quiet, prices tending downwards. Sellers make a struggle against lower quotations but they have to yield. Kakedas especially have considerably declined in value. On the other hand Re-reels are strongly maintained while Filatures are decidedly easier.

SWISS WATCH INDUSTRY. ONLY 20/-

To Every Commissioner, Post Office and Railway Agent, and Persons Requiring a Splendid Watch, we offer this opportunity of obtaining this "Original Swiss Watch" (also known as the "Clarified System") and receive the Highest Award at the PARIS EXHIBITION IN 1900. IT IS THOROUGHLY REGULATED & SUPPLIES TIME ACCURATELY, AND CARRIES WITH IT A THREE YEARS' WRITTEN WARRANTY. It is the Latest Heaviest, and most accurate, which is made of anti-rustless metal. Electrically coated, plated with the Latest Principle, and the finest Compressor cannot detect THE DIFFERENCE BETWEEN OILS AND THE SPECIAL OIL IN A WATCH. IT BEARS LIKE REAL GOLD AND IS THE ONLY WATCH IN THE BRITISH PUBLIC AND COLONIAL. We will deliver EITHER LADIES OR GENTS for £10, or, just free formerly costing £20.00, on receipt of Money order for the Amount. A Leather Case is also given gratis with every Watch. Durable, reliable, and weight. Any Article bought and not approved of will be exchanged. The Editor of our Paper, according to our Daily Orders and Unsolicited Testimony, also proves the Soundness of our Advertisements. Local Officer Postal Orders should be made payable to MAISON BONNET, BALE (RUSSIE).

BY ROYAL WARRANT

Bovril
fortifies the
system.

BOVRIL is an extremely palatable drink, and a stimulant that has no bad after-effects. It is also a replacer of used-up tissue and energy; while it enables the system to endure fatigue and to repel disease.

HOLLOWAY'S OINTMENT IS A HOUSEHOLD NECESSITY

It cures Rheumatism, Sciatica,
Stiff Joints,
Glandular Swellings,
Sore Throat, Quinsy, Wumps,
Burns, Piles, Fistulas, &c.

AND EVERY FORM OF SKIN DISEASE.

Manufactured only at 78, New Oxford St. (late 558, Oxford St.) London. Sold by all Chemists and Medicine Vendors.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 3RD, 1903.

BIRTH.

At Kanazawa, on Sept. 25th, the wife of J. G. DUNLOP, of a Son.

SUMMARY OF NEWS.

MR. KURINO, Minister to Vienna, left Shimonoeki on Sept. 26th for North China en route to his post.

A CORRESPONDENT of the *Fiji* says that during the night of Sept. 26th snow covered the summit of Mt. Fuji.

MIVAKAWA, a clerk of the Nagano City Office, was arrested on Sept. 26th on a charge of fraud. His dwelling was searched.

AN official telegram has been received in Tokyo to the effect that rinderpest is now prevalent in Seoul and the surrounding districts.

ALL Europeans, British and French alike, in the service of the Sultan of Morocco have been

ordered to quit Fez, where their lives are unsafe owing to the hostility of the natives.

A CASE of suspected cholera was reported at Minami-tama district, Tokyo, on Sept. 28th. The patient is a woman named Yu Kinoshita, 45 years old.

TWO cases of cholera and a case of dysentery were reported in Tokyo on Sept. 25th. The latter was a student lodging at the Commercial Marine College.

TWO battalions of the 2nd Division (Sendai) and the 7th Division (Hokkaido) will start in the middle of October to relieve the Japanese garrisons in North China.

A ROBBER named G. Harashima (28), sentenced to death in the Utsunomiya District Court, was executed on the morning of Sept. 28th in the Ichigaya Prison, Tokyo.

TOKYO papers state that the Crown Prince will pay a visit to western cities, leaving Tokyo in the beginning of October and returning before the Emperor's Birthday.

A FISH dealer named Y. Ishii (28) attempted on Sept. 24th to murder a woman named Koto Ishikawa (38), a friend of his wife. The culprit was arrested on the scene.

THE new Chinese Consul-General appointed to Yokohama left Tientsin on Sept. 27th for Shanghai, where he will take steamer for his post, arriving here in the middle of October.

OWING to the recent storm, terrible inundations prevailed at Tokatsu, Hokkaido, and surrounding districts. Over three hundred houses were flooded, and three persons and three horses drowned.

MR. CHARLES JARROTT, the well-known automobilist, who represented Great Britain in the recent race in Ireland for the James Gordon Bennett Cup, has been married to the Countess of Rosslyn.

MR. K. KATAOKA, the president of the House of Representatives, who has been staying at Kochi in consequence of ill-health, is reported to have recovered and is expected to proceed to Tokyo.

THE Rev. C. E. Darwent was just concluding his sermon in Shanghai on Sept. 20th with the words "The bush was on fire;" when the alarm rang out for a conflagration in Kiukiang Road.

A SHAM fight between the 26th regiment and the Hakodate forts was begun on Sept. 27th. Lieut.-General Baron Oseko, Commander of the Seventh Division (Sapporo) is present to watch the affair.

THE Osaka Life Insurance Company held an extraordinary general meeting on Sept. 25th to discuss the proposed amendment of the by-laws. It was decided to add yen 200,000 to the capital.

PRINCE YORIHITO (Higashi Fushimi) Lieut.-Commander of the Navy, and Prince Hiroyasu (Kacho) Lieutenant of the Navy were, on Sept. 26th, promoted to Commander and Lieut.-Commander respectively.

A BLUEJACKET belonging to the Iwabara Naval station was found dead on Sept. 23rd in a wood near Sumo village. He is reported to have committed suicide by hanging himself. The man deserted the station about a week ago.

A TELEGRAM from the authorities of the Formosan Government states that on the evening of Sept. 18th, natives attacked the police station at Arishi, Giran prefecture, destroying it and some buildings with fire. No one was wounded.

ACCORDING to official investigations, the number of dwelling houses in Formosa at the end of last year was 565,648 comprising 15,075 Japanese houses and 550,573; and the inhabitants numbered 3,000,111 comprising 47,077 Japanese and 2,953,034 natives.

K. TANAKA (24) living at Hamacho, Tokyo, who was recently found guilty of entering the dwelling of a merchant at Kobayashi and stealing therefrom money and several articles, was sentenced on Sept. 28th in the Tokyo District Court to eight years' confinement with hard labour.

GRADUATES of the Imperial University propose to erect bronze statues of Drs. Scriba and Baelz who have been connected with the institution for many years. The *Yorodu* states that already over yen 6,000 has been collected and an artist has been asked to design the statues.

THIRTY-FIVE villagers of Yanaka, Shimo-Tsuga district, Tochigi prefecture, on Sept. 27th, rose in a body to complain to the Governor about some damage caused by recent inundations of the Watarase river. A correspondent of the *Fiji* states that the damage sustained amounts to about yen 100,000.

THE body of a man was found on the morning of Sept. 24th on the beach at Nanko near Kamakura. It bore many injuries on the head and other parts and is thought to have been murdered and then thrown into the water. The officials of the Yokohama District Court have examined the corpse.

MR. NAKAE, member of the Toyama Prefectural Assembly, was arrested on Sept. 28th on a charge of an infringement of the Election Law. The same day the headman and other village officials of Afura, near Maebashi, were taken to the Court on a charge of having secretly altered the qualification of candidates for the Assembly.

THE Daito Life Insurance Company, Osaka, was, on Sept. 25th, ordered by the authorities of the Department of Agriculture and Commerce to close its business and wind up its affairs. It is alleged by the *Fiji* that a Public Procurator of the Osaka District Court had been examining the business of the company on the ground that the firm was suspected of having contravened the Insurance Law.

THE wonderful antediluvian mammoth discovered 18 months ago in Siberia has at last, after 12 months of labour and great expenditure, been safely secured in the museum of the Imperial Academy in St. Petersburg. It was discovered on the left bank of the river Beresovka, in a region that for ages has been the scene of great landslips at the melting of the snows in spring. The discovery was made by a Siberian hunter, who secured one of the tusks for sale. It was of almost incredible size.

CHINA.

Saturday, September 26.

It is interesting to observe that in an analysis of the attitude of the various Powers towards the Manchurian question, the Liberal organ *Jinmin* declares emphatically that Great Britain is averse to a war between Japan and Russia. Our friends the Germans—we say nothing of the Russians, for that their spectacles should be out of focus at this juncture is perhaps inevitable—our friends the Germans seem bent upon convincing the world that England is using all her endeavours to foment war. The result of this campaign, if such it can be called, on the part of a section of the German press, can only be to augment the astonishment caused by its writings during the South African War. We are not speaking of hostility to England. There may have been good reasons for that. What we mean is that the editors displayed in connexion with foreign affairs a degree of ignorance quite surprising where Germans were concerned. They appear to be making a similar exhibition with regard to England's action at the present juncture.

The recently received rumour is confirmed that the Russian troops hitherto stationed at Shanhaikwan have been withdrawn to Port Arthur by sea, with the exception of the soldiers garrisoning the first fort, and these also are expected to hand over the place to England at an early date. Of course no special importance attaches to this incident.

Monday, September 28.

The *Fiji Shimpō's* Peking correspondent telegraphs under date of the 26th instant, that on the 25th His Excellency Ku Fung-ki called at the Japanese Legation and assured Mr. Uchida, in behalf of Prince Ching, that China had no idea of accepting Russia's recent demands, and had, in fact, sent a written reply in that sense to M. Lessar, informing him that the Chinese Government could not entertain any proposals until Russia carried out her convention by evacuating Manchuria. The Minister added that China's reliance was now entirely on Japan. The *Kokumin Shinbun's* telegrams confirm this, so far as concerns the fact of Ku Fung-ki's visit to Mr. Uchida on the 25th, and add that on the evening of the 24th the Japanese Representative entertained the principal members of the Chinese Foreign Office at dinner. In the same journal we find a general statement that China has unequivocally rejected Russia's latest demands, and further that the two supplementary conditions to which recent reference has been made are, first, that only Russians shall be employed in the customs service in Manchuria, and secondly that no timber-felling or mining privileges shall be granted to any nationals other than subjects of the Tsar. The *Nichi Nichi's* Peking correspondent telegraphs in exactly the same sense as the *Fiji's*, and goes so far as to quote Ku Fung-ki's words to Mr. Uchida, namely,—"China profoundly appreciates the friendly warning addressed to her by Japan with reference to Russia's new demands. China, sensible of the vital issues involved in this question, is about to definitely reject Russia's demands." The correspondent concludes by saying that the Chinese Government's answer to M. Lessar was:—"China desires that Russia should implement her treaty for the evacuation of Manchuria. After the withdrawal of the Russian troops, any demands that Russia may make can be considered.

Meanwhile she is requested to withdraw her present demands."

We shall be much surprised should this information prove correct.

It is stated, by a *Hochi Shimbun* correspondent that according to explanations obtained from the Russian Consulate in Nagasaki, Baron Rosen is not to take part in the council of officers and officials convened by Viceroy Alexieff to meet on the 25th instant. The Baron, on landing, was to proceed at once to the Viceregal residence, and it is estimated that his stay in Port Arthur will be limited to 5 days, including the day of his arrival, so that his return to Japan will be about the 24th of October.

Tuesday, September 29.

The interesting news taken by us yesterday from Peking correspondents of Tokyo journals, is repeated to day by the correspondent of the *Asahi Shimbun*. He attributes the sudden access of resolution by which China has been visited to counsels of Mr. Conger. It will be remembered that, a few days ago, Prince Ching was said to have visited Mr. Conger with the hope of inducing the latter to undertake the office of mediator between Japan and Russia. On that occasion, it is now asserted, the United States Representative, though refusing forthwith to interfere directly, pointed out with great clearness and in much detail the insuperable objections that presented themselves to accepting Russia's latest demands, and the Chinese Minister is believed to have been so much impressed by the advice thus tendered that he decided to return, and did actually return, to M. Lessar the strong-backed reply reported by Saturday's telegrams, namely, that China declined to negotiate so long as Russian troops were in occupation of Manchuria.

When publishing this news of China's resolute attitude we expressed great scepticism about it, our reason being that the course thus attributed to Prince Ching was palpably inconsistent with his original reception of Russia's new demands. It is known that he regarded them with comparative favour and showed a strong disposition to accede to them, being, in fact, persuaded that no other course was open to the Chinese Government. Considering the number of the sources from which this news of a radically changed front comes, we can not put it aside with complete incredulity, but undoubtedly some confirmation is required.

In America a month ago it was confidently believed and asserted that Mr. Conger, after considerable difficulty, had obtained a written promise from Prince Ching in the sense that on the 8th of October the latter would sign the new commercial treaty which guarantees, among other things, the opening of Mukden and Tatung-kou to foreign trade. Mr. Conger has therefore a special status in the eyes of the Chinese Foreign Office. On the other hand, there is nothing in Russia's latest demands to interfere with the opening of these two ports. Very conflicting accounts have been published concerning these demands, especially about the clause relating to the non-alienation of Manchurian territory. It has been confidently affirmed that the clause specially interdicts the grant of any land for forming special settlements such as it has of late become fashionable to obtain from China, and that it discriminates in favour of Russian subjects. We believe these statements as well as others accompanying them to be mere embroidery. What Russia has demanded is that no part of Manchuria, large or small, shall be leased or sold to a foreign Power. That may be held to pre-

clude the formation of special settlements requiring the lease of areas of land to foreign governments, but it does not by any means preclude the formation of ordinary settlements, and even in the case of special settlements the restriction could scarcely be supposed to apply where Russia herself was a consenting party. Russia is understood to have unequivocally declared her willingness to see places in Manchuria opened to trade, though naturally she limits her consent.

A battalion of Russian artillery numbering 150 men with 27 guns, is said to have moved from Harbin to Port Arthur, where also the troops now in garrison are working day and night to complete the dock, and several torpedo-destroyers are watching the adjacent seas. It is further reported that a considerable body of troops has been marched from Tomsk to Liao-yang, where they are obliged to live under canvas, no permanent accommodation being available. We give these reports for what they may be worth.

It is now reported that the command of all the troops in the Amur region has been entrusted to Viceroy Alexieff, and further that the three Russian Legations in China, Japan and Korea have been placed under his charge. This latter rumour was current some time ago, but it was said to have been contradicted by the St. Petersburg Government, which declared that Russia's relations with the neighbouring countries of her Far-Eastern dominions did not fall within the functions of the new Viceroy. We are therefore disposed to doubt whether M. Alexieff's sway is as wide as this new story would suggest.

In well informed circles in Tokyo it is affirmed that Baron Rosen's journey to Port Arthur was taken in accordance with direct orders from St. Petersburg, and that it had nothing to do with the council of officers and officials summoned by the Viceroy at the latter place. The idea is that the Russian Government desires to have a clear statement of Admiral Alexieff's views before finally opening negotiations with Japan, and that direct consultation between the Viceroy and the Minister in Tokyo seemed an advisable preliminary. If this analysis be correct, it may be assumed that things will move more rapidly after Baron Rosen's return to Japan, which event is expected to take place on the 3rd or 4th proximo.

A specimen of the electric changes to which newspapers are liable at this crisis is afforded by the latest issue of the *Hochi Shimbun*. In the columns of that journal on the 28th instant there appeared an editorial statement to the effect that the Cabinet was virtually inactive, that it had not the least intention of vigorously asserting the country's rights, that the talk of direct negotiations with St. Petersburg was intended merely to throw dust in people's eyes, and that the Ministerial policy was one of helpless waiting for the 8th of October. Accompanying the newspaper in which these sweeping statements were made was a small supplement announcing that the Government had resolved to appeal to the sword, that the nation must be prepared to face the *ultima ratio*, that the navy had been fully organized for combat, that the Kokura Division was under orders for the front, that all the necessary supplies had been furnished to it, and that transports for conveying the troops had been requisitioned from the Nippon Yusen Kaisha and the Shosen Kaisha. We do not remember to have ever seen two such stupendously contradictory stories published by the same newspaper in the same issue.

Mr. Mochizuki Kotaro, sometime much talked of as a leader of the "High Collar Party," has returned from a trip to China and Manchuria, and has related his experiences briefly in the columns of two newspapers whose reports do not altogether tally. The gist is, however, that the traveller found Prince Ching nominally disposed to listen to Japan but at heart determined to placate Russia, and that he found Viceroy Alexieff avowedly much averse to war and apparently not making any marked preparation for such an event.

Wednesday, September 30.

There are no indications that incredulity should be felt any longer about the recently received news that China has definitely refused Russia's last proposals, improbable as such an act seemed in the face of her previous attitude. The *Nichi Nichi's* correspondent now says that since receipt of the refusal M. Lessar has not resorted to any measures of strong pressure, but is awaiting instructions from Viceroy Alexieff. If that be so it would appear that the Viceroy is charged with the control of the diplomatic relations between Russia's Far-Eastern dominions and the neighbouring states, which is precisely the question about which doubts have hitherto existed. In a translation of the Imperial Ukase appointing the Viceroy, which the *Japan Times* publishes, we find a clause that "the diplomatic relations of the Far Eastern Provinces with the neighbouring states shall be centralized under direction of the Viceroy." If that be a correct translation the matter admits of no further doubt, though we understand that there is scepticism in Tokyo as to the extent of the Viceroy's functions in this direction. Certainly we can not gather that the Russian Government has officially conveyed to either China or Japan any intimation of so important a change in the locus of diplomatic authority.

From the same correspondent we learn that M. Lessar had received from Lien Fang assurances which amounted to a distinct promise that the Russian demands would be accepted. Hence Prince Ching's sudden assumption of a radically dissenting attitude has surprised him, as well it might, indeed. As for the Prince, he is described as showing a very bold front and as having derived additional confidence from a visit to the British Legation.

The *Kokumin Shinbun* also confirms the news. China's refusal, it says, was formally transmitted to M. Lessar on the 23rd instant. As for the terms of the refusal, our contemporary's correspondent gives this much:—"Our country sincerely desires to maintain relations of neighbourly friendship with the Russian Empire. With regard to the latest demands presented by Your Excellency, this Government considers that prior to the Russian Empire's withdrawal of all its forces from Manchuria in accordance with treaty, the occasion is not suitable for making any reply to those demands." Of course that can not be the whole of Prince Ching's despatch, but whether it is intended as a quotation or an epitome we can not tell. The correspondent adds that Prince Ching has entirely changed his demeanour and is now showing a determined front.

The *Asahi's* correspondent alleges that a boom has been placed across the entrance to the harbour at Port Arthur, and that only vessels having recognised business with the port are allowed to enter.

Thursday, October 1.

In the *Jimmin* it is stated that Viceroy Alexieff, having been entrusted by the Tsar with virtually plenipotentiary authority for purposes of diplomatic arrangements in China, Korea and Japan, and being dissatisfied with the manner in which Russian interests have been promoted in Seoul and Peking, proposes to send M. Lessar to the Korean capital and M. Pavlov to Peking, the latter having already acquired exceptional knowledge of Chinese affairs. St. Petersburg's approval alone is said to be needed for the consummation of this change. It perplexes us to conjecture the source from which such intelligence can have reached a journal like the *Jimmin*. But we can easily comprehend that the progress of Russian affairs in Seoul does not look very very satisfactory in Russian eyes. Russia has to fight a very uphill game in Korea, a losing game we believe, for every month that passes adds to Japan's material interests in the peninsula and thus strengthens her position there. She can not suffer herself to be effaced and she will not suffer it. M. Waeber, when he had the direction of Russian diplomacy in the Korean capital, succeeded in partially stemming the tide of Japanese influence. His achievements culminated when his Legation became an asylum for the hunted sovereign of the country. Of the fruits of that time, however, nothing now remains except the timber-felling concession, and up to the present M. Pavlov has failed to make out of this privilege such capital as might have been manufactured by different manipulation. He seems to have forgotten that his *vis-à-vis* was not helpless, hopeless Korea alone, and he accordingly had recourse to processes which, by their arbitrary character, placed a weapon in the hands of interested outsiders. Russian influence assuredly has not grown greater in Korea under M. Pavlov's direction, and while we do not presume to pronounce any final judgment or to have any guides except results, we can not but think that by trying to accomplish too much, M. Pavlov has injured his own opportunities, and we are quite sure that his restless encroachments and exactions have greatly increased the perils of the Far-Eastern situation.

In the *Asahi* a telegram is published to the effect that a Japanese constable, recently visiting Mi Reuk-tong on the Yalu, observed that one end of a cable crossing the river had been landed there. On making inquiries from some Russian soldiers, he was informed that the work of completing the cable would soon be undertaken. Our readers may remember that a rumour was recently circulated about this new project of cable-laying. Originally the Russians were supposed to have planned a telegraph from Antung to Yong Am-pho, but as Mi Reuk-tong is in the immediate vicinity of Wiju, the inference is that the Kiutien-ching and Wiju route has been chosen. The plain fact is that Russia interprets the timber concession as placing at her disposal the whole of the forests in the entire Valley of the Yalu and along all its tributaries, and that she claims the right to adopt any measures essential in her own eyes for developing the potentialities of that extensive grant.

Further confirmation is afforded by the *Asahi's* Peking correspondent that China, on the 24th ultimo, returned to M. Lessar the unqualified refusal already reported, and the correspondent adds that in making this refusal Prince Ching was much influenced by

the counsels of the American and British Legations. This correspondent states also, with regard to the rumour that the United States Government had abandoned the opening of Tatung-kou in favour of Antung, that the statement is incorrect: Tatung-kou is still asked for, but Antung is added for purposes of shipping convenience.

It is reported that M. Lessar will shortly leave Peking for Port Arthur with the intention of consulting Viceroy Alexieff about the course to be adopted in view of China's rejection of Russia's demands. Should this prove true, the fact, taken in conjunction with Baron Rosen's visit to the same place, will go far to prove that the centralization of relations between Russia's Far-Eastern dominions and the neighbouring States has a very practical meaning, and that the direction of those relations is virtually in the hands of M. Alexieff.

The *Jiji Shimpō* has a telegram from Peking dated the afternoon of the 30th ult., saying that on the preceding day the Japanese Representative had a long conference with Viceroy Chang Chih-tung, which ended in the conclusion of the new China-Japan commercial treaty. It was agreed that the opening of Peking to trade should be postponed until after the withdrawal of the foreign troops, and it was further agreed that in addition to Mukden and Tatung-kou, in Manchuria, Antung also should be opened, but there is no statement as to the exact date of this last clause's operation.

The United States Representative in Peking is to leave that city for Shanghai on the 2nd instant to discharge business connected with the new American-Chinese commercial treaty. His absence from the capital is expected to be of some three weeks' duration, and he will take the opportunity of going up the Yangtse, visiting the Viceroy at Nan-king and inspecting the actual operation of the *likin* system.

OIL 'N HOKKAIDO.

The *Nichi Nichi* attaches much importance to the recent discovery of oil in Hokkaido by the International Oil Company. This Company has been making many and costly efforts to test the potentialities of Yezo as an oil-bearing region, and on the 16th of August it met with its first signal success. A boring was commenced on the 29th of July at a place called Hachimancho in Ishikari, some 5 miles from the sea-coast of Morai, and on the 16th August when a depth of 1780 feet had been reached, indications of oil were obtained. The following morning at 6 a.m. the oil began to spout with a noise like thunder, and a jet six or seven feet high rose above the surface of the ground. It is believed that the oil-bearing stratum of Hokkaido has now been reached, but no one acquainted with the vicissitudes of this kind of enterprise will be prepared to pass final judgment. Meanwhile we echo the *Nichi Nichi's* expression of pleasure that this discovery have been made, not merely because it adds materially to the resources of Hokkaido, but also because it promises to confer some reward on the splendidly untiring and courageous enterprise of the American Company. We can not choose but speculate how long a time must have passed before any such result could have been attained by the slender resources and immature experience of the Japanese themselves.

KOREA.

Saturday, September 26.

It need scarcely be said that rumour has found congenial material at Yong Am-pho. Confident predictions are now uttered that Russia is about to send troops to that place for the purpose of protecting her subjects there, who are exposed to the danger of attack by Manchurian brigands. We shall be told presently that the fifteen-hundred-ton steamer which, under Russian charter, carried a cargo of provisions, clothing and ammunition to Antung and Yong Am-pho was a preface to this brigandage, and that the Russian Authorities had the acumen to prepare for a sequence of events originating in an incident which they could not have foreseen unless they contrived it. Rumour apart, however, the situation is sufficiently striking, for no one has yet seriously attempted to prove that Russian subjects have any right to be settled at Yong Am-pho, and if they have no such right, then Korea's inevitable refusal to protect them places Russia in a curious dilemma unless, indeed, the Manchurian brigands are mythical.

Meanwhile news arrives that the Russians are making palpable preparations to lay the much talked of cable across the estuary of the Yalu from Antung.

It is stated that there has been some kind of dispute between Russian subjects and Japanese at Song-jon in Korea, and that a Russian war-vessel has proceeded thither to investigate.

Monday, September 28.

It is stated that the Korean Government has instructed the Governor of Wiju to take steps for the removal of any telegraph posts that may be erected by Russians at Mi-reuk-tong. This is the place where, according to rumour, Russia has been recently collecting telegraph material.

Mr. Stein, Secretary of the Russian Legation in Seoul, left that city on the 23rd, nominally for a trip to Russia but really, it is believed, in consequence of a change of post.

From Seoul it is announced that Mr. Cho and Baron Gunsberg have set out for Yong Am-pho. Their departure suggests that the Government's signature is likely to be given to the agreement concluded by Cho with a representative of the timber-felling company. We take it that if such be the case, if the establishment of a Russian settlement at the mouth of the Yalu be permitted by Korea under the circumstances of Russian intrusion at that place, Japan can not possibly sit idle. It will be essential for her to redress the situation in some drastic manner. Korea of course will be the sufferer, but Korea, by her own mismanagement, has fallen into a state of decrepitude incompatible with national safety in these days of "civilized" aggression.

The *Hochi's* correspondent affirms that Baron Rosen's visit to Port Arthur has thrown the Korean Court into a state of alarm, and that the Emperor is denying himself alike to the Representative of Russia and to the Representative of Japan.

Additional news is received about the alleged appearance of Russians at Cho Yong-pho in the immediate neighbourhood of Yong Am-pho. It is now said that the Russians are erecting an observatory there, and that the local officials have warned them to desist from the work.

Wednesday, September 30.

M. Pavlow is taking the line that although the agreement concluded between Cho, act-

ing on behalf of the Korean Court, and a representative of the Lumber Company, contains a clause providing for subsequent delimitation of the land to be leased to Russian subjects at Yong Am-pho, that is a question of mere detail which can not be held to invalidate the broad fact that a promise to lease certain lands at that place has been definitely made. Moreover, the Korean Minister of Foreign Affairs, Li Dochai, had actually fixed a day for the official signature of this agreement, and therefore the responsibility for delay and evasion rests entirely on Korea's shoulders.

It is undeniable, we think, that M. Pavlow has cause of complaint in this matter. He was misled into imagining that his plans were progressing smoothly, and up to a certain point the procedure and men of the Korean Government justified him in thinking that no obstacle would offer to the definite leasing of the Yong Am-pho lands to his nationals. The Korean Authorities themselves seem to have intended to make the leases. Therefore M. Pavlow may well complain that there has been some fast-and-loose play. But from a strictly legal point of view his position does not appear to be tenable. The official signature of the Cho Convention was essential to its final validity. That is admitted by M. Pavlow himself, as we understand. Therefore, the Korean Government retained a constructive right to reject the Convention. Indeed such a right would at any rate have been vested in the confirming authority, who presumably is the Emperor himself. Having then the right to reject, the Korean Government is not guilty of any legal breach of faith when it exercises that right, whatever be the pretext. But it has, apparently, been guilty of the discourtesy of misleading M. Pavlow, and behaving, up to the eleventh hour, as though it intended to accede to his wishes. M. Pavlow is justified in making what capital he can out of the situation, but it is not possible to endorse the contention attributed to him that the lease of some land or other at Yong Am-pho must be regarded as an accomplished fact. The Korean Government, it is true, does not say frankly that it objects altogether to leasing any land. It is unwilling to establish such a contradiction between its original and its ultimate attitudes. But it declines, or at any rate hesitates, to take the only step which could render the lease Convention practically operative. The position is very peculiar. It had its origin in an act on Russia's part such as can not be defended by any theory of international relations with which we are acquainted, and it has resulted in an act on Korea's part such as no powerful and self-respecting government would have taken. Meanwhile the Russians are in illegal occupation of Yong Am-pho, and there is no apparent prospect of their occupation being legalized. It is stated, further, that the Japanese Representative has officially cautioned the Korean Government with reference to the procedure of the commission just despatched to Yong Am-pho, a commission consisting of Baron Gunsberg and a Korean official.

The Japanese Standing Squadron has proceeded to Masampo for practice.

Thursday, October 1.

The *Fiji Shimpō* has another editorial urging the necessity of adopting more resolute and substantial measures towards Korea. Paper protests are of little value in the case of a country menaced by such

eminently practical aggression as that of Russia. The *Fiji* contends that Russian influence in the peninsula has been materially strengthened by the contrast between her fruitful acts and Japan's barren speeches, and it invites the Government to leave the cloud-land of despatches and enter the *terra firma* of deeds. But our contemporary does not on this occasion define what deeds should be performed. From its past writings we know that the opening of Wiju and the grant of a railway concession from Seoul to that city are among the requisitions recommended. These are two steps which we ourselves have always advocated. The fact is that the Japanese Government seems to pay over-much deference to the principles of an international morality which Occidental States neglect, some wholly, some in part, when dealing with Oriental States. That obedience to the ethics of inter-State relations is most praiseworthy, and we quite understand that Japan has special reasons for displaying it. The upshot will be, however, that, to use a vulgar but expressive phrase, she will get left.

Nothing more is heard of the bandit Lin, whose menacing presence in Yong Am-pho elicited from M. Pavlow a requisition for Korean official aid to protect the persons and properties of his nationals. Telegraphic intelligence from the Yalu Valley suggests that Lin and his threats were a myth; in short, a diplomatic invention. We do not believe that, but it seems certain that the bug-bear has not materialized.

Friday, October 2.

We read in the *Chino Shinbun* a statement which requires confirmation. It is that Count Inouye and Baron Shibusawa have undertaken to interest themselves in the speedy construction of the Seoul-Fusan line, as the present rate of building is too slow to suit the situation. Nothing is said as to the method contemplated by these two financiers for hastening the work, but it is added that Mr. Hayashi has obtained from Korea the concession of the Seoul-Wiju road, and that the work of building it will be commenced immediately on the conclusion of the southern line, both being regarded as strategically important.

It is reported that in consequence of action taken by the British Representative the opening of Wiju will be abandoned in favour of that of Yong Am-pho, and that the latter step will be taken very shortly. The *Fiji Shimpō* publishes this news.

THE INTERPORT FESTIVAL.

The Kobe Cricket Club on Tuesday formally accepted the challenge of the Y. C. and A. C. for the usual interport cricket match, and dates were at once fixed. The Interport Festival will take place in Yokohama this year and the cricket matches will commence on Monday, October 19th, continuing every day till finished. The Interport Baseball matches will be played on October 23rd and October 24th; and if occasion offers the interval between the cricket and the baseball matches will be filled with tennis.

In regard to the amusement of our visitors, we understand that through the kindness of the A.D.C., a performance of "The Chieftain" will take place on October 20th; a smoking concert will be arranged for the Friday evening, while the Interport dinner would naturally take place on the evening of October 21st.

THE ELECTRIC RAILWAY QUESTION.

Saturday, September 26.

Yesterday the City Council met to consider the report of its committee advising that the charter of the Street Railway Company be resumed and that the work be taken up by the Municipality. At this moment of writing we are not informed as to the result of the meeting, but the general expectation yesterday morning was that the majority would vote in favour of the Committee's recommendation. Probably such a vote would have little practical result, for the resumption of the charter at this stage is scarcely a practicable operation. No provision of law exists for such procedure under circumstances of the nature of those now existing. What may be affirmed, however, is that the action of the civic authorities has greatly strengthened the hands of the anti-amalgamationists. It was by the advocates of amalgamation, after all, that the dispute was commenced, and thus the ultimate responsibility rests on their shoulders. Rumour says that in view of this fact negotiations have commenced between the two parties, and that the idea of amalgamation will be abandoned provided that the three-*sen*-fare system be modified. We adhere to our conviction that a three-*sen*-fare is out of the range of practical consideration, in the beginning at all events.

Since the above was written we learn that City Council decided to adopt the committee's resolution as to resuming the charter, but of course there is much in the way of such a step.

Monday, September 28.

The report presented by the committee of the City Council with reference to the electric-railway dispute, was unequivocally favourable to the anti-amalgamationists. It appears that the Committee invited the attendance of Mr. Amenomiya and Mr. Toyama as representatives respectively of the anti-amalgamationists and the pro-amalgamationists. From the former they obtained, said the report, clear and concise information. Mr. Amenomiya declared that by construction economies which had been proved by experience to be feasible, the lines could be built for such a figure as would justify the adoption of a uniform 3-*sen* fare with a good prospect of profit. He nevertheless expressed the definite opinion that no hope offered of an amicable settlement between the contending parties, and that, under the circumstances, the best plan would be for the Municipality to resume the charter. Mr. Toyama, on the other hand, failed to give satisfactory answers. He even expressed surprise that such questions should be propounded by the Committee, and the consequence was that the compilers of the report found it impossible to embody any clear account of the amalgamationists' views. They therefore recommended resumption of the charter.

This report was adopted by the City Council with acclaim. There does not seem to have been the least symptom of dissent, the Councillors being unanimously agreed that further postponement of the provision of transport facilities could not be endured.

Meanwhile there are indications that the contending sections may come to a compromise. Mr. Inouye Kakugoro and other members of the Commercial and Industrial Economic Society have resumed the role of mediators, and a plan of settlement has been evolved which will be carried by a joint committee to Marquis Ito, so that Japan's final exit out of all her difficulties may put his *cachet* on the arrangement. Briefly

speaking the programme is that amalgamation shall be abandoned; that all the present Directors and other officials shall retain their posts and that the question of 3-*sen* fares shall be deferred. We include this last condition by inference, but we note that it does not actually appear in the printed accounts, having been purposely omitted—shelved in short—by mutual consent. The result is in some sense a victory for Mr. Amenomiya, who has certainly shown himself a stout fighter. But the truth is that although the amalgamationists had a majority of the shareholders on their side, and although their project was at one time endorsed by the Home Department, they saw that to carry their plan amicably would be out of the question, and they saw also that officialdom had lost confidence in their ability to do so. The anti-amalgamationists, on their side, though they might wreck the Company, could never effect a permanently satisfactory settlement so long as a majority were in the opposite camp. Thus there was nothing for it by compromise, and in the meanwhile the results of the working of the Sukiya-Kanda section of the line which was recently opened to traffic, had been such as to show that the Company might confidently reckon on full success on an independent basis. It may be hoped that this long dispute is now over.

Since writing the above we learn that the negotiations for compromise have again been broken off. They were on the point of conclusion on these lines:—first, that the company should remain independent, both sides suspending all legal proceedings; secondly, that Messrs. Amenomiya and Yoshida, representing respectively the anti-amalgamationists and the pro-amalgamationists should resign at once, their posts remaining unfilled for the present, and thirdly, that the remaining Directors should resign within 30 days. The question of 3-*sen* fares was altogether omitted. Just when this settlement was about to be made a basis for Marquis Ito's final consideration, Messrs. Hada and Kumakura, two barristers hitherto engaged for the anti-amalgamationists, called at the place of meeting, obtained an interview with Mr. Amenomiya, and succeeded in bringing such pressure to bear on him that he left the place and did not put in an appearance again although the other parties waited until 11 p.m. Then suddenly the anti-amalgamationists demanded that the 3-*sen* fares should be included in the list of conditions for compromise, and therewith the meeting broke up, *re infecta*. These two barristers are the pettiest of petty shareholders. Their object in disturbing the smooth progress of events is said to be purely selfish. Nothing seems now to remain except the resignation of the Directors *en bloc*. Tokyo business men have succeeded in making themselves a veritable laughing stock.

Tuesday, September 29.

A bomb has been thrown into the camp of the electric-railway disputants by the Minister of State for Home Affairs. At the end of July last the Street Railway Company applied for permission to effect amalgamation with the Tram Company, without which permission the charter of the former would have lapsed, inasmuch as amalgamation involved disappearance of the Street Railway Company's independent existence. To this application a negative reply has now been given by the Minister. The pro-amalgamation party is thus completely defeated and Mr. Amenomiya

and his fellow-thinkers have carried the day. It need scarcely be said that this action of the Home Minister is vehemently denounced by the journalistic organ of the amalgamationists, but uninterested on-lookers will welcome the measure as finally putting an end to a most unsightly dispute. It remains now to be seen what action the City Council will take with regard to its resolution in favour of resuming the charter.

Wednesday, September 30.

This miserable fight is not yet over. Although the Minister of Home Affairs has refused to sanction amalgamation, the advocates of that course are naturally unwilling to be totally effaced, since they are said to have at their back a majority of the shareholders. Therefore the pro-amalgamation Directors purpose holding a general meeting with the object of obtaining the removal of Messrs. Amenomiya and Tachikawa. On the other hand, these two gentlemen, claiming that they have won the day, threaten to summon on their own account a general meeting to depose all the other Directors. Thus the battle now appears likely to turn upon the personnel of the Directorate.

The Minister of State for Home Affairs has explained that his proximate reason for rejecting the application of the amalgamationists was that the evidence afforded by recent discussions and negotiations indicated that the amalgamationists had really abandoned their position and were no longer determined to carry out their plan, while, on the other hand, a dispute most unsightly and injurious to the interests of the travelling public was waged. The Minister is represented as adding that the Department's rejection of the application does not imply any approval or disapproval as to the problem of amalgamation itself or as to Municipal ownership. If the shareholders should hereafter present a duly credited application for amalgamation, it would not necessarily be refused.

Supplementing this explanation Baron Kodama is made to say that he strongly advocates the taking over of all the electric railways by the Municipality.

The *Shogyo Shimpo* approves the action of the Home Office. It declares that every thoughtful person must recognise the merits of amalgamation, but that, under the disgraceful and childlike circumstances of the quarrel, the only wise course for the Home Office was to cut the Gordian knot by rejecting the application. As to municipal ownership, the *Shogyo* ridicules it. The *Funin*, on the contrary, greatly blames Baron Kodama for originally leading the amalgamationists to suppose that their scheme had his sanction. Without that assurance they would never have maintained the conflict. The Minister's sudden change of front is therefore denounced. The *Yomiuri Shimbun* takes a similar line, but is disposed to rejoice that by this decision the interests of the travelling public have been promoted, and the big capitalists who looked to make a great profit by amalgamation which would have kept up rates, have suffered defeat. No newspaper seriously treats the questions of municipal ownership.

Thursday, October 1.

This fight continues. Mr. Amenomiya and his friends seem determined to push their advantage. At a meeting of Directors on the 29th ultimo they demanded that either the Directors who had supported amalgamation should resign at once, or that the 3-*sen* uniform fare should be definitely

adopted, after which all the Directors should resign *en bloc*. The amalgamation Directors refused to accept either suggestion, and on their own side voted for postponing until the next meeting of Directors all vital questions relating to arrangements for carrying on the enterprise independently. A decision was then invited with reference to the fare that ought to be charged when the section of the line now open was extended to Hanzomon. Three *sen* was proposed, and adopted by a majority. Mr. Amenomiya and his friends objected on the ground that this amounted to fixing a new fare for each section, but they were overruled. So at least say some journals, but others allege that the meeting broke up in a storm.

What is quite plain is that the present Directorate can not conduct the affairs of the Company successfully. And now, too, there are no Inspectors, the last of them, Mr. Nezu, having sent in his resignation on the 29th ult.

THE SITUATION AND JAPANESE PUBLIC OPINION.

The *Fiji Shinpo* has an excellent article on the situation. It says that the country's statesmen are exhausting every method to reach a settlement, and that this is not a time either to attack them, to make loud protestations of the nation's resolve, or to circulate appeals calculated to provoke excitement. Such things are done doubtless with the best possible motives, but it is essentially indiscreet to embarrass the Government with crude complaints at such a moment, and as for the temper of the nation, it needs no demonstration. The people are determined not to shrink from any step essential to the safety and defence of the empire. The *samurai* carried a sword not for purposes of aggression but to guard his honour. He did not draw it lightly, but when once it left its scabbard, he had made up his mind either to kill his enemy or to die himself. That canon of not appealing to force until the issue became one of life or death had the effect of checking all careless displays of anger and deterring empty quarrels. It thus helped materially to educate the calmness of mien shown by the Japanese towards the various crises of life. But it helped also to add force to a resolution not lightly taken. The country is now resolved, and they are not its sincere friends who incite it to convert resolution into premature action. When action becomes inevitable there will be no shrinking, but in the meanwhile the duty of all is to preserve their own *sang-froid* and to assist the nation towards the same mood.

The *Nichi Nichi Shinbun* takes the same line indirectly by severely censuring those that precipitately preach the doctrine of appealing to force. This evil example was set by the Seven Professors, and it is now followed by the Progressists whose manifesto, just issued, amounts merely to a blind attack upon the officials charged with the conduct of the empire's affairs, and to an endeavour to inflame the public mind. But it is observable that the Progressists have never any policy to recommend. Their declamations are limited to attacks that succeed the event. The *Nichi Nichi* can not recall that in any instance they advised the country how to act when a crisis was approaching. Their role is to wait until the crisis is past or present and then to vaguely abuse the methods followed in dealing with it. But they should remember that Japan and Russia

are still on terms of friendship and intimacy, that there has been no breach in their relations, and that to settle their differences without such breach is the method best adapted to the interests of the world. Our contemporary concludes by asking the Progressists to abandon vague rhetoric and to formulate some plain line of policy.

Meanwhile some of the members of the *Tai-Ro Doshi-kai* have been expressing dissatisfaction at the strict silence maintained by the Government. In default of explanation there is nothing for it, they say, except to judge by visible facts, and such facts go to show that the Government's policy is one of constant and craven retreat. They proposed, therefore, to hold a general meeting of the Association on the 5th of next month for the purpose of passing an unequivocal vote of censure on the Cabinet in connexion with its conduct of foreign affairs. But when the Committee came to consider this proposition, the chairman, Mr. Komuchi Tomotsune, strongly opposed any such course. He admitted that the Government had hitherto observed remarkable secrecy, but the admission involved another conclusion, namely, that the public were not in possession of material sufficient for forming a judgment. Therefore to adopt the course now proposed would be nothing more than to pass an insufficiently founded vote of censure with the object of forcing the officials to speak. But it must be remembered that the whole responsibility rested on these statesmen, and that they were now in the midst of discharging that responsibility. To attack them at such a moment would be not only premature but mischievous. There was therefore nothing for it but to attend the course of events, Mr. Komuchi mentioned that among the *Genro* Count Inouye is all for peace, whereas Count Okuma, though he entertains strong views, is compelled to modify their expression in deference to the cohesion of his party.

It appears the *Tai-Ro Doshi-kai*, or rather the agitated section of it, has accepted the chairman's view and will abstain from further action, at any rate until after the 8th proximo.

THE SHARE MARKET.

The 26th ultimo saw a rise in several kinds of securities. The following figures indicate the appreciation:—

	25th. Yen.	26th. Yen.
Sanyo Railway Shares	60.00	61.80
Kwansai Railway Shares	43.75	44.40
Narita Railway Shares	24.90	25.30
Tokyo Electric Railway	56.90	59.60
Nippon Yusen Kaisha	82.75	83.43
Tokyo Electric Light (new shares)	75.10	75.40
Kanegafuchi Spinning	42.15	42.75
Tokyo Stock Exchange	176.70	178.50

This is supposed to be due partly to an easier feeling in the political atmosphere, and partly to the fact that the rice crop is now assured, the storm of the 24th instant having done no appreciable damage. There has consequently been another fall in the market prices of the cereal, as the following quotations will show:—

	25th. Yen.	26th. Yen.
For Delivery in September	12.90	12.73
For Delivery in October	12.09	11.79
For Delivery in November	11.77	11.44

It will be seen from the list of general shares that the greatest appreciation took place in those of the Tokyo Electric Railway Company—not the Street Railway which has hitherto been engaged in such a warm controversy. In fact the Tokyo Railway's shares touched 61 *yen*, but receded again.

"THE YOROZU WEEKLY" AND "THE STUDENT."

None can form any conception of the difficulties that Japanese students of English have to encounter unless he has actually laboured to help them along by direct teaching, by the compilation of readers or by contriving other aids. As time passes, however, as scholars reach maturity who have themselves by bitter experience learned how hard to travel is the road to proficiency, strong helping hands are held out here and there so that the young strugglers of the present generation fare much better than their predecessors did. Conspicuous among these helpers are periodicals like *The Student* and *The Yorozu Weekly*. With *The Student* a large section of the foreign public is familiar, to some extent at any rate, though those that have noted it since it underwent its recent great change and was reborn into an existence of the highest type, are probably still few. *The Student* has now for advising editor Professor Nitobe Inazo, and for editors Miss Alice M. Bacon, Miss Ume Tsuda, Miss Anna C. Hartsorne and Mr. Sakurai Hiroichiro. Every one of these names is illustrious in a greater or less degree. Professor Nitobe, the author of *Bushido*, a finished scholar, a man profoundly acquainted with everything pertaining to his own country and with much that pertains to foreign countries, supplements high literary abilities with exceptional business capacity. Miss Bacon and Miss Tsuda are respectively the writer and the inspirer of the book that will always remain the standard thesis on Japanese women. Miss Tsuda, in truth, is a national benefactress, for if ever patriotic philanthropy found expression in untiring achievement, her case is an example. Miss Hartsorne is an educationist of fully proved usefulness, and Mr. Sakurai has made in literature a mark which grows wider and deeper as years go by. This is a great galaxy assembled for the editing of a single periodical. Their plan is simple to state but very difficult to carry out. They undertake to publish twice each month a magazine containing articles, notes and letters on current topics, the language used being highly idiomatic English, and every paragraph having copious notes appended wherein are set forth the Japanese equivalents of the more difficult forms of expression. These commentaries display remarkable scholarship. We presume that the honour of them belongs to Miss Tsuda and Mr. Sakurai, Professor Nitobe being absent in Formosa. It is indeed an honour, for there are here evidences of such intimate acquaintance with the two languages as only great mental capacity and indefatigable industry could attain. The last number of the magazine is on Carlyle. It is strange that Carlyle, who believed himself to be, and who probably meant honestly to be, the prophet of the gospel of truth, could never write two lines of plain unadorned thought but perpetually strained after verbal effects which, being artificial, were not sincere. None the less are they happy to whom his pages speak intelligibly. But what we should say to all youthful Japanese students of English is "do not read Carlyle," and what we say to all teachers of such Japanese students is "do not put Carlyle into their hands and do not encourage them to worship him." Carlyle should be left in undisturbed and unimitated possession of his own style. He has already done incalculable harm to English literature by creating a host of inept imitators, and it has

not been our lot to meet more than half-a-dozen English-speaking Japanese whose discrimination could be trusted to eschew Carlyle's mannerisms while adopting his force. But that is by the way. The editors of *The Student* think differently, or, any rate, their tribute to the memory of the sage indicates that they value his jewels of thought too highly to consider the bizarre setting. Our appreciation of this excellent magazine is not limited, we need scarcely say, to the Carlyle number. Several predecessors of the Carlyle effort have elicited our admiration, and we have many a time thought that students of the present generation have much to be thankful for.

The Student being already in the field, we do not altogether see the necessity for *The Yorozu Weekly*, which is on much the same lines as the elder magazine. Its editor is the well known Mr. H. Saito, who shares with Baron Kanda the fame of having contributed extraordinary assistance to the study of English in the present generation. Mr. Saito's grammars and readers are in the hands of an immense number of learners of English, and if he thinks that there is a place for this new venture, we must bow to his opinion. But why does he say in his opening article—a remarkably well written article—that "what is wanted is a good daily paper, and in default of that a weekly, in simple easy English within the reach of the ordinary student?" Does he ignore *The Student*, which, though, to be sure, a fortnightly periodical, has long been striving to fill the very gap into which *The Yorozu Weekly* now steps, and has filled it, we venture to think, with considerable success. However, too much of a good thing is difficult to have, and *The Yorozu Weekly* is emphatically a good thing. If Mr. Saito be the unaided author of the opening article and of the translations that follow, he has a title to rank among the very greatest proficient in English that Japan possesses. His foot-notes, too, shew a remarkable power of adapting Japanese equivalents to English idioms, but there is this reservation that nine-tenths of his adaptations are in the most unqualified book language, which contrasts not too happily with the easy flow of the English. To "distract the attention," for example, is rendered *chui wo samman narashimu*; "to glide off into the enchanted realms of etc." becomes *kôsen nuigayû no kyô ni iru*, for the slightly different original of which Mr. Saito seems to have had recourse to the Chinese philosopher Chwangtze; "sweeping condemnation" takes the form of *genka no bubetsu*, and so on, the effect being, we venture to think, that while Japanese students of *The Yorozu Weekly* will undoubtedly learn the significance of innumerable English idioms, they will not be much tempted to use familiarly forms of speech coming to them in such unfamiliar guise. This objection does not apply, however, to the pages of the periodical where ordinary news items are found; items translated with most happy scholarship from the columns of the *Yorozu Choho*. There the gifted editor has before him a Japanese original whose language is free from all phrasemongering, and he is consequently able to lay before his readers linguistic parallels that can not fail to prove highly serviceable. One thing occurs to us, however. Does Mr. Saito think that a juster conception of English literary style can be conveyed to Japanese students, by translations from the Japanese—translations made by a Japanese—than by means of

extracts taken directly from first-class English newspapers? We should not have thought so. Here, for example, are two extracts from the same note, headed "Progress of Manchurian Defence":—"A fresh force has also been stationed in North Manchuria, and preparations are now completed for war, *she being only prevented by the floods now raging in south Manchuria from effecting occupation of Manchuria.*" * * * "As soon as the roads are opened, it is feared, England and Japan will be aroused out of their sweet dream of a peaceful settlement, &c." We do not find that these sentences are models, and apart from the literary question, it strikes us as regrettable that Mr. Saito should lend his powerful aid to circulate such intelligence among the student class in his country. For the rest, however, we offer him most sincere congratulations, and express the unreserved opinion that the knowledge of English he displays in *The Yorozu Weekly* is altogether exceptional.

FINANCIAL.

It is now confidently stated that the broad lines of next year's Budget, as just drafted, include an economy of 3½ millions in the ordinary administrative expenses, and an economy of 6½ millions in the extraordinary outlays. Further, a saving of 5 millions is effected by postponing railway works, and a saving of 1 million by similarly treating telegraphs and telephones, the aggregate economies thus reaching 16 millions, which is the sum required to restore the balance. With regard to *sake*, it is believed that the brewers will attempt to organize strong objection to the Treasury's proposed system of *Kuradasli-zei*, but the nation will endorse the official plan since its object is simply to prevent dishonest evasion of taxes. The system is thus pretty sure to go into operation next year, and though its full effects will not be immediately felt, it will probably bring the proceeds of the *sake* tax to the figure for 1901-2, with a certainty of considerable increase in the future. Concerning tobacco, the Government is understood to be equally resolute about taking into its own hands the business of manufacture. This will be limited to cigarettes during the first year and will be subsequently extended. It is expected to produce at once an additional revenue of 5 million *yen*, and to enrich the Treasury finally to the extent of 30 millions. Naturally this prospect is creating the greatest excitement among the Japanese tobaccoists. The quantity of leaf tobacco now produced in the empire is about 108 million lbs. annually. This is bought by the Government from the producers at a fixed price and then sold out again to the manufacturers who prepare it for smoking whether in pipes, in cigars, or in cigarettes. The Treasury's idea is to treat about one-half of the total production in accordance with the present system during the fiscal year 1904-5, and to take into its own hands the business of converting the rest into cigarettes. In 1905-6 the whole work of manufacture would become official. Every one knows what an important industry the manufacture of cigarettes has become, and every one can therefore understand how vehemently the manufacturers must rebel against the loss of their employment. A deputation of seven manufacturers, representing the Tobaccoists Union, proceeded to the Treasury on the 26th instant and had an interview with the Vice-Minister, Mr. Sakatani. They did not obtain much satisfaction. Mr. Sakatani told them, in effect,

that the Diet having refused to allow the continued levy of an increased rate of land tax, and having exacted from the Government a promise not to subject the people to any new impost, while, on the other hand, certain outlays were imperative, nothing remained except to fall back upon *sake* and tobacco. He declared that he was not yet in a position to give exact details of the method, but he said that the bill was drafted, that its passage through the Diet seemed certain, and that the necessary machinery for its operation was in process of preparation.

THE PERILS OF THE X-RAYS.

Mr. Edison has been complaining in American journals of the ill-effects of experiments with X-rays. One of his assistants had to have his arm amputated through the rays destroying the phagocytes in the blood. He himself suffered from a series of abdominal lumps through the rays. Two gentlemen in the radiograph department of the London Hospital, he further declares, have been obliged to take enforced holidays owing to their hands being injured by the rays. The use of the rays for direct examination of injuries has now been abandoned at this hospital. The rays are now employed to take photographs, from which the surgeon works, thus avoiding the necessity of manipulating the limb while the rays are actually playing on it. Gloves with lead foil sewn into the back were tried, but they were discarded. The first symptom of X-ray poisoning is a troublesome inflammation of the hands, accompanied by swellings resembling chilblains, depression of spirits, and insomnia. The nails, too, are affected—a ridge forming down the centre, in which pus is generated. After the matter has been removed the nails seem partially to perish, the injury to the matrix impairing future growth. Regarded pathologically, the results of the X-rays seem to be cumulative, being up to a certain point highly beneficial and beyond that the reverse.

A gentleman connected with the radiographical department at Guy's Hospital expresses himself amazed at Mr. Edison's statements. He has not found the rays baneful, and as to the destruction of phagocytes, he says the treatment of rodent ulcers has been attributed by several eminent authorities to the enriching action of the rays on the blood by the increase of phagocytes. This expert says, "about 1,200 persons are treated at Guy's annually by the X-rays, and I know of no case where injury has resulted from the treatment." Mr. Edison, reports the New York correspondent of the *Daily Mail*, says that experimental work with X-rays will be but slightly affected by the discovery that under certain conditions they are harmful. Ample protection can be obtained by the experimenters in the use of a screen of lead about a quarter of an inch thick. The evil effects come only after months of constant exposure. The worst results are felt two or three years after this exposure. This is puzzling. Mr. Edison says at the time he was compelled to stop his experiments he had found a crystal which fluoresced 12,000 times, and with this he succeeded in making a practicable fluorescent lamp, but he soon discovered that it was so powerful that it would kill anyone who used it continuously. The experiences led him to conclude that the rays were the result of radium and polonium.

"MASTERPIECES SELECTED FROM THE KORIN SCHOOL."

Not many years ago the opportunities available for the study of Japanese pictorial art by foreigners were very few. Indeed, previously to the publication of the late Dr. Anderson's remarkable work, the merits and characteristics of this not unimportant branch of human achievements may be said to have been virtually unknown outside Japan. Since that time the subject has attracted considerable attention. Louis Goussier's appreciations added much to its popularity. M. Goncourt's essays threw new light on the works of special masters. Mr. Fenollosa's notes and the fine collection of pictures obtained from him by the Art Museum of Boston through the liberality of Dr. Bigelow, placed American connoisseurs fully abreast of even the French in this particular line. But it was in Japan itself that the most effective movement was made to familiarize the world with masterpieces of the country's draughtsmanship. Anderson, Goussier, Goncourt and even Fenollosa all laboured more or less under the disadvantage of having only limited materials wherewith to illustrate their theses. Fenollosa, indeed, had seen almost everything that Japan had to show; or, at any rate, enough to thoroughly mature his judgment, perhaps even to prejudice it. But he could not show enough to fully educate a foreign audience. The Japanese themselves had to lend their assistance for that purpose, and they have been doing so with much enterprise and assiduity during the past ten years. Many publications have been issued in the form of periodicals; some of minor importance, as the *Fine Arts Magazine* and the *Hansei Zasshi*, but others, like the *Kokka* and the *Shimbi Daikwan*, books through whose medium even persons entirely unfamiliar with Japan herself, can cultivate a wide knowledge of her art. The *Kokka* has lived for over 13 years, issuing its beautiful numbers month by month, and the *Shimbi Daikwan* has reached its ninth splendid volume. There have been also the fine work (*L'Histoire de l'Art du Japon*) compiled for the purposes of the last French Exhibition at an enormous cost, and the magnificent books, two in number (*Japan*) brought out by Mr. J. B. Millet of Boston. These should not be omitted from the catalogue. But it is to the latest effort made by the Japanese that we would specially draw attention here. The work is entitled "Masterpieces selected from the Korin School." It is to be in five volumes each costing 25 yen, and its intention is to illustrate the Korin methods of pictorial and decorative art. The first volume, now before us, is splendid in everything appertaining to the crafts of the printer, the binder, the paper maker, the chromoxylographist, the potographer and the engraver. The cover is of silk, bearing a fine design of conventionalized waves by Korin himself, and the pictures, which, thanks to the ample dimensions of the book have been reproduced with absolute accuracy, are on Japanese paper of the most suitable description. Intended mainly to appeal to the foreign public, the text of the work is in English, and as it has passed through the revising hands of Mr. Goodrich of the Kyoto High School, it is free from all syntactical solecisms. There is a preface by Baron Kuki, formerly Director of the Imperial Museum. It is not in the nature of an ordinary preface merely setting forth the writer's commendation of the book. It is an

essay on Japanese pictorial art in general and on the school of Korin in particular. Baron Kuki insists on the doctrine that the character of a people is largely influenced by the scenery among which they live. Can there be any doubt that such is the case? Moral qualities are developed not by that which enters the ear only but also by that which speaks to us through the eye. One kind of education is probably just as efficacious as the other. Applying this rule to the Japanese, Baron Kuki infers that they should be and are remarkable for gentleness of manner, frankness of temperament and fine aesthetic taste. He does not elaborate the point so as to be quite convincing, but we gather that through all the distinctive characteristics of the various epochs of Japanese art, and in spite of the powerful inspiration it derived from outside sources, he detects a uniform strain of native individuality in the form of delicacy and buoyancy. That appears to us to be indisputable. Passing on from theory to fact, the Baron concludes that the five great representatives of Japanese pictorial art are the Tosa, the Kano, the Korin, the Maruyama (including the Shijo) and the Ukiyo-ye. We are surprised and pleased to find that he includes the last, for we ourselves can recall a time when no Japanese connoisseur would concede any really artistic merit to the genre pictures of his country. It was by the verdict of the Occident, especially by that of France, that this most defective estimate was corrected. Baron Kuki gives a brief analysis of the characteristics of the various schools, and concludes that "we are justified in calling the Korin the most mature and the purest of all the schools of art which are represented in an exhaustive collection of the Japanese pictorial arts." That is a very wholesome appreciation, yet we should hesitate to challenge its correctness. Certainly it has always seemed to us that Korin possessed the decorative faculty in a more highly developed form than any Japanese before him or after him, and that his ability to detect and utilize the adaptability of natural objects to purposes of applied art amounted to almost infallible inspiration. He has been accused of mannerisms. It would be more correct to say that he showed the idiosyncracies of genius. Mannerisms may be forgiven but they can never be permanently tolerable, whereas Korin's productions appeal to us more and more forcibly the longer our acquaintance with them. There are times when one is disposed to think that his massiveness has some touch of the grotesque and that his boldness verges on crudity; but that imagination never fails to be dissipated by closer acquaintance. We have not the least doubt that Korin will one day be recognised as standing very near the head of the greatest decorative artists the world has ever produced, and these noble volumes now in course of publication will do much to win for him the esteem he deserves. Goussier says of Korin:—*Ses motifs, bien à lui et uniques dans l'art japonais, ont une naïveté un peu gauche qui vous surprend; mais on s'y habitue vite, et si l'on fait quelque effort pour se placer au point de vue de l'esthétique japonaise, on finit par leur trouver un charme et une saveur inexprimable, je ne sais quel rythme harmonieux et flottant qui vous enlance.* Aulick says of him:—"Such skill we have never seen hitherto and can never see again. He is the best artist of Japan: not only of Japan, but he is the best colourist in the whole world." Goussier would have been more enthusiastic and Aulick's confidence would have been con-

firmed had the volumes we are now considering been accessible to them. The enterprise of compiling and publishing such a splendid and costly work seems to have been due to Mr. Tajima Shiichi, whose name appears on the title page, and by whom are written not only the general introduction, which is an admirable account of Koyetsu, Korin and their school, but also a list, with scientific analyses, of the colours used by the galaxy of Korin artists, biographical sketches of all the masters of the school and full explanations of the various pictures. There are 31 plates, so that if, as may fairly be assumed, the next four volumes be equally full, we shall have in all 155 specimens of the genius of this essentially Japanese School, and they will constitute a veritable library of Japan's decorative art in its highest phases. Thus those having any pretensions to knowledge will no longer be justified in founding false judgments on lack of evidence. Unfortunately the price of the work must limit the number of its purchasers, but whoever can afford the money will be well advised to acquire these beautiful and highly instructive volumes. The publishers are the Shimbi Shoin, 52 Nichomachi, Shitaya, Tokyo, and we can not conclude this brief notice without saying that Japan is to be congratulated on possessing such publishers.

FUNERAL OF COM. E. M. HUGHES, U.S.N.

With all the solemn pomp attending a naval funeral, the remains of the late Commander E. M. Hughes, of the U.S.S. *Annapolis*, were consigned to their last resting place in Yokohama on Tuesday afternoon. Commander Hughes died in the United States Naval Hospital on September 27, after a lingering illness, leaving a widow and daughter to mourn his loss. A funeral escort under the command of Commander A. P. Nazro, U.S.N., from the cruiser squadron now in Yokohama Bay, landed on Tuesday afternoon, and these were attended by a large body of officers and men anxious to pay the last tribute of respect to one who had endeared himself to all by his many qualities of mind and heart. The escort consisted of the Band, the Marine Guard and two companies of Bluejackets from the Flagship *Wisconsin*, and one company of Bluejackets from the *Raleigh*, all in full dress, together with some men from the *Annapolis*. Arrived at the Naval Hospital the following officers fell out and assumed the office of pall-bearers:—Captain Uriel Sebree, Medical Inspector E. H. Green, Pay Inspector M. C. McDonald, Lieut. Commander A. W. Dodd, Lieut. Commander G. W. McElroy, and Lieut. Commander C. H. Harlow. They were followed by officers from all the ships in the squadron, by officers and men from the French flagship *Montcalm*, and by representatives from the British and German navies, the whole forming a brilliant and numerous cortège, amid which were carried the draped colours of deceased's ship. Rain fell steadily all the time.

The funeral services were most impressively conducted at Christ Church by the Rev. W. P. G. Field, during the course of which the Band played the hymns "Now the Labourer's task is o'er" and "Nearer my God to Thee." The procession was then formed and marched to the cemetery where at the graveside the melancholy "Taps," the American version of the Englishman's "Last Post," brought the proceedings to a close.

POLITICAL NOTES.

Some attempts are made by the yellow press of Tokyo to create a sensational incident out of the fact that the Russian and Japanese squadrons will probably find themselves manœuvring in the same seas. One journal, which our readers will at once identify without hearing it named, affirms that the Russian vessels having started for Masampho where they will land troops for purposes of inspection, the Japanese squadron has anticipated them by hastening to the same place. Another paper says that the Russians are bound for Port Arthur, and that unless they abandon that purpose they will cross the track of the Japanese and a collision will be inevitable. Yet another paper assures us that the British squadron is to combine with the Japanese in making a grand demonstration. One would imagine that the men-of-war of two Powers whose diplomatic relations are still pacific, can not come within sight of each other without recourse to fighting. Even if the two squadrons happened to find themselves in one another's neighbourhood at Masampho what might be reasonably expected would be an interchange of courtesies instead of cannon-shots. But the truth is that all these sensational rumours are totally dissipated by telegrams received in Tokyo showing that the Russian squadron has already cleared the Korean sea en route for Port Arthur, where it will doubtless have arrived before these words are in print. It is expected that when these vessels from Vladivostock have joined the rest of the Far-Eastern naval command at Port Arthur, a grand review of the whole will be made by Admiral Alexieff. In connexion with that event we shall doubtless hear fresh stories, especially as there is a report, apparently well founded, that the naval manœuvres will be simultaneous with a military parade on a large scale in the Liaotung Peninsula.

The disposition evinced in some quarters to condemn Japanese diplomacy at this juncture is severely denounced by the *Nichi Nichi Shimbun*. As a matter of fact the critics do not know what that policy is. So carefully have Japanese statesmen kept their council that outside their own circle all is obscure. Therefore the critics are obviously talking off the book. The *Nichi Nichi* does not make that point, probably because it must be self-evident. Our contemporary's contention is that Russia stands in a very difficult position. She has been unsuccessful abroad and she has to face disordered finances and disturbed conditions at home. At such a time she is pressed by Japan to conclude an unpalatable arrangement, and it is not, on the whole, wonderful that she should hesitate. Her policy of menace in Seoul has produced no tangible results; her threatening demeanour in Peking has not been more fruitful, and what chiefly stands to her account is that she has alienated the confidence of the Powers. If she persists in her present route of procrastinating any definite reply to Japan's proposals, it is hard to see how a rupture can be avoided. There are some onlookers, indeed, who urge that Japan should seize this occasion to appeal to the arbitrament of the sword, and that if she delay, the situation will turn in her disfavour. But Japan is not looking round for opportunities to fight. She will not shrink from fighting in case of need and she does not fear the result. Her purpose is to act in strict accordance with the principles that appeal to her friends,

Great Britain and America, and to steadily tread the road of moderation that has already obtained their approval. If she be forced from that path, responsibility for the ensuing calamities will not rest on her shoulders. Meanwhile of those that condemn her foreign policy in the loudest terms, it is only to be said that they wish to condemn it. Such are the *Nichi Nichi's* views.

THE PRESS AND THE WAR OFFICE.

Although they have not been reproduced in these columns, various paragraphs and notes have appeared from time to time in Japanese journals of late, indicating that exceptional preparations are being taken by the War Office to place the troops in readiness for fighting. These items of false intelligence are doubtless attributable to the fact that at a time of excitement like the present, acts that belong really to the ordinary routine of official procedure and would be performed however pacific might be the state of the country's foreign relations, attract exceptional attention, and suggest exaggerated inferences. It has seemed to the authorities advisable to instruct the editors of newspapers on this point, and accordingly on the 30th ultimo some twenty-eight editors were asked to attend at the War Office, where they were received by Col. Murayama, and fully informed as to the actual state of affairs. The Colonel explained that nothing whatever had been done outside the usual routine. It is the invariable rule to take certain steps at this time of year in the case of reservists and men removed from the active list but not yet placed on that of the reserves. There has been no departure from these steps. The only other incident to which false reports seem attributable is that the wonted measures for supplying winter clothing have been adopted. Such is the system adopted at the War Office—Colonel Murayama went on to explain—that the fighting line can be formed at any moment without delay or difficulty. The Government did not blame the newspapers for what they had published. They were fully credited with patriotic motives. But greater caution was most desirable. Events falling within the common and regular routine of administrative arrangements ought not to be called exceptional merely because the atmosphere of the moment rendered their outlines unusually distinct. The War Office assured the editors that should it be found necessary to take any abnormal step of mobilization, they would be fully informed and duly posted as to the reasons.

We may mention here that correspondents of European and American journals seem to have been equally misleading the public they address. News from abroad indicates that many sensational telegrams have been sent by these correspondents of late. An impression has thus been created that Japan is preparing for war and that the temper of the nation is essentially bellicose. Nothing could be further from the truth. These correspondents illustrate the old saying that a treaty port, whatever its situation, is always hundreds of miles away from the capital of the country and from sources of correct intelligence about the nation's doing or moods.

THE TOBACCO MONOPOLY.

It is evident that the tobacco manufacturers intend to offer strong opposition to

the Government's project of a tobacco monopoly. They have formed an association, or perhaps it would be more correct to say that they are utilizing the capacities of an association already formed, with the object of inducing members of the Lower House to vote against the official scheme. What shape such inducement will take is very plainly hinted by certain vernacular newspapers. We have not, for our own part, the slightest faith in Government monopolies, with two exceptions: one is when undue exactions on the part of private combinations have to be combatted; the other, when dishonesty on the part of tax-payers deprives the State of resources necessary for administrative purposes. It is claimed that the latter case has occurred in connexion with the taxation of tobacco, but probably the more imperative argument is that the Treasury wants a bigger revenue, and sees no immediately available way of obtaining it except by taking into its own hands the business of preparing the leaf. We can not hope that the defects invariably incidental to official excursions into the realm of trade or industry will be avoided in this instance, but until it is shown that some other way of raising revenue is available, the Government must be credited with choosing the lesser of two evils. Concerning the report that one-half of the total tobacco produced in Japan would be affected by the new scheme in the fiscal year 1904-5, it is understood to have been denied by the authorities. They say that the immediate operation of the programme will not be by any means so extensive, but we can not find that they make any exact statement as to its real dimensions. Mr. Murai, the prominent tobaccoist, is represented as declaring that he will not step out of the industry unless the Treasury compensates him by paying over at once the aggregate of three years profits on his business. Apparently he thinks that he should be treated as were the hereditary income-holders of feudal days. It may be presumed that all just claims will be recognised, but if the Treasury is to begin by buying out the private manufacturers at Mr. Murai's rate, there will be small gain to the State's finances.

A WRITER FOR BOYS.

There will be widespread sympathy with M. Jules Verne in the sad affliction of almost total blindness, as the result of cataract, which has befallen him. Jules Verne, who is now seventy-five, has written a novel for every year he has lived, although his first book did not appear until he was over thirty. This was "Five Weeks in a Balloon," and its success was instantaneous. At that time Jules Verne had hardly travelled at all. But he possessed an imagination which could carry him to the ends of the earth, through the earth, and over the earth, and he did not fail to make the most of it. Jules Verne's imagination, in truth, has made him one of the most famous of all living authors, and yielded him a splendid fortune. His stories appear serially in five countries before being published in book form, and they are turned out by their author with clockwork regularity. M. Verne seldom fails indeed to produce two complete novels in a year. Hence he is always in advance of his contracts. Yet the labour which goes to the production of his romances is far from light. He once described his method. First comes the preliminary draft. This is followed by a plan of the chapters, and then begins the actual

writing of the first rough copy in pencil, with a half-page margin for corrections and additions. Then it is all gone over again in ink, and with the arrival of his first set of proofs M. Verne reckons to begin his real labour, since he not only corrects something in every sentence but rewrites whole chapters. He never seems to grip his subject, he says, till he sees his work in print. All M. Verne's work, it may be added, is done in the morning. He still rises daily at five and has completed his day's output by eleven.

ACCIDENT ON THE SUMIDA RIVER.

A serious accident occurred at Ryogoku Bridge in Tokyo on the 26th ultimo. Among the five great bridges over the Sumida, the Ryogoku Bridge is the only one that has not been changed from wood to iron. Some time ago it was decided to make the change, and for the purposes of the work a temporary structure was thrown across the river just above the old bridge. At a little distance above Ryogoku the Sumida receives the waters of the Kanda canal. It is the custom that cargo boats which intend to enter the canal should be towed by a steam tug to a point just above the Bridge, and the hawser being there cast loose, the momentum of the boats enables them to enter the canal without further aid from the steamer. But on Saturday the flooded state of the river rendered the performance of this manœuvre difficult. A barge laden with 1600 bags of flour came up the stream, and the master of the tug cast her adrift at the usual place without regard to the exceptional condition of the river, in spite of warnings shouted to him by men on board the barge. It resulted that the barge was swept down against the temporary bridge, which gave way forthwith, precipitating a number of people into the river, the barge itself being upset. Among the people that fell from the bridge, an engineer of the municipality was killed on the spot, his head being crushed between two beams, and a workman as well as a sailor of the barge are missing. On board the barge there were only 3 persons, the master, his wife and his son. The two last were saved, as were all that fell from the bridge except two.

ALPINE ACCIDENTS.

One of the most thrilling pieces of news brought by the last mail is the account of a recent accident on the Alps which befell the Hon. Gerald Fitzgerald, the well known Dublin Land Commissioner and yachtsman. Mr. Fitzgerald was descending from the Margherita hut on Monte Rosa, tied between two Swiss guides named Alner, father and son. As they were passing along a dangerous edge, he and the younger guide fell down, but the rope held, and the younger Alner succeeded in saving himself and returned to the hut whence he telephoned to Alagna for help. Now imagine this scene:—

Mr. Fitzgerald, on the contrary, having broken his right leg, remained for seven hours supported by the rope and suspended over the precipice at a height of 10,500 feet. Old Alner succeeded, in fact, in supporting him in mid-air, standing himself for the seven hours motionless, with his legs propped against a boulder. When aid arrived Alner appeared exhausted by the enormous strain.

Mr. Fitzgerald was eventually brought down by eight guides and two physicians to Alagna "all the inhabitants of which," we are told, "warmly cheered old Alner." He

deserved those cheers. Sympathy must also be extended to Mr. Fitzgerald, for to dangle in the air with a broken leg for seven hours surpasses the ordinary experiences of mankind by a good deal.

NOTES ON CURRENT EVENTS.

One of the most sensational and daring of experiments was tried on Aug. 18th at Brest, in presence of the French Minister of Marine. One of the 10-inch steel-plated turrets of the *Suffren* ironclad was fired at by the *Massena* with 12-in. shells. The two ships are among the latest and the finest in the French Navy. The Minister, who was confident in the strength of the steel plates, remained with his staff on board the *Suffren* within a few yards of the bombarded tower. The whole crew were on board, too, at the posts they would be allotted in action. The object of the experiment was to ascertain how the turret—one of the vital parts of a modern man-of-war—would behave in action, whether the steel plates would withstand a repeated bombardment at short range, and, if so, whether the turret would get jammed. In the latter case it would become unworkable, and would be a death trap. The first shot was fired at 10 a.m., and struck a target of sand-bags on board the *Suffren*, some feet in front of the turret. At 11.30 the turret itself was struck full by a shell. The turret was uninjured, and the shell was shattered to atoms. At 4 p.m. a second shell hit the same spot, the fragments of the missile being scattered to 700 yards. The Minister's private secretary was interviewed and said that no accident took place on board the *Suffren*, but he refused to say more as the Minister wished the results of the experiment to remain secret. The sheep who were confined in the turret, adds a contemporary, were taken out alive afterwards, and so far as could be judged they felt none the worse for their experience. The turret, it is stated, continues to work perfectly, and turns easily on its axis. At the fourth and last shot fired at the *Suffren* the shell was seen to form into numerous splinters, one of which ricocheted and hit the *Massena* at 100 yards distance.

On Saturday last H.B.M.'s Naval Attaché, Capt. E. C. Troubridge, R.N., visited H.M.'s Naval Hospital at Yokohama, and presented the Bronze Medal of the Royal Humane Society of Great Britain to C. P. Talbot, Esq., R.N., which had been sent out for him through the Admiralty, and which was awarded for his gallant action in saving the life of a seaman from drowning in the Yangtze river whilst his ship, H.M. *Glory*, was visiting Hankow last year, an account of which we published at the time. Mr. Talbot has been under treatment in the Hospital for some weeks but will soon rejoin his ship.

We read in the *Hochi Shimbun* that although the Department of Justice does not figure largely in the economies effected by the new scheme of administrative reform, its organization is appreciably touched. For four courts of appeal are to be abolished—those of Hiroshima, Nagoya, Miyagi and Hakodate—and over 20 local courts with 50 district courts will share the same fate. On the other hand, a new court of appeal will be established at Aomori. The result of all this will be a saving of 400,000 yen.

We can not welcome this so-called reform. There are at present 7 courts of appeal, and by the proposed change they will be reduced

to four, namely, those of Tokyo, Osaka, Kumamoto and Aomori. Unquestionably the trouble and expense of appealing will be increased for litigants. Perhaps that is regarded with satisfaction as the privilege of appeal is certainly abused at present. But can any such plea be advanced in defence of cutting down the establishment of local and district courts by over seventy? Already the delays caused by an insufficiency of judicial officers provoke much complaint.

The Department of Agriculture and Commerce suffers to the extent of 1,673,000 yen.

Japanese papers state that First-class Surgeon Saka Takuji of this country's army is a competitor for the prize of 20,000 francs offered by the French Government for the best method of preparing portable provisions to be used by troops in the field. Dr. Saka's method is described as freezing—by the aid of Tripler's exhaustor—a mixture of rice-cake and bean flour. He is said to have forwarded an account of his project with specimens through Baron Corvisart of the French Legation.

According to an official report the total number of inhabitants of Harbin is 38,983 males and 5,593 females, a discrepancy very suggestive of the political condition of the town. The details are Russians 1,690 males and 829 females; Chinese 1,880 males and 134 females; Japanese 43 males and 64 females; together with 10 persons or less each of British, French and Germany nationality. The figures relate to the old town. In the new town there are Russians 5,180 males and 1,983 females; Chinese 15,489 males and 342 females; Japanese 29 males and 6 females, with a few Germans and Austrians (about 5 each).

Among the first deputations received by Pope Pius X after his coronation was that representing the Irish Parliamentary Party, headed by Sir Thomas Escombe, M.P. His Holiness has supplemented the audience by causing the following letter to be sent to Sir Thomas:—

"Honourable Sir,—You have discharged a high and memorable mission in the name of the Irish Parliamentary Party by laying at the feet of the Holy Father your affectionate and elevated address expressive of sentiments of unalterable attachment to the Holy See together with best wishes for its ample prosperity. The opportunity you have furnished to the new Vicar of Christ to direct his august attention to the loyalty and undying fidelity of the Irish people comes most appropriately in the midst of the testimonies of devotion and respect which come to him from all parts of the world. It is, therefore, with extreme satisfaction that the Successor of St. Peter, from whom the great apostle of your noble people derived the authority of his evangelic mission, sees to-day continued and confirmed the hereditary national virtues of your race. In consequence thereof, in thanking you for your most acceptable homage, His Holiness takes pleasure in return in expressing his heartfelt good wishes for the faithful nation you represent, convinced as he is that you and your colleagues of the Irish Parliamentary Party will constantly aspire to add to the renown of the faith you profess. He is pleased to bless with a full heart yourself, your colleagues, your families, and the whole of the people of Ireland. In communicating the foregoing I have the honour to be, with much esteem, yours faithfully,

"RAFFAELLE MERRY DEL VAL,
"Acting Secretary of State to the Vatican.

All the Tokyo papers announce that Baron Rosen reached Port Arthur on the evening of the 28th September and that he had a three hours' interview with Viceroy Alexieff the same day, followed by a long conference from an early hour the next morning. They add that on the 29th the Baron addressed two lengthy telegrams to the Russian Legation in Tokyo. The *Chuo Shimbun* affirms that the Cabinet in St.

Petersburg has intimated its desire to transfer the seat of the negotiations to Tokyo, and that the Japanese Government having assented to that obviously convenient course, Baron Rosen has been invested with the necessary powers, the condition being added, however, that he is to exercise them in consultation with Viceroy Alexieff. Hence the Baron's visit to Port Arthur.

It is a matter of general satisfaction that Mr. J. C. Hall has been appointed Consul-General of Great Britain in Japan. Thirty-six years of service in this country is Mr. Hall's record, and in every instance requiring his attention he has proved himself a thoroughly competent official. His exceptional knowledge of the Japanese language is an additional title to the promotion which the British Government has now conferred on him. Apparently Mr. Hall is to remain in Kobe, a fact upon which that settlement is to be congratulated.

Coffee in the form of jelly is the latest recommendation of *The Lancet*. It says: "A hot draught of coffee is undoubtedly a powerful stimulant, enabling both mental and physical fatigue to be borne. On the other hand, a cup of hot coffee disagrees with many persons, their digestion is disturbed rather than aided, there is interference with the normal chemistry of the digestive process, and the dyspeptic must eschew hot strong coffee as well as tea. The excessive drinking of coffee is in any case an evil. But it is often forgotten that coffee can be taken in other ways and in none better than in the form of jelly. A clear coffee jelly after dinner is every bit as good as the hot infusion, while it is free from some of the drawbacks of the latter. Coffee, unlike alcohol, diminishes organic waste, rouses the muscular energy without the collapse which follows alcoholic imbibition, and gelatine in the form of jelly is cooling, assuages thirst, is soothing, and has a tendency to absorb any excessive acidity of the stomach. Gelatine is what is known as a 'proteid-sparer'—that is, it saves the destruction of proteid, such as albumin. Having regard to these facts, therefore, coffee jelly should form a very suitable sequel to dinner and an excellent substitute for the infusion. Moreover, the astringent principles of coffee, which, however, are different in kind and degree from those present in tea, are nullified by the gelatine. In short, jelly is an excellent vehicle for coffee, but, as is necessary in making the infusion, the quantity of coffee in the jelly should not be stinted. Coffee serves an admirable purpose in dietetics, and those with whom it disagrees when in the form of a hot infusion will very probably find the jelly quite satisfactory."

There are rumours that General Kuropatkin has resigned the portfolio of war, and one of the Tokyo journals, giving great prominence to the story, sapiently opines that if the General be an advocate of peace, his resignation must be interpreted as making for war, whereas if he be an advocate of war the opposite inference may be drawn. A highly interesting and important commentary. In quarters usually better informed than this particular journal, Kuropatkin's resignation is altogether denied or discredited, and we do not learn that any official news of the event has been received.

Some capital is made by newsmongers out of the fact that Admiral Viscount Ito, of Yalu fame, and Marquis Ito were both received in audience by the Emperor on the 29th instant, but it will

doubtless turn out that these visits to the Palace do not bear the sensational construction put upon them. Pending the issue of her negotiations with Russia, for which there is no obvious reason to anticipate an unsuccessful issue, Japan's policy is not at all likely to enter any such phase as is attributed to it in some quarters.

The Emperor and Empress received the Countess of Minto and her suite at the Palace on the 25th ultimo, and afterwards entertained them at lunch. The Countess was presented by Sir Claude MacDonald. There have been various entertainments in Tokyo in honour of this distinguished visitor, notably at the British Legation and the Foreign Office.

The winner of the Cup presented by Mr. T. W. Hellyer for open competition among the members of the Kobe Golf Club on their links at Rokko-san, has turned up in Mr. H. S. Playfair of Yokohama. Mr. Playfair's score averaged 40 for the eight rounds of nine holes, and he lowered all local records. Mr. Moon was second and Mr. Eugene H. Gill third.

According to Mr. Soyeda, speaking through the columns of the *Hochi Shimbun*, the Japanese authorities have decided that the time is now suitable for bringing Formosa within the same currency system as that prevailing throughout the rest of the empire; in other words, adopting gold monometallism. At first the island's close relations with the neighbouring empire of China rendered it advisable to adhere to the silver system, but the severe fluctuations in the gold value of the white metal during recent years have greatly hampered trade, and the moment seems to be now opportune for reverting to the stabler basis. We gather from Mr. Soyeda's remarks that a bill in that sense has already been prepared by the Treasury.

It is with sincere regret that we have to announce the death of Lieut.-General Tamura, which took place at 2 a.m. on the 1st instant. The rank of Lieut.-General was conferred on the distinguished officer by the Emperor just before death. The Lieut.-General had practical charge of the Headquarters Staff affairs and was regarded as one of the ablest officers in Japan. His loss will be severely felt by the country.

An atmospheric depression still continues to linger on the southern coast while in the north an exceptional elevation is reported. In short the conditions indicate instability and it is anticipated that bad weather may prevail for the next two or three days.

FIRE.

A small fire occurred at Ogicho Shichome, Yokohama, about half-past six on Tuesday evening. One house was destroyed.

An outbreak of fire occurred on the morning of Sept. 28th at Iwamisawa, Sapporo, burning down seven brothels and killing one person.

On the night of Sept. 28th, fire broke out at Senju, Tokyo, burning down two houses and damaging three others.

About 6.30 p.m. on Sept. 29th, fire occurred in an unoccupied house in the compound at No. 136, Kotobukicho 4-chome, Yokohama, destroying the building. The damage is estimated at ¥3,000.

BASEBALL.

The game of baseball played on Saturday afternoon in dull, overcast, muggy weather, between the Y.C. & A.C. versus the Yokohama Commercial School, proved an interesting encounter. The visitors displayed all the fine fielding abilities which we are accustomed to expect from a Japanese baseball team, and at one time it looked as if they might retire as the victors; but the home side were not to be denied and in the end of a closely contested game defeated the school boys by the narrow margin of one run. Yokohama went in first and at the end of the second innings the score stood 2 all. In the 4th Yokohama got 4 runs and the Japanese came out with nothing. In the 5th innings Goddard bagged a home run and the score now stood 7-2. In the 6th innings the Japanese brought their score up to 6, and the 8th and 9th innings were unproductive for either side, the score being:—Y.C. and A.C., 7 runs; Y.C.S., 11 runs. Teams:—

Y. C. S.	Y. C. & A. C.
Furubashi (Capt.)	P. Van Cleve.
Yodogawa	C. Kilby.
Ozeki	1B. Mollison.
Sugimoto	2B. Merriman.
Kajima	S.S. Parker.
Oishi	3B. Thorn (Capt.)
Matsumura	1F. Jenks.
Yamada	CF. McChesney.
Yonebayashi	R.F. Goddard.

A correspondent writes:—A most interesting and exciting game of baseball was that on Saturday when the Y.C. and A.C. nine met the Yokohama Commercial School for the first time since the latter's return from a tour through Japan. A large crowd of spectators, including many schoolboys, followed the game with keen interest. The local nine showed up extremely well, displaying a marked improvement in their team-work, and with constant practice they should be in good trim when the Interport contest next month comes round. The Japanese team's fielding was superb, though, with one or two exceptions, their batting was very weak. Two runs were scored by the Commercial School in the first innings, which was equalised in the third by the Club. In the sixth innings the Japanese went to pieces and the Y.C. & A.C.'s batted well for four runs, Goddard scoring a brilliant home run on a fine hit to right-field—6—2. The score remained thus until the end of the seventh when through poor play on the part of Thorn, particularly, and one or two others, the Japanese were allowed to get in four runs. In the eighth the Club scored one run and thus the score remained, though the school boys made every effort to win, or at least tie. McChesney, Merriman and Van Cleve played an excellent game, while E. W. Kilby, playing for the first time since recovering from his accident, was as clever as ever at catching, and batted with marked effect throughout the game. Baseball enthusiasts were glad to see him once more in his old position. Van Cleve is improving in his pitching though he is inclined to hold on to the ball too long, a bad fault but easily corrected. Mr. W. S. Stone umpired and Mr. Nozaki scored. Tea was served in the Pavilion after the game.

THE HONMOKU MATCH.

An equally exciting game of baseball was played at Honmoku about the same time between the U. S. S. *Wisconsin* and the Naval Hospital, resulting in a win for the later by 6—3. The score during the entire game was 3—3 up to the 9th inning when Briedenstein, for the Hospital, broke the tie by a splendid hit and before they were put out three runs had been added. An unfortunate occurrence happened in the 7th inning when Donnaher the Hospital pitcher, broke his arm completely while attempting an "underhand out curve." It was most unfortunate as he has trained hard and developed by conscientious work into a wonderful pitcher. The whole team have done wonders in the last few weeks and practically made themselves into first class players. Schmidt relieved Donnaher after the accident and pitched very well.

THE SITUATION.

MUCH conjecture is indulged in about the situation, not only because the 8th of October is close at hand, but also because of Baron ROSEN's sudden departure for Port Arthur. It appears to be tolerably certain that some surprise was caused in Japan by Russia's action in presenting a new set of demands in Peking while the Manchurian question was under discussion between the St. Petersburg Foreign Office and the Representative of Japan in that city. We use the word "surprise" advisedly. A stronger sentiment was undoubtedly excited in the bosoms of some leading Tokyo journalists, but that was probably because they entertained a somewhat mistaken view of the stage to which negotiations had been carried in the Russian capital. The fact is, we believe, that *pourparlers* between Japan and Russia could scarcely be said to have entered a serious phase. There had been delay, not owing to any want of activity on Japan's part, but because Russian statesmen had not shown themselves particularly earnest in welcoming this country's advances. Nevertheless it could not be denied that a preliminary interchange of views had taken place; that Russia was informed of Japan's desire to negotiate directly, and that she had not displayed any unwillingness such as Japan would have been justified in construing as an intimation of refusal. Under such circumstances the formulation of a new series of demands in Peking without consulting Japan in any way, might fairly cause surprise in Tokyo, and could not but justify Japan in approaching the Russian Government with a more insistent mien. Such is believed to have been the sequence of events. Some purveyors of news undertake to enter into much fuller details but it would seem that their imagination has been embroidering their knowledge. The Russian Government, on the other hand, is thought to have delegated to Viceroy ALEXIEFF a large part of its authority for the purposes of the Manchurian problem, and little doubt is said to be now entertained that M. LESSAR acted under instructions from the Viceroy at Port Arthur when he opened his last budget of demands in Peking. It is plain, however, that all this places Japan in a somewhat equivocal position. We need not elaborate the point, since to do so might only sharpen sentiments which it should be the object of every newspaper to soften at this juncture. But we may note that the Viceroy in Port Arthur is a somewhat inaccessible personage for purposes of diplomatic discussion. If he has been invested with such extensive authority in relation to problems affecting the welfare of the Far East and the interests of several great Powers, it is inconvenient that his Viceregal court is not equipped with machinery for receiving and transmitting the views of the States concerned, and it would be calamitous if he committed the

error of imagining that Japan can submit to be effaced by a confusion of the functions of St. Petersburg and Port Arthur. This country has been remarkably patient, but there are conjunctures which she can not possibly endure in silence. If Russia create such a conjuncture, it will not be of deliberate intent, we are persuaded, and since there is a strong probability that Viceroy ALEXIEFF, great as is the ability attributed to him by public report, does not clearly recognise how close Japan has been pushed to the verge of vehement self-assertion, it is a very welcome incident that he will now be brought into direct contact with Baron ROSEN, who can tell him exactly how Japan feels and what are the bounds of her endurance.

A PROGRESSIST MANIFESTO.

ON the 25th instant a manifesto was issued from the Progressist head-quarters over the signature of Count OKUMA himself. The document sets out by stating that the public are well acquainted with the views held by the Party for many years. Now, however, the state of affairs in Eastern Asia becomes imminently menacing. Russia's attitude in Manchuria suggests that she contemplates war, and her aggressive preparations in that region are not merely of a recent character. On the other hand, the Japanese Government has treated this question in a temporizing and perfunctory manner, which has been a constant source of regret to the Party. Nevertheless at a critical time like the present, it is not the wish of the Progressists to attack those in power, nor would the nation desire them to do so. If, however, the Party have remained patient up to this day, it is because they fear to complicate any negotiations that may be in progress, or to cause, possibly, the interference of third parties. But the crisis has now become of such a nature and involves such far-reaching consequences that further silence is impossible. Therefore the Party in conformity with the resolute policy they have always professed and in conformity with their conviction that no weak concessions should be made to foreign States, hereby declare that China's integrity should be preserved; that the Power which now threatens to consume her should be driven back; that Korea should be assisted, and that the Power which menaces this bulwark of Japan's safety should be forced to retire; that all patriots entertaining these views should unite to rouse the nation and to incite the Government to a stout course. The Authorities have the people at their back; the people trust the Authorities; therefore Russia must be invited to reflect seriously. Should a catastrophe be precipitated, the loyalty and sincerity of the Japanese people may be relied on beyond all question. A heavy responsibility, a responsibility not to be averted even by self-sacrifice, will devolve on those who have the direction of the nation's affairs, should they, by a policy

of temporizing, tame concessions and spiritless drift, imperil the safety of the country and bring the empire into disgrace. The manifesto concludes by calling upon all patriots that are of one mind to join hands in the cause of their country, so that on the one hand the nation may be roused to a sense of its danger, on the other the Government to an appreciation of its responsibilities, and thus the empire be saved from future calamities.

It will be said, of course, that domestic politics have much to do with a manifesto like the above. Perhaps they have. Few steps are taken without some determining cause different from the ostensible object. But whatever motive-seekers may find to satisfy themselves that the Progressists are essaying to promote their own Party's interests rather than to provide for the security of the empire, it is undeniable that the issue of such manifestoes indicates a dangerous growth of public sentiment and a dangerous incentive to its growth. There is nothing that we should not do or say to avert the calamity of war. But blind optimism is not the way to avert it, and we therefore repeat our apprehension that Russia is pushing Japan beyond the verge of endurance. A long course of years passed in intimate contact with the people of this country has shown us that their temper may easily be mistaken by those that look only for such evidences of moral disturbance as would mark the progress of an Occidental nation to the stage of uncontrollable excitement. The Japanese does not reach the limit of his patience by visible steps. He remains calm in outward appearance until the crucial moment, not furnishing by his demeanour any indication of the coming storm. It is much to be feared that Russia has failed to appreciate this mood of the nation she is treating with such indifference. The TSAR does not desire war and would, we are convinced, do much to prevent it. But does it ever occur to His MAJESTY or to his immediate advisers to try to place themselves for a moment in Japan's position? Do they ever recall that only eight years have elapsed since they themselves drove her from Manchuria on the pretence that her presence there would imperil the tranquillity of the Orient, and that they have now occupied Manchuria with most defiant indifference to that pretence and in flagrant contravention of their public engagements? Does it ever occur to them to think that for the past fifteen centuries Japan has regarded either the independence of the Koreans or their inclusion among her own subjects as an essential condition of her safety, whereas Russia has now included the whole Valley of the Yalu in her sphere of influence, and has deliberately commenced in northern Korea a series of steps the sequel of which can not, by the light of history, be doubted for one moment? Does it ever occur to them that Japan fought a bloody war eight years ago to rescue Korea from its connexion with China, a connexion which made all

progress impossible and must ultimately have laid the peninsular kingdom at the mercy of any Western aggressor, whereas Russia is now behaving as though no obstacle offered to the inclusion of Korea in the huge scheme of appropriation by which Eastern Asia is steadily passing into Muscovite hands? If they think at all seriously of these things, if they credit Japan with the possession of any of the feelings that make for patriotism, it is scarcely conceivable that they would not have paused ere now in their course of haughty aggressiveness. We have counted all along on a pacific issue because, having faith in the perspicacity of Russian statesmanship, we trusted to see timely limits set to the advance of this wave of conquest. But we are compelled now to say that, in our deliberate opinion, the thread of Japanese patience has been stretched very nearly to breaking point, and that at any moment the situation may be found to have eluded all resources of diplomacy.

THE MUNICIPALITY OF TOKYO AND THE STREET RAILWAY.

THE mere fact that the Tokyo City Council has adopted a resolution in favour of cancelling the charter of the Street Railway Company and converting the lines into a municipal undertaking, is sufficient to call attention to the powers reserved to the Authorities by the terms of the charters granted to such companies. There is more than one provision bearing on this point. In the first place there is the general provision that if the State, or a public corporation acting in the public interest, desire to hire the exclusive use of a part or the whole of the rails and the accessories essential to operating the line, or to buy a part or the whole of such rails and accessories, the Company shall not have competence to refuse but shall be entitled to proper compensation. As to the rate of compensation in this case, it is to be determined by dividing the average net earnings for five years by the fraction $\frac{1}{100}$. In the event of 5 years not having elapsed since the opening of the line to traffic, the period that has actually elapsed is to be substituted. Then further, there are provisions with regard to the taking over of the line by the State after the expiration of the charter period, or in the event of the Company's failure to comply with certain regulations; and there is a provision that should the Company without official permission suspend its business or abandon a part of it, the Minister of Home Affairs may direct the Municipality, or some other persons, to operate the lines at the Company's expense during the remaining term of the charter. We apprehend that with the exception of the first-mentioned, none of these provisions is applicable to the case with which the City Council propose to deal. In other words, if the Municipality want to take the enterprise into their own hands, they must pay to the Company a sum assessed by taking the quotient of

five years' average net earnings divided by $\frac{1}{100}$, or a quotient modified in accordance with the time that has actually expired since the opening of the line if such time has been less than 5 years. Now the committee of the City Council have been making some calculations. It is such an interesting question that we do not hesitate to lay the details before our readers. The length of lines for which the Street Railway Company has charters is 92.6 miles, and the Company's total capital is fixed at 15 million yen, representing 300,000 fifty yen shares. Of these shares sixty thousand have already been issued, and 25 yen per share has been paid up. The shares are selling at 60 yen each approximately. Now the City Council's committee assume that the Municipality could take over the business merely by paying to the shareholders the market price of the shares already issued, and since the shares are selling at a premium of 35 yen each—assuming 60 yen to be their market value—the Municipality would have to make a disbursement of 2,100,000 yen to acquire these sixty thousand shares. But the Company is required by its charter to make a payment of a million yen to the City Improvements Fund, so that, in fine, the outlay of the Municipality on account of these shares would be only 1,100,000 yen, which, added to the 15 million yen capital of the Company would make 16,100,000 yen. That, then, is what the Committee regard as the capital the Municipality would have to invest. Now there are two points to be noted here. One is the naivete of a calculation which includes among gains the loss of a certain asset. If the Municipality forfeit the sum of one million yen due to it by the Company, how can that loss be reckoned a set-off against the price the Municipality pays for the line? Presumably the million owed by the Company would have to be obtained from some other source of Municipal revenue. The second point is that the law does not entitle the Municipality to assume possession of this enterprise merely by paying the market price of the shares. We know of no such provision, nor would such a provision be tolerable. Passing on, however, to the committee's calculations, we find that the gross earnings of the line are estimated at 80 yen per mile daily, which for a total mileage of 92.6, gives a gross annual income of 2,703,920 yen. As to this, it will be observed that the question of single and double lines is not taken into account. The total of 92.6 miles represents, we believe, the length of all the lines laid, not the length of the roads traversed. We have no figures to show what proportion of the lines would be single tracks, but it may fairly be assumed that the actual length of the roads would not exceed 50 miles. On that assumption, the figure taken by the Committee as a basis becomes 148 yen per mile of road. They then proceed

Gross annual earnings at 80 yen per mile daily	Yen. 2,703,920
Expenses	1,081,568

Net earnings	1,622,352
--------------------	-----------

This represents, roughly speaking, 10 per cent. on the capital invested. Hence the enterprise would be highly profitable to the Municipality. But supposing, the Committee proceed, that the earnings do not amount to 80 yen per mile daily. Suppose them to be only 50 yen. Then the calculation stands thus:—

Gross annual earnings at 50 yen per mile	Yen. 1,689,950
Expenses	675,980

Net earnings	1,013,970
--------------------	-----------

This represents 6.3 per cent. on the capital invested, and is still a fair return. But it will be noted that whereas the expenses are calculated at 1,081,568 yen when 80 yen per mile is earned, they are reduced to 675,980 yen when only 50 yen is earned. In other words, these remarkably sanguine committee-men assume that the expenses of operating an electric railway system diminish in the exact ratio of the earnings. If it costs a certain sum to operate the system when the takings are 80 yen a mile, then it will cost only $\frac{3}{4}$ of that sum to run the system when the earnings are 50 yen a mile. That is the most admirable estimate we have ever seen. Could it only be realized, there would be no such thing as a losing enterprise in the world, for when the income approached cipher, the outlay would approximate zero. The true figures are that if the lines earned only 50 yen a mile, their expenses remaining the same, the net profit would be 608,382 yen, or 3.8 per cent. of the capital invested.

It is not a matter of mere conjecture, however, what earnings may be reasonably expected from electric-traction business in Tokyo. The Sukiya-Kanda section of the Street Railway was opened to traffic on the 15th instant, and during the 13 days between that date and the 24th the earnings averaged 250 yen daily. There were four wet days, but there was one holiday which probably compensated. We set down the figures as an interesting record of the first electric line within Tokyo city:—

Day.	Total Earnings. Yen.	No of Passengers.
15th	273.52	13,676
16th	328.64	16,432
17th	308.66	15,433
18th	243.32	12,166
19th	183.32	9,166
20th	222.52	11,126
21st	207.96	10,398
22nd	184.78	9,239
23rd	149.92	7,496
24th (holiday)	404.06	20,203

The distance between Sukiya-bashi and Kanda-bashi is 18 cho, or 2,160 yards, so that the average daily earnings on this section were 204 yen per mile, approximately. Hence the committee's estimate of 148 per mile of road is distinctly conservative.

The record of the Sukiya-Kanda section furnishes a basis for approximately estimating what the whole road will pay when finished. Assuming the gross earnings to be 200 yen per mile daily and the length of

road to be 50 miles, the aggregate yearly income becomes 3,650,000 *yen*. As to the operating expenses, however, a basis is not so easy. The City Council's Committee, it will be perceived, puts the expenses at 40 per cent. of the gross earnings. That is probably too high an estimate in the case of large earnings such as 200 *yen* a mile. If, then, we assess the expenses at 35 per cent. of the gross earnings, the net income becomes 2,372,500 *yen per annum*. Now the charter requires that one-third of everything earned above 7 per cent. shall go to the Municipality. If we take the cost of construction and equipment to be 15 million *yen*, it results that the Municipality would receive 440,833 *yen* yearly, and the Company's net income would be 1,931,667 *yen*, or something less than 13 per cent. annually of the capital. That is probably not far from the truth.

But as to the price that the Municipality would have to pay if it took over the lines, we can not form an estimate worthy of mention. Assuming the whole system to be in working order and earning at the above rate, its price for purposes of transfer to a public corporation would be twenty-eight million *yen*, approximately, according to the method of calculation fixed by the charter. In other words, the shareholders possess an asset which, in a few years, will be worth some 13 million *yen* over and above its cost price. The City Council's Committee propose to take over that asset now for 2,100,000 *yen*. It is not at all likely that such a transaction could be consummated.

ELECTRIC-RAILWAY FARES.

THE dispute that is now going on in Tokyo with regard to electric-railway fares receives no exhaustive treatment at the hands of Japanese publicists. Caught by the glamour of cheapness and uniformity people seem indisposed to examine the question minutely. But what, after all, are the advantages of a uniform fare for all distances? The basic idea of such a fare is that levelling down is effected in one direction and levelling up in another, one set of passengers being charged a little more and the other set a little less, so that finally a compromise is reached between the two. But in what respect does this compromise advantage those that are "levelled up?" It certainly benefits folks that want to ride long distances since the cost is reduced for them, but to an exactly corresponding degree it takes money out of the pockets of those that have only a short distance to travel. The first principle of payment for services rendered is that the remuneration should be in the exact ratio of the service. If a man rides two miles in an electric car he should pay twice as much as the man that rides only one mile. To equalise the two payments at a point mid-way between the higher and the lower, is to make the one-mile traveller pay one-half of the fare of the two-mile traveller, and in what respect the former gains it is

difficult to comprehend. Of course the saving clause is that the total outlay demanded of the public using the cars may be reduced by the uniform system; but look at the matter how we may, the indisputable fact remains that one set of travellers are required to pay high for a small service in order that another set may be enabled to purchase a large service disproportionately cheap. The discrimination is wholly in favour of the latter. There is much excuse for the uniform system in countries where the denominations of small portable coins are taken as a basis of account. For example, in England where the lowest denomination of a silver coin is 3 pence, the well-to-do classes would probably be content with a uniform fare of that amount, and would prefer it to a graded system involving the use of coppers. But the working population regard the penny as their unit of currency, and consequently that coin is made the smallest charge, a man being able to ride about 1½ miles for a penny. We speak generally, of course; special rates are adopted in some places. In Japan the *sen*, that is to say a farthing, is the money unit of the lower orders, and we are inclined to think that the wisest plan for any electric company would be to commence its charges at one *sen* and run them up by a *sen* for each half mile travelled, until a maximum of 10 *sen* was reached. Or, if the line naturally divided itself into stages longer than a mile, but not exceeding 1½ miles, then the charge for each stage, might be 2 *sen*, and for each half stage one *sen*, with the same maximum as before. It may be objected, perhaps, that such a system would be complicated and must cause corresponding inconvenience to the public. That, indeed, is an argument habitually advanced in favour of a uniform fare. But a moment's thought will show that the inconvenience must fall upon the company's employees solely. If a car had an entrance stile on the penny-in-the-slot plan, a ticket-man might be dispensed with, and the saving thus effected might be devoted to cheapening fares. Such would be the simplest system of all. But that being impossible, for the present at all events, tickets have to be distributed and collected, and one fails to see what inconvenience a traveller is subjected to by having to inquire the amount when he buys his ticket, seeing that he has to buy it under any circumstances. In short, if the mere fact of uniformity has any substantial advantages in Japan, we do not detect them, and since the value of money is very highly appreciated in this country, the aim should be, we think, to make the minimum fare as low as possible. As to long distances, while the electric railway continues to be incomparably the cheapest way of traversing them, people will not hesitate to pay its charges; but as to short distances, many persons willing to disburse one *sen* for car accommodation, would prefer to walk if they were asked to pay 2 *sen*.

YACHTING.

There were three races on Saturday afternoon, two under the auspices of the Yokohama Yacht Club and one taken part in by boats of the Mosquito Yacht Club. Three 39-raters started in the postponed race, *Mary*, *Golden Hind* and *Maid Marion* crossing the line. The first named took a long lead, but the wind being light failed to finish in time.

The Mosquito craft had good racing round their figure of eight course, six starting. *Winsome* led from the outset but was well pressed by *Pele* and *Edna* and only won by a comparatively narrow margin. Times:

	h.m.s.		h.m.s.
<i>Chocho</i>	3-55.02	<i>Vixen</i>	3-57.35
<i>Edna</i>	3-52.28	<i>Winsome</i>	3-51.04
<i>Pele</i>	3-51.26	<i>Sunbeam</i>	4-01.58

No fewer than thirteen "Larks" started to compete for the usual club prize, a handicap prize and a prize presented by Mr. Gillon. Nos. 10, 11 and 1 soon got away from their fellows and made capital racing; 10 (sailed by Drummond) winning by a few seconds from 11 (Abbey), 1 (Gillon) third. No. 10 thus wins the club prize and handicap and No. 11 takes Mr. Gillon's prize. Times:

No.	h.m.s.	No.	h.m.s.
1	4-19.20	10	4-16.50
2	4-33.05	11	4-16.55
3	4-49.05	12	4-25.45
4	4-37.30	13	4-28.30
8	4-48.20	14	4-46.50

It appears that though *Mary's* return was not officially recorded, she finished within the time limit, that is before 7 p.m. Happily, therefore, this long race has been disposed of. *Mary* led *Maid Marion* at the Kawasaki mark by twenty minutes, and half an hour later the *Maid* gave up. *Golden Hind* did not even round the Kawasaki Buoy. *Mary* passed round the Widow Buoy at 5.23 and fetched back to the Lightship at 5.47, crossing the finishing line after dark at 6.10. The wind was light, freshening, later and fluky.

GOVERNMENT BONDS.

According to official investigations, the whole issue of Government Loan Bonds amounted to *yen* 580,530,010 at the end of August:—

	Yen.
Old	4,169,635
Pension, 5 per cent.	19,630,475
Naval	8,297,300
Redemption	167,128,350
Military	115,641,150
Railway, 4 per cent.	17,577,750
Railway, 5 per cent.	37,148,900
Industry, 4 per cent.	78,052,250
Industry, 5 per cent.	60,134,600
Hokkaido Railway, 4 per cent.	2,000,000
Hokkaido Railway, 5 per cent.	3,592,500
Formosan Industry	20,707,900
Loan for redeeming notes	22,000,000
Temporary loan for Formosan industries.	4,349,200
Temporary loans	10,000,000
Loan by Treasury	10,000,000

Bonds sold abroad are not enumerated in this table.

THE COUNTY CRICKET CHAMPIONSHIP.

The following table shows the position of the English counties down to 31st August:—

	Played	Won.	Lost	Drawn	Points.	Per cent.
Middlesex	(12)	18	8	1	9	77.77
Sussex	(2)	22	7	2	13	55.55
Yorkshire	(1)	26	13	5	8	44.44
Lancashire	(5)	26	10	5	11	33.33
Notts	(3)	20	6	4	10	20.00
Worcestershire	(9)	20	8	6	2	14.28
Essex	(13)	22	7	6	9	7.69
Kent	(7)	21	7	6	8	1
Warwickshire	(6)	18	4	4	10	—
Somersetshire	(8)	17	5	6	6	—9.09
Derbyshire	(10)	16	4	7	5	—27.07
Surrey	(4)	26	6	11	9	—29.41
Gloucestershire	(14)	19	3	9	7	—50.00
Leicestershire	(11)	19	1	9	9	—80.00
Hampshire	(14)	17	1	9	7	—80.00

Figures in brackets represent position last year.

LADIES HOSPITAL FUND.

The ordinary annual meeting of the subscribers to the Ladies Hospital Fund was held on Monday afternoon in the Public Hall, Mrs. E. C. Bellows presiding. There was a fair attendance of ladies.

The meeting having been called to order,

The President described the object of the meeting—to elect officers for the ensuing year, and to submit to the subscribers a report as to the work done during the past year. She recalled that the intention to hold a meeting last year after the annual one, for the purpose of having the General Committee and Dr. Mcre present, was not attained because Dr. Mcre would not meet them at all and the main object was to hear his objections. Some time later the Ladies Committee heard from Mrs. Davies at Hongkong and as the result of the correspondence that ensued Dr. and Mrs. Davies came here and Dr. Davies took over the hospital from Dr. Mcre. The Ladies Committee then employed Mrs. Davies to assist him. When Dr. Davies developed drinking habits the General Committee were compelled to dismiss him, and since then Mrs. Davies had been in charge and the situation had practically drifted. There were patients in the hospital when Dr. Davies was dismissed and Mrs. Davies stayed on to administer the affairs of the hospital. Since then attempts had been made to devise plans for the proper carrying on of the institution. Those plans had not yet been decided on, but Mr. E. Flint Kilby who was present would describe the state of affairs to them.

Mr. FLINT KILBY read the following letter:—

Dear Mrs. BELLOWES.—There is nothing fresh to advise you as to the Hospital for your meeting to-day, as until negotiations with Mrs. Davies as to the lease mature, we cannot act.

Briefly the position is as follows: Mrs. Davies is at present in charge of the Hospital, under the lease transferred to her by Dr. Davies, and the Hospital Committee are paying two extra Japanese nurses, and for Charity Patients. If the lease transfer can be arranged, the idea of the Committee is:—

1. To retain Mrs. Davies as Matron and Head Nurse.
2. To engage a European Nurse as assistant, who has a Dispenser's Certificate, so that nearly all medicines can be dispensed at the Hospital.
3. To engage a Japanese male nurse.
4. To arrange with two local Doctors to attend the Hospital in alternate periods of three months, both being available in cases of emergency.
5. To ask the community to provide the necessary funds for an operating room.
6. To make such additions and alterations to the equipment of the Hospital as are urgently needed and according as the Funds permit.
7. To remove the present Hydropathic Establishment, and alter it so as to make it available for Hospital purposes, or for private patients, say mostly visitors who may require accommodation that cannot be obtained at the Hotels and where, for instance, married people may have their wife or husband with them.
8. To rearrange the present residential buildings on the lot so as to permit an entrance from the main road, and to make the grounds more presentable.
9. To provide proper heating and electric lighting power on the premises.
10. To consider the advisability of erecting at the back of the lot a suitable building for Chinese patients, who at present occupy the general ward, the funds for which we are told the Chinese community would subscribe.

The Committee were desirous to be able to put a full scheme before the community, but as time goes on and doubtless residents are anxious to know what is being done, I do not think I shall be going beyond the wishes of my fellow Committee men in giving you this information for the benefit of the subscribers. With regard to the way in which you can assist the Committee, I would confirm what passed in our recent interview, that they hope they may rely on your fund to pay the passage and salary of the extra European nurse, and think that it would be very desirable that the ladies of Yokohama should still interest themselves in this matter, with their subscriptions, and they will, I am sure, be glad to recognize any subscribers to your fund as entitled to vote on Hospital matters at any meeting.

Whilst this general scheme has been considered by the Committee, I have no authority to put it forward officially, but next week at least, they hope to be in a position to put a detailed scheme before the

community, through the Press, and if considered advisable, for discussion at a public meeting.

Yours faithfully, E. FLINT KILBY.

Yokohama, September 22nd, 1903.

In connection with the operating room Mr. Kilby said he might mention that within the last few days a sailor was taken to the Hospital. An operation could not be performed for, he thought, five days afterwards. Two days later Dr. Baelz came down from Tokyo and performed another operation, but the man died. He (the speaker) was informed by the doctor who sent the man to the hospital that had he been operated on at once his life might have been saved. Mr. Kilby added, relevant to the letter, that there was only one bath in the hospital. Negotiations as to the carrying on of the hospital were still going on; the Committee had a further offer from Mr. Litchfield and a valuation had been made.

The PRESIDENT said that was the situation. It had been the opinion of the Ladies Committee that they might be able to help in carrying out the plans of the General Committee by paying for the passage here of a foreign trained nurse and afterwards paying her salary for about two years. They had a sum of money that they thought would be sufficient. Mrs. Bellows then went over and commented on the following accounts:

STATEMENT OF TREASURER'S ACCOUNTS.		
	Yen.	Yen.
Received on Subscription	1,497.00	
Donations, Anonymous	1,010.00	
Entertainments	693.35	
Interest on Deposits	21.94	3,222.29
Salary to Mrs. Davies	416.65	
Salary to Assistant (7 weeks) ...	70.00	
Sundry petty expenses	37.70	524.35
On hand		2,697.94
Fixed Deposit in H. & S. Bank ...	1,500.00	
Current Account " "	1,188.34	
Cash	9.60	2,697.94
Total Amount Subscribed	1,617.50	
Collected	1,497.00	
Outstanding on Subscription.....	120.50	

September 22nd, 1903.

Of course, the President, said they did not object to receiving subscriptions but they thought that they should not ask for them, for they thought that their subscribers would give more freely to the Hospital Fund if they were not called upon this year. They would, however, keep up the organization and would do so in any way that the General Committee should indicate to them. They might occasionally raise money from entertainments but they did not expect to canvas for subscribers this year.

In reply to Mrs. Hartland,

The PRESIDENT said the nurse to come from abroad would be in addition to Mrs. Davies, whom the General Committee had planned to employ as matron with an assistant so that in case of illness one would be available.

Some discussion took place as to the number of Committee to be elected, the President explaining the changes that had taken place in the Committee during the year.

In reply to Mrs. Stedman,

The PRESIDENT said the Committee made no change in arrangements after Dr. Davies left; they simply acquiesced in the steps taken by the General Committee. They learned afterwards that Mrs. Davies was considering two proposals, one that she should be in the hospital as general manager and the other that she should conduct it as lessee but the Committee wrote that her acceptance of either proposal would be a cancellation of her agreement with them. Mrs. Davies was paid by the month; no definite period of engagement was fixed. It had been proposed that the General Committee should employ the nurse and make the contract and the Ladies Committee should simply pay the salary as long as the money lasted, after which the General Committee would be responsible.

Mrs. STEDMAN thought it would be better to ask for more subscriptions.

The PRESIDENT said the reason for proposing not to do so was that they did not wish to interfere with the subscriptions to the General Fund—for a large expenditure would be called for,

Mrs. SWAIN said it was very kind and courteous of the General Committee to allow the ladies to discuss their plans, and she hoped the ladies would not in the future overstep the work of the Committee. She suggested that there might not be necessity for so large a Committee of ladies. She asked Mrs. Bellows whether she thought a smaller Committee could do the work, and whether there were any changes she could suggest.

The PRESIDENT did not think she could suggest any changes. The work was not so arduous but that it could be accomplished by a smaller number, but they had often questions to discuss on which it was well to have the views of as many as possible. There had been the greatest harmony in the Committee. The General Committee had expressed the wish that the organization of the Ladies Hospital Fund should be kept up.

Mr. KILBY corroborated this last statement.

Mrs. HARMAN suggested that subscriptions should be collected this year, otherwise interest in the Ladies' Fund would lapse, but the President and Mrs. Martin explained that the amount required by the General Committee was so large that its collection should not be interfered with.

The election of officers and Committee was then proceeded with, with the result that Mrs. E. C. Bellows was elected President, Mrs. Mollison Vice-President, Mrs. C. K.-M. Martin Secretary, Mrs. Weston Treasurer and Mesdames Moss, Dearing, Knapp, and Manley the Committee.

Mrs. STEDMAN asked supposing the negotiations with the Committee fell through would Mrs. Davies be left in the lurch? Up to the present the Ladies Committee had been paying her.

The PRESIDENT said if her negotiations with the General Committee fell through the present Committee would be unanimously in favour of retaining her services instead of the other nurse.

On the motion of Mrs. SWAIN seconded by Mrs. Stedman a cordial vote of thanks was passed to the Committee.

The PRESIDENT acknowledged the appreciation, and the meeting closed.

SHIPPING DISASTERS.

Fears are entertained as to the safety of the British steamer *Finsbury* which left Kobe on the morning of Sept. 22nd for Yokohama direct and has not yet arrived. Her agents, Messrs. Grosser and Co., have communicated with the British Consul and the Japanese authorities. Heavy weather prevailed after the time of the *Finsbury's* departure.

The M.M. steamer *Australien* went ashore on Sunday morning some 120 miles south-west of Kobe. A thick haze is reported to have prevailed at the time. She sustained considerable damage forward. The local agent, M. Chaix, has gone down to inspect the vessel, and it is understood that permission has been obtained to dock the ship at Kure. Passengers and mails have been brought back to Kobe and the *Annam* is taking cargo off the *Australien*. Yokohama cargo is uninjured.

The *Kobe Herald* referring to the wreck of the M.M. *Australien* says:—The steamer in negotiating a difficult channel is said to have been swept by the current on to the rocks, where her bows are high and dry. Her stem is undamaged but about thirty to fifty feet further aft a large number of plates have been torn through and it is at this point where she is held fast. Captain James was the pilot in charge, and it is stated that he had only just brought one vessel into port before stepping aboard the *Australien*.

The *Australien* lies on a sandy patch on the south-eastern shore of Umasima, the large island which is the centre of the Kurushima no Seto between Oshima and the Shikoku coast. A rock has penetrated the plating forward of the foremast and it was in gliding over this that the rents which measure some 20 metres (60 feet) in all were made. The stem of the steamer is about 100 feet from the rocky bluff of the island, and about 150 feet from the easternmost point. Both the Pilot (Captain James),

and the Commander of the steamer (Captain Verron), who has been running out East for many years and is one of the most experienced Captains in the service, were on deck when the disaster occurred. The only explanation of the accident so far forthcoming is that the ship heading north with the object of taking the easterly passage through the narrows (that between Uma Sima and Nagato Sima) was swept by the current farther west than there was reason to suppose she would be and so struck just inside the south-eastern point of the island inside of clearing. This is the only explanation offered at present but we cannot say it is altogether satisfactory as the weather was, we are advised, perfectly clear. How it was that the course was not altered with a view to taking the western passage when it was seen that the ship was being carried under the island is not apparent. The ship struck at about four o'clock.

Mr. T. Shimatani's steamer the *Shuyo Maru* (about 500 gross tons), went ashore on the morning of Sept. 28th off Noto promontory and sustained severe damage. Two steamers were immediately despatched from Tsuruga to help the ship but it is reported that there is no hope of floating her. The steamer was built in February last year at the Ono Shipbuilding Yard, Osaka, and cost yen 62,000. The Nippon Marine Insurance Company insured the hull for yen 40,000.

Mr. S. Matsuda's steamer *Aioi Maru*, of 76 gross tons with cargo of sugar and cotton, went ashore on the night of Sept. 23rd off Makura point, Kagoshima prefecture. The hull is full of water.

Further information with regard to the steamer *Chitose Maru*, which was in collision on Sept. 19th with the German steamer *Seydlitz* off Wonsung, is given by the *Fiji* to the effect that the ship was inspected by a surveyor of Lloyds who found that there is an expectation of floating her if the cargo is removed. Mr. Takahashi, the manager of the Hiromi Shoten, who are the owners of the *Chitose Maru*, left Osaka on the 25th for Shanghai accompanied by an engineer.

On Saturday, Sept. 12th, a serious catastrophe occurred, reports the *Hongkong Daily Press*, in the Laichow River, about 250 miles S.W. of Hongkong and near the French settlement of Kwangchauwan, a steamer named the *On Hing*, about 250 tons register, being capsized and a large number of persons drowned, the number being variously estimated from 80 to 160. A strong northerly breeze prevailed at the time, heralding the approach of a typhoon, and a strong current in the same direction, as well as cargo stowed on the shade-deck, contributed to the capsizing of the ship. The disaster was witnessed by Captain A. E. Monger of the *Swift*, who in consequence of the strength of the breeze had weighed anchor and was turning round just at the moment the *On Hing* overturned. The cries of the terrified passengers were agonising, but Captain Monger states that he was unable to render assistance without jeopardising the safety of his own ship and the lives of a large number of passengers on board. He saw about twenty cargo-boats and sampans put off from the shore to the rescue, but as on this river there is a surface-current running in the opposite direction to the under-current, it is improbable that many lives were saved. As above stated, some reports place the loss as high as 160 souls, but Captain Monger is of opinion that this is an exaggeration and that 80 would be a more correct estimate. The *On Hing* sailed under the British flag but had no European officers on board. The Captain (Chinese) was among the number drowned.

ROBBER IN A BANK.

On the night of Sept. 29th, a robber entered the Kakeya Bank, Matsui prefecture, and secured over yen 2,300. He murdered an employee of the bank who attempted to arrest him. The culprit is still at large.

SENDAI NEWS.

Thursday, September 24th, being a holiday the Christian workers of Sendai selected it for their meeting. At two o'clock the guests commenced to assemble in the grounds of the Baptist Woman's College in Nakajima-cho, overlooking the river and facing the barracks and the ancient castle of the world-wide famous hero, Date Masamune. Lawn tennis and other gentle games occupied the attention of the guests, until, when the sun's declining rays cooled the air of one of Sendai's perfect days, they gathered in the school assembly room and were entertained by music and speeches from the graphophone, by the kindness of the Rev. John K. Ochiai, B.D., Rector of Christ Church, Sendai.

President McKinley's voice was heard in clear resonant tones reproducing his speech at the Buffalo Exposition, prophesying the expansion of American commerce. The prophecy is even now being fulfilled in this, the metropolis of the North-East. A memory test after a single view of objects displayed on a table followed. This was won by the Rev. Prof. William E. Lampe, A.M. (Princeton) of the Reformed Mission. Mr. Lampe has kept his wits sharpened all summer by superintending the erection of the *Miyagi Jo Gakko*, the Woman's College of the Reformed Mission, by far the most prosperous educational institution for girls and young ladies in the Empire north of the capital. About thirty guests sat down to a sumptuous repast more *Japonico* served by bright-faced maidens of the Baptist seminary. In the discussion that followed the work of the autumn campaign was outlined.

On account of the large number of missions that centre in this city of the North East, the proportion of Christians to the general population is greater than that of many larger cities, yet there remain many strongholds of the arch-enemy of mankind that remain to be stormed (*Deo volente*) in the near future.

In addition to the names mentioned there were among the guests, Rev. David B. Schneider, D.D., President of the North Japan College (*To Hoku Gaku In*); Rev. Alan K. Faust, A.M., (Lancaster) Professor of Latin in the same institution; Rev. Jacob M. Stick, A.B., (University of Pennsylvania) Business Manager of the Reformed Mission; Rev. Henry Scott Jefferys, M.A., (University of Pennsylvania) of the *Nippon Geiko Kwai*; Mrs. J. H. DeForest, and almost all the native pastors. All went away deeply grateful to their genial hostesses, Miss A. S. Buzzel and Miss G. C. Paulson.

THE LAW COURTS.

CLAIM ON A PROMISSORY NOTE.

The hearing of a case instituted by Capt. A. E. Bougouin against G. Kuga, claiming payment of an unpaid promissory note, was to be resumed in the Tokyo District Court on Sept. 28th.

CLAIMS BY THE BANK OF JAPAN.

The appeals in two cases instituted by the Bank of Japan against K. Nedzu and against S. Kobayashi and three others, claiming on unpaid promissory notes, were to be heard in the Tokyo Appeal Court on Sept. 28th.

CLAIM FOR SHIPPING DAMAGE.

The hearing of this case, instituted by the American Trading Company against Messrs. Robert M. Sloman and Co., owners of the steamer *Verona*, claiming yen 485.36, with interest at the rate of 6 per cent. per annum up to date of payment, for damage caused to cargo brought by the defendants from New York on Feb. 24th this year, was resumed in the Yokohama District Court on Sept. 28th before Judge Kano.

Counsel on both sides repeated the statements presented at previous hearings (on May 26th and July 3rd) after which defendants' counsel presented a document notifying that Mr. Robert Edward Loesener has succeeded to the business of Messrs. Robert M. Sloman and Co., and he presented a Power-of-Attorney from the former. He stated that he did not now represent Mr. A. Buschel, of Messrs. C. Illies and Co.

The parties then introduced several documents as evidence.

Plaintiffs' Counsel asked the Court for leave to examine Mr. A. E. Pawsey, of Messrs. Lane Crawford and Co. The Court decided to do so on Oct. 19th.

APPEAL IN THE CAMPHOR MONOPOLY CASE.

The hearing of this appeal, instituted in the Tokyo Appeal Court by Messrs. Samuel, Samuel & Company against a decision given in favour of Mr. Hioki, Liquidator of the bankrupt estate of Messrs. Mourilyan, Heimann & Company, began before Judge K. Suzuki on Sept. 29th at 9 a.m.

It may be remembered that the liquidator of the bankrupt estate filed a suit in the Yokohama District Court against Messrs. Samuel, Samuel & Company (the present appellants) claiming to be paid yen 226,250, which amount was invested in 1900 by Messrs. Mourilyan, Heimann & Co. in the Camphor Monopoly business as one-eighth share of the capital of the Camphor Monopoly. After several hearings, judgement was given on May 29th this year with the result that (1) Messrs. Samuel, Samuel and Co. were ordered to pay yen 226,250 to the liquidator with interest at the rate of 6 per cent. per annum, from April 20th, 1902, to the date of execution, and also to pay costs; and that (2) the costs incurred by the Hongkong and Shanghai Banking Corporation who intervened, were ordered to be paid by the Bank. Messrs. Samuel, Samuel and Co. appealed against this judgement.

Mr. G. Akiyama appeared for the appellants and Mr. Hioki appeared himself as respondent. At the same time, the liquidator of the bankrupt estate of Messrs. Mourilyan, Heimann and Co., filed an appeal against an interlocutory judgement given during the course of the previous proceedings, and which dismissed in the lower Court his claim against Mr. E. C. Davis, one of the partners of Messrs. Samuel, Samuel and Co., on the ground that he had not entered the firm as a partner when the contract with regard to the camphor monopoly business was made. The two appeals were brought jointly.

Before the Court began the hearing, the petition of a Chinaman named Korei-Bun, former Comptroller of the branch in Formosa of the bankrupt firm for leave to intervene and claiming yen 22,500 was dismissed.

Mr. Hioki, liquidator, simply stated that Mr. E. C. Davis should be held to have joint responsibility in the claim of yen 226,250 which the bankrupt firm was pursuing against Messrs. Samuel, Samuel and Co. Although the lower Court had held that Mr. Davis was not concerned, he (Mr. Hioki) contended that he was and that he actively attended to the details of the monopoly business. The liquidator then introduced to the Court several books, documents, and letters as evidence and in regard to each gave lengthy explanations.

Counsel for Messrs. Samuel, Samuel & Co. explained at length the reasons for the appeal, and then said that the simple facts of the case were that Messrs. Samuel, Samuel & Co., which firm consisted of three partners, Messrs. Marcus Samuel, Samuel, Samuel and W. F. Mitchell, made a contract on March 24th, 1900, with the Formosa Government to manage and superintend the Camphor monopoly for three years. With regard to one-eighth part of the capital needed for the business, the Hongkong and Shanghai Banking Corporation put up bonds to the value of yen 226,250 on behalf of the bankrupt firm. The contract was made on May 18th, 1900, and Mr. Davis entered the firm as a partner in November of the same year, before which time he was an employee. He however attended to the whole work of the office as representing the proprietors of the firm. Mr. Davis did not put his own signature to any letter when he was an employee, he signed *per pro*, so that it is clear he had no responsibility before being admitted a partner. Mr. Akiyama next asked the Court for leave to argue the two appeals separately, but the Court, after consultation, decided to go on with the cases jointly.

Subsequently Mr. Akiyama introduced several documents as evidence, some of which had not

been presented in the lower Court. The liquidator would not acknowledge these in any way on the ground that he must first investigate any new evidence proposed to be presented, but he would, if the Court permitted, reply to the new evidence at the next hearing.

Counsel for Messrs. Samuel, Samuel & Co. asked the Court to examine Mr. H. C. Pigott, a former manager of the bankrupt firm, saying that he was the man most likely to know the facts concerning any payment made by the Hongkong and Shanghai Bank to Messrs. Samuel, Samuel on behalf of Messrs. Mourilyan, Heimann and Co. The Court decided to entrust the Yokohama Local Court with the examination of Mr. Pigott.

The case was adjourned *sine die*.

Mr. T. Twizell Wawn, acting British Vice-Consul at Yokohama, was present during the proceedings.

HALL v. STANILAND.

This case, instituted by Mr. J. W. Hall against Mr. F. Staniland, claiming commission and advertisement charges on the sale of the property known as the Bluff Hotel, was resumed in the Yokohama District Court before Judge Kano, on Sept. 30th when Mr. W. Bailey, clerk of the Royal Naval Hospital, was examined as a witness.

Witness deposed that he remembered seeing Mr. Hall on Jan. 21st, 1901, when he made an enquiry with regard to the sale of the property of the Bluff Hotel which was to be disposed of, and since that time his wife and her friends, who were intending to start an hotel, had frequently seen the auctioneer. They did not intend to purchase this property, but simply asked its price. The ladies understood through Mr. Staniland that the price of the furniture and sundries needed for hotel work was yen 7,000, and that the rent of the whole property was yen 210 per month on condition that a lease for five or seven years was made. The income of the hotel was estimated at from yen 12,000 to yen 15,000 per month. Witness knew through Mr. Hall that the property was to be disposed of, and not through reading an advertisement in the local papers. He did not know that a gentleman named Campbell also intended to purchase the property.

Plaintiff's Counsel then introduced two letters, as evidence, one of which was written by Mrs. Bailey on July 4th, 1901, to Mr. Hall requesting him to show her the business books of the hotel so that she could understand the detailed conditions. Mr. Staniland refused to show the books. Counsel asked the Court to examine Mr. H. J. Sharp, Manager of Messrs. Kelly and Walsh, as a witness, but he withdrew the request upon the Court deciding not to call further witnesses.

Having summarized the evidence, Counsel entered on a lengthy discussion, after which the Court rose, reserving judgement till Oct. 5th.

NATIONAL BANK v. CHANG MING CHIH.

This case came up again in the Yokohama District Court on Sept. 29th when Judge Hasegawa ordered defendant to pay yen 19,820 to the Bank and to bear the costs.

DARING ROBBERY IN HONGKONG.

Hongkong has ever been an Alsatia for the criminal outscourings of Canton, and at the present moment it seems to be the haunt of some very daring and unscrupulous rogues, judging by paragraphs in the local press. The latest outrage occurred in broad daylight on Sept. 16th, when Miss Bateman, an Assistant Mistress residing at 18, Bellios Terrace, was bound in her room, gagged and robbed by a gang of six Chinamen. The *Hongkong Daily Press* says that a chit was taken to Miss Bateman, who was lying down, having been indisposed for some days, and as she was opening the envelope, a young Chinaman entered the room, and was quickly followed by five others. Both Miss Bateman and the amah were immediately seized by the robbers, who tightly bound them hand and foot, gagged them, and tore up a tablecloth to cover the faces of the helpless victims of their violence. The man who held Miss Bateman to the couch gripped her tightly by

the throat, as though to choke her, and the marks still on the lady's neck plainly testify to the extreme violence used by her assailant. Miss Bateman had a small terrier chained to its kennel on the verandah. One of the robbers released the dog, brought it into the room, and held it so that it was unable to bark. Meanwhile, the others of the gang secured all the jewelry they could lay their hands on. They took from Miss Bateman the gold-rimmed spectacles and the ring she wore, and two gold rings were also taken from the amah's fingers. Evidently the thieves knew something of Miss Bateman's habits, as one made for her jewel case, which was kept in a particular corner in the wardrobe, while another secured her keys and overturned the contents of a camphor-wood box, in order to secure some articles of jewelry which Miss Bateman was in the habit of keeping there. They appeared to know just where to lay their hands on the jewelry in the room, and were consequently speedy in their operations. As soon as they had secured their booty they decamped, leaving no clue to their identity behind, excepting an old pair of slippers and the tassel of a queue. When they had disappeared, Miss Bateman and the amah succeeded in releasing their bonds, and promptly made a report to the police who are now endeavouring to trace the robbers.

REVISED DRAFT OF THE PROPOSED NEW CRIMINAL CODE OF JAPAN.

(CONCLUDED FROM LAST ISSUE.)

CHAPTER XXVII.—WOUNDING AND (GRIEVOUS) BODILY HARM.

Art. 240.—Whosoever shall have wounded and injured or inflicted any (grievous) bodily harm upon any other person, shall be punished with penal servitude for a period not exceeding five years or with an ordinary or police fine not exceeding one hundred yen.

Those who have cut off or damaged the hair of a girl or woman shall be punished with penal servitude for a period not exceeding one year or with an ordinary or police fine not exceeding fifty yen.

Art. 241.—When the following effects have resulted from bodily harm inflicted, the punishment shall be penal servitude for a period exceeding two years and not exceeding ten years:—

1. Loss of the sight of one eye or both eyes;
2. Loss of the hearing of one ear or both ears;
3. Loss of speech;
4. Loss of the use of one or more limbs;
5. Loss of the use of the sexual organs;
6. Serious and incurable mental or bodily disease or exterior deformity;
7. Miscarriage.

Art. 242.—Whosoever shall have caused the death of a person by means of wounding or inflicting any grievous harm, shall be punished with penal servitude for a period not exceeding three years.

When the offence has been committed against his or her own or his wife's or her husband's ancestors (as the case may be), the punishment shall be penal servitude for life or for upwards of five years.

Art. 243.—In the event of any of the offences mentioned in the three preceding Articles being committed, any person present who shall have aided or abetted the perpetrator (even although he personally may not have been guilty of inflicting injuries) shall be punished with penal servitude for a period not exceeding one year, or an ordinary or police fine exceeding fifty yen.

Art. 244.—If the violence has been committed by two or more persons, and it is not possible to find out the gravity of the wound or bodily harm committed by each of the offenders or which of the perpetrators has inflicted such wound or bodily harm, they shall be dealt with according to the provisions relating to the "co-operation of several persons in the same offence" even although no conspiracy existed between them.

Art. 245.—Persons who have been guilty of assault (violent conduct) without going to the

length of actual wounding or inflicting bodily harm, shall be punished with detention or police fine.

The prosecution for the offence mentioned in the preceding par. shall only take place on the complaint of the injured party.

CHAPTER XXVIII.—OF INVOLUNTARY HOMICIDE, BLOWS, OR WOUNDS.

Art. 246.—Whosoever, by negligence, shall have caused wounding or bodily harm, shall be punished with an ordinary or police fine not exceeding one hundred yen.

The prosecution for the offence mentioned in the preceding paragraph shall only take place on the complaint of the injured party.

Art. 247.—Whosoever, by negligence, shall have (involuntarily) committed homicide shall be punished with a fine not exceeding three hundred yen.

Art. 248.—Whosoever, by reason of a dereliction of duty and failure to take necessary precautions in connection with his specific functions, shall have (involuntarily) committed homicide or caused wounds and bodily injury, shall be punished with imprisonment for a period not exceeding three years, or with a fine not exceeding five hundred yen.

CHAPTER XXIX.—OF ABORTION.

Art. 249.—Every woman enceinte who shall have procured abortion by the administration of drugs or by the aid of any other means shall be punished with penal servitude for a period not exceeding one year.

Art. 250.—Whosoever shall have procured abortion for a woman at the request or upon the consent of the said woman, shall be punished with penal servitude for a period not exceeding two years.

Whosoever has thereby caused death or injury to the woman shall be punished with penal servitude for a period not exceeding five years.

Art. 251.—Any doctor, midwife, chemist or druggist, who shall have procured abortion for a woman either at her request or with her consent shall be punished with penal servitude for a period not exceeding five years; and should death or injury have thereby been caused to the woman, the penalty shall be penal servitude for a period of not exceeding seven years.

Art. 252.—Whosoever shall have procured abortion for a woman neither at her request nor with her consent, shall be punished with penal servitude for a period not exceeding seven years.

Attempts to commit the offence mentioned in the preceding paragraph are punishable under the heading of "Infractions not consummated."

Art. 253.—When a person has committed the offence mentioned in the preceding article, and thereby caused death or injury to a woman, the provisions relating to the offences of wounding and grievous bodily harm shall be compared with, and the case decided according to the most severe of the two laws.

CHAPTER XXX.—OF ABANDONING CHILDREN, THE AGED, OR SICK.

Art. 254.—Whosoever shall have abandoned or deserted a child, aged person, or a person who requires assistance owing to sickness, shall be punished with penal servitude for a period not exceeding three years.

Art. 255.—Whosoever, being charged with the responsibility of protecting an old person, a child, or a sick person, abandons, or deserts his charges, or fails to afford them protection necessary to the preservation of their lives, shall be punished with penal servitude for a period of not exceeding five years.

Every person who has been guilty of the same offences vis-à-vis his or her or his wife's or her husband's direct ancestors, shall be punished with penal servitude for a period of not less than one year and not exceeding seven years.

Art. 256.—Persons who have been guilty of the offences mentioned in the two preceding articles, and thereby caused death or bodily injury to individuals, shall be punished by comparing the provisions of this chapter with those applicable to wounding and grievous bodily harm and inflicting the most severe of the possible penalties.

Art. 257.—Whoever shall have discovered an old person, young child, or sick person who is in need of succour, and, without reasonable cause, shall not have rescued him or reported the matter to the proper authorities, shall be punished with police fine.

CHAPTER XXXI.—OF ILLEGAL ARREST AND FALSE IMPRISONMENT.

Art. 258.—Every individual who shall have arbitrarily and illegally arrested or imprisoned a person shall be punished with penal servitude for a period of not exceeding five years.

Should the same offence have been committed against one's own or one's wife's or husband's direct ancestors (as the case may be) the penalty shall be penal servitude for a period of not less than one year and not exceeding seven years.

Art. 259.—If by reason of the commission of the offences mentioned in the preceding article death or injury shall have been occasioned, the penalties for wounding and grievous bodily harm shall be compared with those provided herein and the case decided in accordance with the most severe of the provisions.

CHAPTER XXXII.—OF THREATS.

Art. 260.—Whoever shall be found guilty of having used threats to do injury to life, person, liberty, reputation or property shall be punished with penal servitude for a period of not exceeding one year, or a fine of not exceeding one hundred yen.

Threats are also punishable in like manner when injury is threatened to the life, person, liberty, reputation, or property of the relations of the person who has been threatened.

Art. 261.—Whoever shall have committed violent conduct, or have made threats of injury to the life, person, liberty, reputation, or property of an individual, and by means of such violence or threats shall have caused a person to do an act which he had no obligation to do, or hindered from doing an act which he had a lawful right to perform, shall be punished with penal servitude for a period not exceeding three years.

The same applies to threats against the life, person, liberty, reputation, or property of a person's relations, by means of which he is caused to do an act which he is under no obligation to do, or hindered from doing an act which he has a lawful right to perform.

Attempts to commit the offences mentioned in the two preceding paragraphs are punishable under the heading of "Infractions not consummated."

CHAPTER XXXIII.—OF ABDUCTION, KIDNAPPING, AND ALLURING.

Art. 262.—Whoever shall have allured or taken away any minor without the sanction of his or her father or mother, or other person having the lawful care or charge of such minor, shall be punished with penal servitude for a period of not exceeding five years.

The same penalty shall be inflicted upon whoever shall have, by force or fraudulent stratagem, obtained the consent of a (minor's) father, mother, or curator, and kidnapped (the said minor).

Should the acts mentioned in the two preceding paragraphs be committed for the purpose of gain or for an indecent purpose or with the object of marriage, the penalty shall be penal servitude for a period not less than two years and not exceeding ten years.

Art. 263.—Whoever shall have for the purpose of profit or for an indecent purpose or with the object of contracting marriage, kidnapped a person by means of force or fraudulent stratagem, shall be punished with penal servitude for a period of not less than two years and not exceeding ten years.

Art. 264.—Persons who shall have, with the intent to aid the abductor, harboured a person who has been kidnapped or caused him to be hidden to elude (detection?), shall be punished with penal servitude for a period not exceeding five years.

Whoever shall have, for the purpose of profit or for an indecent purpose, received a person who has been kidnapped shall be punished with penal servitude for a period not exceeding seven years.

Art. 265.—The prosecution of offences in the three preceding articles shall, except those cases where such offences have been committed for the purpose of profiting thereby, only take place on the complaint of the injured party; but, if the person kidnapped has actually contracted a marriage, he or she cannot lodge a valid complaint until after the marriage has been cancelled or declared incomplete or invalid by the irrevocable judgment of a Court of Law.

Art. 266.—Whoever shall have, for the purpose of transporting him or her out of the Empire, committed the offences mentioned in Pars. 1 and 2 of Article 262, or kidnapped a person by force or fraudulent stratagem, shall be punished with limited penal servitude for a period exceeding three years.

The same penalty shall be inflicted upon whoever shall have, with intent to convey him or her out of the Empire, sold a person or transported to a foreign country a person who has been sold or kidnapped.

Art. 267.—Attempts to commit the offences mentioned in this chapter are punishable under the heading of "Infractions not consummated."

Art. 268.—Persons who shall have committed the offences mentioned in this chapter may also be deprived of their civic rights.

CHAPTER XXXIV.—OF LIBEL AND INDICTABLE SLANDER.

Art. 269.—Whoever shall have injured the reputation of a person by publicly imputing to him evil acts or disgraceful conduct, shall, irrespective of the fact as to whether the statement relative to the deed or vice imputed to the person is true or false, be punished with penal servitude or imprisonment for a period not exceeding six months, or fine of not exceeding one hundred yen.

A person who has injured the reputation of the dead is not punishable, except when such injury has arisen in consequence of a false accusation.

Art. 270.—Whoever shall have publicly insulted and reviled a person shall be punished with detention or police fine, even although he may not have (actually) imputed dishonourable acts or disgraceful conduct to such person.

Art. 271.—The prosecution for offences mentioned in this chapter shall only take place on the complaint of the offended party.

CHAPTER XXXV.—OF ROBBERY AND THEFT.

Art. 272.—Whoever shall have stolen the personal effects of another shall be adjudged guilty of larceny and punished with penal servitude for a period not exceeding ten years.

Art. 273.—Whoever shall have forcibly taken away the personal property of any individual by means of acts of violence or by the aid of threats, injury to the life, person, liberty, or property of another, or to the life, person, liberty, or property of a third party whom the person threatened is bound to assist and protect, shall be adjudged guilty of robbery and punished with limited penal servitude for a period of not less than three years.

Persons who have unlawfully acquired pecuniary advantages by the means mentioned in the preceding paragraph, or have caused third parties to do so, shall be punished in the same manner.

Art. 274.—Whoever shall have made preparations with the intent to commit robbery shall be punished with penal servitude for a period not exceeding one year, but he may, according to the circumstances of the case, be released from the principal penalty and placed under police surveillance.

Art. 275.—A thief who shall have, after acquiring valuable effects, unexpectedly committed acts of violence or threatening for the purpose of preventing their recovery, escaping arrest, or destroying evidence, shall be adjudged guilty of robbery.

Art. 276.—Whoever shall have committed larceny by the aid of a suspension of will (caused by the use of a narcotic, or by any other means) shall be considered as guilty of robbery.

Art. 277.—Should the robber have wounded any person he shall be punished with perpetual penal servitude, or with penal servitude for a period of not less than five years; and if there has been homicide the penalty shall be death or perpetual penal servitude.

Art. 278.—If the rape of a woman has been

committed on the occasion of a robbery, the penalty shall be perpetual penal servitude, or penal servitude for a period not less than five years; and should death have been occasioned therefrom, the penalty shall be death or perpetual penal servitude.

Art. 279.—Whoever shall have by means of intimidation other than those mentioned in Article 273, forcibly taken away the personal property of an individual, shall be punished with penal servitude for a period not exceeding ten years.

The same shall be applied to those who shall have unlawfully acquired or caused others to acquire pecuniary advantages by the means mentioned in the preceding paragraph.

Art. 280.—Whoever shall have deceived an individual, and thereby obtained personal property under false pretences, shall be punished with penal servitude for a period not exceeding ten years.

Whoever shall have unlawfully acquired any pecuniary advantages by the means mentioned in the preceding paragraph, or have caused third parties to do so, shall be punished in same manner.

Art. 281.—Whoever shall have caused loss or damage to another person, on whose behalf the former is managing the business of the latter, or shall have committed any acts contrary to his duties with the intent to obtain profit for his own or any third parties, causing accordingly to his principal any pecuniary loss or damage shall be punished with penal servitude for a period not exceeding ten years.

Art. 282.—Whoever shall have taken advantage of the inexperience of a minor or of the weakness of mind of another person, and caused to be delivered any property, or shall have unlawfully acquired any pecuniary advantages, or have caused third parties to do so, shall be punished with penal servitude for a period not exceeding seven years.

Art. 283.—Whoever shall have with the intent to commit offences mentioned in Article 272, 273, 276, and 279, committed offences mentioned in Article 152 or 153, shall be punished with penal servitude for a period not exceeding seven years.

Art. 284.—Offences mentioned in Article 272 of the five preceding articles shall be free from punishment when they shall have been committed among relations in a direct line or among relations living together; and in the case of other relations no action shall be taken unless a complaint is lodged by the injured party.

The above example is not applicable to co-actors who have no relation with the injured party.

Art. 285.—Even though the property may be that of the offender himself, if such property be hypothecated, or under lien to third persons in a manner investing them with possessory rights, or if it be under the guard of another person in consequence of orders issued by the offices of the public services, it shall be considered as the property of another person.

Art. 286.—Attempts to commit the offences mentioned in this chapter are punishable under the heading "Infractions not consummated"; but the offence mentioned in article 274 shall not come under this rule.

Art. 287.—Every person who shall have committed the offences mentioned in this chapter may be additionally sentenced to deprivation of civic rights.

Persons who shall have committed the offences mentioned in this chapter and consequently are punishable with limited penal servitude may also be placed under police surveillance.

CHAPTER XXXVI.—EMBEZZLEMENT.

Art. 288.—Whoever shall have unlawfully appropriated articles or objects which he holds on behalf of another person, shall be punished with penal servitude for a period not exceeding five years.

Even though the property may actually appertain to the offender himself, should he take or apply it to his own use after being ordered by the offices of the public services to hold the objects in trust, the same penalty is applicable.

Art. 289.—Whoever shall have unlawfully

taken or applied to his own use articles or objects which shall have been entrusted to him in the course of his business or professional duties, shall be punished with penal servitude for a period exceeding two years and not exceeding ten years.

Persons who have committed the offences mentioned in the preceding paragraph may be sentenced to deprivation of civic rights and placed under police surveillance.

Art. 290.—Whosoever shall have obtained possession of lost articles, floating objects (as from a shipwreck), or other articles belonging to another, and shall have appropriated the same, shall be punished either with penal servitude for a period not exceeding three years, ordinary fine, or a police fine of not exceeding one hundred yen.

Art. 291.—The provisions of article 284 are applicable to offences mentioned in this chapter.

CHAPTER XXXVII.—OF OFFENCES RELATING TO OBJECTS STOLEN OR EMBEZZLED.

Art. 292.—Whosoever shall have received and accepted objects obtained by means of offences committed shall be punished with penal servitude for a period of not exceeding five years.

Any person who shall have been found guilty of transmitting, depositing, or otherwise disposing of stolen goods, or of acting as a depository of the same, shall be punished with penal servitude for a period not exceeding ten years, or a fine not exceeding five hundred yen.

Art. 293.—Persons who shall have committed offences mentioned in the preceding article may be deprived of civic rights and placed under police surveillance.

Art. 294.—Offences mentioned in Article 292 shall be free from punishment when they shall have been committed among relations in a direct line, relations living together, or their husbands or wives (as the case may be).

The example mentioned in the foregoing paragraph is not applicable to any co-actors having no relations with the injured party.

CHAPTER XXXVIII.—INJURIES TO PROPERTY.

Art. 295.—Whosoever shall have destroyed documents belong to an office of the public services, shall be punished with penal servitude for a period of not exceeding seven years.

Art. 296.—Whosoever shall have destroyed documents relative to rights and obligations belonging to another, shall be punished with penal servitude for a period not exceeding three years; but the prosecution shall only take place on the complaint of the injured party.

Art. 297.—Whosoever shall have unlawfully destroyed or injured buildings, boats or ships belonging to another shall be punished with penal servitude for a period not exceeding five years; if there has resulted death or bodily injuries, the penalties for "Wounding and (grievous) bodily harm" shall be applied, each time that they are more severe than the preceding.

Art. 298.—If any objects other than those mentioned in the three preceding Articles, are destroyed or injured, the penalty shall be penal servitude for a period not exceeding two years or either ordinary or police fine of not exceeding two hundred yen; but the prosecution shall only take place on the complaint of the injured person.

Art. 299.—Even when the property destroyed or injured actually belongs to the offender, if it be under attachment, or a right in rem, or if it be rented, or insured, the provisions of the three preceding articles are applicable.

NAVAL NEWS.

It is officially stated that the Japanese standing squadron, which left Saseho on Sept. 28th, arrived at Masampo, Korea, the following day. The new gunboat *Uji* left Oesaki on the 29th for Shanghai.

The U. S. warships *Kentucky*, *New Orleans*, *Oregon* and *Albany* left Nagasaki on the 28th for Yokohama. It is stated by the *Fiji* that these four ships will undergo repairs at Yokosuka and Uraga. They have been staying at Chefoo since the spring.

The British cruiser *Leviathan* has left Nagasaki for Wei-hai-wei, and the *Gwry* has gone to Hongkong.

NEWS OF THE WEEK.

The Italian cruiser *Lombardia* arrived at Yokkaichi on Sept. 26th.

The Pope has announced his intention to abolish the Swiss Guards.

We learn that 150 shares (Brett & Cos.) have changed hands at 7²⁵/₁₀₀ each.

Mr. John Jacob Astor has donated a million dollars for the purpose of cancer research.

It is now certain that a dreadful famine confronts thousands in the district of Monastir.

Kang Yu-wei has gone to Sumatra and Batavia. The reform leader is doing a lot of travelling.

Saku (29) living at Nihonbashi, Tokyo, committed suicide on Sept. 29th by hanging herself.

Tokyo papers report that Baron Rosen was expected to leave Port Arthur on Oct. 1st for Tokyo.

Lord Lonsdale predicts great political troubles for the Australian Commonwealth owing to too much legislation.

A telegram from Taipei, Formosa, states that the quotation for silver rose on Sept. 27th from *sen* 90 to *sen* 93.

Seven Chinese students arrived on Sept. 24th at Tokyo where they will study the police business during two years.

On Sept. 29th Tam Yang-kit, proprietor of the Cock-eye tailor shop, No. 81, Yokohama, was naturalized as a Japanese.

A case of scarlet fever was reported on Sept. 29th in Tokyo. The patient is a boy of 8 years old living at Kosumiga-oka.

Count Katsura, Premier, and other members of the Cabinet held a meeting on Sept. 29th to discuss official re-organization.

The flag of the commander of the Standing Squadron was removed from the *Shikishima* to the *Asahi* on Sept. 28th.

The Red Cross Society will summon the surgeons in reserve throughout the Empire on Oct. 30th to undergo training for twelve days.

H. Hattori (29), a jinrikisha coolie, living at Asakusa, Tokyo, committed suicide on Sept. 28th, by drinking a quantity of sulphuric acid.

The standing squadron consisting of the *Asahi* and twenty others, including ten torpedo-boats, left Saseho on Sept. 28th for Masampo, Korea.

Baron Kodama, Minister of State for Home Affairs, paid a visit on Sept. 24th to the Shinto Shrine, Ise province, after which he left for Tokyo.

Mr. K. Hashimoto, lawyer, was arrested on Sept. 29th at Urawa on a charge of embezzlement. The following day he was removed to the Tokyo District Court.

The members of the Bei-yu Kyokai (the American Friendship Society) will entertain Mr. Griscom, the U.S. Minister, on the evening of Oct. 7th at the Imperial Hotel.

Tokyo papers state that a special kind of fever is prevailing at Asakusa, Tokyo, since the beginning of September. From this disease, nine persons have already died.

The two young Australian women who arrived at Singapore the other day by the *Clitus*, as typewriters to the Sultan of Johore, have been sent back by the Straits Government to their parents.

A telegram received on Sept. 29th states that the Russian squadron consisting of the *Petrovsk* and eleven ships passed the Korean Strait for Port Arthur that day, coming from Vladivostok.

"Rougemont," the residence of Mr. A. Shelton

Hooper, in Macdonnell Road, Hongkong, partially collapsed on Sept. 9th, presumably from the ravages of white ants. Mrs. Hooper had a narrow escape.

Owing to the storm on the night of Sept. 23rd, a landslip occurred at a place near Fukushima, Yamagata prefecture, causing damage to the railway. Traffic was still suspended on the following day.

The *Fiji* states that Mr. S. Mitsuhashi, an official of the Nagahama Tax Bureau, who is alleged to have absconded after having stolen money belonging to the office, was arrested on Sept. 24th at Kanazawa.

Sato Fujisawa (27), wife of a peddler, living at the village of Nanao near Kamakura, murdered on the night of Sept. 28th her husband's brother, Iwakichi, with a hatchet and then gave herself up to the Fujisawa police.

A telegram from Mito states that a man named Y. Someya (20) living at the village of Ekawa murdered his wife named Tsune (23) on Sept. 24th by stabbing her with a sword. The cause is reported to be jealousy.

The cyclists of Yamaguchi prefecture, states the correspondent of the *Fiji*, opened an office on Sept. 24th with the object of presenting a petition to the authorities asking them to reduce the tax from *yen* 6 to *yen* 5 per annum.

The shareholders of the Hoden Oil Company, Nagaoka, Niigata province, held a meeting on Sept. 29th when resolutions to add *yen* 1,500,000 to the capital and to issue debentures aggregating *yen* 500,000, were passed.

The railway between Byoritsu and Sansu, Formosa, being almost completed, traffic will be opened on Oct. 7th, when the authorities will entertain the natives living along the line, who presented land for the use of the permanent way.

Mr. G. Matsushita, editor of the *Yamato Shimbun*, and two others, who have been charged with having obtained money by means of extortion, were released on Sept. 30th in the Tokyo District Court on the ground that the evidence against them was insufficient.

Count Katsura, Premier, proceeded to the Palace on the morning of Sept. 28th when he had audience of the Emperor. After half an hour, he returned to his official residence, where he presided over a meeting of Ministers.

Mr. E. J. Main, Superintendent Engineer at Kowloon Dock, died in Hongkong on September 21, from fever and heart trouble. A native of Leith he had been in the East some 25 years, 18 of which he served with the Dock company.

Another educational official connected with the text book affair was sentenced on Sept. 30th in the Tokyo District Court to 4½ months' imprisonment with hard labour and a fine of *yen* 15. The bribes, *yen* 5,200, which he received were ordered to be confiscated.

The death is announced in the *Echo de Chine* of Mgr. Banci, Vicar Apostolic for northern Hupeh, residing at Lao-ho-kou. Mgr. Banci was well advanced in years and his health had for some time been in a precarious condition. He belonged to the Franciscan order.

Li Chongku and three other Koreans who arrived at Kobe on Sept. 29th by the steamer *Tairen Maru* have been ordered to retire from Japan. They will leave by the earliest steamer for home. The *Fiji* states that these Koreans are suspected, by the Kobe police, of being accomplices of Yuen Hong-ting, who is an assassin sent to destroy the Korean refugees in Japan.

The Central Warehousing Company, Tokyo, whose capital is *yen* 400,000, of which *yen* 200,000 is paid-up, intends to wind-up. With this view the shareholders will hold a general meeting on Oct. 13th. Tokyo papers state that the firm has already lost its paid-up capital and

has incurred heavy debts. The firm recently lost yen 42,000 by the fraud of a woollen cloth importer.

A Kobe telegram states that the Russo-Chinese Bank has decided to sell by auction the whole of the property of the Heian Cotton Spinning Company for yen 300,000, which amount had been loaned by the Bank to the company and left unpaid.

Miss Janet Waldorf writes from Pittsburg, U.S.A., asking that the rumour that she was dead should be contradicted. Miss Waldorf writes that it was a malicious report and was evidently put in circulation in order to do her harm professionally.

It is stated by the *Jiji* that the standing squadron, which is at Saseho, will shortly leave there in three or four detachments to undergo important training. It is reported that some of the ships will go to Masampo and other Korean ports.

Mr. S. Kanda, manager of the Odawara branch of the Fujisawa Bank, was arrested on Sept. 28th and removed to the Yokohama District Court on suspicion that he intended to burn down the Ginkaku-ro at Oiso, which belongs to him, and which he recently heavily insured.

Mr. Tsai Chun, Chinese Minister, will entertain Baron Komura and other high officials of the Department of Foreign Affairs on the evening of Sept. 30th. He will also entertain Marquis Ito, Barons Suematsu and Kaneko, Messrs. Kato, Tsutsuki and others on the evening of Oct. 1st.

A meeting in support of the movement to establish a monument in commemoration of the 50th anniversary of the opening of Hakodate was held on Sept. 24th when, on the motion of Vice-Admiral Wakamatsu, it was decided to establish a hotel in foreign style bearing a suitable appellation.

Mr. S. Tanaka, member of the Saitama Prefectural Assembly, just elected, was arrested on Sept. 24th charged with infringement of the Election Law. He was detained in the Urawa prison. It is stated by Tokyo papers that he entrusted one of his supporters with yen 30 with which to purchase votes.

According to a tourist who has just arrived at Shimonoseki from North China, the Russian authorities are imposing duties on goods imported through Port Arthur on and from Oct. 1st. Russian troops are assembling at Newchwang and hoisting their national flag, and there is no appearance of evacuation.

I. Kato (48), living at Motomachi, Yokohama, employed in the office of Messrs. Hunt and Co., No. 211, attempted, on the evening of Sept. 28th, to murder his wife Tome (44), by cutting her abdomen with a large knife. The culprit was arrested at the scene by the police; his victim was removed to hospital.

The Rajah of Sarawak is on his way home for another holiday. Sir Charles Brooke is now seventy-four, and as he has held his present position for thirty-five years and worked hard in the face of many difficulties, and often grave anxieties it is not surprising that he needs frequent spells of leave in the bracing climate of the old country.

The Japan Red Cross Society received a telegram on Sept. 28th from Sweden saying that Count Hamilton, president of the Red Cross society of Sweden, has died. He has been succeeded by Prince Dickvestrogoch Stal. Count Matsukata, president of the Japanese society, replied the same day with a telegram of sympathy.

The *Kobe Herald* says:—Mr. J. Carey Hall, who was recently appointed Consul-General, has received full details as to his new position. It seems that Yokohama is to secure Mr. Hall's services, for it is the northern port which is to have a Consul-General. The fact seems rather strange to those who have watched the progress of the two ports during the last few years. It

has not yet been decided when Mr. Hall is to take up his residence in Yokohama, but in all probability it will be in the early part of next month.

The Mitsui Bussan Kaisha has purchased a foreign steamer of 4,500 gross tons, and re-named it the *Madayama Maru*. The ship is now in dock in Hongkong. She is expected to arrive at Kobe in the middle of October and will be employed on the line between Moji, Hongkong and Singapore. The steamer was built in England in 1901.

The *Niroku* states that Mr. Tsai Chun, the Chinese Minister, paid a visit to Marquis Ito on Sept. 26th when they entered into a secret conference with regard to current affairs. The same day, Mr. Ye Yong Tei had an interview with Baron Komura at the Department of Foreign Affairs. The paper adds that they were also in private consultation.

The general election for the assembly of this prefecture took place on Sept. 25th commencing at 8 a.m. and closing at 2 p.m. at the Japanese Chamber of Commerce. The result of the voting is to be declared this morning (26th) at 8 o'clock. The charge of infringing the Election Law which has been often reported in other prefectures did not appear here.

A police officer named Iwaseki of the Ichihara station, Chiba prefecture, attempted on Sept. 21st to murder I. Soma (48) the manager of the Yahata branch of the Chiba Commercial Bank, by inflicting severe injuries with a knife at the dwelling of the farmer. As to the cause of the crime, it is stated by the *Yorofau* that the banker was too friendly with the wife of the officer.

Rear-Admiral Saito, Vice-Minister for the Navy, and other high naval officers gave a dinner party on Sept. 24th at 6 p.m. at the Maple Club, Shiba Park, Tokyo, to Vice-Admiral Bayle, Commander of the French squadron, the captains of the warships *Montcalm* and *Chateaufrenault* and others. The dinner was served in Japanese style and the *Koyo-odori* (maple dance) was given.

The Board of Enquiry into the collision of the *Rohilla Maru* and the Quartermaster Collier No. 3 at Manila places the blame on the former vessel, giving various reasons for the same, the principal ones being that the *Rohilla* had too much headway; that her captain erred in crossing the bow of the transport *Logan* instead of going astern, and that the launch, having a tow, should have been given the right of way.

Reuter has already informed us that Montagu Holbein, the English swimmer, who left the South Foreland on the evening of Sept. 1st in his fourth attempt to swim the English Channel, failed again. He left the water, eight miles from Calais, after swimming 17 hours and 20 minutes. Holbein was within four miles of the French coast when the tide turned and swept the swimmer toward Dover.

Captain Ernest Bent will, says the *Manila Cablenews*, command the steamship *Rohilla Maru* in the near future. Captain Bishop, the present shipper of the *Rohilla*, will resign in a few weeks or sooner, and Captain Bent will mount the liner's bridge. Captain Bent is at present in Yokohama on the reserve list of the Toyo Kisen Kaisha, the company owning the *Rohilla Maru* and the *Rosetta Maru*.

The most important point in buying opals, says a contemporary, is colour. Red is in the keenest demand, or red in combination with yellow, blue and green. Pattern is a second consideration in valuing the stone. Harlequin is the rarest and most exquisite of all, and when the colour squares of red, yellow, blue, and green are regular and distinct its beauty is a revelation of symmetry and light. The flash opal, though not so rare as the harlequin, is scarcely less attractive, particularly when its colour veins are of the true ruby or pigeon's-blood hue.

AMERICAN MATTERS.

The estimate of expenses for running the New York Fire Department for 1904, shows a total of \$6,039,033.25, an increase of \$1,118,932.97 over 1903. The increase is caused by an extension of the fire alarm system, new equipment and mandatory legislation in regard to the volunteer forces in Richmond, Queens and Staten Island.

General Joubert, the famous Boer warrior, will raise ostriches in Mexico. He will bring several pairs from South Africa, where he is already engaged in ostrich farming, and they will be tried in the American climate. The ostriches will be taken to the Lopez ranch in Tawahpas, part of which was purchased recently for the colonization of the Boers.

General Grenville M. Dodge of New York, and Former Governor Drake of Iowa, have each donated \$10,000 for the construction of the proposed memorial university of the Sons of Veterans at Mason City, Iowa. Major Jay, a lumberman, made a liberal subscription, and Senator Allison will do likewise. The buildings will cost \$1,000,000.

Putnam Bradlee Strong, who last year married May Yohe, after escapades which brought both much notoriety, is in Buenos Ayres with her, and is doing a prosperous business as an agent for automobiles. In a recent letter to a friend Mrs. Strong said she and her husband and child would remain in Buenos Ayres, as her husband had opportunities there which would be denied him elsewhere.

The long-delayed Henry Ward Beecher memorial in Brooklyn will probably take the form of a building directly opposite to Plymouth Church. "The plans," says *The Outlook*, "have not yet been decided upon in detail, but they will be arranged, it is expected, so as to make the building, or buildings, suitable to serve both as a repository for books, pictures, and other articles pertaining to Mr. Beecher and the Beecher family, and also as a library and place of recreation and instruction."

The American newspapers are never happy—at least a certain section of them—unless they are on the track of a scandal in one or other of the Government Departments. The other day it was the Post Office that was being pilloried throughout the length and breadth of the land; to-day come hints of serious "swindles" in the Department of the Interior in connection with Indian land grants, and the public may as well prepare for another deluge.

The commission appointed to delimitate the American coaling station at Bahia Honda has returned to Havana and presented its report. The total area of the station is about 50 caballerias, or about 1,663 acres. Two-thirds of the area is a mangrove swamp. The site is located on the ends of two capes, which shut in the harbour. There is a hill on the east side 80 feet high. There is a fort on this hill, built in 1826, with six old cannon. One-third of the land is under cultivation. This is valued at about \$25,400 per caballeria. The swamp land is valued at \$40 per caballeria.

"Those who follow the light fiction market with interest," states the New York *Evening Post*, "must be impressed with the exceedingly high ton of the 1903 midsummer output." It is all but impossible to turn the leaves of the August magazines that specialize on "hammock reading," we are told, "without lighting upon an earl, the Waldorf-Astoria, or, at the lowest, a girl with a million dollars." All this "high-falutin" fiction, *The Post* continues, "is so different from what has commonly been thought of as the American product that it ought to be explained."

When the Negro is spoken of as a social factor, remarks *Public Opinion*, nearly everyone thinks of him only as a labourer or a loafer. The reports of the meeting of the Negro business men's league at Nashville have therefore surprised everyone who has taken the trouble to read them. The

local papers report dozens of cases of Negroes who have made success of banking, manufacturing, promoting, and other forms of business activity on a large scale. These men are still the exceptions among people of their race, but there are enough of them to demonstrate beyond question that the coloured man is not incapable of conducting business affairs of importance, and this, too, in competition with the whites who continue to despise his abilities. In the light of this discovery, we may call it, the higher evolution of the Negro is far more hopeful than it is commonly believed to be, among northern as well as southern whites.

The preliminary report of the United States Geological Survey makes the total oil production of the United States for 1902 80,894,590 barrels, valued at \$69,610,348. This is the largest quantity ever known in the history of the country. The production for 1901 was 69,389,184 barrels. At this rate of increase our production of crude oil will soon reach 100,000,000 barrels per annum. The gain during the last year was 11,505,406 barrels in quantity and \$3,192,963 in value. This increase comes almost entirely from Texas and California. The product of these latter states sold at comparatively low figures, and brought the average value of the oil production of the entire United States down to 86 cents a barrel. Ohio proved the leading state in the production of petroleum in 1902. California ranked second, with West Virginia third, Pennsylvania fourth, Texas fifth, Indiana sixth and New York seventh. The yield of Louisiana, Colorado, Kansas, Indian Territory, Kentucky and Tennessee was less than 2 per cent. of the total production.

Writing on Mexico's gold output the *Mexican Herald* observes that the official statistics for the last quarter of 1902 show that the total value of new gold mined was \$3,250,000, or at the rate of \$15,000,000 per year, and to this should be added 33 per cent. to cover the gold illicitly exported to avoid the payment of the export tax. Practical miners and people familiar with the gold exportation confirm this estimate. The point made by our contemporary is that the gold mined in Mexico is now approximately \$20,000,000 annually. In a few years the total annual yield will reach \$25,000,000. "We believe," says our authority, "it will go higher inside of eight years. Mexico will lose its distinctive renown as a great silver producing country and enter the list of the countries contributing heavily to the world's stock of the yellow metal. Not only will Mexico have gold enough for her currency needs, to back her silver money, but also to give strength to her banks and so make it possible to drive the interest rate down still further. Good money in abundance will push Mexico ahead in marvelous fashion. We are of the opinion that the new business era there has but begun."

The interesting fact is brought out in a recently issued census bulletin, remarks *Bradstreet's*, that for the first time in the national history the southern states increased in population faster than those of the north in the decade ending with 1900. The northern states east of the Mississippi have grown somewhat more rapidly than the southern states in the same region, but the growth of the southern states as a whole exceeds that of the north, owing to the fact that west of the Mississippi the southern states have increased in population more than two and a half times as rapidly as the northern states in that quarter. Taken as a whole, the region west of the Mississippi has increased faster than that to the east of it, but the rate of increase was not so great in the last decade as in the one before. This fact prompts the suggestion that there may have been a falling off in the current of migration toward the west. Another conclusion deduced from the data collected by the Census Office on this point is that there appears to be a rapid approach to equality in the rates of increase of the various parts of the United States. In the future, in all likelihood, a degree of uniformity will be witnessed in the statistics as to the increase of population, which was lacking in the returns of earlier censuses.

Hugh Thompson, 16 years old, No. 260 Front Street, Brooklyn, and son of Christopher Thompson, a sailor, who ships on coastwise vessels running from Belfast, Me., to points south, was taken from the French barque *Marechal de Gontaut*, four miles east of Sandy Hook Lightship, early on August 27, by a party of revenue cutter officers, under the direction of Nevada N. Stranahan, collector of the port. The boy had made frantic efforts to escape from the barque when she was lying off Thompkinsville, Staten Island, and had declared that he was being "shanghaied." After he had been taken in charge by the revenue officers he admitted that he had not been forcibly taken to the vessel, but had gone with the consent of his father. He said, however, that he thought he was to ship on a coaster, and when he found that the *Marechal de Gontaut* was bound for Yokohama and that he would be absent for many months, he wanted to return to his home. The government officials declare that the master of the barque, Capt. Dennierre, admitted that he had paid \$36 to a runner attached to a Manhattan boarding house for the services of the boy. The vessel is now being detained at her anchorage, where she was found by the revenue cutter, and will not be allowed to sail until Colonel Hamilton, Collector Stranahan's legal adviser, decides whether or not the captain has violated the law sufficiently to warrant his being placed under arrest.

EUROPEAN TOPICS.

The King has intimated, through the Commander-in-Chief, that he has been pleased to grant permission to the band of the Coldstream Guards to proceed to Canada to fulfil an engagement at the Dominion Exhibition at Toronto. This is the first time that a famous military band in Great Britain has been invited to a British Colony.

Vice-Admiral Gourdon, Maritime Prefect at Brest, who has just been appointed to the chief command of the French Mediterranean Squadron, in succession to the late Admiral Pottier, commanded the *Bayard* in the Chinese Expedition of 1885, under the late Admiral Courbet, when he distinguished himself by blowing up with torpedoes two Chinese frigates at Sheipou.

The military authorities are sending to Somaliland at an early date six motor lorries to assist in the transport service there. The lorries will cost about £735 each. This will be the first appearance of motor cars, which will be of the type that was successful in the recent competition promoted by the War Office, and will be watched with interest by all concerned in the motor industry.

A Lanarkshire paper records the marriage in Johannesburg of Maria Francis Kruger, second daughter of ex-President Kruger of the Transvaal, to an engine-driver in Scotland. There are those, says the *Mining World*, who are enquiring what is the marriage portion which has been given to this lady, and it is pointed out that if it is in proportion to what the ex-President took with him from the Transvaal, it ought to be large.

The *Baluchistan Gazette* says:—It will be remembered that some European women accompanied certain Baluchis—of the Peshin subdivision—back to their country a few years ago from Australia, much to the annoyance of the authorities, who tried, at Karachi, to dissuade them from entering on such a life, and going where, in every likelihood, there was another aboriginal wife, but all efforts were in vain. The ultimate fate of these Australian-bred and born women is a mystery, though the writer saw at least one of these at the local railway station a couple of years back, she having been brought into the Mission hospital there for medical treatment.

Capt. Younghusband, who was sent by the Indian Government to negotiate with Tibet for the opening up of trade relations between the two countries, has (says the Simla correspondent of the *Daily Mail*) now arrived with his mission on the border of Tibet, and has encamped below

Fort Kambojong, in a vast plain situated at an elevation of 15,000 ft., with ripening barley crops extending northwards towards Lhasa. Mr. Wilton of the Chinese Customs, is now on his way to join the mission and assist in settling the question as to the status of the Tibetan representatives who have arrived. Another native pioneer regiment is held in readiness at Mecanmeer, in case further assistance should be required in improving the road leading to India.

The returns just issued show the vastness of British national wealth. During the eight remarkably prosperous years—1868-9 to 1875-6—the sum upon which income tax was paid rose from £344,772,000 in the former to £474,740,000 in the latter. The gross incomes brought under the notice of the Inland Revenue for these periods were respectively, £398,794,000 and £544,376,000. In 1901-2 the gross return was £866,993,000, and the taxed £607,551,000, the Finance Acts allowing of extensive exemptions. The second return shows that while the population between 1861 and 1901 increased from 28,000,000 to 41,400,000, paupers have declined from 1,054,000 to 1,001,233. In the same period the food imports have risen from a value of £88,141,000 to £224,520,000, those from the colonies increasing from £16,655,000 to £43,516,000. The total value of exports has advanced from £160,000,000 to £348,000,000, while imports have risen from £217,000,000 to £525,000,000. The yield of a penny in the income-tax has improved from £1,162,250 to £2,531,000. Profits from Colonial and foreign securities since 1881 have risen from £30,573,000 to £62,559,479.

Mr. L. Andersen, of the firm of Mustard and Co., arrived back in Shanghai on Sept. 18th, says a Shanghai contemporary, having made the journey from Moscow by the Siberian route in just fifteen days. Unlike recent passengers, he made a most rapid and successful trip, and is full of enthusiasm for the overland journey. The trains, he says, are much more comfortable than on the transcontinental lines of America, and the country passed through is, at this season of the year, anyway, like one vast park, full of interest to the traveller. He did not find the long ride either tedious or monotonous. The train was the ordinary express, and not a Wagon-Lits, but was beautifully equipped. It was the first to get through after the recent floods which had washed away the metals for three short stretches in Manchuria. These damages were due to the fact that the line as yet has not been permanently laid; stone bridges are in process of erection in many places and embankments are being strengthened. The floods have now subsided. If Russian troops are being hurried along the line in great numbers their movements are being kept wonderfully quiet, and Mr. Andersen at all events scarcely saw a soldier the whole way. From Moscow to Dalny took thirteen days and five hours, and as the steamer left Dalny within four hours of the arrival of the train, the through trip to Shanghai was made in what is about record time.

Major Donald Ross sends to *The Times* a letter written by Major Penton, R.A.M.C., D.S.O., Principal Medical Officer of the Sudan, recording the results which have already followed the anti-mosquito campaign commenced less than a year ago by the Suez Canal Company at Ismailia. There is no doubt, says Major Ross, that similar measures could easily be taken in the majority of tropical towns in our possessions. Major Penton says:—As the prevention of malarial fever is of the utmost importance to us in the Sudan, I have recently paid two visits to Ismailia to study on the spot the measures which are now being enforced for the destruction of mosquitoes. The results have been remarkably successful. The town is practically free from mosquitoes, which only a short time ago were very abundant. Mosquito-nets can almost be dispensed with, for one can now sleep without being bitten, as I found from personal experience. Two marshy swamps to the north-east of the town have been filled up with sand, and a third, the largest, will shortly be dealt with. Coincident with the destruction of mosquitoes and other larvae, malarial fever at

Ismaïlia this year shows a most striking improvement. All medical officers employed there are agreed upon this. Statistics show that up to the present it is the healthiest years on record. Bearing in view the remarkable diminution in malarial fevers that has attended the present operations against mosquitoes, it is more than probable that when they are completed, malarial fevers will have practically disappeared.

The *Times of Ceylon* describes a visit to the Russian training-ship *Okean*, which left Hongkong the other day. "It is significant that not a single officer could speak English at all fluently, or even so as to be intelligible; but all were conversant with the French language, and most of them could carry on a conversation in German. With the aid of these three languages our representative conveyed to several of them the object of his visit, namely, to see the vessel and learn what methods were pursued in regard to the training of the young idea on board. One of the sergeants was kindly placed at the reporter's disposal, and a minute investigation of the vessel was made. The interior seemed to be all boilers and engines. Down in the darkness and the heat, strong young Russian sailors were being initiated into the mysteries of the machinery. On this steamer, as already stated, there are four different kinds of boilers. All were kept heated by huge furnaces, so that the men could be thoroughly taught their work. There are over 360 stokers and mechanics aboard. They are divided into six batches, and each batch takes its turn in the engine-room. The *Okean* is on her way to the Far East, and then returns at leisure to Russia. There the crew will undergo a practical examination upon what they have learnt during the present voyage. The successful ones will then be in a position to undertake important duties as overseers or foremen in charge of stokers, firemen, and mechanics."

OCTOBER MONEY MARKET.

Tokyo papers publish, on the authority of the Bank of Japan, certain tables showing the amount of money required during the month of October to meet various calls.

TO BE PAID-UP.	YEN.
Sake tax, 2nd payment	15,716,401
Soy tax, manufactured for family use ...	10,467
Tokyo Streets Tramway Co., 3rd payment per share	750,000
Sanyo Railway Co. 1st payment on new shares	640,000
Osaka Shosen Kaisha, 1st payment on debentures	1,250,000
Hankaku Railway Co., debentures	500,000
Hokkaido Railway Co., debentures	1,200,000
Industries Encouragement Bank, 19th debentures	900,000
Industries Encouragement Bank, guarantee-deposit on 20th debentures	200,000
TO BE PAID-OUT.	
Dividends of various railway Companies.	4,169,638
Dividends of various Mercantile Companies	162,540
Interest on debentures of Nippon Industry Bank	187,500
Interest on debentures of various mercantile Companies	175,990
Interest on debentures Encouragement Bank	35,158
Refund of debentures of Industries Encouragement Bank	18,740
Besides this the national Treasury is to pay out yen 19,939,002.	

CORRESPONDENCE.

PRESBYTERIAN CHURCH BUILDING ASSOCIATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Herewith I send you a copy of the rules of the above Association which were adopted by the Council of Missions at its recent meeting in Arima. As may be known to most of your readers, this Council embraces the seven Missions, Presbyterian in form of government, who are working in connection with the "Nihon Kirisuto Kyokwai," endeavouring to build up a single body of Presbyterian faith and order. These endeavours have thus far resulted in

the establishment of a church of more than twelve thousand members, distributed all over Japan Proper, Formosa and recently North China. For the gathering of a body of Christians then, the experimental stage is past. The church is already established. But the housing of that church is now a grave problem. The Missions as a rule, think best for several reasons, not to make grants from their treasuries in aid of church erection. And yet houses of worship are a prime necessity. But how are they to be built? The Christians, as a rule, are not financially able to meet the call, however generously they may give from their small incomes. If then, the Missions think it unwise for their treasuries to supply the funds, and the Christians are unable to do so, what is to be done? This is the problem which is acutely pressing upon many missionaries and struggling groups of Christians now. The brave little band of believers are giving up to the hilt; the missionary in charge is often found giving far beyond his little in his single handed struggle to meet the urgent need; and yet with all these efforts, there is a wide—an appalling—chasm between assets and estimated needs. Perhaps they fall into the chasm and sadly fail; again by spasmodic and irregular appeals to friends and heroic efforts of those most concerned, the chasm may be bridged and the situation saved. But it is brain-splitting, nerve-shattering work, from which it is most desirable to be saved. Is there a way of escape? Yes, we think so. To supply just such a way of escape is the raison d'être of this Association. By uniting many a mickle of individual mites the muckle needed in each case can be obtained. No one of the many individuals will be overburdened, while the exceedingly heavy burdens which have thus far oppressed a few will almost vanish. It is the hope of the Council then, that this plan which they have launched will meet with wide and ready sympathy and prompt acceptance by many, so that the above-described happy result may be speedily attained. Inasmuch as each case aided is to be fully explained to all subscribers, this plan will afford an excellent means to all those desiring a more intimate acquaintance and closer touch with mission affairs. Applications for membership may be sent to any of the Directors.

Thanking you in advance for kindly admittance to your valuable columns, I am respectfully yours,

DIRECTOR.

FIRE DETECTING APPARATUS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—We have the pleasure to inform you that in view of the many fires which of late have occurred on steamers carrying Eastern cargoes, our Head office have installed on the steamer *Seneca* a pipe system for the immediate discovery of a fire, and provided for a hose connection to bring steam promptly to the seat of any fire.

The system has been very favourably passed upon by the New York Underwriters, and we beg reference to the enclosed report given by Mr. Platt Stratton, Surveyor of the American Record, to Mr. Raven President of the Atlantic Mutual Insurance Co., which we think will prove of interest.

The steamer *Seneca* is now in port and those interested are invited to examine the apparatus on board of the vessel. An express will be issued when she enters the inner Harbour for outward loading.

Yours faithfully,

STANDARD OIL CO. OF N.Y.
(Oriental Freight Department).

Yokohama, September 30th, 1903.

COPY.

A. A. RAVEN ESQ., PRESIDENT
ATLANTIC MUTUAL INSURANCE CO.

51, WALL ST., CITY.
SIR,—Complying with the instructions received from your Company's representative, the undersigned on the 9th inst. proceeded on board the British steamer *Seneca*, then loading case oil at the Standard Oil Co.'s dock, Bergen Point, N. J. where he proceeded to make an examination of the "Rich Marine Fire Indicating system" installed on this vessel, which consists of a system of $\frac{3}{4}$ " iron pipes, one of which connects with each compartment of the hold of the vessel; in this instance 14 in all.

This system of pipes is made to terminate in a rectangular tightly closed case with glass sides, 12" x 25" square, located in the Captain's chart room, immediately under the bridge of the vessel. In the top of this closed case is located a 12" suction fan, which is rotated at high velocity by a small electric motor, which is made to run periodically at intervals of 15 minutes, with periods of 3 minutes duration, the effect of which is to draw the air from the various compartments of the hold, through the pipe system already referred to, discharging the air, smoke or gas, which may be in any of the compartments

referred to, immediately into the Captain's chart room.

The mechanism of this exhaust fan, which is calculated to detect the presence of fire, is regulated by a clock, the dial of which corresponds to the hours of the day. The evolution of this clock regulates the running of the fan at the periods referred to. The fan mechanism, in this instance, is actuated by the power derived from a twelve cell storage battery of the Edison type, and may be operated by any other mechanical system of electricity.

This installation, in the opinion of the writer is of ample size and doubtless would quickly give evidence of the existence of fire in any of the compartments with which it is connected in the ship, and therefore is a reliable and quick detector of the presence of fire in any closed compartments with which it may be connected. The claim is made for it that in the event of the discovery of fire, steam is to be immediately injected downward through these pipes to the particular compartment in which the fire is located.

The principal of this apparatus is excellent, and well calculated to detect the presence of fire in any closed compartments of the ship with which it is connected, in an astonishingly short time.

All of which is respectfully submitted.

(Signed) E. PLATT STRATTON,
(Surveyor of the American Record).

TRADE OF SHIMONOSEKI FOR 1902.

BY MR. CONSUL F. W. PLAYFAIR.

The value of the foreign trade of the Consular district of Shimonoseki, including the ports of Shimonoseki and Moji, during the year 1902 amounted to £2,187,242, showing a decrease in 1902 of £24,262 in imports and an increase of £8,943 in exports, that is to say a net decrease of £15,319. In imports machinery, metal manufactures, rice, sugar, and miscellaneous each show a marked decrease; while there was a large increase in the import of raw cotton, locomotive engines, iron ore and manure; and a smaller increase in the cases of flour and fresh eggs. The decrease is most marked in the case of sugar, being upwards of £190,000, while the increase in raw cotton amounted to over £120,000.

SUGAR.—The decrease in the imports of sugar was anticipated in last year's report, when it was pointed out that the import for 1901 was abnormally large in order to evade the inland revenue tax imposed on all stocks not cleared from the customs by Oct. 1 of that year, and the heavy stocks then imported were found to be more than sufficient to meet the demand. Prices advanced towards the close of last year for new supplies as old stock had been got rid of by that time, and the demand in America for Java raw sugar had raised the price of raw material.

RAW COTTON.—Of the raw cotton imported, some £201,500 came from India, £57,700 from the United States and £17,300 from China.

The imports from the United Kingdom consisted principally of machinery, £21,307; metals, £20,334; and railway cars, £7,446. Germany supplied machinery to the value of £38,937. The imports from the United States include raw cotton, £57,700; £34,527 for locomotive engines, and £17,207 for flour.

EXPORTS.—COAL.—The export of coal was as follows:—China, £447,310; Hongkong, £352,401; Straits Settlements, £142,563; Dutch Indies, £33,398; United States and Philippines, £30,630; Russian Asia, £12,009; France (Saigon), £10,467; United Kingdom, £8,590; Korea, £7,596; British India, £7,535. Total, £2,052,498.

About half the export of coke went to Hongkong. Over 90 per cent. of the cotton yarns exported went to China, the balance going to Korea. Matting in 1902 shows an increase over the previous year of £8,266. The whole went to the United States. Portland cement shows an increase of 6,397 tons, valued at £14,513. About 40 per cent. went to Korea and 30 per cent. to Hongkong and China respectively.

RICE.—The export of rice is nearly all of brown or uncleaned rice. About £25,000 worth went to France; £10,000 went to Austria-Hungary; £8,400 to Holland; and £6,000 to the United Kingdom. Though the price of rice is slightly higher at Kobe and Osaka than at this port, the former places have greater facilities for shipping, hence the export goes from those ports. The rice crop last year in the island of Kiushiu was about 5 per cent. over the average; that of the district between Shimonoseki and Kobe, on the other hand, shows a decrease of 10 per cent., but the quality is about average.

SHIPPING.—The aggregate tonnage of all shipping entered at the ports of Shimonoseki and Moji during 1902 shows a decrease as compared with 1901, of 35,281 tons; but the heavy tonnage in 1901 was chiefly due to transports and boats carrying supplies to North China. The extra movements of steamers on the China Coast for the same reason meant greater coal consumption at Singapore, Hongkong,

Shanghai, &c., resulting in increased shipments from this district. The tonnage for 1900 and 1902 shows a difference in favour of 1902 of 506,854 tons.

The chief differences to be noted during the year are:—An increase in Japanese, Norwegian and United States shipping of 95,314, 33,055 and 27,661 tons respectively; the increase in the number of Norwegian vessels amounting to 38. The principal decreases were in British shipping, 56 vessels and 113,184 tons; Austro-Hungarian, 24 vessels and 43,759 tons; and Danish, 2 vessels and 15,855 tons.

The undermentioned well-known lines were represented as follows:—The China Navigation Company, 67 vessels; the Ocean Steamship Company, 39 vessels; the Indo-China Steam Navigation Company, 34 vessels; the Peninsular and Oriental Steam Navigation Company, 33 vessels; the China Mutual Steam Navigation Company, 23 vessels; the "Glen" Line, 19 vessels; and the "Ben" and Eastern and Australian Steamship Company, 15 vessels each.

SANYO HOTEL.—The Sanyo Railway Company opened a hotel built in foreign style on Nov. 2 of last year. The hotel is situated in the station compound and most convenient for travellers. It is well built, fitted and furnished, and has the advantage of a foreign adviser, so that it should prove a boon to tourists and others who have hitherto had to depend entirely upon Japanese hotels.

WHALING.—The Whaling Company of Yamaguchi Prefecture, with five vessels, took 35 whales in October last year. Whale meat is extensively used as an article of diet in this district.

WAKAMATSU STEEL FOUNDRY.—It is said that when the establishment of such works was contemplated by Government, offers were made by foreign firms of the highest standing to build and start the foundry under conditions by no means onerous to Japan, while they were further willing to hand over the whole concern to the State after a certain term of years. In the Diet lately the Minister for Agriculture and Commerce stated that, although an examining committee had recommended the transfer of the foundry to private hands, there was not, at present any private company prepared to take it over; that it might ultimately be transferred to a private company, but the present intention was to continue its official control. Perhaps events will, in the end, justify the decision of the Government that it could do better on its own account, but, meanwhile, the outlook is anything but promising.

According to vernacular papers, the foundry lost during the last fiscal year some £108,000, in addition to spending £200,000 on machinery and plant. Moreover, a supplementary grant of £200,000, applied for from the Diet, was only passed after earnest appeals by certain ministers, and a further £400,000 is being asked for this year. The working of the foundry is characterised as "very unsatisfactory," and it is stated that the operation of the smelting furnace had to be suspended, while only about 20,000 tons could be turned out instead of the 50,000 tons which the authorities undertook to produce. The loss on the working for this year is estimated at £190,000.

WATERWORKS.—The survey of the site of the proposed reservoir at Itsuimura has been begun, and tenders have been invited for the necessary stonework.

PHOTOGRAPHY.—As mentioned in last year's report, it cannot be too widely known that the taking of photographs in and around Shimonoseki and Moji is forbidden by the military authorities, the penalties for any breach of the regulations being very severe. In certain public places notice boards are exhibited, but, besides being not always conspicuous, the wording is somewhat vague. The phrase generally used is: "Photographing in the vicinity of forts is forbidden," while the regulations make "the vicinity of forts" to be anywhere within the fortified zone, i.e., within a circuit of about ten miles. In 1901 there were two persons, in 1902 three, and early this year one person prosecuted in the Japanese courts and fined, in one case 10 yen (£1), and in the other 30 yen (£3) each, besides having their cameras and all plates confiscated in every instance. Special permission to take photographs may sometimes be obtained from the gendarmerie office.

TRADE OF DISTRICT OF KOBE FOR 1902.

By MR. CONSULAR ASSISTANT E. F. CROWE.

The trade of this Consular district, including the two ports of Kobe and Osaka, shows a large increase of over £2,000,000 in imports and a small decrease of about £5,500 in exports. If the trade of Kobe and Osaka be separated, the figures will show a decrease in the Kobe exports of over £250,000, and a steady increase all round in Osaka. As far as the volume of trade goes, the year under review has been a record one, but the results to merchants generally have been unsatisfactory, and 1902 cannot but be classed as an unprofitable year. The salient feature

of the previous year's trade was the advance of exports at the expense of imports, but last year this state of affairs was entirely reversed. The large increase in imports is principally due to the great quantity of raw cotton which came to this port, an increase of more than 1,500,000 lbs. over 1901, but generally there was a slight increase all round, excepting in the three items of sugar, metals and machinery. The steady decline in silver throughout the year seriously affected the trade with China and other silver-using countries, and it is this fact which accounts chiefly for the decrease in exports. Matting and tea, which both go largely to the United States, show a satisfactory increase.

IMPORTS.

RAW COTTON.—From an importer's standpoint the year was a fairly satisfactory one, as, owing to a much increased home demand for Japanese yarns and a respectable export of the same article to China, a larger quantity of cotton was imported. It is true that inquiry for yarns from China was not as large as might have been expected, but this was more than counterbalanced by the home demand. Owing to the spinning mills being fairly well employed throughout the year the cotton business was, on the whole, satisfactory, and had it not been for the depreciation of silver, the result, from a financial point of view, it is safe to say, would have been excellent.

COTTON PIECE GOODS.—As the preceding year, 1901, had wound up with a very satisfactory autumn trade in cotton piece goods for the Japanese, with stocks remaining less than for two or three years past, consequent upon the excellent rice harvest, the buyers were early in the field placing their orders for the year 1902. At the close of the year, however, contrary to expectations, stocks of all classes of goods remained undelivered to be carried over to next season. It may be that trade was a little overdone, as from a financial standpoint the results were not unsatisfactory. The articles showing an increase as compared with 1901 which may be said to have been overdone are greys, umbrella cloths and velveteens.

COTTON YARNS.—In cotton yarns the principal imports here are the Lancashire coarse counts, but in consequence of the increased growth of the Japanese industry they are gradually but surely being ousted from the market; hence the big decrease in the figures for 1902. Gassed yarns are practically speaking, no longer imported, as the existing Japanese mills are in a position to supply very nearly all the native wants.

WOOLLENS.—The buying season for woollen cloth and serges, having started later than usual, was continued until February, fairly good business being transacted. The new season commencing in September opened with good inquiries, but high home prices made remunerative business difficult. In spite of an increase of flannels in the past year, it may safely be said that this article is on the decline. A very good substitute is being made in Osaka of wool as well as wool and cotton, which competes more especially with German all wool flannels, and its manufacture is being rapidly improved, but the supply is as yet far below the demand.

INDIGO.—The increase in the import of German indigo (artificial) during the past five years has been remarkable. It is not due to any falling-off in quality that Indian indigo has lost the position it formerly held, but to the fact that the increased duties which came into force on Jan. 1, 1899, caused consumers to buy more and more of the better sorts. Duty is levied at the rate of 12.953 yen per 100 kin (about £1 6s. 6d. per 133½ lbs.), irrespective of the quantity of indigotine contained, and much to the disadvantage of vegetable indigos, the German artificial indigo has been passed by the Japanese customs at the same rate of duty. It is understood that the German artificial indigo made by the Badische Anilin-und Soda-Fabrik contains about 98 per cent. indigotine, and costs about 5s. 6d. a lb., whereas Indian indigos, though only costing from a third to a half and analysing about 30 to 55 per cent. indigotine, have the same duty per lb. to pay. As India has not acceded to the Anglo-Japanese treaty, Indian indigo will further suffer, as the statutory tariff will be raised from April 1, 1903, to 21.422 yen per 100 kin. Under the most-favoured-nation clause, German and Dutch indigos, protected by the Anglo-Japanese Conventional Tariff, will continue to pay 12.953 yen, so that the future for Indian importers is anything but bright.

EXPORTS.

COTTON YARN still maintains its place at the head of the table, but the value of the amount exported is only £1,670,715, that is to say £234,970 less than last year and £242,374 less than the average of the last five years. This decrease is due principally to the fact that the disturbing influence of the risings in the interior of China in 1901 was more protracted than was anticipated, and to the sharp depreciation in silver which created a dearer exchange between this country and China. However, the loss of orders was more than counterbalanced by the home demand, which owing to the gradual im-

provement in Japanese spinnings, bolstered up by a protective tariff, have without doubt taken the place of Lancashire yarns, particularly in the coarser counts.

METALS.—The export of copper fell off considerably, and metals which for some time past had occupied second place in the list of exports dropped to third, while matches, the export of which has been increasing steadily, came up to second.

Rice and Camphor both show a decrease.

MATTING AND MATS.—If the official figures given for matting and mats be correct—and there is ground for believing that they are too large both as regards quantity and value—the export matting trade of 1902 showed a very heavy increase over any preceding year. The prices per roll of 40 yards for the principal grade exported, known as "Common Jacquard," fell from 7.30 yen (15s.) in January to 5.75 yen (11s. 9d.) in December. When duty was first put on matting in America four years ago, this grade came strongly into favour, as higher grades had to pay a very heavy increased rate of duty. Hence the demand for it has constantly increased, with the result that Japanese makers, who seem incapable of pursuing a steady middle course, have considerably increased their number of looms for this particular grade. In 1901 there were about 10,000 of these looms; in 1902 there were 5,000 more. The farmers, too, had pursued the same policy with the raising of the rush, and for 1902 they had planted about twice the acreage of former average years. The result was that "Common Jacquards" were produced out of all proportion to any reasonable demand, and prices for them fell steadily, at the same time disorganising all grades below it. These low values tempted the American importers, who laid in heavy stocks, and this fact accounts principally for the enormous export during 1902.

TEA.—The new leaf was damaged by frost early in April, and the picking of first crop tea was considerably below the average. The total yield for the season, however, was larger than for the past three years. The market ruled high throughout the season, owing to a speculative demand caused by the announcement that the duty of c.10 per lb. in the United States of America would be removed on Jan. 1, 1903. Owing to the unseasonable weather in the spring the quality and preparation of the leaf were rather inferior; and there is danger of the trade being gradually lost unless the producers display more care to preserve the reputation of Japan teas in the American markets.

SHIPPING.—The total number of Ships entered into Kobe during 1902 was 1,555 with a tonnage of 3,328,584 tons, as compared with 1,475 with a tonnage of 3,035,949 tons in 1901. It is satisfactory to note that British shipping still heads the list, having increased by over 133,000 tons, whereas the Japanese its nearest competitor, which had hitherto been gaining ground rapidly, has only increased by 117,000 tons. The tonnage of the German sailing vessels has advanced on that of last year, but the total increase for steam and sail amounts to less than 5,000 tons. American shipping totalled 181,078 tons, as compared with 138,117 tons in 1901, and further progress may be expected with increased communication between the States and the Philippines.

OSAKA HARBOUR WORKS.—The work of constructing the new harbour at Osaka is continuing steadily, and in the near future it will be ready to accommodate ocean going steamers, but it would be rash to suppose that Osaka will, therefore, seriously affect the trade of Kobe, as seems to be imagined in some quarters.

DISTRIBUTION OF TRADE.—The increase in the United Kingdom total of imports is chiefly due to the large amount of cotton piece goods imported, which more than counterbalances the decrease in yarns. The sugar refineries at Osaka are the principal cause of the decrease in the imports from Hongkong. Rice and raw cotton are almost entirely responsible for the increase in India, and the latter article has also been imported to a larger extent than in 1901 from China and the United States.

The principal decrease in exports is to Hongkong. This was caused chiefly by the smaller amounts of cotton yarn and copper exported. Owing to the steady decline in silver, trade with all the silver using countries was not as good as might have been expected.

The United States shows a fair increase, brought about to a large extent by increased exportations of matting, tea, and toothbrushes.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)
THE BALKAN AFFAIR.

London, September 25.

Telegrams from Sofia say that the situation is again becoming worse and is causing anxiety.

THE KING AND THE CRISIS.

It is reported that the King is using his constitutional prerogatives in the present crisis and is insisting especially on having a strong man at the War Office.

THE SULTAN AND BULGARIA.

Later.

The Sultan has announced the necessity in his policy of suppressing the insurrection and restoring order. Therefore he is disposed to entertain the overtures of the Bulgarians.

But the Turkish war party are daily growing, and as they think that Bulgaria is only trying to gain time and that it is impossible to get the whole Turkish army in the field during the winter of consequently war is the best course.

THE BALKAN CRISIS.

London, September 26.

The Russian Government publishes an official note declaring that neither Turkey nor Bulgaria will receive support from any quarter if they resist, secretly or openly, the execution of the Austro-Russian reform scheme formulated in the spring with the approval of the Powers. Austria has published a similar statement, adding, that if these warnings are disregarded, the Powers are resolved to permit no change in the *status quo*.

Later.

Bulgaria yesterday demanded from the Porte the withdrawal or reduction of the troops on the frontier. The Porte replied complaining of Bulgarian mobilization.

LORD CURZON AND THE PERSIAN GULF.

London, September 27.

The Viceroy visits in autumn Muscat and other ports in the Persian Gulf, escorted by the Admiral and a number of the ships of the East Indian Squadron. He will inspect the Indian political posts there and visit the chiefs on the Arabian shores that are in treaty with Great Britain. Sir Arthur Henry Hardinge, British Minister at Teheran, meets the Viceroy at the entrance to the Gulf.

THE CABINET CHANGES.

Mr. Balfour is still at Balmoral.

THE REFORMS COMMISSION.

Hulman has been appointed to the Reforms Commission, which now consists of one Mussulman and four Christians, besides the President, Hilmi Pasha.

THE BRITISH CABINET.

London, September 27.

Mr. A. J. Balfour has left Balmoral.

ASIA MINOR.

It is announced in Washington that the American warships are unlikely to be withdrawn at present from Beirut, which is quiet, though nothing like permanent order has been established.

LABOUR IN THE TRANSVAAL.

The Transvaal Government has decided to postpone the construction of the new railways in view of the scarcity of labour.

TURKEY AND BULGARIA.

London, September 28.

Although a calmer feeling prevails amongst officials at Constantinople, in the hope of a direct understanding between Turkey and Bulgaria, the Porte continues its preparations. Sixty-four battalions are mobilizing in Asia Minor, of which 35 will proceed to Salonika and the remainder to Adrianople.

AMERICA AND BEIRUT.

The United States Government has re-

fused the suggestion of the Porte for the recall of U.S. warships from Beirut.

THE MACEDONIAN REFORMS.

London, September 29.

The Christian members appointed on the Macedonian reform commission on the 26th inst., are men of no standing, but simply the tools of the Turkish Government. Great Britain is pressing the Porte to apply the Austro-Russian reforms more efficaciously; it is also consulting with other Powers regarding the possibility of introducing other measures more fitted to remedy the present state of things.

Later.

There was a demonstration at Sofia on Sunday. It was orderly and imposing but an unmistakable proof of great sympathy with the revolutionists and of a determination to support them.

The Bulgarian Government is again sending a special mission to Constantinople to try and arrive at some understanding.

LONDON'S STAGNANT MONEY MARKET.

London, September 30.

Consols yesterday reached 87½, the lowest recorded. The continuous weakness of the London Stock Exchange is ascribed to be due to a combination of numerous factors, whereof the chief are the stringency of money; the plethora of undigested gilt-edged securities, underwritten by syndicates which are perpetually forced to sell in order to pay margins; and general uneasiness due to the slackness of business, to the weakness of the Government, to affairs in the East, and to apprehensions of financial troubles in America.

THE BALKANS.

There is much outcry, especially in Western Europe, over the indifference of the Powers who, in the presence of the bloodshed in the Balkans, are content to support Austria and Russia in insisting on the scheme of reforms which long ago proved derisory.

EASTERN SIBERIA.

London, October 1.

An Edict has been issued in St. Petersburg transferring the Trans-Baikal Cossack regiment and battery to the Kwantung peninsula, where an independent East Siberian Cossack Brigade is being formed.

ENGLAND AND THE MACEDONIANS.

A great demonstration representing all parties and creeds has been held in St. James' Hall to protest against the outrages in Macedonia. A resolution was adopted urging the abolition of Turkish rule.

THE CZAR.

The Czar is in Vienna.

(RECEIVED AT THE LEGATION OF FRANCE.)

FRENCH NEWS.

Saigon, September 25.

The transmission of international postal correspondence between Europe and the Far East will commence on October 1st.

(We presume that the Trans-Asian Railway is to be the carrier.)

A MARITIME DISASTER.

Saigon, September 25.

A Russian steamer has brought to Aden the passengers of the S.S. *Anural Guydon* of the Company of Chargeurs Réunis, who were supposed to have been lost. The ship was burned on the 30th of July on the coast of Arabia. The passengers are all safe and sound, but one sailor of the crew is missing.

MACEDONIA.

Saigon, September 28.

Disturbances continue in Macedonia.

The Powers are vehemently urging Turkey to put an end to the massacres in Macedonia, [This message was delayed between Tokyo and Yokohama.]

(RECEIVED AT THE FOREIGN OFFICE IN TOKYO.)

TRADE REPORT FROM NEW YORK.

New York, September 26, Japanese Consulate.

The money market is easy; the crops are fine, and the reports of the railway companies are good. But there has been a further heavy fall in all kinds of stocks, the reason of which is still undetermined.

EUROPEAN SILK REPORT.

Lyons, September 26, Japanese Consulate.

The silk market is quiet, and prices remain unchanged. Some of the silk manufacturers of Italy and France have shortened their hours of work in consequence of the reduced crop of silk, and several have closed their factories, it is said. It will be the best plan for Japanese sericulturists not to ask too high figures but to encourage the demand by conforming to market prices.

CHOLERA.

Seoul, September 27.

There has been one case of cholera among the Japanese residents in this city.

PLAGUE IN CHINA.

Japanese Consulate, Tientsin,

September 24.

There has been a case of pest at Pehtang near Taku. The malady is not of the worst type but there are signs of its spreading.

(SPECIAL TO THE "JAPAN MAIL.")

M.M. LINER ASHORE.

Kobe, September 27, 9.23 p.m.

The Messageries Maritimes mail steamer *Australien*, hence at eight o'clock last night, ran ashore at Amaharu in the Inland Sea about four o'clock this morning. The passengers are safe. The French Consul, the M.M. Agent, and others have left for the scene of the accident.

(FROM THE "JIJI SHIMPO.")

BALKAN AFFAIRS.

London, Sept. 23.

The relations between Turkey and Bulgaria are tending to a serious condition. Several conferences have been held by the Ministers of the Porte.

Thirty-two battalions have been sent to Adrianople from Monastir. Two hundred officers are on their way to Constantinople.

Greece, in sympathy with Turkey, is about to oppose Bulgaria's actions. Germany supports the interests of Greece.

As the demands of Bulgaria upon Turkey have not been approved of by Russia and Austria, the enthusiasm at Sofia has partially lessened.

THE BRITISH CABINET.

Trouble is still experienced in forming a new British Cabinet.

THE GOVERNOR-GENERAL OF INDIA.

London, September 25.

Lord Curzon, Governor-General of India, has left with a naval escort to pay a visit to Persia, with the intention of being absent for three weeks. He is also expected to pay a visit to the Sultan of Muscat.

RUSSIA AND INDIA.

Lord Kitchener, Commander-in-chief in India, has found that Russians are surveying the roads to Casisier (? Kashmir).

BALKAN AFFAIRS.

The Powers have presented warnings to Turkey and Bulgaria about the maintenance of peace and the subduing of disturbances.

Squadrons of British and French ships are now on their way to the Levant. Russia has censured the Macedonia committee.

Roumania is expelling Bulgarians from its capital, Bucharest.

The fighting at the Bresna (?) mountain pass still continues. The losses of the Turks are very severe. The insurgents are making a strong defence.

THE BRITISH CABINET.

London, September 26.
The vacancies in the British Cabinet are not yet filled. The delay is attributed to the fact that as the result of the disclosures with regard to the War in South Africa, the King intends to secure the reform of the military administration.

BULGARIAN AFFAIRS.

According to a declaration by Mr. Balfour which is issued to-day, Great Britain approves entirely the Macedonian reforms proposed.

The British Ambassador at Constantinople has communicated to the Porte the lines of British policy and demanded that effective steps be taken.

DEATH OF THE DUKE OF RICHMOND.

London, September 28.
Charles Henry Gordon-Lennox, Duke of Richmond and Gordon, is dead.

[His Grace was the sixth Duke of Richmond and was one of the great territorial magnates of the United Kingdom. He is succeeded by the Earl of March.]

BALKAN AFFAIRS.

Turkey has issued an order mobilizing 64 battalions at Salonika.

CZAR'S VISIT TO ITALY.

With regard to the visit of the Czar, special care is being taken in Italy—particularly at Rome. Five thousand soldiers have been added to the garrison.

RUSSIAN VOLUNTEER FLEET.

London, September 29.
The Russian volunteer ship *Akron* has been requisitioned to join the squadron in the Far East as a transport.

MAILS BY THE SIBERIAN RAILWAY.

The Siberian Railway commenced yesterday the carrying of mails from France to Japan and China. Seven bags were despatched.

BALKAN CRISIS.

Great Britain has formally presented her protest to the Sultan of Turkey upon the imperfect manner in which he is carrying out the Macedonian reforms. There is news that a portion of the Turkish troops have withdrawn from the Bulgarian frontier.

(FROM THE "ASAHI SHIMBUN.")

RUSSIAN TROOPS IN THE FAR EAST.

St. Petersburg, September 25.
Besides the Russian troops in the Amur districts, the Military and Naval Attache's of the Legations in Japan, China, and Korea are placed under the control of General Alexieff, Commander-in-Chief of the Far East.

(FROM THE "JAPAN GAZETTE.")

THE BALKAN CRISIS.

Berlin, September 25.
There is a semi-official report from St. Petersburg to the effect that Russia and Austria have emphatically repeated their warning at Sofia and Constantinople. The government must avoid helping the insurrection in Macedonia, and Turkey is gravely warned to prevent all cruelties which would only hamper the necessary reform measures. The other great Powers have declared themselves in accord with Russia and Austria. They will deny any support to Bulgaria and Turkey if these two States resist the carrying out of the reform programme.

THE RUSSIAN ELECTIONS.

The election for the Prussian Chamber (Landtag) will take place on November 20th.

JAPANESE ARMY MANOEUVRES.

Tientsin, September 25.
Major-General von Rohrscheidt, Commander of the German occupation troops in China, has received an invitation to attend the Japanese army manoeuvres which will take place between Hiroshima and Kobe from the 11th to the 20th November. The General has accepted and will attend the manoeuvres accompanied by his adjutant Major Witte.

MOROCCO.

Berlin, September 26.
An animated agitation is being made in the French press for a military advance upon Morocco. It is probable that a treaty, dividing Morocco between France and Spain, has already been arranged. France will get the hinterland; Spain the provinces on the littoral. The French Minister in London, M. Cambon, is working for the acknowledgment of this treaty. If England agrees, France will give up her Egyptian claims and make Tangier a free port.

TURKISH-BULGARIAN CRISIS.

The Turkish-Bulgarian war scare has diminished.

THE MOROCCO NEGOTIATIONS.

Berlin, September 29.
It is admitted from Paris, Madrid and London that negotiations regarding the future of Morocco have taken place, but the results will not be published for some time. The London *Morning Post* states that it would approve of a French protectorate over Morocco on condition that the international control of Egypt is cancelled and the Siamese and Newfoundland question definitely settled.

MORE RUSSIAN TROOPS FOR THE FAR EAST.

The *Berliner Tageblatt* reports from St. Petersburg that two new infantry brigades are being mobilised for Eastern Siberia.

ENGLAND AND MACEDONIA.

While England joined the other Powers in the latest warning Note addressed to the Constantinople and Sofia Governments, she wishes to have the reform programme imposed on Macedonia amplified. The Russian and Austrian Ministers of Foreign Affairs, M.M. Lamsdorff and Goluchowski, have not yet given their answers on this point.

THE CZAR NOT TO MEET THE KAISER.

The expected interview between Kaiser William and Czar Nicholas will not take place.

NEW GERMAN RIVER GUNBOAT FOR CHINA.

A new German river gunboat, intended for China, has been launched at the Imperial shipyards at Danzig and is now on the way out to the Far East.

THE PANAMA CANAL.

Berlin, October 1.
The President of Colombia has been authorised to conclude the Panama Canal Treaty with the United States of America.

THE HUNGARIAN CRISIS.

The temporary Hungarian Premier, Baron Khuen Hedervary, has resigned.

GERMAN-SWISS COMMERCIAL TREATY.

The negotiations for a German-Swiss commercial treaty will begin on October 10th in Berlin.

THE MOROCCO NEGOTIATIONS.

England denies having made any concessions to France in regard to the Morocco question.

THE BALKAN PROBLEM.

The Czar and Emperor Francis Joseph have discussed the Near Eastern question at Vienna. Count Lamsdorff and M. Goluchowski, their Ministers of Foreign Affairs, were present. The following resolutions were adopted: There will be no intervention and no demand for an amplification of the Macedonian reform programme.

[It is understood that England wished the programme amplified.]

Bulgaria is sending M. Natchevich on a special mission to Constantinople. The aspect of the crisis has become less formidable.

Kaiser William has proceeded to Rominten in Eastern Prussia to enjoy some hunting. His Chancellor, Count von Buelow, will return to Berlin next Tuesday.

INTERNATIONAL EXCLUSION.

It is reported from New Zealand, that the Government brought in a bill to exclude German ships from calling at the harbours of New Zealand, because Germany is said to have closed the harbour of Apia, Samoa, to New Zealand vessels. The *Norddeutsche Allgemeine Zeitung* in Berlin, a semi-official paper, declares this last statement of German action to be untrue.

(FROM THE "N.C. DAILY NEWS.")

MACEDONIA.

London via Bombay, September 23.
It is stated at Sofia that the Porte recently expressed its readiness to consider proposals for a direct understanding.

Upon this, Bulgaria proposed some conditions, the most important being the appointment of a mixed commission, the majority of the members of which should be Bulgarians, to supervise the reforms in Macedonia.

The conditions were accepted in principle, though nothing was definitely decided.

An interview between the Bulgarian Premier and the Ottoman Commissioner with reference to ten thousand destitute refugees from Burgas, resulted in the practical understanding that Turkey shall reinstate them in their homes, and guarantee them protection.

This has increased the hopes of a general agreement.

(FROM THE "SHANGHAI MERCURY.")

THE HUNGARIAN CRISIS.

London, September 25.
Loyalty to the Throne has induced the Ministerialists of Hungary to accept the declaration of the Emperor Francis Joseph, but the Kossuth Party provoked a frantic scene in the Diet, one Deputy declaring that he had lost faith in the King's word.

Total	601

Per British steamer *Borneo*, for London via ports:—Raw Silk for Europe, 47 bales; Waste Silk for Europe, 295 bales.

LATEST COMMERCIAL.

IMPORTS.

In Yarns no movement is perceptible, but in shirtings deliveries are good and the tone of the market is hopeful. Fancy Cottons and Woollens export a quiet market with better enquiry.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 10TH, 1903.

MARRIAGE.

At Kobe on the 6th Oct., 1903, at H.B.M.'s Consulate, before John Carey Hall, Esq., Consul-General for Japan, and afterwards at All Saints Church, by the Rev. G. H. Davies, M.A., HERBERT EDGAR, fourth son of the late Thomas Green, P. & O. S.N. Co., to BLANCHE MARY, only daughter of the late John Catto Abell, of Kobe.

DEATH.

On the 4th Oct., at 144, Bluff, EDWARD FLINT KILBY, of Yokohama, Japan, and Caversham, Oxon., England, aged 51 years.

SUMMARY OF NEWS.

BARON FUJIEDA TSUNENARI died on Oct. 2nd at Kyoto.

FIFTY-FOUR Korean emigrants arrived at Nagasaki on Oct. 2nd en route to Hawaii.

THE *Fiji* states that during September, the gross income of the Osaka Shosen Kaisha amounted to yen 513,456.

THE Kobe baseball players met the U. S. S. *Annapolis* on Wednesday and beat them by 22 runs to 13.

COUNT UYESUGI, former territorial chief of Uzen province, will leave for England in Decem-

ber accompanied by Mr. S. Chiyo, an official of the Educational Department.

A TELEGRAM dated Oct. 1st from Yamaguchi states that rinderpest has appeared in the village of Tsunoshima.

THE Emperor and Empress presented yen 8,000 to the family of the late Marquis Kuga towards the funeral expenses.

It is stated that Major-General Fukushima will succeed the late Lieut.-General Tamura, as Vice Chief of the General Staff Office.

A TELEGRAM from Sapporo states that frost was experienced there on the morning of Oct. 3rd. It is six days earlier than last year.

THE Crown Princess is expected to proceed to the detached palace at Hayama about Oct. 10th, where she will stay for some weeks.

THE bronze statue of the late Prince Arisugawa erected in front of the General Staff Office, is finished. It will be unveiled on Oct. 10th.

THE St. George's Society of Shanghai intend to celebrate King Edward's birthday on Nov. 9 with a fancy dress ball at the Town Hall.

THE *Fiji* publishes a rumour that Russians are purchasing on the London market shares in the railway between Newchwang and Shan-hai Kwan.

MR. S. SAKI, a writer on the *Niigata Shinbun*, was arrested on Oct. 2nd on a charge, according to the *Fiji*, of having obtained money by means of menaces.

ACCORDING to Tokyo papers, it is officially stated that the Russian authorities are now engaging in the construction of batteries at Yong-Am-pho.

THE Kyoto Warehousing Company will hold a general meeting on Oct. 19th and decide to wind up the concern. It is said that the firm owes debts of yen 190,000.

A GOODS train was derailed at a point between Ninomiya and Kodzu at 5.40 p.m. on Oct. 4th causing slight damage to the railway and cars. Fortunately no person was injured.

AN extraordinary meeting of the Hokkaido Assembly will be held on Nov. 20th to discuss the supplementary budget of local expenses and the pensions to teachers in primary schools.

THE draft of the revised Penal Code will be submitted to the 19th session of the Diet. The *Niroku* prophesies that it will be passed both Houses without any considerable amendment.

DURING September, the foreign trade of Moji amounted to yen 1,199,550 in exports and yen 586,495 in imports. That of Shimonoseki was: exports, yen 104,344 and imports, yen 58,535.

THE *Nichi Nichi* states that as the result of the proposed administrative reform, fifteen prefectural Government offices will be abolished. It is said that over yen 400,000 will be saved annually.

A CASE of cholera appeared among the crew of the Norwegian steamer *Obore* which arrived at Hakodate on October 2nd from Shanghai. The ship was immediately detained at the quarantine station.

A MAN armed with a dagger entered, early on the morning of Oct. 5th, a house occupied by a singer named Yaye (16) and her mother, at Fukagawa, Tokyo. He got away with a small sum of money. About the same time another house at Nihonbashi was entered by an armed

man who looked about 23 years old. He took away a sum of money.

THE *Yokohama Shinpo* states that a woman named Tsune Kojima (25) has been arrested in Korea by the Russian consular authorities. The charge against her is that she forged Russian notes and attempted to circulate them.

THE *Fiji* states that with regard to the alleged mismanagement of famine funds in the North, the Progressist members of the Awomori Prefectural Assembly have decided to pass a vote of want of confidence in Governor Yamanouchi.

WHOLESALE arrests were carried out at Yamaguchi and Oita prefectures on Oct. 4th. The charges are of contravening the Election Law. Thirty electors and their supporters, aggregating forty-four, and all belonging to the Progressists, were arrested.

A NAGOYA correspondent states that a cabinet-maker named Ch. Awoki (56) murdered a carpenter named S. Mita (58), his son, and grandson, inflicting fatal injuries upon them with an axe. The culprit committed suicide by cutting himself with a knife.

A SOLDIER named Y. Shiraiishi (23), belonging to a battalion of pioneers, Akabane, was arrested on October 3rd on a charge of having stolen yen 1,025 belonging to the regiment. Yen 695 was found concealed in a wood near the office but the remaining sum had already been squandered.

A PASSENGER by the express train from Shimabashi on Oct. 1st jumped from the car while near Kawasaki and sustained severe injuries. The youth, who appeared to be about 16 and a working man, was taken to the office of Dr. Watanabe where he now lies in a hopeless condition.

FORTY-EIGHT students of a Buddhist institution belonging to the *Jodo* section, Yamaguchi prefecture, caused an outrage on the night of Oct. 5th by destroying the whole of the furniture of the house. The reason for such behaviour is reported to be the ill-treatment they have received from their teachers.

EARLY in the morning of Oct. 4th an incendiary was arrested in possession of inflammable materials outside a house in Sumiyoshi-cho, Yokohama, which he was watching at a little distance. The culprit is a youth named Kamimura, a native of Kyoto who recently arrived here via Tokyo.

THE Toyo Kisen Kaisha has decided to order from the Nagasaki Shipbuilding Yard two steamers of 11,500 gross tons and 19 knots each. The *Asahi* states that the firm rejected the offer to purchase the N. D. Lloyd's steamers *Kiautschou* and *Hamburg* on the ground that these ships are not suitable for the Pacific trade.

A COOLIE named Ch. Suzuki (27) working in the compound of the Shimabashi station, was run over by a train on Oct. 5th and his feet cut off. He was removed to the Kato Hospital where he died the same evening. A man named K. Okawa (38) was killed the same day by a train near Akabane Station. He is supposed to have committed suicide.

K. KUGA, ex-official of the Department of Finance, who has been charged with having received bribes, was sentenced in the Tokyo District Court on Oct. 1st to four months' imprisonment with hard labour and a fine of yen 15, while the bribe of yen 1,200 was ordered to be confiscated. Y. Abe, ex-engineer of the Department of Agriculture and Commerce, was sentenced in the same Court to the same punishment, and the bribe, yen 1,600, was ordered to be confiscated.

KOREA.

Saturday, October 3.

The *Hochi Shimbun* publishes a telegram from Korea saying that the Russians have begun to build a fort at Yong Am-pho and that the situation there is serious. Similar intelligence reaches the *Nichi Nichi Shimbun* supplemented by news that Russia is making preparations for a military encampment there. The *Nichi Nichi* justly queries the accuracy of this information and certainly no prudent person will be disposed to credit it without full confirmation. Russia's procedure in northern Korea has hitherto been intelligible though not, we think, defensible. She reads the timber concession in a much broader sense than that attached to it by the Koreans themselves. The latter when they agreed that a Russian Company should enjoy timber-felling privileges along the Ap-nok river, had in view the lower reaches of the Yalu, which alone they understand by that name. In the Russian version, however, the term used was the Yalu River, and the Russians, when the operation of the concession came to be discussed, insisted that by "Yalu River" was meant the whole stream from source to mouth, including all its tributaries; in other words, the entire valley and the slopes which form the watershed of the Yalu. That was a question of interpretation, and it would certainly be unjust to allege that Russia deliberately exceeded her duly acquired privileges, unless, indeed, some evidence be forthcoming to show that she originally understood and accepted the restricted significance of the term. Then followed her contention that a concession to fell timber in a certain region necessarily carried with it the right of establishing stations for the timber-fellers; a contention which can scarcely be disputed though its practical application is obviously subject to the proviso that the places selected for stations must have the previous approval of the Korean Authorities. It was this latter proviso that Russia deliberately violated when she formed a settlement at Yong Am-pho without in any way consulting the Government in Seoul, and by that arbitrary act she placed herself irremediably in the wrong, for whatever M. Pavlov might urge to the contrary, it is quite evident that a concession to carry on some particular enterprise in a large district closed to the commerce and ingress of foreigners does not include the constructive right of settling everywhere and anywhere throughout that district. M. Pavlov knows, and every intelligent Russian knows, that in this particular phase of the incident no excuse possessing even a semblance of validity can be found for the formation of a settlement at Yong Am-pho without Korea's leave. The struggle subsequently made, and still understood to be in progress, to obtain legalization of an illegal act by roundabout processes, tends only to confirm the suspicion suggested by the arbitrary choice of Yong Am-pho, namely, that what influenced Russia was not the interests of the timber-fellers but the strategical value of the place, and that in view of the latter all preliminary reference to Korea was studiously avoided. Nevertheless up to this point of the business it is not impossible to construct some palliations of Russia's acts. But did she set herself to build forts and form a military cantonment at Yong Am-pho, the affair would be immediately carried beyond the limits of industrial enterprise, however arbitrary, and something more than protest must be expected from Japan. Therefore we can not place any faith in this new rumour.

Reports have reached Tokyo of a riot in the Korean capital. It had its origin in the death of a child run over by an electric-tram car. The electric railway has long been unpopular in Seoul and the people seem to have been infuriated by this accident. They seized a United States citizen who happened to be riding in the car, and were handling him roughly when a Japanese subject engaged in distributing telegrams passed on a bicycle. The American managed to appropriate the bicycle and so made his escape from his assailants, who now turned on the Japanese charging him with having abetted the American's flight. The Japanese took refuge in the shop of a countryman, one Asada, haberdasher, whither the rioters pursued him, wrecking the shop and severely injuring the fugitive as well as a member of Asada's household. How the affair ended it is not stated.

Monday, October 5.

Statements have already been published with regard to the recent riot in Seoul. These are now confirmed. The trouble had its immediate origin in the death of a child—run over by an electric car—which led to an assault on an American passenger by the mob, and finally to the wrecking of a Japanese haberdasher's house whither a letter-carrier of the same nationality had fled. The letter-carrier became involved in the trouble owing to the fact that his bicycle was used by the American to effect his escape from the mob. It is now stated that the rioters were mostly soldiers, and that they took the opportunity to wreck the shop of the haberdasher, Asada, to whom several of them owed money for clothes. Their idea was to destroy the proofs of their indebtedness. The Japanese Representative is reported to have lodged a strong protest.

The *Asahi Shimbun's* Tientsin correspondent reports that Lin, the brigand leader, has been arrested in Chefoo and sent to Fushang. When last the public heard of Lin he was supposed to be in Yong Am-pho, threatening the lives and property of Russians there, and M. Pavlov had made urgent representations to the Korean Government as to the necessity of providing for the safety of the unlicensed settlers. But it would seem that Lin was not so formidable as M. Pavlov supposed. In fact we are almost disposed to suspect that his importance as a potential disturber of the peace was magnified by diplomatic expediency.

A rumour is published by the *Airoku* that 45 followers of this bandit Lin attacked and destroyed the Russian temporary barracks at Antung. It does not appear that this event is in any way connected with the recently alleged assembly of bandits at Yong Am-pho. The reason assigned is that the bandits were enraged by the severity of their treatment at Russia's hands.

The *Hochi Shimbun*, in its issue of the 4th instant, affirms that the British and Japanese Representatives having both urged the immediate opening of Yong Am-pho, the Korean Government has finally given its consent.

Tuesday, October 6.

The *Asahi* publishes a report from Seoul to the effect that the Korean Minister of Foreign Affairs recently memorialized the Throne in the sense that whereas several of the foreign Powers were pressing for the opening of a port on the Yalu, and whereas Yong Am-pho seemed to be the only suitable

place, therefore His Majesty's sanction for the opening of Yong Am-pho was solicited. The Emperor replied that he did not find any mention of the closing of Pyong-yang in the memorial; whereupon the Minister corrected the memorial as suggested and re-submitted it, but it has failed to elicit any reply. This, of course, is given as a mere rumour. We may mention that the proposal to close Pyong-yang has no political significance. It has for some years been the desire of the Korean monarch to remove his palace to some secluded spot away from Seoul, where he is perpetually exposed to the buzzing of that horrible bore of a bee, the foreign Representative, and Pyong-yang would suit the purpose admirably could it be restored to its original freedom from alien presence. Only for selfish purposes, therefore, does the harassed Sovereign desire to put back the hand on the dial of progress, just a little bit.

It is reported from Seoul that the Korean Government having lost confidence in Cho, to whom has hitherto been entrusted the duty of delimitation at Yong Am-pho, has despatched thither a new commissioner and two assistants. This means, of course, that the land in question, large or small, will ultimately be leased as Russia desires. It is scarcely to be supposed that Korea will persist in defying circumstances partly of her own creation, and we may therefore look to see the Russians ultimately settled at the mouth of the Yalu River, a consummation whose results should be forecast easily by the light of modern history. An antidote may possibly be found in the opening of Wiju or Yong Am-pho itself, but we are of the unequivocal opinion that Japan should seek to redress the balance by some move on her own account. The unrelenting egoism of Russia's policy in Eastern Asia is a splendid instrument of empire-building against which the altruism of the open door and free trade can not contend with anything like full success.

Concerning the above mentioned new land commissioner, the *Asahi's* Seoul correspondent says that he is an emissary of the Foreign Office, Cho being the Court's representative.

Wednesday, October 7.

It has been said that the Yalu Valley affair ought not to figure largely in the present complications, being merely a collateral circumstance of the Manchurian problem. That may be true in a sense, but there is this to be said, namely, that whereas the Manchurian problem is more or less vague since it presents no features such as can be called immediately conclusive, the Yalu Valley complication is an urgent actuality which may at any moment assume an acute form. Russia is rooted in Manchuria but her manner of planting herself there has been so gradual that it presented no distinctly defiant stage. Further, her manner of leaving it, if she ever does leave it, must also be gradual, and it is proverbial that these slowly moving incidents lend themselves with comparative readiness to diplomatic manipulation. But in the Yalu Valley events seem to be progressing rapidly and even dramatically. In the Yalu Valley Russia has not obtained a lease as she did at Port Arthur. Her settlement at Yong Am-pho was made without any legal sanction whatever. So long as it remained a mere wood-cutter's hamlet, it might not have furnished any material for serious international friction. Now, however, news comes which unequivocally confirms the previous intelligence as

to fort-building by the Russians at Yong Am-pho. The correspondents of three Tokyo journals agree in stating that the fortification of the place is proceeding rapidly. These papers are the *Fiji Shimpō*, the *Asahi Shimbun*, and the *Hochi Shimbun*. The *Fiji's* telegram is short. It merely says that the fact of fort building is true; that guns have not yet been mounted, though four field-pieces have arrived, and that some 40 soldiers in uniform are in garrison. The *Asahi's* correspondent is much more explicit. He says that he himself visited the place in company with Captain Hino. He found the Russians working hard at the erection of fortifications which had already reached a height of some 20 metres! Guns were not yet in position, but three field-pieces had arrived, and it was said that some 12 cannon varying in calibre from 13 to 23 centimetres were also on the spot and would soon be mounted. Some forty Russian soldiers were visible, and the work of building residences was progressing rapidly under the efforts of about 700 labourers. Considerable extension had been made of the original limits, and neighbouring hills were being levelled, evidently for the purpose of mounting artillery. The *Hochi's* news comes to it via Wiju and is a curt confirmation of the *Fiji's*.

Every one desiring peace will refuse to believe these statements until they are officially confirmed. For should it be true that Russia is taking such steps, the situation would at once become exceedingly grave. Russia's presence at Yong Am-pho in a purely pacific character might derive some semblance of justification from her lumber convention, though there is nothing in that document to justify her occupation of Korean territory without the previous consent of the Korean Government. But did she proceed to fortify within Korea's boundaries an important position commanding the estuary of the Yalu, she would be guilty of an act not merely of flagrant aggression but virtually amounting to a declaration of war. It is impossible to credit such doings without the strongest confirmation. It may be that in practically entrusting the management of her Far-Eastern affairs to Viceroy Alexieff, Russia has put the man at the front in the saddle and has thus reduced the chances of peace to very slender proportions. But these alleged doings at Yong Am-pho defy credence. They would deprive Japan of all option.

Mr. Cho, who accompanied Baron Gunsberg to Wiju for the purpose of considering the Yong Am-pho delimitation, is represented as declaring that his presence has become quite superfluous, for Russia has not only extended, but is still further extending, the boundaries of the area originally leased by her people from Korean subjects. No very implicit confidence is placed, however, in Mr. Cho's assertions.

Our readers are already aware that in addition to the Russian timber-felling company, there is a kind of triangular Korean-Chinese-Japanese enterprise of the same nature in the Yalu Valley. Disputes constantly arise in connexion with logs that come floating down the river, their ultimate ownership being open to query. The method pursued in the forests is to mark the logs so that their provenance shall be distinct, but it appears that this device is not always sufficient. News now comes of a dispute about some fifty thousand logs which had been collected at Wiju and purchased by some exporters when the Russians inter-

fered. The trouble has been temporarily suspended, but is expected to recur.

From Wiju comes a report that as two Japanese subjects were returning from the discharge of some business at the local government's office, they were set on by a party of Korean soldiers and wounded with bayonets so that their lives are despaired of. The correspondents (*Fiji* and *Asahi*) who send this news, add that the outrage was aggravated by leaving the wounded men lying on the road, but as to that feature we must observe that the victims of an act of violence are seldom succoured subsequently by their assailants.

Thursday, October 8.

With reference to the riot in Seoul on the 30th ultimo, when a mob broke into the store of a Japanese subject and caused much damage, it is stated that the Japanese Representative has presented five demands. The incident is aggravated by the fact that the law-breakers are said to have been at work for 50 minutes without any attempt to restrain them although the district where the affair happened may be described as essentially the official quarter of Seoul. Mr. Hayashi's demands are thus stated by correspondents of Japanese journals:—(1) That the chiefs of police and of gendarmes shall be reprimanded, and that both shall repair to the Japanese Legation to offer apologies for the occurrence. (2) That the rioters, civil and military, shall be severely punished and that the officer commanding the military shall be reprimanded. (3) That should such a disturbance occur again, Japanese police stations will be established at convenient places throughout the city and the expense of their maintenance will fall on the Korean Government. (4) That the medical expenses of the wounded postman, his pay during his time on the sick list and the extra-pay attached to service in Korea shall be defrayed by the Korean Government. (5) That the damage, direct and indirect, caused by the wrecking of the Asada store shall be paid by the Korean Government, and that should there be any delay in making the payment, the sum shall bear interest from the day when it falls due.

The *Fiji Shimpō's* correspondent states that as there are indications of an attack by the ignorant populace on the offices of the electric railway company where several Japanese are employed, four Japanese police have been sent to guard the premises.

Li Chung-ha, acting Minister of Foreign Affairs, has resigned, the reason of his retirement being that he finds himself unable to deal with the difficult questions of the leasing of land at Yong Am-pho and the opening of that place to foreign trade. The probability is that his successor will be Li Ho-yong, formerly Korean Representative in Japan. This Yong Am-pho complication seems fated to render impossible the continued tenure of the foreign-affairs portfolio by any Korean. It drove out of office the former Minister, Li Do-chai, and it is now responsible for the fall of Li Chung-ha. Perhaps the gradual lengthening and consequent attenuation of the chain of responsibility brought about by these changes is not unwelcome to the Koreans. From Li Ho-yong's point of view Li Do-chai's promises are in a more distant vista than they were to Li Chung-ha, and it may result after one or two other changes of portfolio that M. Pavlov will have to contend against plausible forgetfulness as well as obdurate dissimulation. One is reminded of the old days of the Tsung-li Yamen—days which are gradually returning, it is

said, under its successor—when embarrassing problems were reduced to a vanishing quantity by transmission from Minister to Minister.

On the eve of his retirement Li Chung-ha is reported to have addressed a very strong remonstrance to M. Pavlov with regard to the construction of Russian forts at Yong Am-pho. It is easy to conceive what terms such a protest would assume. M. Pavlov was informed that the construction of fortifications by a foreign Power within Korean territory was a flagrant violation of Korea's sovereign rights, and was further calculated to disturb the peace of the East. It was therefore requested that the work should be abandoned at once and that the building already done should be demolished, failing which steps the Korean troops would receive orders to take suitable measures.

This last item we take from the *Niroku's* telegrams, and we confess that while reproducing it we seem to recognise one of those statements which a smart correspondent can easily manufacture out of his own review of a situation. It may be true, however, and certainly it ought to be true, for no less drastic course would meet the occasion. If this fort-building has really commenced—and the news gathers probability as each hour passes without contradiction—Russia may be said to have declared war against Korea. No one of course can be seriously asked to contemplate the impossible hypothesis of any similar train of circumstances in the Occident. The notion of a European Power sending workmen and soldiers to build and arm forts within the boundaries of another European State without the latter's permission is too extravagant to be conceivable. If Korea tamely endures treatment of that kind, she passes at once within the sphere of Russia influence in a not less unequivocal degree than Manchuria has already passed. But can Korea take any effective measure of remonstrance? That she could succeed in driving out the Russians if they want to stay is not to be imagined, and if she once draws the sword for however legitimate a purpose, the fate that will overtake her, failing foreign succour, is assured. All these things are so obvious that we still hesitate to credit the story of the fort building, and still hope that news of its falsehood, or, at any rate, of its great exaggeration, will be received.

Friday, October 9.

Seoul is said to be in a state of great confusion. An idea prevails that war is imminent between Russia and Japan, and this forecast, while throwing the lower orders into a mood of trepidation, is reported to have induced the Emperor to seclude himself and the Cabinet Ministers to tender their resignations. The picture is edifying. Meanwhile the news of Russian fortress-building at Yong Am-pho is confirmed, and it is added that the mounting of twelve guns has been begun, and will soon be effected. Rumour, however, shows unwonted circumspection with regard to the number of Russian soldiers in garrison there: they still remain at 40. The Japanese inhabitants of Wiju, on the other hand, have become so solicitous about their own security that they have, it is alleged, petitioned their Government to provide military means of defence. We are still disposed to think—though perhaps the wish is fatter to the thought—that the so-called fort-building at Yong Am-pho will prove to river-embarkment and wharf-construction.

CHINA.

Monday, October 5.

The *Nichi Nichi's* Peking correspondent wires that the Representative of a certain foreign Power has given some counsel to Prince Ching with regard to China's relations with Russia. The advice turns upon supposed symptoms of unrest in the Russian Cabinet, beginning with the resignation of Mr. de Witte, and continuing with that of General Kuropatkin as well as the reported intention of Viceroy Alexieff to resign. This anonymous adviser is said to have attributed these events to differences of opinion about the treatment of the Far-Eastern question, and to have suggested to Prince Ching that, under the circumstances, it behooved his country to move very warily. The sequel of the story is scarcely worth repeating. It takes the inevitable form that Prince Ching expressed much gratification and took an early opportunity to report the facts to the Empress Dowager. We may add that no official intimation of any such unrest in Russian political circles has been received in Tokyo.

A conference of Foreign Representatives took place at the Russian Legation in Peking on the 3rd instant to discuss the *Supao* affair and also the question of the Representatives' reception at court. The fact that the conference assembled in the Russian Legation is attributed to M. Lessar's illness, which prevents him from leaving the house.

M. Lessar is a splendid example of devotion to public duty. He was believed to be a dying man when he last left the Chinese capital, and it would have been natural that he should desire to abstain from the strain of highly responsible official functions and to pursue a course of medical treatment under circumstances and in a climate more favourable than Peking can possibly offer. Yet he returned to his difficult post at a time when great questions depended on his exertions, and he now pushes his country's interests with all the vigour of a hale man though he is wasted by sickness and suffering. We have often expressed the opinion that Russia is remarkably well served in the Far East. It may be that knowing the large issues at stake she has always chosen exceptional men, but her good fortune in having them to choose is none the less conspicuous.

Tuesday, October 6.

It appears as though the *Supao* case were likely to furnish another illustration of the extraordinary clumsiness of the machine called international co-operation. The meeting of Foreign Representatives reported to have recently taken place at the Russian Legation in Peking was for the purpose of discussing this affair, and it is stated that no further progress was made than the formulating of a proposal which met the approval of all, namely, that efforts should be made to find some solution satisfactory to the Powers as well as to China. Such a solution does not suggest itself. China wants to have her jurisdiction recognised by the surrender of the men and the Powers do not want to surrender them. The only half-way refuge between the two extremes would seem to be an arrangement for nominal surrender under pledge of immediate restoration to the hands of the Shanghai municipal police. China, being a very practical Power, might be disposed to accede to some manoeuvre of that kind for the sake of "saving face." Some complication of this *Supao* character has long been anticipated in view of the peculiar status acquired for itself by Shanghai. In

the very early days of foreign intercourse with China not a few disturbances were caused by refusals on the part of European Authorities to hand over to Chinese jurisdiction persons of their own nationality charged with crimes of violence. Things have moved out of that old-fashioned groove now since a foreign settlement in China constitutes itself an asylum for Chinese politicians accused of lese-majesty.

Wednesday, October 7.

It is reported from Peking that the new revised commercial treaty between China and Japan will be signed on the 8th instant, simultaneously with the signature of the United States treaty. We believe the latter to have been already signed, but at any rate if the Japanese convention receives the signatures of the contracting parties on the 8th, there will be something to mark that day in the annals of the Far East. Public attention does not appear to be much directed towards these conventions. Yet they have a very vital bearing on the situation, for they are understood to contain clauses providing for the opening of Mukden, Tatung-kou and Antung. In other words, they guarantee the preservation of the open door in Manchuria, and the maintenance of the open door is the limit of America's ambition; perhaps also of Great Britain's. Concerning the difficulty originally anticipated as likely to arise from the satisfaction of Russia's demands, it is to be observed that the demands have not been satisfied and that the difficulty would have been unreal in any case. The apprehension was that Russia's condition as to the non-leasing of any parcel of Manchurian territory, large or small, to a foreign Power, would preclude the possibility of forming a foreign settlement. We have already pointed out the chimerical nature of any such obstacle, and it is sufficient to say here that, whether real or unreal, it is completely removed by the order of events. For Russia's demands having been shelved and the new treaties having been signed in the meanwhile, the provisions of the latter will of course take precedence of any privileges acquired by the former, and whatever permanent status Russia may now obtain in Manchuria will be subject to the maintenance of the open door and to the forming of foreign settlements after the stereotyped pattern. We are not suggesting that Russia objects to either of these results. She has not throughout opposed the open-door policy, so far as we know. We merely state the bald facts, for they seem to us to carry the Manchurian problem one very distinct stage nearer to an amicable settlement. If Russia's presence in Manchuria be deprived, as these new conventions would deprive it, of any contingencies detrimental to the treaty rights already acquired by other Powers throughout China, the situation would be plainly easier.

The *Fiji* publishes a telegram from Shanghai saying that in spite of China's refusal to grant a charter for the construction of a line from Chingtu to Hankow, the British applicants are proceeding with the work, and a number of British engineers have arrived in Shanghai for the purpose. That, of course, is quite incredible. We can well conceive that strenuous efforts are being made to obtain the concession of a road so very important, but England does not retain enough of her old fashioned methods to essay anything so arbitrary as the unsanctioned construction of a line of railway in Chinese territory.

It is stated (*Nichi Nichi Shimbun's* cor-

respondence) that on the 4th instant the Chinese Foreign Office sent a note to the Russian Representative saying that as the 8th instant is the day fixed by treaty for the evacuation of Manchuria, China looked for the fulfillment of Russia's engagements on that day. This communication is said to have been regarded by M. Lessar as a mere formality. So it is in point of fact. China has no power whatever to hold Russia to any engagement, so that when Prince Ching addresses such a note to M. Lessar the act is obviously futile. Russia would probably prefer not to receive such reminders, but there the matter ends.

Thursday, October 8.

It is reported from Peking by the *Kokumin Shimbun's* correspondent that Prince Ching having, on the 4th instant, addressed to M. Lessar a note urging the fulfilment of her treaty obligations by Russia in the matter of evacuating Manchuria, the Russian Representative replied that so long as his country's recently presented demands remained unsatisfied, there could be no evacuation, and that if China persisted in refusing them, the occupation of Manchuria might become permanent. Considering that the demands would create a situation virtually corresponding to permanent occupation, there is a measure of cynicism in M. Lessar's reported answer.

On receipt of the above reply Prince Ching is said to have despatched an official to the Japanese Legation for the purpose of conveying the gist of the reply, and of explaining that China now has only her friends to rely on; in other words, that without Japan's aid she is helpless.

It may be truly said that history contains no parallel to the spectacle now afforded by China. A fine nation of 400 millions, men highly endowed physically and morally, with splendid resources and at a time of the world's history when all the instruments of civilization are easily procurable and when the immense capacities of any people for purposes of domestic defence have been fully demonstrated, China stands miserably helpless to protect herself against aggression, and is compelled to hold up suppliant hands for pitying aid to her pigmy neighbour whom, in the old days, she treated as a negligible quantity in international matters. If there be any such thing as a just dispensation in human affairs, China deserves to go to the wall, and much as we sympathise with her, brutal as we think her treatment by Western Powers has been in many instances, we can not deny that she merits her fate. What we sincerely hope is that she may not aggravate the disaster of her own catastrophe by involving a neighbour in the ruin.

THE RICE CROP.

The Department of Agriculture and Commerce announces that the damage done by the recent storms to the rice crop was inconsiderable, and that the yield will probably be better than was previously anticipated. At first the Department gave 47,017,211 *koku* as a close approximation. Now it gives 47,713,166 *koku*, the former estimate having been made on the 26th of August, the latter on the 24th of September. The second figure is 29.1 per cent. more than last year's crop, and 18.5 per cent. more than an average yield. Moreover, it exceeds any production since 1893, the only competing year being 1898 when the returns showed 47,387,666 *koku*.

AN INTERVIEW WITH PRINCE KUDACHEFF.

A representative of the *Fiji Shimpō* called at the Russian Legation on the 3rd instant, and though unable to obtain an interview with Baron Rosen, was received by the Secretary of Legation, Prince Kudacheff. The Prince stated that he was much occupied with business in consequence of the Minister's return and that there had not been time to ascertain the full results of Baron Rosen's visit to Port Arthur. He regretted his inability to give any detailed information on this point, but he was confident that the Japanese people had not forgotten the habitually friendly feelings entertained by Baron Rosen towards their country, and that they would easily infer his Excellency's sincere desire to effect an amicable arrangement of existing complications. There could be no question about the nature of the influence that the visit of such a diplomat to Viceroy Alexieff would exercise. It would be influence essentially making for peace. Of that Prince Kudacheff entertained no doubt, and he felt equally assured that the desired result would be attained. The Japanese of course knew that Viceroy Alexieff had been entrusted with the duty of overseeing his country's relations with the neighbouring states, and for the intelligent discharge of that duty the Viceroy, naturally desirous of consulting the Russian Representative in Tokyo, has requested the latter's presence at Port Arthur. The Viceroy was a strong man but also a moderate, and the Prince was quite convinced that the effect of such a statesman's conference with a diplomatist of Baron Rosen's convictions should bring about a pacific settlement of existing complications. There had been some delay in the negotiations owing to the existence of slightly perplexing points in Russia's relations with her neighbouring States in the East, but these points had probably been now removed. Viceroy Alexieff had served twenty years in the Far East, and Baron Rosen's experience had not been less lengthy. The advice of two such officials must have the greatest weight in the councils of St. Petersburg, and above all it might be said that without the Viceroy's concurrence the Home Government would not take any definite step of importance in East-Asiatic affairs. Naturally the final decision rested with St. Petersburg, but in view of the facts stated above it would obviously be a more practical course that the negotiations between Japan and Russia should be transferred to Tokyo and carried on between Baron Komura and Baron Rosen, than that they should be conducted in St. Petersburg between Mr. Kurino and the Foreign Office there. The Prince could not tell whether the Japanese Government would view such a method with approval, but he believed that the change would take place. With regard to Viceroy Alexieff's appointment in the matter of relations with neighbouring States, that was a point of Russian internal administration. She was not called upon to make any official announcement on the subject to Foreign States and she had not done so. Of course there was no question of Japan conducting any negotiations direct with Viceroy Alexieff.

The interviewer adds that the Prince being evidently much occupied, he felt constrained to abbreviate his visit, but when taking his leave he asked about the evacuation of Manchuria, since for the completion of that operation only a few days now remained. The Prince did not make any definite reply, as was natural, seeing that—we quote the

interviewer—Baron Rosen's visit to Port Arthur may probably be regarded in some sense as preliminary to arrangements for evacuation.

RUMOURS.

The *Hochi Shimbun* publishes a sensational rumour from Nagasaki to the effect that Messrs. Ginsburg and Company, who have acted for some time as agents for the Russian Government at that port, are packing up all their goods, not excluding even the personal possessions of their director, and are making preparations to quit Japan. This is interpreted to mean that war is deemed inevitable. It is extremely unlikely, we think, that even if Messrs. Ginsburg and Company entertained a belief which no well-informed Russians may be supposed to entertain, they would be getting ready to fly from Japan. Should war break out—and we are not to be understood for a moment as suggesting its probability because we consider the contingency—Russian subjects will be as safe in Japan as they would be in their own country; just as safe as Chinese subjects were during the China-Japan war, when this empire's authorities extended equal and impartial protection to all nationals within its borders. We have heard that there are some persons in Tokyo so unreflecting as to imagine that in the event of war and in the further event of Japan's defeat, no aliens could reside securely in this country. Human passions are not to be accurately gauged, of course, but we have not the least doubt that whatever measure of safety aliens would enjoy in any European country under the supposed circumstances, the same measure of safety would be enjoyed by them in Japan.

The *Chiuo Shimbun* has not been restrained by the caution addressed to Tokyo journals by the Department of War. It publishes statements that a "certain company" of a "certain Division" has received orders to hold itself in readiness for immediate embarkation at Moji, and that some thousands of horse-stalls are in course of construction in the quarters of another "certain Division." If these assertions be well-founded, it is in the interest of the country that they should be suppressed; a consideration which seems to have no weight whatever with journals like the *Chiuo Shimbun*. If they are not well founded, then their publication becomes doubly criminal for their effect must be necessarily mischievous. The balance of good that sensational newsmongers do has never a very large margin.

It is reported in the columns of the *Nichi Nichi Shimbun* that Viceroy Alexieff will leave Port Arthur for Vladivostok about the middle of this month, and will proceed thence to St. Petersburg to lay before the Tsar a report of the conditions existing in the Far East.

The Japanese standing squadron of 21 ships is expected to return shortly to Sasebo, and then to proceed to Takeshiki in Tsushima, where it will remain for a time. The British Squadron is broken up, without any appearance of concentration, but Weihai-wei may be said to be its head-quarters. With regard to the Russian Fleet, the 12 ships which recently left Vladivostok, believed to be bound for Port Arthur, ought to have already entered that place. They have not yet done so, however, and it is believed that they are somewhere on the Liaotung coast.

THE EVACUATION.

Monday, October 5.

We do not hear of any movements in Manchuria indicating that military evacuation is in progress, except such as are reported by Major-General Akiyama, whose views will be found elsewhere in our columns. According to treaty the work should be finished by the 8th instant, but that is obviously impossible if a considerable commencement has not yet been made. There is, of course, one very good reason for some delay; namely, the state of the railway, which, for the past two months, has been impassable owing to inundations. We shall be surprised, however, if that reason be pretexted by Russia, since it would amount to a constructive promise that the restoration of the line would be the signal for evacuation, whereas the attitude plainly taken by her is that she will not evacuate unless certain conditions, not included in the original convention, be now agreed to by China. There can be no second opinion as to the ethics of such procedure. When a definite and unconditional promise is made, the obligation to carry it out can not be shirked by merely asking for additional inducement. But it is altogether futile to apply private codes of morality to international doings. In such matters the value of truth or good faith is purely relative, and when other nations have adapted their conduct to a high standard, it would be time enough to denounce Russia for levelling hers down to a low one. The only consideration is that so long as she consults her own ambition solely, other Powers have an unchallengeable right to see that her acts do not impair their interests unduly.

In connexion with this it is alleged, but only on the very doubtful authority of the *Niroku Shimpō*, that M. Lessar has informed Prince Ching, in a somewhat hectoring manner, that unless the Chinese Government gives solid assurances as to the safeguarding of Russia's already acquired rights and their correlated privileges in Manchuria, Russia can not withdraw her troops. Possibly this may be one of the many so-called telegraphic messages from Peking which seem to be constructed in Tokyo by newsmongers that have only their own conception of the situation to guide them; but the language attributed to M. Lessar is certainly what he might be expected to use.

Tuesday, October 6.

A considerable section of the Japanese and foreign public seem to have fixed upon the 8th instant as a land-mark in the Far-Eastern crisis. People speak as though the sun of peace must surely rise or the clouds of war inevitably descend over the Orient on the day. This, it need scarcely be said, is a vain imagining. The eighth will doubtless come and go just as other days come and go, nor will there be anything to distinguish it. Every one must have seen long ago that Russia had not the least intention of completing her preparations for the rendition of Manchuria on the 8th. It is uncertain whether she has even begun to make preparations, and since, when she does begin, a considerable time will necessarily be required to complete them, no one day can be selected more than another as the inevitable date of agreement or discord between her and the other Powers interested. The eighth of October, 1903, will nevertheless go down in history as the day on which the world found itself in a position to convict Russia of a deliberate breach of contract. That must be very disagreeable for

Russia, morally speaking, but that it will have any practical result we do not immediately see. The world has no recognised mouthpiece in this matter. What is everybody's business is nobody's business. Exasperated, and justly exasperated, as the Japanese people are, we should hope that Japan has too much wisdom to thrust herself recklessly into the breach for the attack of a position which concerns other States nearly as much as it concerns her. On the 8th instant, when Russia is found still in possession, and in apparently unrelenting possession, of a huge territory from which she promised solemnly to take her departure by gradual stages terminating on that day, the time may certainly be said to have come for opening negotiations with her on an unequivocal basis. That is all we can see in the 8th. There will be no thunder or lightning, nor any unusual phenomenon of any kind.

BARON ROSEN.

Saturday, October 3.

Baron Rosen reached Nagasaki in the *Rurik* from Port Arthur on the morning of the 1st instant. His Excellency did not land until the afternoon when he took the night train for Tokyo where he is expected to arrive on the 3rd instant. From Nagasaki come all kinds of rumours based on what is called the unexpectedly speedy return of the Baron. It is asserted, for example, that the instructions conveyed to the Minister by the Viceroy are contrary to the latter's judgment; that great haste was shown by the *Rurik* in laying in stores at Nagasaki; that the officers bought mementoes, saying they should not see the place again, and so forth. But the simple truth is that the Baron's journey has followed precisely the anticipated routine. It was stated in these columns at the time of his departure that his return to Tokyo might be anticipated about the 4th of October, but we subsequently learned that the 3rd was regarded as the more probable date. There is consequently no change of programme warranting any of the Nagasaki canards.

Monday, October 5.

Baron Rosen reached Tokyo at half-past nine on the forenoon of the 3rd instant and proceeded at once to the Legation. The *Fiji Shimpō* says that he had a forty minutes interview with Baron Komura at 4 p.m. on the same day, but other newspapers allege that the meeting did not take place on Saturday. All agree in saying that the conferences of the next two days must have a cardinal bearing on the issue but we ourselves do not take quite such a precipitate view. Some of the Tokyo journals publish reports of a plainly alarmist nature. For example, the *Asahi Shimbun* has a telegram from Nagasaki to the effect that the Agency of the East-Asian Railway at that port has dismissed all its English and Japanese employees. The *Hochi* declares that the British and American Governments have advised their Representatives in Tokyo that the continuance of the present tension between Japan and Russia being generally injurious, every endeavour should be made to induce a speedy and pacific settlement, and further that the French Ambassador in St. Petersburg has intimated to the Russian Government his country's hopes of an amicable arrangement. The *Chuo Shimbun* ascribes to the Treasury an exercise of activity in collecting silver specie

through the medium of the Bank of Formosa and the First Bank in Seoul, which silver, our contemporary opines, would be required for payments on continental Asia in the event of war. Then we find items as to Lieut.-General Terauchi waiting on the Emperor and Major-General Fukushima visiting Baron Komura. Finally, the *Tai-Ro Doshi-kai* are reported to be contemplating an address to the Throne, but as such a step would be very unprecedented, they are likely to have recourse to the stereotyped "committee of investigation."

Speaking of the *Tai-Ro Doshi-kai*, we perceive that several of our contemporaries persist in translating the Association's name as "Anti-Russian." *Tai-Ro* does not mean *anti-Russian*. It has no such significance. The literal meaning of the name *Tai-Ro Doshi-kai* is, "association of fellow-thinkers with regard to Russia." A very false impression of the society's demeanour and doings is conveyed by the erring translation.

We do not here reproduce the editorial utterances of journals like the *Yomiuri* and the *Nippon*. To these, indeed, the term "anti-Russian" might justly be applied, and though neither, not both in combination, may be regarded as representing any large section of intelligent Japanese opinion, they exercise upon foreign observers the influence always attaching to positive evidences as compared with negative. Against the vehemence of such newspapers the moderation and reticence of other and far more influential journals is not duly weighed, and thus the public of Europe and America is much misled by correspondence from this side.

DEATH OF REAR-ADMIRAL LE DŌ.

We announce with regret the death of Rear-Admiral Le Dō, Knight Commander of the Legion of Honour and Officer in Command of the Second Division of the French Naval Squadron in the Far East. The distinguished officer expired on board the *Chateaufort* on the 1st instant.

In the late Admiral Le Dō, the republic of France has lost a man of great merit and personal bravery. Born in November, 1843, M. Le Dō entered the Navy, through the Naval School, in 1860; was appointed cadet in 1863, ensign in 1866, lieutenant in 1870, captain of a frigate in 1884, captain of warship in 1891 and Rear-Admiral in 1900. He was a professor in the Technical Naval School, Under-Commandant of the *Flore*, Commandant of the *Vire* in the Pacific, of the *Meurthe* at Madagascar, of the *Colbert* in the Mediterranean; chief of the Naval Division of the Indian Ocean, Vice-Chief of the general staff of the Navy, President of the Commission of Armament Regulation and member of the Consultative Committee of the Navy; and since February, 1903, was Commander of the second Division of the Squadron of the Far East. He leaves a widow, and son, a navy lieutenant, and two daughters still young. Admiral Le Dō was a dying man when he arrived in Yokohama in the early summer, and it is a pathetic incident of his last hours that he expressed a wish to die on the blue water. His desire was granted and on the 30th September the *Chateaufort* put to sea, the Admiral dying while still within sight of the coast of Japan. The funeral services on Sunday on board the ship, which had returned to Yokohama, were very impressive and were attended by representatives of all the foreign navies having ships or naval quarters in Yokohama.

AN EXTRA.

On Wednesday afternoon the *Chuo Shimbun* published an extra to the effect that on the 4th instant Baron Rosen called on the Japanese Minister for Foreign Affairs and submitted to him a statement in the sense, firstly, that the evacuation of Manchuria being a matter which lies within China's sovereign power, must be settled by direct negotiations between Russia and China, and does not admit of Japanese interference, and secondly that as Korea lies within the sphere of Russo-Japanese influence, Hamgyon-do and the area northward of it must be regarded as Russia's sphere, the district to the south of it being Japan's sphere.

Our contemporary adds that this memorandum was submitted to a Cabinet Council on the 5th instant in the residence of the Prime Minister, when, the military and naval views of Marquis Yamagata, Admiral Yamamoto and General Terauchi having been heard, it was decided that the memorandum should be definitely rejected, and on the 6th instant an intimation of that import was conveyed to the Russian Representative.

We do not attach credit to this story. Such a declaration on Russia's part could scarcely mean anything but war, and it is not believable that she would thus defiantly flout Japan. The *Chuo Shimbun* guards itself by alleging that it does not profess to give more than the gist of Russia's alleged memorandum, but for our own part we suspect the entire tale to be made out of whole cloth for stock-market purposes.

In our issue of Thursday we reproduced the gist of a very alarmist express on the subject of the relations between the Russian Minister and the Japanese Government, published on Wednesday afternoon by the *Chuo Shimbun*, the statements in which we at the same time emphatically discredited. Yesterday afternoon we were informed by the Superintendent of the Yokohama Police that the Department of Foreign Affairs desired it to be known that there was no foundation whatever for the statements made by the *Chuo*.

THE "KING-TAI SHOKWAN."

Telegraphic news from Kobe published by Tokyo journals says that the Chinese firm *King-tai Shokwan* has suspended operations and that its affairs have been taken into the hands of the Russo-Chinese Bank. The firm has a capital of 127,000 yen, and rumour says that it has received accommodation from the Russo-Chinese Bank to the extent of 1,200,000 yen, these apparently liberal advances having been facilitated by the fact that the principal shareholders of the firm were agents of the Bank. It is stated that the firm's business was to make loans to Japanese spinning factories on condition that they bought their cotton through it, an additional charge of some 5 per cent. being put on the staple for the profit of the firm. At first this commission did not appear too onerous, but it was finally felt to be crippling, and the spinners having defaulted, the firm is compelled to close its doors, leaving the Bank to collect its debts from the factories. It is feared that the Bank will show little mercy, and that several factories will presently find themselves in the same plight as the *Heian Boseki-Kaisha*, whose property is advertised to be sold by public auction on account of a debt to the Bank.

THE "TAI-RO DOSHI-KAI."

The *Tai-ro Doshi-kai's* council held a meeting on the 4th instant to consider the proposal for presenting to the Throne an address impeaching the Cabinet's conduct of foreign affairs. Mr. Kudo Kokan was all for the address. Mr. Komuchi Tomotsune suggested delay for the purpose of further observing the Cabinet's procedure. And Mr. Kusume, one of the *Seiyun-kai* seceders, recommended that, in view of the grave nature of an address to the Throne, the better plan would be to pass a vote of censure on the Government in a general meeting. This last programme seems to have secured principal support, and the summoning of a general meeting is anticipated. But the *Tai-Ro Doshi-kai* is a very heterogeneous assemblage of politicians, and in its ranks there are certainly included men just as anxious at heart to assist the Ministry as they outwardly appear disposed to harass it. No one anticipates that the Association will accomplish much.

This association held a general meeting in Tokyo on the 5th instant, when about a thousand persons attended. A manifesto was adopted. It declared that no further discussion of the Far-Eastern question was needed; that the first and second periods of Manchurian evacuation has passed without visible results, and that only three days of the third period remained; that Russia had frequently falsified her own declarations and that there was no appearance of her carrying them out; that she was now employing all her strength on warlike preparations; that her co-called Far-Eastern enterprises seemed to have been prompted by the ambition of seizing Eastern Asia, an ambition long conceived; that her tenure of Manchuria, though nominally for the purpose of protecting her railways and developing commerce, was really for the purpose of appropriating the best positions under pretext of suppressing the Boxers, thereby obtaining a basis for the achievement of her ambition; that there could be no concealing her sinister intention of permanent aggression; that her conduct plainly tended to over-awe China and Korea, to disturb the peace of the Far East, and to establish a state of affairs favourable to her aggressive designs; that the association therefore firmly believed that Japan's natural duty and her national policy offered no margin for reconciliation with Russia's Far-Eastern programme; that, in connexion with this, it was to be observed that Russia had settled her people at Yong Am-pho by a process of menace which did violence to her conventions with Japan and ignored the position held by this empire in Korea; that her new demands presented to China had been an insult to Japan in view of the latter's previously opened negotiations; that all these things amounted to a distinct assumption of an intolerable mien towards Japan and to forcing a quarrel upon her; and that if then the situation became unsolvable except by an appeal to the sword, the whole responsibility would devolve upon Russia. Doubtless the patience and moderation shown hitherto by Japanese statesmen had been prompted by their respect for the preservation of international amenities and their desire to preserve peace; but their temporizing policy and their irresolute procedure had alarmed and angered the nation. Hence, if they pursued a course of procrastination and continued to conduct futile negotiations in the face of exist-

ing conditions, they would only incur the contempt of other Powers and would be laying up fruitless regrets for the nation. Nothing remained now but the one step, decision. Therefore the Association invited officialdom to adopt a finally decided attitude.

The following resolution was then passed unanimously:—

"We, reviewing the present situation, consider that the time has come for appeal to the *ultima ratio*, and that the opportunist, temporizing policy of our officials can not possibly be tolerated."

Mr. Kudo Kokan—the Government's old enemy—then introduced a motion, which was also passed, providing for the appointment of a Committee which should appeal to the Diet to impeach the Cabinet in the event of the latter's continued vacillation.

Colonel Sato next read a communication from Prince Konoye to the effect that the Manchurian question had now entered a cardinal phase and that its settlement concerned the very existence of Japan. Therefore party differences and individual quarrels must be put out of sight. The Prince was fully persuaded that, in spite of various rumours to the contrary, the *Tai-Ro Doshi-Kai* consisted of men earnestly solicitous for the good of their country, and he rejoiced to think that the nation recognised the sincerity of the Association's aims. He regretted that illness prevented him from attending the meeting, but he assured them that on his sick bed one of his great sources of anxiety was lest the temporizing and vacillating policy of the Government should fatally compromise the situation. He conjured the Association not to be influenced by hostile criticism, but to apply itself vigorously to the purposes of stimulating the Government and educating the people.

Mr. Kusume read a declaration of opinion from Count Itagaki. Its length prevents us from epitomizing it with any precision, but its gist was that Japan's long series of concessions to Russia, beginning with Saghalien, must now come to an end, and that the time had arrived for her to take a final stand. The nation of 40 millions would step forward as one man in this matter.

We lay all this before our readers as part of the day's work. But we qualify the story by observing that the *Tai-Ro Doshi Kai* does not represent public opinion by any manner of means. It represents mainly the opinion of some disgruntled party politicians who bid for notoriety by vehemence.

VICEROY ALEXIEFF.

The Vienna correspondent of a St. Petersburg journal is reported by the *Asahi Shimbun* as having obtained some singular statements from Viceroy Alexieff, presumably on the occasion of a visit by the latter to Europe. Alexieff sets out by saying that a collision between Russia and Japan is inevitable, and then proceeds to explain what kind of strategy Russia would adopt. His plan would be to avoid all fights, and to keep the Japanese pursuing the shadow of Russia's forces if the former assumed the offensive. Japan would have to place 200,000 troops in Korea and to keep them supplied with provisions, for which purpose the maritime route alone would be available. That alone would be an immense strain on her resources, and the difficulty would be enormously enhanced for her by the action of the Russian fleet. It is stated by some people that in the first

collision between the Japanese squadron and the Russian, the latter would be disabled. But Russia would not take the risk of such a collision. Her plan would be to collect her fleet in Port Arthur where the vessels would be perfectly safe and whence they could emerge at leisure from time to time to harass and cut the Japanese line of maritime communications.

It is scarcely conceivable that the Viceroy can have used such language, for if the Russian squadron shut itself up in Port Arthur, any of the ships subsequently attempting to emerge would have to run the gauntlet of a Japanese fleet. Such tactics would be doomed to failure throughout, and if Russia adopted the manoeuvre of withdrawing her forces before the Japanese she would be under the ultimate necessity of resuming the offensive under disadvantageous conditions. But we should anticipate in the event of war, which heaven forbid, that neither Power would choose the strategical programme attributed to it by Viceroy Alexieff's reporter—erroneously attributed, as we make no doubt. Japan is most unlikely to saddle herself with the stupendous task of driving Russia from Manchuria and pursuing her along a route which would bring her, at every step, nearer to her sources of strength. That would be about as prudent as the act of a European Power which undertook the invasion of Russia.

THE RUSSO-JAPANESE LEGATIONS.

It seems to be believed in some circles in Tokyo that the negotiations between Japan and Russia has actually commenced, their inception having been a visit paid by Baron Rosen to Baron Komura. The *Hochi Shimbun* undertakes to give in detail the proposals advanced by Japan and goes so far as to state that Russia shows a disposition to make some very small concessions. But apart from the intrinsic improbability of the *Hochi's* version, we regard it as wholly out of the question that any such information can have leaked out. Nothing could exceed the reticence observed by Japanese officials throughout the whole of this affair. There has not been in this country any instance of similarly successful secrecy, if we except the negotiations which culminated in the Anglo-Japanese alliance. Outside a very limited number of persons in the Foreign Office at Kasumigaseki we do not believe that any one knows even approximately what Japan asks for or what reception her proposals have received. At the present moment certain journals in the metropolis speak of the negotiations as hopeless, while others regard them with sanguine eyes. This conflict of ideas merely illustrates the fact that nobody knows. Perhaps it may interest our readers to learn that the journals publishing a hopeful view are the *Asahi*, the *Jimmin*, and the *Chugai Shogyo*. The first quotes Russian opinion in Vladivostok, as conveyed by the Volunteer steamer *Kasan's* crew, to the effect that Baron Rosen has been entrusted with full powers by Viceroy Alexieff, and that a peaceful solution is tolerably certain. The *Shogyo* quotes a foreign diplomat as confidently predicting a pacific settlement, and the *Jimmin* expresses a similar opinion on its own account. On the other hand the *Hochi* and the *Niroku* write gloomily, but journals like the *Fiji* and the *Nichi Nichi* maintain silence.

Of course there is much editorial writing in Tokyo. The *Asahi Shimbun* is very resolute. The gist of its argument is that Russia is merely throwing dust in the eyes of the

world, and that if she have any desire of peace she will show some practical disposition to give effect to her treaty obligations. Our contemporary thinks that so long as these treaty obligations are ignored no negotiations conducted in Tokyo can be of much value. The *Kokumin* takes a somewhat similar view. It considers that the evacuation of Manchuria is the prior question which must be settled before any negotiations become feasible. If Russia fail to carry out her promise in that respect, she will be deliberately inviting the world to pass judgment on her breach of faith, and to declare her unworthy of confidence. Japan is acting in accordance with civilized principles and in concord with the most enlightened Powers. Russia is violating the former and defying the latter. So says the usually moderate *Kokumin*.

LIUTENANT-GENERAL TAMURA.

Lieut-General Tamura's illness seems to have been of an unusual character. He had been suffering for some time from *seinyaku-yen* (varicose veins?), and on the 19th of September his symptoms took the form of repeated nausea. Having many affairs to attend to, however, in his capacity of Vice-chief of the Head Quarter Staff, he did not go on the sick list but remained at his duty until the 26th when his physician insisted on his taking rest. The next day he was examined by Dr. Hashimoto, and on the 30th ultimo he entered the Red Cross Hospital, where he was seen by Dr. Baelz, as well as by Doctors Hashimoto and Iwai. Shortly after reaching the hospital his symptoms developed sudden intensity, and during the night the bursting of a blood vessel flooded the brain and carried him off at once. The Lieutenant-General was only in his forty-ninth year, and had all the appearance of robust health, though of late his corpulence grew remarkably fast. He entered the service in 1877, after two years' instruction at the Military College, and in 1882 he proceeded to Germany where he spent six years, repeating the visit for a term of four years in 1895 in the capacity of Military Attaché to the Japanese Legation in Berlin. Having thus passed ten years in Germany he was an accomplished German scholar, and his keen industry had led him to make a profound study of his profession so that in Japan the public recognised in him an officer of exceptional ability. During the war of 1894-5 he distinguished himself by the soundness of the strategical advice given by him, and in 1902 he received the appointment of Vice-chief of the Head Quarter Staff, which position was expected to have fallen to Major-General Fukushima. He held the Fourth class of the Golden Falcon.

MAJOR-GENERAL AKIYAMA.

Major-General Akiyama and Colonel Oba, who have just returned from the Russian military manoeuvres at Nicholask, speak in the most grateful terms of the treatment they received at the hands of the Russians. They say that nothing could exceed the courtesy and kindness shown to them; that they were accompanied everywhere by officials who looked after their comfort, that their journey was thus made easy for them and that every facility was afforded from first to last. Many of the Russian officers serving in Eastern Asia have been there, they say, for ten years, and Viceroy Alexieff can count his Far-Eastern service

by 20 summers. Major-General Akiyama contrasts this unfavourably with the habits of Japanese officers who dislike remaining abroad for more than two years, but obviously the conditions are too diverse to admit such comparison. He further explains that when a Russian soldier's time expires, the authorities do everything in their power to induce him to settle in the locality instead of returning to Russia, and they are generally successful, especially as substantial aid is given to furnish the man with means of engaging in some bread-winning industry. These ex-military colonists are doubtless the persons constantly spoken of as disguised soldiers.

The two Japanese officers returned by way of Port Arthur and were there just at the time of the Council's assembly and Baron Rosen's arrival. They consider that the significance of the Council has been exaggerated, and that its object is merely to promote the efficient administration of Russia's East-Asiatic dominions. They further allege, and this is perhaps the most important part of their news, that Russia is evidently preparing to remove all her troops from Manchuria except railway guards. For this purpose she is collecting the various corps so as to bring them to Port Arthur, Dalny and Harbin and to the borders of Siberia, whence they can be conveniently removed. The men that are to remain as railway guards carry a distinguishing badge, which is in itself considered by Major-General Akiyama as an indication of the reality of Russia's purpose.

NEW BRITISH CABINET.

The cable informs us this morning of the new appointments in the British Cabinet, which fill the vacancies caused by the disruption due to the attitude assumed by Mr. Chamberlain on the question of the fiscal policy of the Empire, in which he strenuously advocates the adoption of a policy diametrically opposed to the system of free trade under which banner Great Britain has ranged herself since Sir Robert Peel wiped off the statute book the old repressive Corn Laws with all their concomitants in the way of hide-bound protection. There are some surprises for the public in the new appointments. When the news became known that Lord Milner had refused the offer of the King to occupy the position left vacant at the Colonial office by the resignation of Mr. Joseph Chamberlain—perhaps the most successful and popular of Colonial Secretaries since the post was instituted—public opinion fixed upon Earl Selbourne, the First Lord of the Admiralty, as the most likely candidate for the position, but once again the quidnuncs have found themselves at sea, for the man who has taken the office is the Hon. Alfred Lyttelton, better known in the cricket world, perhaps, than in the wider field of public life. He has done good work at the Bar, however, has served the office of Recorder of Oxford since 1895 and has filled various minor posts in former administrations with considerable credit. Mr. Austen Chamberlain succeeds Mr. Ritchie as Chancellor of the Exchequer, passing up from the post of Post-Master-General. He is a young man for such a weighty office, having only been born in 1863, but as the present administration may be looked upon in the light of a stop-gap perhaps this does not matter so very much. Mr. A. Chamberlain once filled the post of Financial Secretary to the Treasury in 1900 and so is conversant with the

work which devolves upon a Chancellor of the Exchequer. Mr. Brodrick has passed from the War Office to the Secretaryship for India, a rather surprising move considering the obloquy which has devolved upon him of late as Secretary for War, but again the reflection is forced on one that the appointment is merely a stop-gap. We may presume from these appointments that a general election is not far off, and that the present Cabinet will shortly appeal to the country upon the question which Mr. Chamberlain has brought so prominently forward. The country is ripe for such a step but they would be short-sighted people indeed who imagine that protection versus free-trade will be the sole war-cry in the conflict. The Nonconformists are mustering their forces, urged thereto by the recent educational legislation of the Government, while a deep and bitter feeling is abroad regarding the mal-administration of the War Office, a feeling which the recent publication of the War Commission's blue-book has done much to accentuate.

DEATH OF MR. E. FLINT KILBY.

It is with deep regret that we announce the death of Mr. Edward Flint Kilby: the end came quietly at 3 o'clock on Sunday morning. Only a short week before, Mr. Kilby took part in a public meeting of subscribers to the Ladies' Hospital Fund, and though he was then evidently suffering severely none present realised how soon the sands of his life were to run out. On the following morning, however, he was stricken with apoplexy and this was followed by other symptoms, which, acting on a weak heart, eventually carried him off. Thus to-day Yokohama mourns the loss of one who played no inconsiderable part in her affairs during the past thirty years. Mr. Kilby arrived in Yokohama in May, 1873, coming out to the Far East for the firm of Hudson, Malcolm & Co. About two years later this firm went into liquidation and as a result Messrs. Malcolm, Wilcox & Co., rose in its place, and Mr. Kilby remained with them, together with Messrs. Seamen and Bellamy, until early in 1879, when, following the death of Mr. Wilcox late in 1878, the firm came to an end. A few years later he joined Mr. Arthur Brent and started the firm of E. Flint Kilby and Company in Yokohama, and Brent & Co., in London. Upon these mercantile concerns dissolving some two years or so ago, Mr. Kilby joined the staff of Messrs. Cornes & Co., with whom he remained till his death. From the day of his landing here, it may be said, he took the keenest interest in all that pertained to the public weal of the community. A good oarsman and runner, Mr. Kilby's face is to be found among many of the older groups of winning crews and athletic teams now decorating the Boat-house or the Cricket pavilion, or enshrined in the albums of the older race of residents. An enthusiast in all he undertook, a man who never spared himself where the general good was concerned, he was perhaps the most successful Secretary the Cricket Club ever had, and when a few years ago he was elected President of the Y.C. and A.C. it was felt by all that the honour had never been more deservedly bestowed. For years a member of the committee of the Yokohama Chamber of Commerce and kindred bodies, he had the honour, in company with Mr. H. J. Holm, of presenting to the Imperial recipient the piece of silver plate which the community subscribed as a wedding present on the occasion of the

marriage of H. I. H. the Crown Prince. Recently Mr. Kilby was elected Chairman of the Yokohama Fire Insurance Association, succeeding Mr. J. D. Hutchison, and here as elsewhere he threw all his energies into the work of promoting the objects and the welfare of the Association. He was also keenly interested in educational matters and, at the time of the Queen's first Jubilee, he took a very active share in organizing the Victoria Public School, and among the most treasured of his possessions was a handsome bronze presented him by Old Boys of the school shortly before his last trip to England. Indeed, there were few public committees on which Mr. Kilby had not at some time or other served, and at his death he was, in addition to being on the Christ Church Committee, Secretary of the Japan Branch of the China Association, and Chairman of the Yokohama General Hospital Committee. But even this does not exhaust the list of his public services. Mr. Kilby was also a Freemason of high rank and held the distinguished office of District Grand Master of English Freemasons in Japan, an appointment he received direct from the King, then Prince of Wales. Only last year he celebrated the silver Jubilee of his admission to Masonic light, and the occasion was seized by the Brethren of the District to present him with a very handsome silver bowl of unique workmanship, together with some silver ornaments for his wife's dressing-table; while the Yokohama Lodge, of which he had been twice master, presented him with an illuminated address. In all his varying activities he won the esteem of every one with whom he came in contact not alone for his fine business capacities, his untiring zeal and transparent earnestness of purpose, but also for the high standard of probity and unflagging public spirit which he always maintained. Few men, in fact, have carried out more thoroughly the Biblical precept, "whatsoever thy hand findeth to do, do it with thy might," and he leaves behind him in consequence the fragrant memory of a well spent life—a life in which works of charity and benevolence bulk largely.

Mr. Kilby is survived by his second wife and ten children, to whom the utmost sympathy will be extended in this hour of their grief and distress.

At Christ Church on Sunday morning, though no reference was made in the sermon to the great loss sustained by the Church in the untimely death of Mr. Kilby, a favourite hymn of deceased was substituted for one already set down on the choir-paper. It was the appropriate and touching "Let saints on earth in concert sing," and there were few dry eyes in church when the stanzas were reached,

One army of the living God,
To his command we bow;
Part of the host have crossed the flood,
And part are crossing now.
E'en now to their eternal home
There pass some spirits blest;
While others to the margin come
Waiting their call to rest.

The funeral of Mr. E. Flint Kilby took place on Monday afternoon and was marked by many touching tokens of esteem and regret. The ceremony was fixed at 4 p.m. and by that time Christ Church was filled by a large congregation. The Rev. W. P. G. Field conducted the service. As the mournful procession entered the church the choir sang the first psalm appointed for

the Burial of the Dead. Following the Lesson the hymn, "Christ hath called unto His own" was sung and then the cortege made its mournful way to the cemetery. The bearers were Messrs. J. Dodds, A. G. Morey Weale, E. W. Wheeler, J. Walter, J. P. Mollison, R. D. Robison, H. J. Sharp, H. W. Lea, E. J. Moss, and E. C. Fox. At the conclusion of the service at the graveside the choir sang "On the resurrection morning" and the simple but impressive ceremonies closed by the casting into the grave by the Masons present of sprigs of acacia. The floral tributes were very numerous.

THE CHINA-JAPAN AND CHINA-AMERICA COMMERCIAL TREATIES.

It appears that the China-Japan revised commercial treaty has been concluded and that its ratification may be expected at an early date. The Japanese Representative in Peking has pressed Prince Ching to expedite matters, and the Prince is said to have promised to do so. The treaty provides, it is alleged, for the opening of Mukden and Tatung-kou, and also removes the prohibition upon the export of rice from China. We do not know that the latter change will be at all welcome to Japanese farmers, but as it makes for cheapening the food of this country's people, it must be regarded as a sound measure.

The United States Representative, who, according to Peking correspondence in Japanese newspapers, left Peking for Shanghai on the 3rd instant, is expected to sign the revised American commercial treaty on the 8th instant, as was arranged some time ago. This treaty also provides for the opening of Mukden and Tatung-kou, and also, it is said, for that of Antung. But according to our own information, the treaty was actually signed on the 3rd instant.

It is re-stated from Shanghai that the signing of the new commercial treaties between China and America and China and Japan will take place on the 8th instant in Shanghai, and, it is now added that after the signatures have been affixed, the United States Representative, Mr. Conger, will entertain the Japanese and Chinese Plenipotentiaries at luncheon. The Chinese commissioner Lu Hai-Kwan, being sick, his colleague, Sheng, will alone affix his name. Of course in choosing the 8th for this ceremony the Plenipotentiaries must have had in view the other and larger pageant which should be completed on the same day, but which has been postponed by circumstances until the Greek kalends. There is an element of force in the notion of China pledging herself to open ports in a territory which is under military occupation by Russia, but the world has become accustomed to these serio-comedies on the Far Eastern stage.

It is stated that the new commercial treaty between China and the United States provides for the opening of Mukden and Antung within twelve months of the date of the treaty's ratification or signature. We can not clearly discern from the telegraphic news whether signature or ratification is intended, though the difference is not immaterial in point of time. A great many things may happen in a year. If they are things bearing any resemblance to those that have happened in the past twelve months, it is not probable that China's treaty engagements about Manchuria will have much validity.

DEATH OF ADMIRAL BOGLE.

In glancing over the record of Rear-Admiral A. G. Bogle, whose death is announced from Italy, one realises how full of stirring incidents were the lives of so many of the officers who served in the senior British service half a century ago. Admiral Bogle, who entered the Royal Navy in 1847, took part as a midshipman in the blockade of Athens two years after, while not many months later he was engaged in Congo waters aiding in the suppression of the slave trade, his experiences including the rescue of an American brig from the hands of pirates, conduct for which he received official thanks. While serving as sub-lieutenant on the *Amphion*, in 1854, he was present at all the operations in the Gulf of Riga, and commanded a gunboat at the bombardment of Sveaborg, while from 1857 to 1859 he distinguished himself in Chinese waters. He took part in the storming of Canton, and was highly commended for services at the capture of the North Gate. Prior to this he went to Calcutta to protect that city during the early months of the Indian Mutiny, and at a later period he was engaged in various operations against the Taiping rebels, receiving the Chinese gold medal and "Order of Merit in Fight." It is interesting to recall that when engaged against the pirates off the Min river, he rescued and refloated a large tea ship, an act which not only secured him high commendation from the Commander-in-Chief, but a substantial salvage award.

CHILD, LIFE IN TOWN AND COUNTRY.

In one of those charming articles which we expect to find every now and again within the inner pages of the *Spectator*, our contemporary draws attention to the great handicap under which a town-bred child suffers in comparison with his cousin brought up in the country. The town-bred child has nothing to replace that vista of dreams which the country child can retrieve at will. He moves in set and ordered ways, even as the stars in their courses. Certain walks he goes, demure and restricted; he trots sedately beside his nurse, or lays a gloved hand in hers. Shouting and running are forbidden. Shops, and people, and traffic, in eternal monotony of noise and hurry, are all that is offered for his outdoor consideration. The sunset is shut away from him behind bricks and mortar. The stars he has only seen by stealth through curtained windows. Dew is a matter he cannot comprehend; snow is something of a peculiar and adhesive dirtiness. Trees there are, and grassplots but they have neither scent nor significance for him. The flowers in the parks and squares are under a *rigine* as orderly as his own, appearing with punctual precision in their appointed times, even as he comes down to dessert o' nights. Birds mean sparrows; there are others mentioned in rhymes and fairy-tales, but he has never met them, any more than dwarfs or talking cats. In his nursery, of course, he romps and roysters; but the whole breadth and depth of outdoor life are denied to him. All his years, whatever he may achieve or enjoy, he will be vacant of those glorious gains, barren of those golden memories, which are the inalienable heritage of his country cousin. Meanwhile the country child is laying up a store of reminiscence that will be a companion to him to his latest hour. The

seasons are no empty names to him; each has its unique and proper delights, none is inferior to another. Day and night are his, especially that luminous mystery of summer night which is the haunt of vague romantic visions. The sunrise he knows, and the sunset, and all the unimaginable expanses of bare heaven, visible from rim to rim. He is far-sighted, because there are such untrammelled distances for his sight to travel; and yet he may be a keen observer of minute detail, expert in the tiny variations of insects, birds, and flowers. He is knowledgeable in the ways of feathered folk, and the rusty leaves at the foot of the oak-tree do not conceal from him the nightingale's olive-coloured eggs. While his sisters are weaving daisy-chains or tossing cowslip-balls, he is immersed in the precarious ecstasy of hunting pig-nuts; or he is away with elder boys to the trout-stream, to return rosilily triumphant. He excavates piratical caves in the sandpit, or jogs a-see-saw on deftly poised timber. His little garden claims devoted attention: he is an adept with rake and hoe, and carries his first-fruits of cress and radishes in proud tribute to a prouder mother. Incidentally, but inevitably, as time goes on, he picks up the use of a gun, an oar, a horse; his holidays are long sequences of dangerous delights, from which his emergence unscathed can only be attributed to special interposition of Providence. The pantomime, the Park, the "Zoo"—are these effectual substitutes for the green and windy young life which has cradled our best and greatest? It is remarkable how many of our heroes have been the sons of some rural parsonage, bred up in that intercommunion with Mother Earth which moulds and invigorates the mind for ever. In the quietude of woods and fields, from the melody of winds and rivers, splendid futures germinate.

DISASTROUS STORM.

The low-lying streets of Yokohama, particularly in the district generically known as China Town, were again flooded on Friday in consequence of the heavy rain-fall.

At No. 27, Bluff, the residence of Mr. L. Mottet, an extensive landslide took place in the course of Friday afternoon, some 30 yards of the hillside slipping away. At Negishi a house fell down a cliff; but no damage was done to life or limb. A fatal accident occurred at Zaimoku-za, Kamakura, a house being buried under a heavy landslide and a nurse and two children killed. The house belonged to Mr. Fujiwara, a well-known barrister of Yokohama. His wife was also buried in the debris but she was fortunately dug out alive. Four men besides the children and nurse were killed in this disaster. Reports of landslips come from the neighbourhood of Yokosuka, and in some cases they have been accompanied by fatal injury to men and women, sixteen deaths being reported up to the hour of going to press.

In the storm on the 1st instant, a terrible calamity occurred off Choshi in Shimosa. Ninety bonito-fishing boats were at sea when the wind swept over the district, and in attempting to make the shore several of them were wrecked. The rest put to sea again, and the final result is not yet reported. Forty-one of the boats subsequently made the land at Kashima, but it would seem that at least 60 lives were lost, and the record may be ultimately found worse.

The damage done by the storm on Friday, Oct.

2nd, in the inland districts is given in detail by telegrams received from various localities.

The Kano river near Numadzu overflowed, with the result that about 250 houses were flooded and two bridges washed away.

The railway between Akishima and Saijo, Nagano prefecture, was damaged and trains were stopped running on Friday. The damage was repaired the following day.

A ferry-boat with over 20 passengers capsized on the Saigawa. One person was drowned and another is missing.

The Governor of Chiba prefecture states that owing to the heavy storm, thirteen boats with a hundred and thirty fishermen are missing. Other eight junks were wrecked off Choshi.

Information from Shizuoka prefecture says that two persons were drowned, three others are missing, five sustained severe injuries, five houses were washed away, 7,870 buildings flooded, 13 junks lost, and many bridges and river banks broken.

Details with regard to the accident at the villa in Kamakura of Mr. Fujiwara, barrister of Yokohama, are given by the *Yokohama Shimpō*. The villa was situated on the hill-side and it slid down the hill together with a large portion of the hill top. The mother, two children, two female servants and three others were buried beneath the debris and all were killed except the mother, who was dug out still alive.

Two tragical incidents occurred at Yokosuka early on the morning of the same day. A landslide took place at Kanonji fort with the result that six houses were destroyed and eight inmates, including Sub-Lieutenant Takami were killed. At Kosugi three dwellings were crushed, two persons were killed, and three others severely injured.

JAPANESE OPINION.

The *Jiji Shimpō* says that the patience of the Japanese people has reached its extreme limit (*kokumin no kannin sude ni kyokudo ni tasseri*). This phrase winds up a very moderately worded article the gist of which is that Japan asks of Russia nothing more than fulfilment of the latter's treaty pledges. Russia has solemnly bound herself to perform certain acts. Instead of giving effect to her promises, she is proceeding in a manner which can not be interpreted otherwise than as challenging this country to a contest. She is not removing any portion of her troops from Manchuria; she is forming a settlement at an important point within Korean territory in spite of the Korean Government's remonstrances, and she is even building fortifications there, if rumour may be credited. Half a year has now been spent talking over the situation, and the result is that it grows steadily worse for Japan. There should be no more waste of time.

The *Asahi Shimbun* prints a long list of the acts of Russia in the Far East since the Manchurian question came upon the tapis, and points out how moderate and self-effacing Japan's attitude has been throughout, though these various incidents were well calculated to provoke and alarm her. She has, in fact, furnished abundant proof of her sincere desire to maintain the peace of the East, whereas, on the other hand, Russia's doings seem to have been uniformly dictated by a spirit of arbitrary aggressiveness. Negotiations are now said to be going on in Tokyo, but it is plain that unless Russia greatly modifies the attitude suggested by her conduct in the past, little hope can be entertained of an amicable settlement.

NOTES ON CURRENT EVENTS.

The committee of investigation in connexion with the affairs of the Wakamatsu Iron Foundry, met in the official residence of the Minister of State for Agriculture and Commerce on the 30th ultimo. It will be remembered that this committee comprises, in addition to several official experts, Mr. Shoda of the Mitsu Bishi, Mr. Masuda of the Mitsui, Mr. Hasegawa and Mr. Kuribara,

members of the House of Representatives. The Committee were asked, in the first place, to decide whether it would not be advantageous to limit the construction of rails at the Foundry to the English standard section, so as to secure uniformity. They decided in the affirmative. The next question related to smelting furnaces. It was decided that work upon these should be vigorously prosecuted, so as to open the first smelting furnace next April, the Bessemer furnace next August, and the Siemens furnace in 1905. The second furnace is to be completed during 1904. Then the Committee were invited to consider the case of foreign employees. They were informed that among 8 now employed, 7 are perpetually raising objections which impede the progress of the enterprise, and one only seems to co-operate heartily with the authorities. It was resolved that these 7 should be dismissed, and that two others should be engaged from abroad in their place. Of course these decisions were conditional upon the attitude of the Diet, which will be asked to vote a sum of 3 million yen on account of the Foundry.

The Japanese Standing Squadrons of 21 vessels, headed by the *Asahi* flying the Admiral's flag, left Masampho on the 30th ultimo and reached Chinghai Bay on the same evening. It is not stated that the Squadron is engaged in any particular manoeuvres. We need scarcely say that all the sinister rumours about an inevitable collision between the Russian and the Japanese Squadrons when they became entangled in the narrow sea between Japan and Korea were so much sheer folly. Had the ships met there would have been a pleasant interchange of courtesies. Japan and Russia are on friendly terms, and the officers of the two empires know how to treat each other as friends.

Frequent interchanges of visits between conspicuous personages, consultations of Cabinet Ministers, audiences with the Emperor, the arrival of Field Marshal Marquis Yamagata in Tokyo—all these things are noted by the vernacular press as indicating an unsettled state of affairs, if not the approach of a crisis. That things are unsettled is not to be denied, and that Japanese statesmen have to grapple with a situation which would become dangerous if suffered to drift, is also undeniable. But the public will do well to avoid any extreme inferences. It may not be doubted that the patience of the Japanese has been strained very severely—strained almost to breaking point—but happily they retain their sang-froid sufficiently to welcome any pacific outcome, nor is there the least reason to fear that without further provocation they will resort to any kind of extreme measure. They have shown a very high quality of self-control up to this moment, and they will continue to show it, we are persuaded, unless their tolerance be flagrantly abused.

Nature repairs her ravages and the ravages of man also. It is now announced that remarkably fine crops have been produced on the lands supposed to have been completely sterilized by the copper-mine emanations, and that the more abundant the latter, the more fruitful the crop. Mr. Tanaka Shozo declares that this is because the inundations of last year deposited two feet of alluvial soil on the devastated areas, but that explanation does not seem to be regarded as quite satisfactory, and people are disposed

to ask whether much of the agitation was not spurious.

Major-General Fukushima has been appointed to discharge the duties of the late Lieut.-General Tamura's post in conjunction with those of his own. It is fully expected that General Fukushima will presently be named to General Tamura's office—Vice-Chief of the Head Quarter Staff. But he is now on the sick list, having only just emerged from a somewhat serious illness, and his complete recovery will be awaited before the appointment is made.

The three new cruisers now building in Japanese Dock-yards are rapidly approaching completion. The *Nitaka* (3,420 tons), under construction at Yokosuka, is receiving her armament and will be fit for active service in a few days. The *Tsushima* (3,420 tons), a sister ship, was launched some time ago at Kure and is now being fitted. She will be added to the strength of the fleet next month, it is expected. The *Otowa* (2,900 tons), which is building at Yokosuka, is still on the stocks but will soon be launched.

The Naval correspondent of the *Globe* says that the new Russian battleships (six in number), which have for some time been considered mythical rather than substantial, are now known to be in process of design, if not of actual construction; and the following particulars are given of their chief dimensions: Length, 435 feet; beam, 80 feet; draught (mean), 26 feet; horse-power, 18,000 to 20,000; speed, 18½ to 19 knots. Displacement 16,000 tons. They are to be enlarged *Borodino* class. The engines will be of the usual four-cylinder, triple-expansion type; and the boilers will be: in two ships *Belle-ville*, in two *Niclausse*, and in the remaining two ships of a type yet to be decided. The armament of these ships will consist of four 12-inch and twelve eight-inch guns, all to be carried in turrets, but in order to avoid interference, the turrets will be placed on different levels. Russia also contemplates building some very fast cruisers. Not less than 23 knots is mentioned as the speed. The authorities, however, appear to be divided in opinion as to the best size of ship to build. One party desires to have ships of 10,000 tons displacement reduced to *Borodino* type, armed with four eight-inch and twelve six-inch guns; while the other party is in favour of reproducing the 8,000-ton *Bayan*, which has been a very successful ship. The *Bayan*, although nominally a 21-knot ship, has exceeded that speed on several occasions, and is able to maintain it for twelve or more hours without difficulty. In fact, Russia, like several other countries, is beginning to estimate speed as the preponderating factor in Naval warfare. The *Bayan*, by the way, is expected in Far Eastern waters shortly.

A successful "official" trial was run in August with a light-daught river gunboat recently completed by Messrs. John I. Thornycroft & Co., of Chiswick, for the Japanese Government. This boat is similar in most respects to the *Woodcock* and *Woodlark* of the British Navy, also built by Messrs. Thornycroft. During a three-hours' full-power trial, the new vessel averaged a speed of 13.29 knots, and in six runs on the measured mile the mean speed was 13.37 knots. The contract specified for a speed of 13 knots, so that there is a good third of a knot in excess. The propellers are of the "Thornycroft Patent Screw-turbine" type,

which have shown themselves so efficient in shallow-draught steamers of various kinds. The engines are compound surface-condensing, and the boiler is of the "Thornycroft" water-tube pattern. The armament of the vessel consists of two six-pounder guns and four Maxims. The length is 145 feet, beam 24 feet, and the draught of water two feet. She is built in what are known as "buoyant sections," and as soon as all the work connected with her structure is completed to the satisfaction of the Japanese authorities, the various parts will be dispatched to Japan in a merchant steamer.

The annual general meeting of the members of St. Andrew's Society was held at the Club Hotel, Yokohama, on Friday evening. After the usual formal business had been transacted the following officers and committee were elected:—President, Mr. H. Keswick; Vice-President, Mr. A. J. McClure; Hon. Treasurer, Mr. W. G. Peter; Hon. Secretary, Mr. N. G. Maitland; Committee, Messrs. R. B. McKinnell, A. K. Riddle, H. V. Summers, R. Anderson, H. C. Gulland, and A. R. G. Clark. It is more than probable that a ball will be held on the anniversary of the Society's patron saint.

Telegrams to the Yokohama Specie Bank state that the following rates were quoted in the London market on the 2nd instant:—

Japanese 5-per-cents, latest issue..	£ 97	2s. 1½ d.
Japanese 5-per-cents, endorsed bonds.....	£ 101	6s. 4½ d.
Japanese 4-per-cent, bonds.....	£ 82	15s. "
Chinese 4½-per-cent, bonds	£ 91	5s. "
English 2½-per-cent. Consols.....	£ 88½	" "
Indian 3½-per-cent. bonds	£ 66	" "

Such low quotations are unprecedented.

A notable result of the eruption of Mont Pelée, Martinique, is a huge obelisk, or tower of rock, extruded from the top, and adding 800 or 900 feet to its height, which is now some 5,000 feet. The pillar issues from the new cone of the volcano, and virtually plugs it. At its base the column is some 300 to 350 feet thick, and from certain points of view tapers to a needle or "aiguille." It also appears to bend, or arch, over towards the south-west, or in the direction of Saint Pierre. On the south-western face it is cavernous and slaggy, showing where explosions had carried away parts of the substance. On the opposite, or north-eastern, face, the surface appears solid and smooth, but having parallel grooves like glacial markings. It shows the marks of attrition by the surrounding rock. The tower is composed of lava, which solidified before it could flow over the crater. The mass has grown by accretions from below, and it appears to have a vent, or tube, up its interior, as red-hot stones and steam have been observed to issue from the apex. The formation seems to account for the "sugar loaf" and conical hills of volcanic rock found in Scotland and elsewhere—for example, Rio Janeiro.

Japanese newspapers agree in stating that the tenders for the first line-of-battle ship under the third-period programme of naval increment have reached Japan, and that the tender of Messrs. Vickers, Maxim & Co. having proved the cheapest, they have secured the order.

The death is announced of Marquis Ito's mother at 2 o'clock on the evening of the 7th instant at the age of 85. She had been in indifferent health since 1896, and recently her malady took the form of inflammation of the lungs, which, in the course of two days, proved fatal. Doctors Hashimoto, Baelz

and other physicians were in attendance. The decease took place at Marquis Ito's villa in Oiso, and there is as yet no announcement of the date of the obsequies.

TRAINING NOTES.

It is much too soon to pass any remarks on the Training for the Autumn Meeting; most of the new batch of Australians not being in a condition for even a mild gallop. Of the 23 arrivals Nos. 2, 8, and 19 have not made any appearance on the course: No. 1 is back in her stable on account of sickness, Nos. 12, and 21 have only recently come up; at the present moment Nos. 5, 6, 10, 14, 16, 17, 18, 23 and 24 have done the most work and I rather fancy Nos. 5, 14, and 16. The latter is considered as having the best show for the Grand Prize on the first day, but as there is still plenty of time, some of the others which at the moment look weak may show up later on. The China Griffins are a very fair lot and it is difficult to choose a favourite, although Nos. 1, 7, 8, 9, 12 and 13 are no doubt the best; the race will probably lie between the three latter ponies: The Old Class of China Ponies consists of The Leader, Sunrise, Aberdeen, Max Willem, Moth, Bauernfaenger, Nippon, and a newly imported skewbald. Nothing can hardly touch The Leader although Moth may run very close; they are all working very hard, and with a little more energy on the part of the new skewbald should make this pony come along pretty well to the front. Of the Older Class of Australians the following are making their appearance on the course.—The Beetle, Tenryu, Melbourne, Cameo, Maymie, Ulenhorst, Suzon, Desdmona and Fujikawa. There has been a change of ownership of four of these horses; Melbourne, which I understand will be named Rose de France, is a stablemate with Suzon in new hands, whilst Ulenhorst in the hands of Mr. R. Field with Mr. Catto up, should win the Champions. Desdmona and Tenryu will make a very good fight for the shorter distances, Maymie and Fujikawa will also have to be counted with. The Spring Subscriptions which are left are Marigold, Brisbane, Izumo, Yashiro, Hatsukaze, Seabreeze, and Ivy; out of these there are only three which would be considered good, viz Brisbane, Izumo, and Ivy; the latter is the best of the bunch, and has lately done a few furlongs at 14½-15 seconds per furlong, the best done in training so far this season. The Course is in the best of condition, and with the big field we should have a very large and successful meeting. The Grand Stand is having attention from the Committee, and the new iron railings around the weighing paddock and entrances to the Grand Stand, makes the place look very neat. A new building of two stories has been put up alongside of the Grand Stand where the former Dining Room used to stand; the lower floor of the new building I hear is to be used as a Pari-Mutuel for Members, whilst the upper floor which has been very nicely put up, is to be used as a Dining Room. There is so far no place for the Band, which however the Committee no doubt are attending to, without any suggestion on the part of the early rising

LARK.

SUICIDE OF A FOREIGNER.

A sad affair occurred on the morning of Wednesday (the 7th) at the Waverley House, No. 88, Yokohama. A foreign gentleman, Mr. Allan Strachan, by name, who is said to have come from Iliolo, where he was engaged in business as a mining engineer, attempted to commit suicide by cutting himself in the throat with a razor. The man was immediately removed to the General Hospital for treatment. It seems that the poor fellow had been grieving over the loss of his wife, who died in the Red Sea, while on the way to rejoin him, and also about business worries. Dr. Hall has been attending him since he arrived in Japan. Mr. Strachan passed away at 2.45 a.m. on Thursday. He was about 50 years old.

THE SEAT OF NEGOTIATIONS.

COUNT OKUMA, speaking through the columns of the *Yomiuri Shimbun*, disapproves of the idea of removing the seat of the Manchurian negotiations from St. Petersburg to Tokyo. We find a similar expression of dissent in the columns of the *Nippon*, but the statesman and the publicist base their verdicts on different arguments. Count OKUMA's view is that if the result of several weeks discussion between the Japanese Legation in St. Petersburg and the Russian Foreign Office has been merely to transfer the negotiations to Tokyo, then it must be said that scarcely any progress has been made, and that something very like a policy of drift has to be charged against the Japanese Government. In such a policy the Count sees the greatest danger of war, for the situation may at any moment elude the control of diplomacy. He would have the Foreign Office act energetically, without pausing to inquire what kind of proposals Baron ROSEN may have brought back with him. So far as the Count's general condemnation of a policy of drift is concerned, everybody must agree with him, but we confess to some difficulty in seeing how Russia could have been forced into a display of alacrity when her purpose was deliberation. Delay in negotiating does not change the facts to be discussed. It does, however, produce a mood of impatience on the side of the aggrieved party, and Russia's prudence in provoking such a mood must be judged by the result. As to the *Nippon*, however, it writes as though the transfer of the negotiations to Tokyo meant that Viceroy ALEXIEFF is to be Japan's *vis-à-vis*, and that everything is to be referred to him not to St. Petersburg. Against such a notion our vehement contemporaries gird angrily. It wants to know who Viceroy ALEXIEFF is and what Japan has to do with him. We imagine that in this matter the *Nippon* is battling with shadows. It has never been suggested, nor would such a suggestion be tolerable for an instant, that Japan should be required to take her imperial affairs into the Court of a Russian Viceroy in the Far East. The question—assuming that any question arises—would be whether her own Representative in St. Petersburg should negotiate with the Russian Minister of Foreign Affairs in that city, or whether Russia's Representative in Tokyo should negotiate with the Japanese Minister of Foreign Affairs in the latter city. The cases are precisely analogous. It might be that Baron ROSEN, did the duty of negotiating fall on him, would have received his commission in the first place from Viceroy ALEXIEFF. But that would be a matter of no concern to Japan, since the Baron would necessarily be the Tsar's nominee, and it is not for this country to inquire into the preliminaries of his nomination; that is Russia's business. Events alone, we anticipate, will supply a clear definition of Viceroy ALEXIEFF's functions as regards the relations

between the districts he governs and the neighbouring States. In the decree appointing him this matter is but briefly referred to:—"The diplomatic relations of the Far Eastern Province with neighbouring States shall be centralized under the direction of the Viceroy." It is not even clear whether Japan is to be included in the term "neighbouring States," and it certainly does not appear that there is any intention on the part of the Tsar to place VICEROY ALEXIEFF in direct contact with the courts of Eastern empires for diplomatic purposes. Such procedure would be wholly at variance with international usages and could not be endorsed for an instant by those empires. The fact seems to be merely that questions relating to Russia's East Asian provinces of Amur and Kwantung are to pass under the Viceroy's deliberation before they receive final consideration in St. Petersburg. That, being a matter of Russia's domestic administration, does not invite foreign interference.

We speak here of Kwantung as a "Russian province" because the Tsar himself calls it so. Kwantung and Liaotung are synonyms. We are to conclude then, it would seem, that all diplomatic disguise has been abandoned in the matter and that the lease of Port Arthur and Talien to Russia by China for a fixed term of years has converted the whole peninsula into a Russian province. That in a public and very unequivocal declaration, *ubi et ubi*, of what is involved in the temporary leasing of foreign territory to Russia. The moral with regard to the Yalu Valley and Yong Am-pho is clear.

THE EIGHTH.

THE eighth of October has come and gone uneventfully, as was to have been expected. Doubtless the new commercial treaties between China, on the one hand, and America and Japan on the other, were signed in Shanghai, but by way of set-off Russia put the last touch in Manchuria to a striking object lesson as to the worthlessness of treaties in general so far as she is concerned, and incidentally as to the worthlessness of one most important clause in these particular treaties, namely, the clause providing for the opening of certain ports in Manchuria. It is, as we have already had occasion to say, little better than a farce that China's sovereignty in Manchuria should be treated by foreign Powers with the seriousness implied by these new covenants. The carrying out of any promises made by China with regard to Manchuria depends entirely on Russia's volition, and under these circumstances to enter into a grave compact with Peking for the opening of Mukden, Tatung-kou and Antung can only be regarded as a diplomatic make-believe. According to all news from the Chinese capital, the Russian Government, or at all events Viceroy ALEXIEFF, is determined that pending the satisfaction, in part or in entirety,

of the newly formulated demands, Manchuria shall remain in military occupation; and it would seem that the other Powers are quietly watching the situation which they apparently regard as having resolved itself into a duel between Russia and Japan. It is needless to elaborate the theme of Russia's treaty-breaking. There has been nothing more flagrant in history during recent centuries. The dates for the evacuation of each part of Manchuria were definitely fixed and carefully embodied in a covenant which received the signatures of Russian and Chinese plenipotentiaries, and were ratified by the monarchs of the two countries. Russia made a semblance of adhering to her engagement in the case of one of the dates, but when the time came for observing the others she formulated in Peking a new series of demands which, if acceded to by China, would have rendered illusory the evacuation promised in the original covenant. It would scarcely be possible to treat a compact with more cynical indifference. Russia's position is that she now declines to fulfill her pledges unless there be substituted for them a situation which deprives their fulfillment of all practical significance. There is no desire on any side to judge Russia harshly. The very greatness of a great Power compels it to yield to exigencies which a smaller State might ignore. Where Russia seems to have tactically failed was in binding herself by explicit engagements which the situation manifestly growing under her manipulation in Manchuria must render exceedingly difficult to observe. The result is that she stands condemned to-day as an unequivocal treaty-breaker, and though the substantial prize remains to her, the cost to her reputation is great. She has counted that cost, we must assume, and is deliberately prepared to incur it. At least she is to be complimented on the fact that no serious attempt has been made by her publicists to furnish excuses for her breach of promise. The world has not been told any stories about renewed Boxer disturbances or bandit raids. Russia evidently intends it to be understood that she is frankly obeying the impulse of empire-building, and she certainly presents a more respectable figure in that guise than in the mien of a futile apologist. Meanwhile, so far as we can see, the Japanese nation preserves its sangfroid. Undoubtedly there is a strong undercurrent of indignation, but the surface remains calm, and it is permissible to hope that moderate statesmen will still retain control of the situation though their tenure must grow daily feebler unless some satisfactory settlement be made.

We fail to see why Japan alone should step into the breach about Manchuria. Manchuria has not for Japan any special interest except as a basis for assaults against Korea. What concerns this empire vitally is that Korea should not fall into Russian hands, and, if that end can be secured, there does not seem to be any valid reason why Japan should

act as the champion of Europe and America in the Manchurian lists. It is necessary to observe, however, that if the most explicit of treaties has failed to bind Russia in any way with regard to Manchuria, the value of a treaty with her in the case of Korea becomes exceedingly problematical. Practical friends of Japan would like to see her safeguard her vital interests by the use of instruments more potent than pen and ink. It is thoroughly distasteful to be obliged to write in this manner about Russia, but truly she has left no room for choice. That her rule in Manchuria will make for the good of the district and will promote the cause of civilization, we frankly recognise, but that her manner of establishing that rule has been thoroughly uncivilized we are equally bound to admit. However, Japan has no mission to pose as the guardian of treaties in general. Since the fiat of might has been openly substituted for the force of compacts, Japan's course, in our opinion, should be to secure herself beyond all peradventure against the only contingency which constitutes a real danger for her and which now plainly threatens, namely, the absorption of Korea into Russia's dominions.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the *Chūō Kōron* (Buddhist) the opinions of Count Itagaki on the necessity of changing Japanese customs are quoted at considerable length. The tone of the Count's remarks is that of a man who is disappointed at the rate at which Japan is progressing. Notwithstanding all the efforts made by the Government, the mass of the people keep to their old customs most resolutely, says the Count. He then proceeds to enumerate various particulars in which the times call for radical changes. In the first place, he says, it is desirable that the contempt for the Chinese which one so frequently hears expressed should give place to an intelligent appreciation of the many good qualities they possess. Japan still retains many insular notions in reference to foreigners and this hinders international intercourse. The *sake* drinking customs the Count considers a perfect bore. He himself dislikes *sake*, and yet at public meetings he has to drink sips with some hundreds of guests until he is wearied of the perpetual cup-washing involved. Such practices originated of course with small family or social gatherings and were never designed to be extended to assemblies such as come together for the discussion of politics in modern times. The same may be said of the habit of giving presents to suit the seasons or after returning from a journey. When intercourse widens and friends are numbered by the hundred, such customs must be dropped. The nation is supposed to have adopted a new ideal, to have widened its views on things in general, to have thrown off the shackles that bound it in feudal days, but in the matter of intercourse with each other the majority of modern Japanese scrupulously follow the customs of their ancestors, which are characterized by exclusiveness, constraint, and empty ceremonial.

* * *

Messrs. H. Shi Tōru, Nakae Tokusuke and Ōi Kentarō form a trio that will long be remembered in the history of Japanese thought. Two of them have gone to the land of shades. The third, after spending 10 years away from the political world has recently entered the arena afresh. Mr. Ōi has for many years past taken a great interest in working men and in the socialistic movement of which so much has been heard in this country during the last few years. He was the founder of the Dai Nihon Rōdō-kyōkai (The

Japanese Workingman's Association) and is now its President. He has lately started a periodical called *Heimin no Tomo* (The Common Man's Friend), in which many of the crucial questions connected with labour and capital and socialism generally are discussed. In the second number of this publication, under the title *Bushi ni ni-gon nashi* ("A knight never goes back on his word" meaning here the Bushidō can never be changed), it is contended that the use of the Bushidō as a basis of moral teaching in modern times is quite impossible, since the whole system is founded on political conditions that no longer exist. It was a code of morals developed by feudalism and one that sacrificed everything to feudal interests, as is expressed in the saying:—*Shukun no tame uchijini suru, fudo no jō mo, saishi no ai mo chūgi no tame ni wa nani ka sen?* (When dying fighting for one's master, affection for parents and the love of wife and children are thought nothing of compared to loyalty). The times have altered and men can no longer live by using the sword. In old times they thought of how best to kill others or how to die themselves in honourable fashion. But in modern times men are concentrating all their thoughts upon ways of maintaining themselves and those dependent on them. What battles they do wage are peaceful ones connected with electioneering. We do not say that no loyalty, no filial piety, no integrity and honesty, are needed to-day—they are more needed than ever. But these virtues can no longer be developed in the manner familiar to readers of Japanese history. The despotic rule which these virtues were utilized to support has gone and we live under entirely new conditions. In these days of keen competition and comparative equality among the classes, men are talking about their rights, about independence, liberty, and the like, and the old Confucian cry of *chūko*, *chūko* sounds to most people out of date. It is not subjection and submission that need to be preached to-day, but self-reliance, self-respect and independence; and this educationists especially should fully recognize. There is little use nowadays in teaching mere abstract morality in the way that is done in most of our Middle Schools. Moreover many of the instances quoted from Japanese history as models for the imitation of the modern student have lost all their significance owing to the altered conditions of life. The helplessness of the teachers of ethics in Middle Schools is shown by the reliance they place on the Imperial Rescript on education as a means of imparting instruction in morality—a function it was never designed to fulfil. If any teacher is bold enough to hint that the Rescript needs to be supplemented by a great deal of particular instruction in order to fulfil its purpose, he is at once accused of want of respect to the Emperor and peremptorily dismissed from the school to which he belongs. Existing sensitiveness on this subject is responsible for the action of the Mombushō in the Tetsugakkan affair—action for which the Department is beginning to show some, though not sufficient, regret. . . . The authorities seem to think that there is no morality that needs teaching which is not embraced in the words *chū* and *kō* (loyalty and filial piety). One of the most recent of Police Regulations is an illustration of this. Orders have just been issued to the Tōkyō troops of itinerant story-tellers whose performances (consisting partly of chanting and partly of the narration of ancient tales) are known as *Naniwa-bushi Kataru* to the effect that only such stories as teach *chūchin* (loyalty to superiors) and *kōshi* (孝子) (filial piety in children) are to be related*. This action represents the general feeling in official circles.

Repeat the old watchwords; insist on submission to authority; keep up the notion of the sacredness of the Imperial Rescript and you will do

* One can imagine how adeptly these low-minded story-tellers will contrive to give a virtuous air to the lives of crime which they describe by making the hero utter a few ear-catching pious sentiments before he dies. And how are the Police going to decide on the moral tendencies of stories, we wonder, when even University specialists differ on such questions?—(WRITER OF SUMMARY).

all that is required to make people virtuous, says modern officialdom. The superficiality of this advice astonishes us, says the *Heimin no Tomo*.

* * *

The *Bunko* (文庫), a new publication, aims at bringing about a change in the character of Japanese popular fiction. In a recent number it calls attention to the fact that the following magazines all rely principally on fiction for their circulation.—The *Shinshōsetsu*, the *Bungei Kurabu*, the *Bungei Kai*, the *Shincho Bungei*. With the exception of the first, these periodicals publish stories about *geisha*, with illustrations which are injurious to morals. The *Bunko* has much to say about the vulgarity and general contemptibleness of the men employed by Japanese newspaper managers to collect material for publication on the third pages of their journals. They are men without any sense of honour, who are not above employing shameful means of obtaining information. The *Bunko* in treating the question of the discussion of personal matters in newspapers, says that there are numerous irregularities committed by individuals which certainly ought to be exposed, that in the case of some abuses the surest way of getting rid of them is to inform the general public of their existence. But the thing is overdone and the newsmongers only aim at causing a sensation and have no regard whatever for truth.

* * *

In the *Keisei* Mr. Ebina Danjō writes on optimism in the following strain. Though Brahmanism is usually considered to be pessimistic, it has a very strong optimistic element in it. It assumes that the Brahmins are indifferent to and unaffected by the world's changes and that, whatever may be the fate of States, nothing can rob the Brahman of that great superiority to other men which belongs to his caste. The Brahmins are the kings of mankind. They rule in that ethereal region of thought where the effects of great political changes are not felt. Whether India is subject to Russia or to England is a matter of supreme indifference to the Brahman. Thus is he ever optimistic, come what will. . . . We find among the Chinese a similar state of mind. Nothing seems to shake their faith in their superiority to all other races. Among the best educated Chinese it is quietly assumed that their Emperor only is the son of Heaven, and their sages teach that only high moral character in Chinese Emperors is needed to ensure for them universal dominion. Their saying, *Tenun junkan shite, yukite kayerazaru wa nashi* (The fortunes [of a State] after making many revolutions revert to their original condition), well illustrates their habitual feeling in reference to the political changes through which they pass. If they come under the yoke of Russia it is only one of the revolutions of fortune. It cannot affect seriously their superiority as a people. Coming to the Japanese in ancient times, as is evidenced by their mythology and by many of their customs, they were highly optimistic. So optimistic were they that they worshipped the moon as a man and the sun as a woman, thus elevating the lesser light into a position of honour. But Buddhism changed all this, and owing to its influence all our literature became pessimistic. That the pursuit of pessimistic literature is bad for young people goes without saying, and one is very surprised to find books like the *徒然草*, *Tsurezuregusa*, the *方丈記*, *Hōjōki*, and the *Heikemonogatari* still used in this Meiji era as text-books in schools. But the question is, has all the optimism been driven out of Japanese human nature by Buddhism? I think not. There are in national character permanent traits which it is almost impossible to eradicate; Japanese optimism is one of these. Though we have lost the optimism of the nation's youth, we have by no means become wholly pessimistic. There are many forms of Buddhist pessimism and in some cases the pessimism we find is no other than modified optimism. The effect on Buddhist thought of the development of the Bushidō was considerable. This was natural; as the Bushidō may be said to have been a product of the teaching of the Zen Sect. As regards the Nichiren Sect, through it is customary to regard it as one

of the ordinary Buddhist bodies, Nichiren was no real Buddhist, but a man whose whole mind was permeated with Bushidō teaching. What Buddhism there was in him was transformed Buddhism. Though at one time the Bushidō showed signs of a pessimistic taint, in the sixteenth century it began to display a distinct leaning towards optimism, and in later years this tendency grew stronger, until to-day we find that Japanese optimism is largely based on Bushidō teaching. . . . At the beginning of the Meiji era Buddhism was unpopular and the nation reverted to its ancient creed, which meant a revival of optimism. But in recent years there has been a strong tendency to go back to Buddhism once more, owing to its possessing more substantial religious elements than Shintō, and perhaps partly too on account of its cosmopolitan nature, and this tendency has given a new impetus to pessimistic thought and has led men to regard this human life of ours as meaningless. There can be no stable foundation for optimism outside of man's inner consciousness. If a man's mind is thoroughly dissatisfied with human life, then deterioration in character or suicide must follow. A man's conscience must yield him satisfaction if he is to have it at all. A man must be able to say *Kami moshi furi naraba, ware wa waga gi wo manotte shinan* (Even though God be unjust, I will observe what I consider just till I die). . . . What are known as the elder statesmen are all pessimistic. When some time ago Itagaki said to the man who had designs against his life, "Liberty will not die though Itagaki be killed," he showed himself to be highly optimistic. But his recent utterances have been decidedly plaintive. He mourns over the fact that the modern political world is without an ideal. Why does he not give it one? What is the object of his going on living if he cannot do this? If he has no longer any hope of bettering his contemporaries, may he not be said to be already dead? It is asserted that in his last days Mr. Fukuzawa was persuaded that religion is necessary. But this was a conviction that only came when he was very weak.* Count Okuma has given up the notion that material civilisation supplies all that man needs and now contends that moral and religious ideals are necessary as elevating and refining agencies. What about Marquis Itō? Well, the one ambition of his life is to produce a superior class of political party. Do present appearances indicate that he is likely to succeed? Though many of them are rich, though they live in grand houses and enjoy the best of everything, the elder statesmen are dissatisfied. They are suffering from the feeling that the glory of the world is transient, and so are in a frame of mind to listen to religion. In character they certainly are much inferior to the warriors of the sixteenth and seventeenth centuries, who when they stood on the brink of the grave showed no disquietude and no misgivings. As they lived so they died. Maeda Toshie shortly before his death observed that his wife was engaged in sewing up the sides of the bag known as *nusabukuro* (a bag containing the *gohei* or other emblems, which was supposed to help the bearer to enter paradise). "That is not needed," said the warrior. To which remark his wife replied:—"But having killed so many people in this world, would you not fare very badly in the next world without it?" "Since no doubt a large number of my retainers have been taken to hell," replied Toshie, "I shall have to go there too."† This was dying like a true knight, regarding the future with no anxiety whatever. This is optimism—meeting all that has to be met with philosophic cheerfulness.

* Mr. Ebina's meaning is somewhat obscure here. His words are *Fukuzawa Sensei mo, owari ni Shinkyo no hitsuyō wo satoritari. Satoritaru wa yokeredomo, jitsu wa yowari kitta satori de aru. Whether the weakness referred to was bodily weakness or the realization of a mental vacuum that needed filling is uncertain. Our own opinion is that Fukuzawa never felt any need of religion for himself, though he repeatedly admitted that others required it.*—(WRITER OF SUMMARY.)

† The saying of course indicates that he believed neither in heaven nor hell, and could die quietly without worrying himself about either place.—(WRITER OF SUMMARY.)

Optimism implies the possession of courage that enables a man to triumph over every difficulty or trouble that he may encounter.

The *Krisi*, from which we have quoted above, has an article entitled "Muscular Christianity (*Wanyoku-teki Kirisutokyo*)," written by Mr. Matsumura Kaisei, which gives expression to the following sentiments: In certain quarters we constantly hear that what we as a nation most need is to be more industrious and saving, to seek for lasting peace of mind and to give up altogether our reliance on physical force—war should cease. In a word, what is recommended is that we should be more docile, more meek, less energetic and pushing—that passivity should take the place of activity. And in order to drive home this counsel, Bible precepts enjoining humility, patience, and meekness are quoted. So much has this teaching prevailed in certain churches that time and again when Christians have been confronted with a situation requiring pluck, spirit and determination they have shown the white feather in a most ignominious fashion. When Dr. Imbrie was attacked in a very cowardly manner by the students of the First High School, the Meiji Gaku-in Christian students were too frightened to interfere. They simply looked on. To quote another instance, when a short time ago I was delivering a lecture at the Young Men's Association Hall in Kanda, I was interrupted in a most rude fashion by a young man who came on to the platform and made a great disturbance. Though there were many Christians present, not one of them stirred a finger against the intruder. They all looked on in trepidation while a non-Christian young law student forced the young man off the platform. This well illustrates the prevailing spirit among Christians. They think that on all occasions they have to be meek and forbearing and that when smitten on the one cheek they must turn the other also, forgetting that there are occasions when the sword even must be drawn and unscrupulous rogues must be killed (*toki to shite katana mo nukaneba naranu, hito to mo horesaneba naranu*). On such occasions they must be prepared to lay down their lives in defence of what they consider right. Christians should not of course mix themselves up with disputes whenever it is possible to avoid them and they naturally desire not to be present on occasions when an appeal to physical force is likely to be made. But when they do find themselves face to face with a situation where courage is required, if they display cowardice, they bring shame and reproach on the Christian cause. There is too much of this among teachers in our Japanese Christian Church. (*Warera wa sō in senkei to mo ōku mita, sōshite sannen ni kanjita koto ga kutabi ka aru*).

Here is the gist of what that well known Christian writer Mr. Ishikawa Kisaburō has to say on "Christianity and Socialism." It is not surprising that the effects of the wave of socialism which is passing over Europe and America should be felt in Japan. Among the promoters of the socialistic movement in this country Protestant Christians have taken the lead, and some of them seem to assume that socialism is one form of Christianity. It is on this account that we purpose stating our opinions on this topic. The socialistic question is primarily an economic question. The education and protection of the working-classes are not subjects which Christianity should shirk; but it is important to observe that the aim of ordinary socialists being to alter by legislation the existing relations of different classes of the community to each other, it is essentially at variance with the teaching of Christianity. Christianity relies on moral persuasion only for effecting reforms of every kind in society. Men are not to be forced by law to be good, but must of their own free choice act in a just and benevolent manner to their fellow-men. The preachers of the gospel of love cannot work hand in hand with the advocates of legal compulsion. Good that is forced is of little value from a Christian standpoint. Christianity, while exhorting the rich to bestow alms on the poor and to pity the afflicted, gives the poor no right to demand assistance from the rich, and

at this point it is that Christianity and ordinary secular socialism go different ways and become irreconcilable. As for the compulsory division of property which is advocated by many socialists, it is in direct opposition to the teaching of Christianity. Not a few writers quote Acts II. 44, 45 as supporting socialism. But this proceeds from a misunderstanding of the passage, which simply states that, under special circumstances and prompted by Christian love for each other, a number of believers voluntarily adopted the plan of having all things in common. This is quite different from a community of goods sanctioned by law which would compel the rich to give up their property for the benefit of the poor. . . . Christianity has nothing to say against the existence of classes as long as each class acts towards other classes in a Christ-like manner. Christianity has a message for the rich and a message for the poor, but arbitrary schemes for bringing about a compulsory equality of human lot it can neither support nor approve of, as they are contrary to one of its fundamental principles, as is shown above.

Under the heading *Takayama Ukon Done* the *Fukui Shimpō* some little time ago published some interesting facts connected with this noted General's Christian belief and fortitude, culled from a manuscript found in an old Church in Manila by Mr. Fukumoto Jitsunai a year or two ago. Mr. Fukumoto purposes issuing a separate pamphlet on Takayama Ukon before long, but in the meantime he has supplied the *Fukui Shimpō* with a lengthy account of this Christian warrior; from which we are now going to quote. The original manuscript was in Spanish; but there is a French edition, and this is now being translated into Japanese. We have only space for the most prominent facts. Takayama's Christianity was so pronounced that he excited the enmity of Nobunaga, Hideyoshi and other prominent men in his day, but he was not banished to Luzon till November, 1614. Special attention is drawn to the following facts by Mr. Fukumoto. (1) Takayama's father was noted for his highly moral character. He was a famous general and became governor of the castle of Takasuki in Settsu. (2) For the sake of his religion Takayama refused to help his mother and sister.* (3) It is said that Takayama was often to be heard repeating his prayers in time of war while riding from place to place. (4) As a man and as a general he was highly appreciated by Hideyoshi, to whom he frequently spoke about Christianity. Takayama brought several missionaries into contact with Hideyoshi. On one occasion when Hideyoshi was planning to make concubines of certain Chinese women in Chūgoku, he was reproved by Takayama and induced to give up the attempt. (5) At a later period when Christianity was forbidden by Hideyoshi, Takayama's friends tried to persuade him to renounce his faith, and Hideyoshi himself made great efforts to pervert him, but in vain. On this occasion Takayama remarked, *Ware wa ikkoku no daimyō taru mo, rōnin taru mo, kaerimiru tokoro ni arazu. Tada negau tokoro wa Kami no kuni nari*, "Whether I am one of the country's great barons or a mere wandering knight is a matter of indifference to me. My only desire is to see the kingdom of God established." Thus saying, he gave up everything and became a *rōnin*, enduring, together with his wife and children, the greatest hardship with cheerfulness. (6) Subsequently, owing to the intercession of Maeda Toshie, Takayama was again favoured by Hideyoshi and granted an income of 25,000 *koku* a year. This enabled him to exercise a wider influence on behalf of Christianity. When in 1614 the decree of banishment was issued by Ieyasu, Maeda

* The incident referred to took place when Nobunaga was fighting against Araki Murashige. At that time Takayama's mother and sister were in Takayama's castle, being relations of his. Nobunaga informed Takayama that if he assisted Murashige in any way, he (Nobunaga) would give orders for a general massacre of Christians. As Nobunaga was quite capable of such cruelty, Takayama felt it to be his duty to leave his mother and sister to their fate. But they were not killed on this occasion.—(WRITER OF SUMMARY.)
